TMA, including any supplementary or amended CC&Rs. The primary purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described in the Transportation Management Plan (TMP). Mitigation Measure Trans 2 requires that prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of the EIR. Mitigation Measure Trans 3 requires that prior to issuance of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the project traffic study (Urban Crossroads, December 2002) to maintain satisfactory levels of service as defined by the City's General Plan, based on thresholds of significance, performance standards, and methodologies used in the EIR, Orange County Congestion Management Program, and established in the transportation system/infrastructure fee program described in Mitigation Measure Tran 2 of the EIR. Mitigation Measure Trans 4 requires that prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. Mitigation Measure Trans 5 requires that in conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, the landowner or subsequent project applicant and the City will take the actions as specified in Mitigation Measure Trans 5. Mitigation Measure Trans 6 requires that the project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. Mitigation Measure Trans 7 requires that the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval, proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. Implementation of Mitigation Measures Trans 1 through Trans 7 will reduce the impacts associated with traffic/circulation to a level less than significant (EIR page 5.2-67).

Concurrently with the proposed project, the City of Irvine is considering adoption of the North Irvine Transportation Improvement (NITM) program. The NITM program does two things: it prioritizes and schedules the construction of traffic improvements needed to address development in the Great Park, and other undeveloped areas of North Irvine;

also, it imposes a nexus fee program to ensure the timely construction of these improvement events. The NITM program is consistent with and implements Mitigation Measure Tran 2. Traffic mitigation improvements within the City of Irvine as well as areas outside of the City will receive fair-share funding from the NITM program.

O2. Significant Impact:

Implementation of the Overlay Plan will result in inconsistencies with the adopted Orange County Master Plan of Arterial Highways (MPAH). These inconsistencies are associated with Marine Way and Rockfield Boulevard. (EIR page 5.2-66).

Mitigation Measures

Tran 8. Following the approval of the Orange County Great Park and annexation of the project by the City of Irvine, the City will submit a request to the OCTA to initiate a cooperative study, involving the OCTA and other affected agencies, for the purpose of bringing the Orange County's Master Plan of Arterial Highways into conformity with the City of Irvine's Master Plan of Arterial Highways.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Implementation of Mitigation Measure Tran 8 requires the City of Irvine to take action to bring its Master Plan of Arterial Highways and the Orange County's Master Plan of Arterial Highways into mutual conformance. As stated in the EIR (page 5.2-41) the City or Irvine will amend both the Land Use Element and the Circulation Element contained in its General Plan. Following this action, the City will pursue a cooperative study with the OCTA and other affected agencies. The City will request that the realignment of Rockfield Boulevard west of Bake Parkway and the inclusion of Marine Way between Sand Canyon Avenue and Bake parkway be included in the MPAH. This mitigation measure is added in order to clarify concerns raised by the OCTA during the public comment period for the draft EIR. The MPAH inconsistency is a short-term impact that will be reduced to a level less than significant with the implementation of Mitigation Measure Tran 8.

O3. Significant Impact:

Implementation of the Overlay Plan will exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for

designated roads or highways in the 2007 and 2025 scenarios. The Overlay Plan will impact the following (EIR page 5.2-66):

FREEWAY/TOLLWAY LOCATIONS

Year 2025

I-5 from Sand Canyon Avenue to Jeffrey Road – northbound (PM)

I-5 from Jeffrey Road to Sand Canyon Avenue– southbound (AM)

I-405 from Jeffrey Road to Sand Canyon Avenue- southbound (AM)

INTERSECTIONS

Year 2007

El Toro Road/Avenida de la Carlota

Year 2025

El Toro Road/Avenida de la Carlota

Mitigation Measures

Tran 1. Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) (“Spectrumotion”) in accordance with Article X of the recorded Declaration of Covenants, Conditions and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs. The primary purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described below:

Transportation Management Plan (TMP)

The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for the Great Park Project. This document summarizes the key elements of the TMP.

1.0 Introduction

The purpose of this document is to provide an outline for a comprehensive TMP for the Great Park. This report is not intended to provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.

It is the intent to annex Planning Area 51 and a portion of Planning Area 35 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo-commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed restrictions requiring participation in the TMA. Membership dues provide the funding for the Association and its programs, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.

In the event that annexation of PAs 51 and 35 into Spectrumotion is not approved, a TMP similar to that provided by Spectrumotion will be implemented. This document sets forth the components of the TMP should it be necessary.

2.0 Transportation Management Plan Framework

The key elements of the Great Park TMP are set forth below:

New Hire Orientation: Inform newly hired employees of commuting services available to them.

Public Transportation Pass Sales: Provide a central location for purchase of passes to available transit services ((i.e., OCTA buses, Metrolink, Amtrak, etc.).

Vanpool and Carpool Formation Assistance: Perform all of the administrative work necessary to establish van pools and car pools.

On-site Promotions: Hold rideshare promotions at work sites and assist in employer assistance promotions.

Telecommuting/Alternative Work Schedule Consulting: Assist employers in developing and implementing a telecommuting or alternative work schedule program.

Personalized Commute Consulting: Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.

Website: Maintain a website with all of their program information available.

Rideshare Promotions: Conduct high visibility rideshare promotions as a means to advertise its services.

Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.

Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.

3.0 Transportation Management Plan Implementation

As part of the TMP, a process will be established to monitor its effectiveness in reducing peak hour trip generation in the Great Park. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.

- Tran 2.** Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of this EIR.
- Tran 3.** Prior to issuance of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the project traffic study (Urban Crossroads, December 2002) to maintain satisfactory levels of service as defined by the City's General Plan, based on thresholds of significance, performance standards, and methodologies used in this EIR, Orange County Congestion Management Program, and established in the transportation system/infrastructure fee program described in Mitigation Measure Tran 2 above.
- Tran 4.** Prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic

Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate the cumulative impact of the subject map and all previously approved or concurrently submitted maps. The methodology for the study area, applicable land use and circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved traffic study scope of work. The landowner or subsequent project applicant shall construct, bond for, or enter into a funding agreement for necessary improvements identified in the updated traffic study and/or participate in the City fee program (Tran 2 above) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of this EIR.

Traffic signals that are on-site or directly related to the Great Park development will be installed as warranted through the mitigation implementation plan process.

Tran 5. In conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, the landowner or subsequent project applicant and the City will take the following actions:

1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-tollway ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in this EIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines.
2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency.
3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to recordation of the first final map for each Master Tentative Map or equivalent to establish the method and timing of payment of the identified percentage responsibility.

4. The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.

Tran 6. The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.

Tran 7. Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval, proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-complete clause or any similar agreement restricting a public agency's authority to construct improvement.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure Trans 1 requires that prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) ("Spectrumotion") in accordance with Article X of the recorded Declaration of Covenants, Conditions and Restrictions (CC&Rs) for the Irvine Spectrum

TMA, including any supplementary or amended CC&Rs. The primary purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described in the Transportation Management Plan (TMP). Mitigation Measure Trans 2 requires that prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of the EIR. Mitigation Measure Trans 3 requires that prior to issuance of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the project traffic study (Urban Crossroads, December 2002) to maintain satisfactory levels of service as defined by the City's General Plan, based on thresholds of significance, performance standards, and methodologies used in the EIR, Orange County Congestion Management Program, and established in the transportation system/infrastructure fee program described in Mitigation Measure Tran 2 of the EIR. Mitigation Measure Trans 4 requires that prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. Mitigation Measure Trans 5 requires that in conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, the landowner or subsequent project applicant and the City will take the actions as specified in Mitigation Measure Trans 5. Mitigation Measure Trans 6 requires that the project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. Mitigation Measure Trans 7 requires that the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval, proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. Implementation of Mitigation Measures Trans 1 through Trans 7 will reduce the impacts associated with traffic/circulation to a level less than significant (EIR page 5.2-67).

Concurrently with the proposed project, the City of Irvine is considering adoption of the North Irvine Transportation Improvement (NITM) program. The NITM program does two things: it prioritizes and schedules the construction of traffic improvements needed to address development in the Great Park, and other undeveloped areas of North Irvine;

also, it imposes a nexus fee program to ensure the timely construction of these improvement events. The NITM program is consistent with and implements Mitigation Measure Tran 2. Traffic mitigation improvements within the City of Irvine as well as areas outside of the City will receive fair-share funding from the NITM program.

D. PROJECT-LEVEL PUBLIC HEALTH AND SAFETY

Base Plan and Overlay Plan

1. Significant Impact:

Construction activities involving demolition and possible substantial remodeling of existing structures in the project area as the project area develops could result in the disturbance of structures and soils containing asbestos-containing materials (ACMs) or lead-based paints (LBPs). This is considered a significant impact.

The presence of ACMs and LBP in structures and soils of properties conveyed by the DON may pose a future hazard to the public if the materials degrade or are otherwise disturbed. This is considered a significant impact (EIR page 5.5-24).

Mitigation Measures

HH 1.

- a. Prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the DON or its transference shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property, including:
 - The type, location and condition of ACMs
 - The results of any asbestos testing
 - Description of asbestos control measures taken, if any
 - The costs or time necessary to remove existing ACMs
 - The results of any site-specific asbestos inventory updates
- b. For any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DON shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements.
- c. Prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DON. This requirement can be waived if an architect or project engineer responsible for the construction of the structure or an accredited asbestos inspector signs a statement that no ACM was specified

as a building material, and to the best of their knowledge, no ACMs were used as a building material.

- d. Any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws.
- e. Any renovation and/or LBP abatement activities on residential units at former MCAS El Toro, shall be conducted in accordance with all applicable federal, state and local regulatory requirements.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure HH1 requires that: a) prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the DON or its transferee shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property; b) for any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DON shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements; c) prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DON; d) any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws; and e) Any renovation and/or LBP abatement activities on residential units at former MCAS El Toro, shall be conducted in accordance with all applicable federal, state and local regulatory requirements. Implementation of Mitigation Measure HH1 will reduce the impact associated with ACMs and LBPs to a level less than significant (EIR page 5.5-25).

2. Significant Impact:

IRP Site 24 is located in zoning districts categorized as 6.1 Institutional and 1.5 Recreation. The site may be conveyed with temporary restrictions on use that are not appropriate for transportation facility use. This is considered a significant impact.

Future uses of IRP Site 3 may be potentially constrained by the implementation of institutional controls. This is considered a significant impact.

IRP Site 16 (Crash Crew Pit No. 2) is located in zoning district designation 1.5 Recreation. The site may be conveyed with temporary restrictions on use that are not appropriate for recreational land uses. This issue is considered a significant impact (EIR page 5.5-24).

Mitigation Measures

HH 2.

- a. Prior to transfer, the City of Irvine shall receive from the DON, with the concurrence of the appropriate regulatory agencies, a statement that the “Action Required” IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been identified and implemented. The City of Irvine will adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.
- b. Prior to transfer, if the DON chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DON a statement of temporary restrictions on the use of the sites and the release of the sites for unrestricted use following implementation of adequate remediation of groundwater. The City of Irvine shall adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure HH2 requires that: a) prior to transfer, the City of Irvine shall receive from the DON, with the concurrence of the appropriate regulatory agencies, a statement that the “Action Required” IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been identified and implemented; and b) Prior to transfer, if the DON chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DON a statement of temporary restrictions on the use of the sites and the release of the sites for unrestricted use following implementation of adequate remediation of groundwater. Implementation of Mitigation Measure HH2 will reduce the impacts associated with the uses on IRP Site 24, IRP Site 3, and IRP Site 16 (Crash Crew Pit No. 2) to a level less than significant (EIR page 5.5-26).

3. Significant Impact:

The Habitat Preserve, Wildlife Corridor, and Recreational areas in the northeastern portion of PA 51 will be exposed to the highest level of fire risk from wildfires because these areas and adjacent areas currently have a high risk for wildland fires. The proposed project will result in an increase in both population and structures adjacent to this high fire risk area and the impact is considered significant. Additionally, existing structures may not meet City fire safety requirements (EIR page 5.5-25).

Mitigation Measures

HH 3. The Community Development Department, in coordination with the Orange County Fire Authority (OCFA), will be responsible for review of all development plans, which would include evaluation of very high fire severity zones, special fire protection plans, and any requirements for fuel modification zones. Projects potentially impacted by wildland fire hazards will be subject to OCFA Guidelines for “Development Within and Exclusion from Very High Fire Severity Zones” and “Fuel Modification Plans and Maintenance.” Additionally, all demolition, renovation, and construction activities in the project area will be subject to review by OCFA to ensure adequate fire protection, water flow, emergency access, design features, etc., according to the standards of the Uniform Fire Code and the California Fire Code. Due to the implementation of these standard fire protection procedures, the proposed project is not anticipated to result in significant short- or long-term adverse impacts related to fire hazards.

HH 4. Prior to issuance of occupancy permits of any existing structure at the former MCAS El Toro, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval.

- HH 5.** Prior to the issuance of a grading permit, the applicant shall prepare and the Director of Community Development shall approve a protocol plan (including but not limited to worker training, health and safety precautions, additional testing requirements, and emergency notification procedures) in the event of unknown hazardous materials are discovered during grading, construction, and/or related development activities. Additionally, said protocol plan will be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities. The applicant and/or property owner that discovers contamination due to past military operations not previously identified by the DON shall be responsible for notifying the DON, appropriate regulatory agencies, and the Director of Community Development of the City of Irvine in a timely manner.
- HH6.** The City of Irvine shall develop and maintain the location and status, as well as other pertinent information, of all monitoring wells located on the former MCAS El Toro in a geographic information systems database (GIS). The City will review all permit applications on the former air station for well locations that may be affected by a permit, and require applicants to maintain appropriate access. Access to wells will be limited to authorized personnel.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure HH3 requires that The Community Development Department, in coordination with the Orange County Fire Authority (OCFA), will be responsible for review of all development plans, which would include evaluation of very high fire severity zones, special fire protection plans, and any requirements for fuel modification zones. Projects potentially impacted by wildland fire hazards will be subject to OCFA Guidelines for “Development Within and Exclusion from Very High Fire Severity Zones” and “Fuel Modification Plans and Maintenance.” Mitigation Measure HH4 requires that prior to issuance of occupancy permits of any existing structure at the former MCAS El Toro, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval. Mitigation Measure HH5 requires that prior to the issuance of a grading permit, the applicant shall prepare and the Director of Community Development shall approve a protocol plan to address circumstances where unknown hazardous materials are discovered during grading, construction, and/or related development activities. Mitigation Measure HH6 requires the City to develop and maintain the location and

status, as well as other pertinent information, of all monitoring wells located on the former MCAS El Toro in a geographic information systems database (GIS). The City will review all permit applications on the former air station for well locations that may be affected by a permit, and require applicants to maintain appropriate access. Implementation of Mitigation Measures HH3, HH4, HH5, and HH6 will reduce the impacts associated with fire risk from wildfires to a level less than significant (EIR page 5.5-26).

E. PROJECT-LEVEL GEOLOGY AND SEISMICITY

Base Plan

B1. Significant Impact:

Future development of the project area has the potential to result in the exposure of people or structures to strong seismic ground shaking in the event a major earthquake occurs along any one of the active faults in the region. This is considered a significant impact. (EIR page 5.6-12).

Mitigation Measures

GS B1. The City of Irvine will require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest adopted Uniform Building Code (UBC). Compliance with this measure shall be verified by the Community Development Department at the time specific development is proposed.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS B1 requires that that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest adopted Uniform Building Code. Implementation of Mitigation Measure GS B1 will reduce the strong seismic groundshaking impact to a level less than significant (EIR page 5.6-14).

B2. Significant Impact:

The level of seismic activity expected in the project area is similar to the County as a whole, and other areas of Southern California. As such, the risk of loss, injury, or death

involving strong seismic ground shaking is similar to the risk associated with other regions within Southern California. This is considered a significant impact. (EIR page 5.6-12).

Mitigation Measures

GS B2. Existing City policies require the preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.

1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing shall be conducted. The purpose of the subsurface evaluation is to:
 - a. Further evaluate the subsurface conditions in the area of the proposed structures.
 - b. Provide specific data on potential geologic and geotechnical hazards.
 - c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface and subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural sections, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

- Seismic Ground Shaking - Measures to prevent risk of loss, injury, or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.
- Erosion or Loss of Topsoil - Measures to address this condition include site watering during grading to reduce loss of topsoil and adequate surface and subsurface drainage systems to prevent large-scale soil erosion.
- Expansive Soils - Measures to address this condition include appropriate development locations that do not have a history of settlement.

Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS B2 requires that the City requires preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. Implementation of Mitigation Measure GS B2 will reduce the site specific geotechnical conditions impacts to a level less than significant (EIR page 5.6-14).

B3. Significant Impact:

Some expansive soils may be present in localized areas within the project area. The presence of expansive soils could create risks to life or property. This impact is considered significant (EIR page 5.6-12).

Mitigation Measures

GS B3. Prior to occupation of the existing structures on the former MCAS El Toro a detailed seismic evaluation shall be performed. Upon completion of the evaluation, if necessary, the structures shall either be upgraded to meet current seismic Uniform Building Codes or the structures shall remain vacant if they do not meet seismic Uniform Building Codes. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS B3 requires that prior to occupation of the existing structures on the former MCAS El Toro a detailed seismic evaluation shall be performed. Upon completion of the evaluation, if necessary, the structures shall either be upgraded to meet current seismic Uniform Building Codes or the structures shall remain vacant if they do not meet seismic Uniform Building Codes. Implementation of Mitigation Measure GS

B3 will reduce expansive soils related impacts to a level less than significant (EIR page 5.6-15).

B4. Significant Impact:

Many of the existing buildings on the former MCAS El Toro site do not meet current seismic codes. Temporary or permanent reuse of these facilities could expose people to a greater seismic risk than buildings that are constructed to applicable seismic codes. This is considered a significant impact. (EIR page 5.6-12).

Mitigation Measures

GS B3. Prior to occupation of the existing structures on the former MCAS El Toro a detailed seismic evaluation shall be performed. Upon completion of the evaluation, if necessary, the structures shall either be upgraded to meet current seismic Uniform Building Codes or the structures shall remain vacant if they do not meet seismic Uniform Building Codes. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS B3 requires that prior to occupation of the existing structures on the former MCAS El Toro a detailed seismic evaluation shall be performed. Upon completion of the evaluation, if necessary, the structures shall either be upgraded to meet current seismic Uniform Building Codes or the structures shall remain vacant if they do not meet seismic Uniform Building Codes. Implementation of Mitigation Measure GS B3 will reduce the impact associated with buildings that do not meet current seismic codes to a level less than significant (EIR page 5.6-12).

B4. Significant Impact:

Future development of the project area has the potential for impacts resulting from soil erosion or the loss of topsoil. This impact is considered significant through the post 2025 development levels (EIR page 5.6-12).

Mitigation Measures

GS B4. Detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specifically address erosion control and surface runoff for both construction and long-term operations on the site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx into the drainage system shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS B4 requires that detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. Implementation of Mitigation Measure GS B4 will reduce impacts related to soil erosion and the loss of top soil to a level less than significant (EIR page 5.6-15).

B5. Significant Impact:

Some expansive soils may be present in localized areas within the project area. The presence of expansive soils could create risks to life or property. This is considered a significant impact (EIR page 5.6-13).

Mitigation Measures

GS B2. Existing City policies require the preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.

1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing shall be conducted. The purpose of the subsurface evaluation is to:
 - a. Further evaluate the subsurface conditions in the area of the proposed structures.
 - b. Provide specific data on potential geologic and geotechnical hazards.
 - c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface and subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural sections, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

- Seismic Ground Shaking - Measures to prevent risk of loss, injury, or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.
- Erosion or Loss of Topsoil - Measures to address this condition include site watering during grading to reduce loss of topsoil and adequate surface and subsurface drainage systems to prevent large-scale soil erosion.
- Expansive Soils - Measures to address this condition include appropriate development locations that do not have a history of settlement.

Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS B2 requires that the City requires preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. Implementation of Mitigation Measure GS B2 will reduce the impact associated with expansive soils to a level less than significant (EIR page 5.6-14).

Overlay Plan

O1. Significant Impact:

Future development of the project area has the potential to result in the exposure of people or structures to strong seismic ground shaking in the event a major earthquake occurs along any one of the active faults in the region. This is considered a significant impact. (EIR page 5.6-13).

Mitigation Measures

GS O1. The City of Irvine will require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest adopted Uniform Building Code (UBC). Compliance with this measure shall be verified by the Community Development Department at the time specific development is proposed.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS O1 requires that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest adopted Uniform Building Code. Implementation of Mitigation Measure GS O1 will reduce the impacts associated with strong seismic groundshaking to a level less than significant (EIR page 5.6-15).

O2. Significant Impact:

The level of seismic activity expected in the project area is similar to the County as a whole, and other areas of Southern California. As such, the risk of loss, injury, or death involving strong seismic ground shaking is similar to the risk associated with other regions within Southern California. This is considered a significant impact. (EIR page 5.6-13).

Mitigation Measures

GS O2. Existing City policies require the preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.

1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing shall be conducted. The purpose of the subsurface evaluation is to:
 - a. Further evaluate the subsurface conditions in the area of the proposed structures.

- b. Provide specific data on potential geologic and geotechnical hazards.
- c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface and subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural sections, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

- C Seismic Ground Shaking - Measures to prevent risk of loss, injury, or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.
- C Erosion or Loss of Topsoil - Measures to address this condition include site watering during grading to reduce loss of topsoil and adequate surface and subsurface drainage systems to prevent large-scale soil erosion.
- C Expansive Soils - Measures to address this condition include appropriate development locations that do not have a history of settlement.

Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS O2 requires preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. Implementation of Mitigation Measure GS O2 will reduce the impact associated with geotechnical conditions to a level less than significant (EIR page 5.6-15).

O3. Significant Impact:

Some expansive soils may be present in localized areas within the project area. The presence of expansive soils could create risks to life or property. This impact is considered significant. (EIR page 5.6-13).

Mitigation Measures

GS O3. Prior to occupation of the existing structures on the former MCAS El Toro a detailed seismic evaluation shall be performed. Upon completion of the evaluation, if necessary, the structures shall either be upgraded to meet current seismic Uniform Building Codes or the structures shall remain vacant if they do not meet seismic Uniform Building Codes. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS O3 requires that prior to occupation of the existing structures on the former MCAS El Toro a detailed seismic evaluation shall be performed. Upon completion of the evaluation, if necessary, the structures shall either be upgraded to meet current seismic Uniform Building Codes or the structures shall remain vacant if they do not meet seismic Uniform Building Codes. Implementation of Mitigation Measure GS O3 will reduce the impacts associated with expansive soils to a level less than significant (EIR page 5.6-16).

O4. Significant Impact:

Many of the existing buildings on the former MCAS El Toro site do not meet current seismic codes. Temporary or permanent reuse of these facilities could expose people to a greater seismic risk than buildings that are constructed to applicable seismic codes. This is considered a significant impact. (EIR page 5.6-13).

Mitigation Measures

GS O3. Prior to occupation of the existing structures on the former MCAS El Toro a detailed seismic evaluation shall be performed. Upon completion of the evaluation, if necessary, the structures shall either be upgraded to meet current seismic Uniform Building Codes or the structures shall remain vacant if they do

not meet seismic Uniform Building Codes. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS O3 requires that prior to occupation of the existing structures on the former MCAS El Toro a detailed seismic evaluation shall be performed. Upon completion of the evaluation, if necessary, the structures shall either be upgraded to meet current seismic Uniform Building Codes or the structures shall remain vacant if they do not meet seismic Uniform Building Codes. Implementation of Mitigation Measure GS O3 will reduce the impacts associated with expansive soils to a level less than significant (EIR page 5.6-16).

O5. Significant Impact:

Future development of the project area has the potential for impacts resulting from soil erosion or the loss of topsoil. This impact is considered significant. (EIR page 5.6-13).

Mitigation Measures

GS O4. Detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specifically address erosion control and surface runoff for both construction and long-term operations on the site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx into the drainage system shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS O4 requires that geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. Implementation of

Mitigation Measure GS O4 will reduce the impacts resulting from soils erosion or the loss of topsoil to a level less than significant (EIR page 5.6-16).

O6. Significant Impact:

The Overlay Plan proposes development of habitable structures in the northeastern foothills area, which may result in a significant impact associated with landslides (EIR page 5.6-13).

Mitigation Measures

GS O1. The City of Irvine will require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest adopted Uniform Building Code (UBC). Compliance with this measure shall be verified by the Community Development Department at the time specific development is proposed.

GS O2. Existing City policies require the preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.

1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing shall be conducted. The purpose of the subsurface evaluation is to:
 - a. Further evaluate the subsurface conditions in the area of the proposed structures.
 - b. Provide specific data on potential geologic and geotechnical hazards.
 - c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface and subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural sections, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

- Seismic Ground Shaking - Measures to prevent risk of loss, injury, or death involving seismic ground shaking include constructing new

development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.

- Erosion or Loss of Topsoil - Measures to address this condition include site watering during grading to reduce loss of topsoil and adequate surface and subsurface drainage systems to prevent large-scale soil erosion.
- Expansive Soils - Measures to address this condition include appropriate development locations that do not have a history of settlement.

Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS O1 requires that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest adopted Uniform Building Code. Implementation of Mitigation Measure GS O1 will reduce the impacts associated with strong seismic groundshaking to a level less than significant (EIR page 5.6-15). Mitigation Measure GS O2 requires preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. Implementation of Mitigation Measure GS O2 will reduce the impact associated with geotechnical conditions to a level less than significant (EIR page 5.6-15).

O7. Significant Impact:

Some expansive soils may be present in localized areas within the project area. The presence of expansive soils could create risks to life or property. This is considered a significant impact (EIR page 5.6-13).

Mitigation Measures

GS O2. Existing City policies require the preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.

1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing shall be conducted. The purpose of the subsurface evaluation is to:
 - a. Further evaluate the subsurface conditions in the area of the proposed structures.
 - b. Provide specific data on potential geologic and geotechnical hazards.
 - c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface and subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural sections, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

- Seismic Ground Shaking - Measures to prevent risk of loss, injury, or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.
- Erosion or Loss of Topsoil - Measures to address this condition include site watering during grading to reduce loss of topsoil and adequate surface and subsurface drainage systems to prevent large-scale soil erosion.
- Expansive Soils - Measures to address this condition include appropriate development locations that do not have a history of settlement.

Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure GS O2 requires preparation of geotechnical studies at the time specific development projects are proposed to address site specific geotechnical considerations. Implementation of Mitigation Measure GS O2 will reduce the impact associated with geotechnical conditions to a level less than significant (EIR page 5.6-15).

F. PROJECT-LEVEL HYDROLOGY/WATER QUALITY

Base Plan

B1. Significant Impact:

Grading and excavation activities required for future development could result in the exposure of bare soils which could result in both wind and water-related erosion, and a significant water quality impact if not properly treated. Through buildout of the proposed project, wind and water related erosion has the potential to violate water quality standards or waste discharge requirements. This is considered a significant impact. Implementation of Mitigation Measures HW1 and HW2 will reduce the impact associated with the potential to violate water quality standards and waste discharge requirements to a level less than significant.

Additionally, a Storm Water Pollution and Prevention Plan (SWPPP), Water Quality Management Plan (WQMP), Best Management Practices (BMPs), Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area (this requirement will be met to the satisfaction of the City Engineer for any disturbance of one acre or more of soil in the project area), and General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

These measures will be implemented in accordance with local and state regulatory requirements. As future projects are planned, designed, and constructed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. (EIR page 5.7-22).

Mitigation Measures

H/WQ B1. Future development of the project area shall comply with City of Irvine adopted policies to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance

states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area . . . and residential construction sites that result in the disturbance of five acres or more . . . shall be required to develop and implement BMPs . . . to control erosion and siltation and contaminated runoff from the construction sites."

The City's standard conditions of approval indicate that a Storm Water Pollution and Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.

Additionally, prior to the issuance of precise grading permits, project applicants must submit, and the Director of Community Development must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff. Ongoing operations after construction would be subject to the countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, leasee, etc.); and shall reference the location(s) of structural BMPs.

Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the City Engineer for any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be

imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

H/WQ B2. All stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality standards identified in the Santa Ana Regional Water Quality Control Board Basin Plan, including Total Maximum Daily Load (TDML) allocations adopted for this watershed.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ B1 requires that future development of the project area shall comply with City of Irvine adopted policies to ensure that the potential for soil erosion is minimized on a project-by-project basis. Mitigation Measure H/WQ B2 requires that all stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality standards identified in the Santa Ana Regional Water Quality Control Board Basin Plan. Implementation of Mitigation Measures H/WQ B1 and H/WQ B2 will reduce the impacts associated with the potential to violate water quality standards and waste discharge requirements to a level less than significant (EIR page 5.7-27).

B2. Significant Impact:

Improvements to the flood control system shall be evenly scheduled during the various phases of development. However, a substantial increase in the rate or amount of surface runoff due to new development, may occur, resulting in flooding on- or off-site depending on the future proposed development. The potential for flooding to occur on-or off-site as a result of future development of the project area is considered a significant impact. Implementation of Mitigation Measure HW3 will reduce this impact to a level less than significant (EIR page 5.7-23).

Mitigation Measures

H/WQ B3. Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrology and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCO methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to

proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ B3 requires that prior to future development in the project area, detailed hydrology studies shall be conducted at the time specific development is proposed. Implementation of Mitigation Measure H/WQ B3 will reduce the impact associated with flooding to a level less than significant (EIR page 5.7-28).

B3. Significant Impact:

With recent improvements to upstream flood control facilities, the floodplain area has likely decreased and fewer areas of the project area are subject to inundation. The phasing of the flood control system improvements in PAs 51 and 30 will be coordinated with the street-phasing schedule so that the storm drains are installed prior to or in concert with road construction. Improvements to the flood control system shall be evenly scheduled during the various phases of development. However, a substantial increase in the rate or amount of surface runoff due to new development, may occur, resulting in flooding on- or off-site depending on the future proposed development. This is considered a significant impact. Implementation of Mitigation Measure HW3 will reduce on- or off-site flooding due to surface runoff to a level less than significant (EIR page 5.7-25).

Mitigation Measures

H/WQ B3. Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrology and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ B3 requires that prior to future development in the project area, detailed hydrology studies shall be conducted at the time specific development is proposed. Implementation of Mitigation Measure H/WQ B3 will reduce the impact associated with flooding to a level less than significant (EIR page 5.7-28).

B4. Significant Impact:

As per the requirements of the Regional Water Quality Control Board, proposed projects occurring upstream of or discharging into impaired waterbodies listed on the Clean Water Act Section 303(D) list may be subject to additional controls (specifically Total Maximum Daily Loads or TMDLs). Depending on the specific type of project proposed, these controls could include discharge prohibitions, revisions to discharge permits, or management plans to address water quality impacts. This is especially important in the Newport Bay watershed. At this program level of planning, the potential to degrade surface water quality is considered a significant impact. Implementation of Mitigation Measure H/WQ B1 will reduce the impact of future development on surface water quality to a level less than significant.

Additionally, a Storm Water Pollution and Prevention Plan (SWPPP), Water Quality Management Plan (WQMP), Best Management Practices (BMPs), Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board (this requirement will be met to the satisfaction of the City Engineer for any disturbance of one acre or more of soil in the project area), General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit are required prior to issuance of grading permits in the project area.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Grading or building permit applicants will be required to submit and obtain approval of a Water Quality Management Plan (WQMP) from the City of Irvine prior to issuance of the permits. The WQMP will specifically identify BMPs that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the

assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, leasee, etc.); and shall reference the location(s) of structural BMPs.

Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department (EIR page 5.7-23).

Mitigation Measures

H/WQ B1. Future development of the project area shall comply with City of Irvine adopted policies to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area . . . and residential construction sites that result in the disturbance of five acres or more . . . shall be required to develop and implement BMPs . . . to control erosion and siltation and contaminated runoff from the construction sites."

The City's standard conditions of approval indicate that a Storm Water Pollution and Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.

Additionally, prior to the issuance of precise grading permits, project applicants must submit, and the Director of Community Development must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff. Ongoing operations after construction would be subject to the countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, leasee, etc.); and shall reference the location(s) of structural BMPs.

Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the City Engineer for any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ B1 requires that future development of the project area shall comply with City of Irvine adopted policies to ensure that the potential for soil erosion is minimized on a project-by-project basis. Implementation of Mitigation Measure H/WQ B1 will reduce the impact of future development on surface water quality to a level less than significant (EIR page 5.7-27).

B5. Significant Impact:

Project development is proposed in areas of PAs 51 and 30. Existing and proposed development within these areas could be subject to potential flooding associated with a 100-year frequency storm. Mitigation Measure HW4 will reduce the impact of exposure of future residential development in the project area to a level less than significant (EIR page 5.7-24).

Mitigation Measures

H/WQ B4. Prior to the issuance of building permits, Flood Insurance Rate Maps (FIRMs) shall be prepared for the project area. It is known that portions of the project area are subject to flooding. Consequently, the limits of the

possible 100-year floodplain must be established via a Letter of Map Revision (LOMR) from FEMA for any proposed project within the project area. The City of Irvine currently imposes conditions of approval on projects in 100-year floodplains designated by FEMA. If a project includes land within a Special Flood Hazard Area (SFHA), subject to inundation according to the Flood Insurance Rate Map (FIRM), and not addressed by an underlying subdivision map, various City conditions of approval will apply. Prior to the issuance of a precise grading permit for any lot or parcel wholly or partially located within a SFHA, applicants must furnish to the City Engineer documentation required by FEMA for revision to the FIRM (of other FEMA flood hazard map) and Flood Insurance Study (FIS). Additionally, prior to the issuance of building permits on any lot or parcel located wholly or partially within the SFHA, a National Flood Insurance Program (NFIP) Elevation Certificate must be submitted in accordance with the requirements of the NFIP and must have been reviewed and approved by the City Engineer. If a nonresidential building is being floodproofed, then a FEMA Floodproofing Certificate must be completed in addition to the elevation certificate. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ B4 requires that prior to the issuance of building permits, Flood Insurance Rate Maps (FIRMs) shall be prepared for the project area. Implementation of Mitigation Measure H/WQ B4 will reduce the impact of exposure of future residential development with flooding associated with the 100-year frequency storm in the project area to a level less than significant (EIR page 5.7-28).

Overlay Plan

O1. Significant Impact:

Grading and excavation activities required for future development could result in the exposure of bare soils which could result in both wind and water-related erosion, and a significant water quality impact if not properly treated. Through buildout of the proposed project, wind and water related erosion has the potential to violate water quality standards or waste discharge requirements. This is considered a significant impact. Implementation of Mitigation Measures H/WQ O1 and H/WQ O2 will reduce the impact

associated with the potential to violate water quality standards and waste discharge requirements to a level less than significant.

Additionally, a Storm Water Pollution and Prevention Plan (SWPPP), Water Quality Management Plan (WQMP), Best Management Practices (BMPs), Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area (this requirement will be met to the satisfaction of the City Engineer for any disturbance of one acre or more of soil in the project area), and General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

These measures will be implemented in accordance with local and state regulatory requirements. As future projects are planned, designed, and constructed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future (EIR page 5.7-23).

Mitigation Measures

H/WQ 01. Future development of the project area shall comply with City of Irvine adopted policies to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area . . . and residential construction sites that result in the disturbance of five acres or more . . . shall be required to develop and implement BMPs . . . to control erosion and siltation and contaminated runoff from the construction sites."

The City's standard conditions of approval indicate that a Storm Water Pollution and Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.

Additionally, prior to the issuance of precise grading permits, project applicants must submit, and the Director of Community Development must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff. Ongoing

operations after construction would be subject to the countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, leasee, etc.); and shall reference the location(s) of structural BMPs.

Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the City Engineer for any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

- H/WQ O2.** All stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality standards identified in the Santa Ana Regional Water Quality Control Board Basin Plan, including Total Maximum Daily Load (TDML) allocations adopted for this watershed.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ O1 requires that future development of the project area shall comply with City of Irvine adopted policies to ensure that the potential for soil erosion is

minimized on a project-by-project basis. Mitigation Measure H/WQ O2 requires that all stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality standards identified in the Santa Ana Regional Water Quality Control Board Basin Plan. Implementation of Mitigation Measures H/WQ O1 and H/WQ O2 will reduce the impact associated with the potential to violate water quality standards and waste discharge requirements to a level less than significant (EIR page 5.7-29).

O2. Significant Impact:

Improvements to the flood control system shall be evenly scheduled during the various phases of development. However, a substantial increase in the rate or amount of surface runoff due to new development, may occur, resulting in flooding on- or off-site depending on the future proposed development. The potential for flooding to occur on-or off-site as a result of future development of the project area is considered a significant impact. Implementation of Mitigation Measure HW3 will reduce this impact to a level less than significant (EIR page 5.7-25).

Mitigation Measures

H/WQ O3. Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrology and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ O3 requires that prior to future development in the project area, detailed hydrology studies shall be conducted at the time specific development is proposed. Implementation of Mitigation Measure H/WQ O3 will reduce the impact associated with potential for flooding to occur on-or off-site as a result of future development of the project area to a level less than significant (EIR page 5.7-30).

O3. Significant Impact:

With recent improvements to upstream flood control facilities, the floodplain area has likely decreased and fewer areas of the project area are subject to inundation. The phasing of the flood control system improvements in PAs 51 and 30 will be coordinated with street-phasing schedule so that the storm drains are installed prior to or in concert with road construction. Improvements to the flood control system shall be evenly scheduled during the various phases of development. However, a substantial increase in the rate or amount of surface runoff due to new development, may occur, resulting in flooding on- or off-site depending on the future proposed development. This is considered a significant impact. Implementation of Mitigation Measure HW3 will reduce on- or off-site flooding due to surface runoff to a level less than significant (EIR page 5.7-25).

H/WQ O3. Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrology and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ O3 requires that prior to future development in the project area, detailed hydrology studies shall be conducted at the time specific development is proposed. Implementation of Mitigation Measure H/WQ O3 will reduce the impact associated with potential for on- or off-site flooding due to surface runoff to a level less than significant (EIR page 5.7-30).

O4. Significant Impact:

As per the requirements of the Regional Water Quality Control Board, proposed projects occurring upstream of or discharging into impaired waterbodies listed on the Clean Water Act Section 303(D) list may be subject to additional controls (specifically Total Maximum Daily Loads or TMDLs) pursuant to that regulation. Depending on the specific type of project proposed, these controls could include discharge prohibitions, revisions to discharge permits, or management plans to address water quality impacts.

This is especially important in the Newport Bay watershed. At this program level of planning, the potential to degrade surface water quality is considered a significant impact. Implementation of Mitigation Measure HW1 will reduce the impact of future development on surface water quality to a level less than significant.

Additionally, a Storm Water Pollution and Prevention Plan (SWPPP), Water Quality Management Plan (WQMP), Best Management Practices (BMPs), Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board (this requirement will be met to the satisfaction of the City Engineer for any disturbance of one acre or more of soil in the project area), General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit are required prior to issuance of grading permits in the project area.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Grading or building permit applicants will be required to submit and obtain approval of a Water Quality Management Plan (WQMP) from the City of Irvine prior to issuance of the permits. The WQMP will specifically identify BMPs that will be used on-site to control predictable pollutant runoff. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, leasee, etc.); and shall reference the location(s) of structural BMPs.

Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department (EIR page 5.7-26).

Mitigation Measures

H/WQ O1. Future development of the project area shall comply with City of Irvine adopted policies to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area . . . and residential construction sites that result in the disturbance of five acres or more . . .

shall be required to develop and implement BMPs ... to control erosion and siltation and contaminated runoff from the construction sites."

The City's standard conditions of approval indicate that a Storm Water Pollution and Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.

Additionally, prior to the issuance of precise grading permits, project applicants must submit, and the Director of Community Development must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff. Ongoing operations after construction would be subject to the countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, leasee, etc.); and shall reference the location(s) of structural BMPs.

Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the City Engineer for any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ O1 requires that future development of the project area shall comply with City of Irvine adopted policies to ensure that the potential for soil erosion is minimized on a project-by-project basis. Implementation of Mitigation Measure H/WQ O1 will reduce the impact of future development on surface water quality to a level less than significant (EIR page 5.7-27).

O5. Significant Impact:

Project development is proposed in areas of PAs 51 and 30. Existing and proposed development within these areas could be subject to potential flooding associated with a 100-year frequency storm. Mitigation Measure HW4 will reduce the impact of exposure of future residential development in the project area to a level less than significant (EIR page 5.7-27).

Mitigation Measures

H/WQ O4. Prior to the issuance of building permits, Flood Insurance Rate Maps (FIRMs) shall be prepared for the project area. It is known that portions of the project area are subject to flooding. Consequently, the limits of the possible 100-year floodplain must be established via a Letter of Map Revision (LOMR) from FEMA for any proposed project within the project area. The City of Irvine currently imposes conditions of approval on projects in 100-year floodplains designated by FEMA. If a project includes land within a Special Flood Hazard Area (SFHA), subject to inundation according to the Flood Insurance Rate Map (FIRM), and not addressed by an underlying subdivision map, various City conditions of approval will apply. Prior to the issuance of a precise grading permit for any lot or parcel wholly or partially located within a SFHA, applicants must furnish to the City Engineer documentation required by FEMA for revision to the FIRM (of other FEMA flood hazard map) and Flood Insurance Study (FIS). Additionally, prior to the issuance of building permits on any lot or parcel located wholly or partially within the SFHA, a National Flood Insurance Program (NFIP) Elevation Certificate must be submitted in accordance with the requirements of the NFIP and must have been reviewed and approved by the City Engineer. If a nonresidential building is being floodproofed, then a FEMA Floodproofing Certificate must be completed in addition to the elevation certificate. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure H/WQ O4 prior to the issuance of building permits, Flood Insurance Rate Maps (FIRMs) shall be prepared for the project area. Implementation of Mitigation Measure H/WQ O4 will reduce the impact of exposure of future residential development in the project area to a level less than significant (EIR page 5.7-30).

G. PROJECT-LEVEL BIOLOGICAL RESOURCES

Base Plan and Overlay Plan

1. Significant Impact:

The southern tarplant, a federal species of concern, may be affected by development of the site. This is considered a significant impact (EIR page 5.9-24).

Mitigation Measures

Bio 1. Prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl, shall be conducted. Prior to approval of a subdivision map for development within , or in proximity to Serrano Creek a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owl, least Bell's vireo, or southwestern willow flycatcher, of this species in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement, or if impacts cannot be avoided, then mitigation shall be negotiated through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG).

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure Bio 1 requires that prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant shall be conducted. Implementation of Mitigation Measure Bio 1 will reduce the impact associated with the southern tarplant to a level less than significant (EIR page 5.9-24).

2. Significant Impact:

There is a limited amount of highly disturbed wetland habitat on the project site. The project may result in an impact to this habitat (EIR page 5.9-24).

Mitigation Measures

Bio 2. Prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan subarea that contain the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a wetland mitigation plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). Wetlands impacted on-site shall be mitigated through on-site or off-site replacement, re-creation (i.e. within the proposed wildlife corridor), and/or revegetation as deemed acceptable by the appropriate jurisdictional agencies.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure Bio 2 requires that prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan subarea that contain the potential for wetland habitat and/or jurisdictional waters. Implementation of Mitigation Measure Bio 2 will reduce the impact associated with wetland habitat to a level less than significant (EIR page 5.9-25).

3. Significant Impact:

PAs 51 and 30 contain a large number of trees, many of them mature, representing a wide range of species. Implementation of the proposed project may result in damage and destruction to the trees. A significant impact related to conflicts with the City of Irvine's Urban Forestry Ordinance may occur (EIR page 5.9-24).

Mitigation Measures

Bio 4. Prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height (DBH) greater than six inches and any significant (as determined by a certified arborist selected by the City) plants on the project site, excluding those within the habitat preserve shall be prepared. This inventory shall be prepared by an arborist certified by the International Society of Arboriculture and shall include (but not be limited to) data for each tree such as species, variety, DBH, condition (excellent, good, fair, poor, dead), and any recommendations. All trees in this inventory shall be considered “Significant Trees” under the City of Irvine’s Urban Forestry Ordinance (UFO) (Section 5-7-401 et al) and the UFO shall apply to all trees included in this inventory.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure Bio 4 requires that prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height (DBH) greater than six inches and any significant (as determined by a certified arborist selected by the City) plants on the project site, excluding those within the habitat preserve shall be prepared. Implementation of Mitigation Measure Bio 4 will reduce the impact associated with trees to a level less than significant (EIR page 5.9-25).

H. PROJECT-LEVEL PALEONTOLOGICAL RESOURCES

Base Plan and Overlay Plan

1. Significant Impact:

Earthmoving operations such as grading and trenching has the potential to impact buried paleontological resources in the moderately to highly sensitive areas in the coastal plain and washes, northeast, northwest and southern portions of PA 51. This is considered a significant impact.

Additionally, pleistocene terrestrial vertebrates have been discovered four miles from PA 30. Similar beds of Pleistocene terrestrial vertebrates may underlie PA 30. This impact is considered significant (EIR page 5.10-6).

Mitigation Measures

P1. Prior to issuance of a grading permit for any portion of the project area, a qualified paleontologist shall be retained by the City or designee to carry out an appropriate paleontology investigation of the area proposed for grading. (A qualified paleontologist is defined as an individual with an M.S. or Ph.D. in paleontology or geology who is familiar with paleontological procedures and techniques.) The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant paleontological sites, and paleontological monitoring conditions have not been attached to the previous map approval. These standard conditions include retaining a qualified paleontologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process.

When fossils are discovered, the paleontologist (or paleontological monitor) shall recover them. In most cases, this fossil salvage can be completed in a short period of time. However, some fossils specimens (such as a complete large mammal skeleton) may require an extended salvage period. In these instances the paleontologist (or paleontological monitor) shall be allowed to temporarily direct, divert or halt grading to allow recovery of fossil remains in a timely manner. Because of the potential for the recovery of small fossil remains, such as isolated mammal teeth, it may be necessary in certain instances to set up a screen-washing operation on-site.

Fossil remains collected during the monitoring and salvage portion of the mitigation program shall be cleaned, repaired, sorted, and cataloged. Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure P1 requires that prior to issuance of a grading permit for any portion of the project area, a qualified paleontologist shall be retained by the City or designee to carry out an appropriate paleontology investigation of the area proposed for grading. Implementation of Mitigation Measure P1 will reduce the impact associated with earthmoving operations, such as grading and trenching that may impact buried paleontological resources, to a level less than significant (EIR page 5.10-6).

I. PROJECT-LEVEL CULTURAL RESOURCES

Base Plan and Overlay Plan

1. Significant Impact:

Grading activities associated with future development of the project area may cause a substantial adverse change in the significance of an archaeological resource. Mitigation Measures Cult B1 through Cult B3 will reduce this impact to a level less than significant (EIR page 5.11-5).

Mitigation Measures

- Cult1.** Prior to subdivision for development, a detailed archaeological report(s) shall be prepared within PAs 51 and 30. This report(s) shall specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. Recommendations contained in the report shall be implemented. Compliance with this measure shall be verified by the Community Development Department.
- Cult2.** Monitoring of excavation and grading activities associated with future development in PAs 51 and 30 shall be conducted by a certified archaeologist in accordance with the report required in Mitigation Measure Cult1. If resources are encountered in the course of ground disturbance, the archaeological monitor shall be empowered to halt grading and to initiate an archaeological testing program. The testing shall include recordation of artifacts, controlled removal of the materials, and an assessment of their importance under CEQA and the City's local guidelines. Compliance with this measure shall be verified by the Community Development Department.
- Cult3.** Prior to the issuance of grading permits and/or building permits for any future development in PAs 51 and 30, a detailed mitigation program shall be submitted by the applicant to the City of Irvine to address archaeological resources discovered during grading. Provisions of the program shall include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be a unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation shall be available. Work may continue on other parts of the construction site while archaeological resource mitigation takes place. The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant archaeological sites. These include retaining a qualified archaeologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process.

Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure Cult1 requires that prior to subdivision for development, a detailed archaeological report(s) shall be prepared within PAs 51 and 30. Mitigation Measure Cult2 requires that monitoring of excavation and grading activities associated with future development in PAs 51 and 30 shall be conducted by a certified archaeologist in accordance with the report required in Mitigation Measure Cult1. Mitigation Measure Cult3 requires that prior to the issuance of grading permits and/or building permits for any future development in PAs 51 and 30, a detailed mitigation program shall be submitted by the applicant to the City of Irvine to address archaeological resources discovered during grading. Implementation of Mitigation Measures Cult1, Cult, 2 and Cult3 will reduce the impact associated with archaeological resources to a level less than significant (EIR page 5.11-6).

2. Significant Impact:

Grading activities could uncover previously unknown human remains, including those interred outside of formal cemeteries. Mitigation Measure Cult B4 will reduce this impact to a level less than significant (EIR page 5.11-5).

Mitigation Measures

Cult4. Prior to the issuance of any grading and/or building permits, a mitigation program shall be submitted by the developer to the City of Irvine to address the accidental discovery or recognition of any human remains. The program shall include the following:

There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

C The county coroner must be contacted to determine that no investigation of the cause of death is required, and

If the coroner determines the remains to be Native American:

- C The coroner shall contact the Native American Heritage Commission within 24 hours.
- C The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased Native American.
- C The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriated dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or
- C Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.
 - o The Native American Heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission.
 - o The descendant identified fails to make a recommendation; or
 - o The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.

Compliance with this measure shall be verified by the Community Development Department.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure Cult4 requires that prior to the issuance of any grading and/or building permits, a mitigation program shall be submitted by the developer to the City of Irvine to address the accidental discovery or recognition of any human remains. Implementation of Mitigation Measure Cult4 will reduce the impact associated with grading activities that could uncover previously unknown human remains to a level less than significant (EIR page 5.11-6).

J. PROJECT-LEVEL AESTHETICS

Base Plan and Overlay Plan

1. Significant Impact

Future development of PAs 51 and 30, consistent with the Orange County Great Park land use plan, will lead to the introduction of new sources of light within the project area. These sources include street lighting along planned roadways and exterior lighting (including security lighting and parking lot lighting) for various educational and institutional developments, and lighting associated with athletic fields. The potential for a significant light impact may occur should proposed light sources be directed into or located near existing or planned residential uses, which are sensitive to light intrusion during nighttime hours (EIR page 5.12-9).

Mitigation Measures

- A1.** Prior to issuance of grading permits, lighting plans and signage plans for new development shall be reviewed by the Community Development Department to ensure that minimal light intrusion and spillover into adjacent residential areas occurs.

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure A1 requires that new development is reviewed by City of Irvine staff to ensure that minimal light intrusion occurs on neighboring development. Implementation of Mitigation Measure A1 will reduce light aesthetic impacts to a level less than significant (EIR page 5.12-10).

2. Significant Impact

Future development of PAs 51 and 30, consistent with the Orange County Great Park land use plan, will lead to the introduction of new sources of glare within the project area. Reflective materials and glazed or polished exterior surfaces associated with research and development land uses may create glare, which could cause visual nuisance to residential land uses (EIR page 5.12-9).

Mitigation Measures

- A2.** Prior to issuance of grading permits, during the master plan review process for future development in the project area, the Director of Community Development shall ensure mirrored and highly reflective surfaces are discouraged or, where proposed, shall be accompanied by a design-level glare impact analysis that demonstrates no adverse visual impairment to motorists or other visual nuisance occurs (EIR page 5.12-10).

Finding

Pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure A2 requires that new development is reviewed by City of Irvine staff to ensure that appropriate building materials and design is utilized to reduce glare from new development. Implementation of Mitigation Measure A2 will reduce glare related aesthetic impact to a level less than significant (EIR page 5.12-10).

K. PROJECT-LEVEL PUBLIC SERVICES AND FACILITIES

Base Plan and Overlay Plan

1. Significant Impact: Law Enforcement

The EIR concludes that development of the project will not have any significant impact on the provision of law enforcement services, or the ability of law enforcement services to respond to an incident in a timely manner. Through the continued implementation of the City's Strategic Business Plan and Budgeting process, adequate provision will be made for the maintenance of acceptable law enforcement levels of service. The general significant impacts associated with the construction and operation of public facilities has been addressed in the EIR, including the construction, expansion, and/or operation of a new police substation. Project-level environmental review, at the time the specific location of a future police substation is known, and when specific development plans have been prepared, will be required (EIR pages 5.14-4 and 5.14-5).

Mitigation Measures

The EIR concludes that development of the project will not have any significant impact on the provision of law enforcement services, or the ability of law enforcement services to respond to an incident in a timely manner. With regard to construction impacts,

mitigation measures identified in other sections of the EIR (5.1-5.15), including watering during construction to address air quality impacts, monitoring grading activity for paleontologic resources, etc., address the impacts associated with the construction and operation of public facilities. Specifically, Mitigation Measures AQ1, AQ2, AQ3, HH1, HH2, HH3, HH4, HH5, GS1, GS2, GS3, GS4, H/WQ1, H/WQ2, H/WQ4, SW1, Bio1, Bio2, Bio4, P1, Cult1, Cult2, Cult3, and Cult4 apply to the construction of public services and facilities. These measures would be applicable to new construction and operation of law enforcement facilities to serve new growth expected in the project area.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of law enforcement services, or the ability of law enforcement services to respond to an incident in a timely manner. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

The EIR concludes that development of the project will not have any significant impact on the provision of law enforcement services, or the ability of law enforcement services to respond to an incident in a timely manner. With regard to construction impacts, mitigation measures required for any significant impacts identified in preceding sections of the EIR would apply to the future construction and operation of a new police substation within the project area. Project-level environmental review, at the time the specific location of the future police substation is known, and when specific development plans have been prepared, will be required and project specific mitigation measures developed and implemented. Implementation of Mitigation Measures identified in the EIR Sections 5.1-5.15 (that address the impacts associated with the construction and operation of public facilities) will reduce the impact associated with construction and operation of public facilities to a level less than significant (EIR page 5.14-6).

2. Significant Impact: Fire Protection and Emergency Services

The EIR concludes that development of the project will not have any significant impact on the provision of fire protection or emergency services, or the ability of fire services to respond to an incident in a timely manner. A final determination of fire station needs and locations will be made at a future date when more information is known about risk, density, construction, layout, and type of occupancy. Appropriate capital improvements and resources will be required to meet anticipated fire service delivery requirements. The general significant impacts associated with the construction, expansion, and/or operation of public facilities has been addressed in the EIR, including the construction, expansion, and/or operation of fire protection facilities and emergency response services (EIR pages 5.14-6 – 5.14-11).

Mitigation Measure

The EIR concludes that development of the project will not have any significant impact on the provision of fire protection or emergency services, or the ability of fire services to respond to an incident in a timely manner. With regard to construction impacts, mitigation measures identified in other sections of the EIR (5.1-5.15), including watering during construction to address air quality impacts, monitoring grading activity for paleontologic resources, etc., address the impacts associated with the construction and operation of public facilities. Specifically, Mitigation Measures AQ1, AQ2, AQ3, HH1, HH2, HH3, HH4, HH5, GS1, GS2, GS3, GS4, H/WQ1, H/WQ2, H/WQ4, SW1, Bio1, Bio2, Bio4, P1, Cult1, Cult2, Cult3, and Cult4 apply to the construction of public services and facilities. These measures would be applicable to new construction and operation of fire protection and emergency response services to serve new growth expected in the project area.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of fire and emergency services, or the ability of fire services to respond to an incident in a timely manner. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

The EIR concludes that development of the project will not have any significant impact on the provision of fire and emergency services, or the ability of fire services to respond to an incident in a timely manner. With regard to construction impacts, mitigation measures required for any significant impacts identified in preceding sections of the EIR would apply to the future construction and operation of fire protection and emergency response services within the project area. Project-level environmental review, at the time the specific location of future fire protection facilities and/or emergency response services are known, and when specific development plans have been prepared, will be required and project specific mitigation measures developed and implemented. Implementation of Mitigation Measures identified in the EIR Sections 5.1-5.15 (that address the impacts associated with the construction and operation of public facilities) will reduce the impact associated with construction and operation of public facilities to a level less than significant (EIR page 5.14-11).

3. Significant Impact: Park and Recreation

The EIR concludes that development of the project will not have any significant impact on the provision of park and recreation facilities. The parkland acreage proposed under the proposed project will greatly exceed the existing City of Irvine's standards. The

general significant impacts associated with the construction, expansion, and/or operation of public facilities has been addressed in the EIR, including the construction, expansion, and/or operation of a new park and recreational facilities.

Mitigation Measure

The EIR concludes that development of the project will not have any significant impact on the provision of parks and recreation facilities. With regard to construction impacts, mitigation measures identified in other sections of the EIR (5.1-5.15), including watering during construction to address air quality impacts, monitoring grading activity for paleontologic resources, etc., address the impacts associated with the construction and operation of public facilities. Specifically, Mitigation Measures AQ1, AQ2, AQ3, HH1, HH2, HH3, HH4, HH5, GS1, GS2, GS3, GS4, H/WQ1, H/WQ2, H/WQ4, SW1, Bio1, Bio2, Bio4, P1, Cult1, Cult2, Cult3, and Cult4 apply to the construction of public services and facilities. These measures would be applicable to new construction and operation of new park and recreational facilities to serve new growth expected in the project area.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of parks and recreation facilities. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

The EIR concludes that development of the project will not have any significant impact on the provision of parks and recreation facilities. With regard to construction impacts, mitigation measures required for any significant impacts identified in preceding sections of the EIR would apply to the future construction and operation of new park and recreational facilities within the project area. Project-level environmental review, at the time the specific location of new park and recreational facilities are known, and when specific development plans have been prepared, will be required and project specific mitigation measures developed and implemented. Implementation of Mitigation Measures identified in the EIR Sections 5.1-5.15 (that address the impacts associated with the construction and operation of public facilities) will reduce the impact associated with construction and operation of public facilities to a level less than significant (EIR pages 5.14-19 and 5.14-20).

4. Significant Impact: School Services

The EIR concludes that development of the project will not have any significant impact on the provision of school services. New development within the project area will have to pay development fees to the school districts. These fees will be used for the development of new schools, expansion or improvement of existing school facilities or to

fund school services. Under the Overlay Plan, the project would generate a total of 1,525 new students in the Irvine Unified School District and 384 new students in the Saddleback Valley Unified School District. Additionally, under the Overlay Plan, the Development Agreement requires dedication of a school site in the TOD portion of the project area. The general significant impacts associated with the construction, expansion, and/or operation of public facilities has been addressed in the EIR, including the construction, expansion, and/or operation of new school service.

Mitigation Measure

The EIR concludes that development of the project will not have any significant impact on the provision school services. With regard to construction impacts, mitigation measures identified in other sections of the EIR (5.1-5.15), including watering during construction to address air quality impacts, monitoring grading activity for paleontologic resources, etc., address the impacts associated with the construction and operation of public facilities. Specifically, Mitigation Measures AQ1, AQ2, AQ3, HH1, HH2, HH3, HH4, HH5, GS1, GS2, GS3, GS4, H/WQ1, H/WQ2, H/WQ4, SW1, Bio1, Bio2, Bio4, P1, Cult1, Cult2, Cult3, and Cult4 apply to the construction of public services and facilities. These measures would be applicable to new construction and operation of school services to serve new growth expected in the project area.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of school services. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

The EIR concludes that development of the project will not have any significant impact on the provision of school services. With regard to construction impacts, mitigation measures required for any significant impacts identified in preceding sections of the EIR would apply to the future construction and operation of school services within the project area. Project-level environmental review, at the time the specific location of educational facilities and school services are known, and when specific development plans have been prepared, will be required and project specific mitigation measures developed and implemented. Implementation of Mitigation Measures identified in the EIR Sections 5.1-5.15 (that address the impacts associated with the construction and operation of public facilities) will reduce the impact associated with construction and operation of public facilities to a level less than significant (EIR pages 5.14-27 and 5.14-28).

L. PROJECT-LEVEL UTILITIES

Base Plan and Overlay Plan

1. Significant Impact: Potable Water

The EIR concludes that development of the project will not have any significant impact on the provision of potable water services. The existing transmission capacity of the potable water system on-site will be expanded to serve the proposed project. The Base and Overlay Plan system expands the existing MCAS El Toro potable water system to fully integrate into the IRWD system and provide backbone service to all user areas in the project. The specific environmental impact of constructing new potable water facilities that will be needed to serve the proposed project cannot be determined at this program level of analysis as site specific plans for the installation of the new potable water backbone system have not been prepared. However, the general impacts associated with the construction and operation of public utilities has been addressed within the EIR, which would include the construction and operation of the new potable water facilities (EIR pages 5.15-2 through 5.15-6).

Mitigation Measures

The EIR concludes that development of the project will not have any significant impact on the provision of potable water services. With regard to construction impacts, mitigation measures identified in other sections of the EIR (5.1-5.15), including watering during construction to address air quality impacts, monitoring grading activity for paleontologic resources, etc., address the impacts associated with the construction and operation of utilities. Specifically, Mitigation Measures AQ1, AQ2, AQ3, HH1, HH2, HH3, HH4, HH5, GS1, GS2, GS3, GS4, H/WQ1, H/WQ2, H/WQ4, SW1, Bio1, Bio2, Bio4, P1, Cult1, Cult2, Cult3, and Cult4 apply to the construction of utilities. These measures would be applicable to new construction and operation of the new potable water facilities to serve new growth expected in the project area.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of potable water services. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

The EIR concludes that development of the project will not have any significant impact on the provision of potable water services. With regard to construction impacts, mitigation measures required for any significant impacts identified in preceding sections of the EIR would apply to the future construction and operation of the new potable water

facilities within the project area. Project-level environmental review, at the time the specific location of the new potable water facilities are known, and when specific development plans have been prepared, will be required and project specific mitigation measures developed and implemented. Implementation of Mitigation Measures identified in the EIR Sections 5.1-5.15 (that address the impacts associated with the construction and operation of public facilities) will reduce the impact associated with construction and operation of public facilities to a level less than significant (EIR page 5.15-6).

2. Significant Impact: Recycled Water

The EIR concludes that development of the project will not have any significant impact on the provision of recycled water facilities. The Irvine Ranch Water District (IRWD) will continue to provide recycled water service, at existing levels of service, to PAs 51 and 30. IRWD has indicated in its Water Resources Master Plan that it will have sufficient capacity to meet the future recycled water requirements of Measure W Orange County Great Park Plan, which is similar to the proposed project. Additionally, the IRWD Board of Directors approved water supply assessment for the proposed project. Based on the assessment, the IRWD has determined that a sufficient non-potable water supply is available to serve the project. The specific environmental impact of constructing recycled water facilities that will be needed to serve the proposed project cannot be determined at this program level of analysis as site specific plans for the installation of the new recycled water backbone system have not been prepared. However, the general impacts associated with the construction and operation of public utilities has been addressed within the EIR, which would include the construction and operation of the new recycled water facilities (EIR pages 5.15-7 through 5.15-11).

Mitigation Measures

The EIR concludes that development of the project will not have any significant impact on the provision of recycled water facilities. With regard to construction impacts, mitigation measures identified in other sections of the EIR (5.1-5.15), including watering during construction to address air quality impacts, monitoring grading activity for paleontologic resources, etc., address the impacts associated with the construction and operation of utilities. Specifically, Mitigation Measures AQ1, AQ2, AQ3, HH1, HH2, HH3, HH4, HH5, GS1, GS2, GS3, GS4, H/WQ1, H/WQ2, H/WQ4, SW1, Bio1, Bio2, Bio4, P1, Cult1, Cult2, Cult3, and Cult4 apply to the construction of utilities. These measures would be applicable to new construction and operation of new recycled water facilities to serve new growth expected in the project area.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of recycled water facilities. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or

alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

The EIR concludes that development of the project will not have any significant impact on the provision of recycled water facilities. With regard to construction impacts, mitigation measures required for any significant impacts identified in preceding sections of the EIR would apply to the future construction and operation of new recycled water facilities within the project area. Project-level environmental review, at the time the specific location of new recycled water facilities are known, and when specific development plans have been prepared, will be required and project specific mitigation measures developed and implemented. Implementation of Mitigation Measures identified in the EIR Sections 5.1-5.15 (that address the impacts associated with the construction and operation of public facilities) will reduce the impact associated with construction and operation of public facilities to a level less than significant (EIR pages 5.15-11 and 5.15-12).

3. Significant Impact: Sewer

The EIR concludes that development of the project will not have any significant impact on the provision of sewer facilities. The IRWD will continue to provide sewer service, at existing levels of service, to Pas 51 and 30. IRWD has indicated in the past that it will have sufficient capacity to meet the future sewer requirements of Pas 51 and 30 under more intense development plans (the Millennium Plan) than proposed development plan; therefore, IRWD would have adequate capacity to service the less intense Base Plan and Overlay Plan. The specific environmental impact of constructing sewer facilities that will be needed to serve the proposed project cannot be determined at this program level of analysis as site specific plans for the installation of the new sewer system have not been prepared. However, the general impacts associated with the construction and operation of public utilities has been addressed within the EIR, which would include the construction and operation of the new sewer facilities (EIR page 5.15-12).

Mitigation Measure

The EIR concludes that development of the project will not have any significant impact on the provision of sewer facilities. With regard to construction impacts, mitigation measures identified in other sections of the EIR (5.1-5.15), including watering during construction to address air quality impacts, monitoring grading activity for paleontologic resources, etc., address the impacts associated with the construction and operation of utilities. Specifically, Mitigation Measures AQ1, AQ2, AQ3, HH1, HH2, HH3, HH4, HH5, GS1, GS2, GS3, GS4, H/WQ1, H/WQ2, H/WQ4, SW1, Bio1, Bio2, Bio4, P1, Cult1, Cult2, Cult3, and Cult4 apply to the construction of utilities. These measures would be applicable to new construction and operation of new sewer facilities to serve new growth expected in the project area.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of sewer facilities. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

The EIR concludes that development of the project will not have any significant impact on the provision of sewer facilities. With regard to construction impacts, mitigation measures required for any significant impacts identified in preceding sections of the EIR would apply to the future construction and operation of sewer facilities within the project area. Project-level environmental review, at the time the specific location of new sewer facilities are known, and when specific development plans have been prepared, will be required and project specific mitigation measures developed and implemented. Implementation of Mitigation Measures identified in the EIR Sections 5.1-5.15 (that address the impacts associated with the construction and operation of public facilities) will reduce the impact associated with construction and operation of public facilities to a level less than significant (EIR page 5.15-18).

4. Significant Impact: Solid Waste

The EIR concludes that development of the project will not have any significant impact on the provision of solid waste facilities. Anticipated increases in solid waste generation resulting from the implementation of the proposed Base or Overlay Plans are not anticipated to exceed the capacity of IWMD facilities since the current capacity exceeds 30 years. Private solid waste hauling services will expand to meet the needs of the projected growth and development allowed under the proposed project. The proposed project is estimated to generate approximately 12.4 tons of solid waste per day (Base Plan) and 35.4 tons of solid waste per day (Overlay Plan) through buildout year 2025. Anticipated increase in solid waste generation resulting from implementation of either the Base Plan or Overlay Plan is not expected to exceed capacity of the County of Orange Integrated Waste Management Department facilities since the current capacity exceeds 30 years. Under AB939, each city and county is required to reduce 50% of solid wastes going into landfills, based on 1990 levels (EIR page 5.15-21). Additionally, as part of AB 939 compliance State law (SB1374) requires that all cities implement ordinances or other measures that specifically require the diversion of 75% of all construction or demolition wastes from landfills (EIR page 5.15-20).

Mitigation Measures

SW1. It is anticipated that much of the solid waste resulting from the demolition, dismantling, or other deconstruction of the aged structures and property, including

but not limited to buildings and runways, at El Toro MCAS is contaminated with lead based paints, asbestos, or other materials that may render it unsuitable for recycling or reuse. At the sole cost and expense of the project applicant, in order to evaluate this condition and determine the feasibility of recycling of solid waste material from the El Toro MCAS site by ordinary means, a technical evaluation by a qualified environmental consultant must be conducted. The technical evaluation shall include sufficient sample testing of all types of solid waste materials to be generated by the project to analyze its composition. A copy of the full technical evaluation and its findings must be submitted to the City of Irvine Community Development Department. The City of Irvine must confirm the adequacy of the technical evaluation prior to authorizing the demolition, dismantling, or deconstruction project to proceed.

If it is determined by the technical evaluation that the material is contaminated and prohibited from being recycled by ordinary means, a further evaluation must be conducted to identify and evaluate other feasible methods approved by state law to divert the material from landfills. This may include the delivery of the waste material to other appropriate non-disposal or transformation facilities, such as “waste-to-energy” (WTE) plants (EIR page 5.15-23).

- SW2.** For that solid waste which is determined to be inappropriate for recycling (as that term is defined by California Public Resources Code Section 40180), the project applicant must submit a written plan to the City and implement such plan to ensure that 75% of the material, or the maximum amount feasible as determined by the technical evaluation, is diverted from the landfill through other methods that comply with state statutes and regulations (EIR page 5.15-23).
- SW3.** For that solid waste which the technical study deems to be suitable for recycling the project applicant must submit a written plan to the City and implement such plan to ensure that solid waste material generated by the demolition, dismantling, or deconstruction project, land use operations and maintenance is collected by a City authorized solid waste hauler or recycling agent, and that a minimum of 75% of the solid waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180. ("Recycling" does not include transformation, as defined in Public Resources Code Section 40201) (EIR pages 5.15-23 and 5.15-24).
- SW4.** To ensure ongoing compliance with these mitigation measures, the project applicant will be required to submit solid waste tonnage reports to the City of Irvine on City approved forms, accompanied by “weight ticket” receipts from state-certified disposal, nondisposal, or transformation facilities, on a quarterly basis to demonstrate that solid waste diversion has occurred in accordance with these required mitigation measures and in a manner that is consistent with, and not detrimental to, the efforts of the City of Irvine to comply with AB939.

SW5. For green waste, the project applicant must submit a written plan to the City and implement such plan to ensure that the green waste material generated by the landscape maintenance operations is collected by a City authorized waste hauler or recycling agent, and that a minimum of 50% of the green waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180.

To assure compliance with applicable statutes related to the disposal of solid waste, it is necessary for the City to require appropriate and effective mitigation measures to limit the disposal and ensure significant recycling of solid waste on-site.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of solid waste services. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

Mitigation Measure SW1 requires the preparation of technical studies prior to the demolition or removal of aged structures or property, including runways, from the project site. The purpose of the technical studies is to determine the condition and feasibility of recycling solid waste material from the former MCAS El Toro. Mitigation Measures SW2 through SW5 requires the project applicant to submit written plans to the City of Irvine and maintain adequate records in order to ensure that 75% of the solid waste material removed from the project site, or the maximum amount feasible as determined by the technical studies, is recycled. Compliance with City and State policies and regulations and implementation of Mitigation Measures SW1 through SW5 will reduce the potentially significant solid waste impact to a level less than significant (EIR 5.15- 24).

5. Significant Impact: Energy and Communications

The EIR concludes that development of the project will not have any significant impact on the provision of energy and communications services. Sufficient available capacity exists at the Irvine and Limestone Substations to we4rve the Proposed Project's load estimates. Additionally, Southern California Edison has indicated its ability to serve the project, in accordance with all applicable tariff schedules which are the effective rates and rules of the Southern California Edison Company on file with and approved by the Public Utilities Commission, State of California, and subject to the receipt of such permits or authorization from public agencies may be required for such installation. The specific environmental impact of constructing energy and communications facilities that will be needed to serve the proposed project cannot be determined at this program level of analysis as site specific plans for the installation of the new energy and

communications systems has not been prepared. However, the general impacts associated with the construction and operation of public utilities has been addressed within the EIR, which would include the construction and operation of the new energy and communications facilities (EIR page 5.15-25).

Mitigation Measure

The EIR concludes that development of the project will not have any significant impact on the provision of energy and communications services. With regard to construction impacts, mitigation measures identified in other sections of the EIR (5.1-5.15), including watering during construction to address air quality impacts, monitoring grading activity for paleontologic resources, etc., address the impacts associated with the construction and operation of utilities. Specifically, Mitigation Measures AQ1, AQ2, AQ3, HH1, HH2, HH3, HH4, HH5, GS1, GS2, GS3, GS4, H/WQ1, H/WQ2, H/WQ4, SW1, Bio1, Bio2, Bio4, P1, Cult1, Cult2, Cult3, and Cult4 apply to the construction of utilities. These measures would be applicable to new construction and operation of new energy and communications facilities to serve new growth expected in the project area.

Finding

The EIR concludes that development of the project will not have any significant impact on the provision of energy and communications services. With regard to construction impacts, pursuant to CEQA Section 21081(a)(1) and Guidelines Section 15091(a)(1), changes or alterations have been required in, or incorporated into, the project which avoid or substantially lessen the significant environmental effect as identified in the EIR.

Facts in Support of Finding

The EIR concludes that development of the project will not have any significant impact on the provision of energy and communications services. With regard to construction impacts, mitigation measures required for any significant impacts identified in preceding sections of the EIR would apply to the future construction and operation of new energy and communications facilities within the project area. Project-level environmental review, at the time the specific location of new energy and communications facilities are known, and when specific development plans have been prepared, will be required and project specific mitigation measures developed and implemented. Implementation of Mitigation Measures identified in the EIR Sections 5.1-5.15 (that address the impacts associated with the construction and operation of public facilities) will reduce the impact associated with construction and operation of public facilities to a level less than significant (EIR page 5.15-37).

VII. IMPACTS DETERMINED TO BE SIGNIFICANT AND UNAVOIDABLE

The following describes the project-level and cumulative unavoidable significant impacts identified within the FEIR.

A. PROJECT-LEVEL AIR QUALITY

1. Significant and Unavoidable Impact:

Base Plan and Overlay Plan

Implementation of the proposed project will result in a significant air quality impact associated with the fugitive dust emissions resulting from the demolition of existing structures, and land preparation and excavation for the construction of proposed structures. Additionally, the operation of the project will result in a significant impact associated with motor vehicle emissions.

Mitigation Measures

Construction Emissions Mitigation

The major source of construction emissions are fugitive dust emissions resulting from the demolition of existing structures, and land preparation and excavation for the construction of proposed structures. Actual erection of structures is considered a minimal source of construction related dust emissions. The following mitigation measures are intended to effectively reduce pollutant emissions from construction activities. Some or all of the mentioned mitigation measures can be implemented as necessary, but quantification and application of these measures cannot be specified at this time.

- AQ1.** Prior to the start of demolition and construction within the project area, adjacent sensitive receptors shall be informed of the planned demolition and construction activities. Measures to avoid significantly impacting these receptors shall be developed and implemented by the project proponent in coordination with these uses. Other applicable mitigation measures such as erection of fences around construction areas; staggered use of equipment near sensitive receptors; diversion of truck trips away from receptors; etc.; shall be employed as necessary. Compliance with this measure shall be verified by the Director of Community Development.
- AQ2.** Prior to the commencement of construction activities required to demolish and/or remove existing DON infrastructure, including runways, the Director of Community Development shall receive and approve a construction emissions mitigation plan from the chosen demolition contractor. Prior to the issuance of grading permits, the applicant of any future development project shall submit, and the Director of Community Development shall approve a construction emissions mitigation plan. The plans shall identify implementation procedures for each of

the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.

- Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase.
- Water exposed soils at least twice daily and maintain equipment and vehicle engines in good condition and in proper tune.
- Wash off trucks leaving the site.
- Replace ground cover on construction sites when it is determined that the site will be undisturbed for lengthy periods.
- Reduce speeds on unpaved roads to less than 15 miles per hour.
- Halt all grading and excavation operations when wind speeds exceed 25 miles per hour.
- Suspend all emission generating activities during smog alerts.
- Use propane- or butane-powered on-site mobile equipment instead of diesel/gasoline, whenever feasible.
- Properly maintain diesel-powered on-site mobile equipment.
- Sweep streets at the end of the day if substantial visible soil material is carried over to the adjacent streets.
- Use electricity from power poles rather than temporary on-site diesel- or gasoline-powered generators, whenever feasible.
- Use of low-VOC asphalt.
- Cover all trucks hauling dirt, sand, soil or other loose material to and from the site.
- Provide temporary traffic controls (e.g., flag persons) during all phases of construction to ensure minimum disruption of traffic.
- Schedule construction activities that affect traffic flow on adjoining streets to off-peak hours to the extent possible.
- Reroute construction trucks away from congested streets, whenever feasible.
- Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, whenever feasible.

AQ3. Prior to the issuance of building permits for any future development, the applicant shall submit, and the Director of Community Development shall have approved, an operation-emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.

- Utilize built-in energy-efficient appliances to reduce energy consumption and emissions.
- Utilize energy-efficient and automated controls for air conditioners and lighting to reduce electricity consumption and associated emissions.
- Install special sunlight-filtering window coatings or double-paned windows to reduce thermal loss, whenever feasible.
- Utilize light-colored roofing materials as opposed to dark roofing materials to conserve electrical energy for air-conditioning.
- Provide shade trees in residential subdivisions as well as public areas, including parks, to reduce building heating and cooling needs, whenever feasible.
- Ensure that whenever feasible, commercial truck traffic is diverted from local roadways to off-peak periods.
- Centralize space heating and cooling for multiple-family dwelling units and commercial space.
- Orient buildings north/south for reducing energy-related combustion emissions.
- Use solar energy, when feasible.
- Use high rating insulation in walls and ceilings.

AQ4. Information on available housing and employment opportunities within the project area shall be provided to employees and residents of the project area, so as to encourage employees to live within the residential developments planned on-site and future residents to find employment nearby.

AQ5. Future employment generating non-residential development shall include measures to reduce vehicle trips including carpool incentives, easy access to public transit systems, trail linkages between uses, low-emissions vehicle fleets, and the provision of on-site facilities such as banking and food courts.

Due to the size of the project, certain impacts that result from development will be "unavoidable" as these impacts cannot be completely mitigated and most of these changes are irreversible. This is considered a significant unavoidable impact, although the overall effect on air quality within the Basin for the life of the proposed project is estimated at less than one half of one percent. Construction-related emissions are expected to result in unavoidable short-term impacts in terms of ROG and NO_x, although implementation of mitigation measures during construction will minimize these impacts to the extent feasible. Short-term impacts on sensitive receptors are expected to be mitigated during construction and no long-term CO hotspots will be created that may affect sensitive receptors. Operational emissions from future development under the proposed project will consist of area source and motor vehicle emissions, which will

exceed SCAQMD thresholds. These air quality emissions from future development under the proposed project will remain significant, even after mitigation.

Area Source (Post-Construction) Emission Mitigation

Emissions resulting from the post-construction and routine operation of various sources within a development contribute to long term impacts on air quality throughout its life.

Some of the mitigation measures that could reduce energy consumption within the proposed project and thus, reduce associated emissions should be considered for implementation and are listed below.

- ◆ Central residential space heating and cooling for multi-dwelling units.
- ◆ Orient buildings north/south for reducing energy-related combustion emissions.
- ◆ Central commercial space heating.

These measures could be accounted for in the planning process such that the overall impact of the proposed project on prevalent air quality in the SCAB is minimized.

Motor Vehicle (Operational) Emission Mitigation

Motor vehicle emissions form a large portion of the total operational emissions from the proposed project. These emissions can be mitigated by the use of fuel-efficient vehicles and a well designed transportation system. However, most of the measures will be ineffective unless the occupants of various commercial and residential establishments within the project contribute their share in the mitigation effort. The implementation of some of the measures cannot be stated with certainty, as they are owner and employer specific and related specific land use types within the proposed project. Development of the proposed project will identify motor vehicle mitigation measures that would result in reductions in emissions and thereby contribute to the overall improvement in air quality within the SCAB. The inclusion of the OCTA facility within the proposed project is aimed at encouraging the use of alternative transportation thereby reducing motor vehicle congestion and related air quality emissions and impacts. The implementation of an emission reduction program under SCAQMD Rule 2202 is also expected to result in reducing motor vehicle air quality emissions and impacts.

Finding

Pursuant to CEQA § 15091 (a)(3), specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the FEIR.

Facts in Support of Finding:

The following section provides a summary of the possible mitigation measures that could be implemented for the development of the former MCAS El Toro according to the proposed project. The limited availability of specific data to quantify air quality impacts for emission sources within the proposed project make it impossible to accurately quantify the effectiveness of each of the mitigation measures. However, these measures are identified as possibilities for the project, while some are recommended by the SCAQMD for all development projects within the SCAB. As expected, the implementation of some or all of the mitigation measures will result in an overall reduction in potential air emissions from the proposed project. However, the implementation of any of these emission mitigation measures cannot be guaranteed at this stage of the proposed project, because they may not be technically or economically feasible once actual development gets underway. Therefore, the emission mitigation measures discussed in the EIR are defined as alternate control measures that could be implemented for the proposed project.

B. PROJECT-LEVEL AGRICULTURAL RESOURCES

1. Significant and Unavoidable Impact:

Base Plan and Overlay Plan

The project Base Plan will convert 574 acres of Prime Farmland, 63 acres of Unique Farmland, and 46 acres of Farmland of Statewide Importance to non-agricultural use. The Overlay Plan will convert 651 acres of Prime Farmland, 63 acres of Unique Farmland and 88 acres of Farmland of Statewide Importance to non-agricultural uses. Additionally, the project will involve changes in the existing environment, which, due to their location or nature, could result in conversion of existing farmland to non-agricultural use.

Mitigation Measures

Ag 1. In order to encourage agriculture as an interim land use pending development on the project site by warning future residents that they are buying or renting a house adjacent to existing agricultural operations, City Of Irvine Standard Discretionary Case Condition B.4 and City Of Irvine Standard Subdivision Condition 3.4 regarding disclosure statements shall be amended to include the following for subdivisions proposed adjacent to existing agricultural operations:

Prior to issuance of building permits, the applicant shall submit, and the Director of Community Development shall have approved, a completed occupancy disclosure form for the project. The approved disclosure form,

along with its attachments, shall be included as part of the rental/lease agreement and as part of the sales literature for the project. The disclosure statement shall include the following information:

C Continuation of agricultural operations adjacent to the site and their potential effects (spraying of pesticides, noise, dust, odor, etc.) on future residents or tenants.

Ag 2. Heritage and community service/educational farming operations shall be encouraged within utility easements and other lands. Heritage farming is defined as small-scale specialty farming operations that can be accommodated in an urban environment. An example would be the Edible Landscape project located adjacent to Harvard Avenue within the Edison right-of-way.

Ag 3. Future landowners and the City shall work cooperatively with farmers to minimize conflicts between agricultural operation and adjacent urban uses.

Finding

Pursuant to CEQA § 15091 (a)(3), specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the FEIR.

Facts in Support of Finding

Implementation of Mitigation Measures Ag 1 through Ag 3 will reduce the impact to an extent feasible; however, the impact associated with agricultural resources will remain significant and unavoidable.

C. PROJECT-LEVEL POPULATION AND HOUSING

1. Significant and Unavoidable Impact:

Base Plan and Overlay Plan

A significant impact to jobs/housing ratio will occur.

Mitigation Measure

No mitigation is available to rectify conflicts with the numerical objectives of regional planning documents including the jobs/housing ratio.

Finding

Pursuant to CEQA § 15091 (a)(3), specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the FEIR.

Facts in Support of Finding:

Although the proposed amendments to the City of Irvine General Plan will be incorporated into regional SCAG and County of Orange planning projections, the impact associated with jobs/housing balance will remain significant and unavoidable.

D. CUMULATIVE AIR QUALITY

1. Significant and Unavoidable Impact:

Emissions due to development in the proposed project will exceed SCAQMD thresholds of significance for oxides of nitrogen and reactive organic gases during construction (short-term impact) and for oxides of nitrogen, reactive organic gases, carbon monoxide, and particulate matter less than ten microns in diameter (PM10) during operation from area source and vehicular emissions (long-term impact for both interim year and buildout year). Together, construction and operation emissions will also exceed applicable thresholds of significance. Although construction activities for the related projects may not overlap, the environmental analysis of this EIR assumes that they would. Operation emissions in conjunction with related projects and other emissions in the Basin will also coincide. Since air quality in the Basin does not comply with federal or state standards, these emissions will contribute to a cumulatively significant impact on air quality.

Mitigation Measures

Similar to project-specific impact, no feasible mitigation measures exist to reduce this cumulative impact to a level of less than significant because any project of substantial size will result in this impact.

Finding

Pursuant to CEQA § 15091 (a)(3), specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the FEIR.

Facts in Support of Finding

Since air quality in the Basin does not comply with federal or state standards, the project related emissions will contribute to a cumulatively significant and unavoidable impact on air quality.

E. CUMULATIVE TRAFFIC/CIRCULATION

1. Significant and Unavoidable Impact:

The geographic scope for traffic includes cumulative growth projections for Orange County. The 2025 and Post 2025 analyses contained in Section 5.2 *Transportation/Traffic* assess the traffic impacts of all cumulative development anticipated by the Year 2025 and beyond. As shown in these analyses, all intersections and roadway/freeway/tollway/ramp segments will operate at acceptable levels of service with the existing or planned improvements. However, it has been assumed in the traffic analysis that the cumulative impact of project traffic along with other regional growth at the identified ramp and freeway locations will be mitigated through a combination of regional programs that are the responsibility of other agencies. If these programs are not implemented by the agencies with the responsibility to do so, the cumulative freeway/tollway ramp impacts would remain significant and unavoidable. As a result, the proposed project will result in a cumulatively significant traffic impact that may remain significant and unavoidable.

Mitigation Measures

Tran 1. Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) (“Spectrumotion”) in accordance with Article X of the recorded Declaration of Covenants, Conditions and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs. The primary purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described below:

Transportation Management Plan (TMP)

The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for the Great Park Project. This document summarizes the key elements of the TMP.

1.0 Introduction

The purpose of this document is to provide an outline for a comprehensive TMP for the Great Park. This report is not intended to provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.

It is the intent to annex Planning Area 51 and a portion of Planning Area 35 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo-commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed restrictions requiring participation in the TMA. Membership dues provide the funding for the Association and its programs, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.

In the event that annexation of PAs 51 and 35 into Spectrumotion is not approved, a TMP similar to that provided by Spectrumotion will be implemented. This document sets forth the components of the TMP should it be necessary.

2.0 Transportation Management Plan Framework

The key elements of the Great Park TMP are set forth below:

New Hire Orientation: Inform newly hired employees of commuting services available to them.

Public Transportation Pass Sales: Provide a central location for purchase of passes to available transit services ((i.e., OCTA buses, Metrolink, Amtrak, etc.).

Vanpool and Carpool Formation Assistance: Perform all of the administrative work necessary to establish van pools and car pools.

On-site Promotions: Hold rideshare promotions at work sites and assist in employer assistance promotions.

Telecommuting/Alternative Work Schedule Consulting: Assist employers in developing and implementing a telecommuting or alternative work schedule program.

Personalized Commute Consulting: Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.

Website: Maintain a website with all of their program information available.

Rideshare Promotions: Conduct high visibility rideshare promotions as a means to advertise its services.

Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.

Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.

3.0 Transportation Management Plan Implementation

As part of the TMP, a process will be established to monitor its effectiveness in reducing peak hour trip generation in the Great Park. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.

Tran 2. Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of this EIR.

Tran 3. Prior to issuance of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the project traffic study (Urban Crossroads, December 2002) to maintain satisfactory levels of service as defined by the City's General Plan, based on thresholds of significance, performance standards, and methodologies used in this EIR, Orange County Congestion

Management Program, and established in the transportation system/infrastructure fee program described in Mitigation Measure Tran 2 above.

- Tran 4.** Prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate the cumulative impact of the subject map and all previously approved or concurrently submitted maps. The methodology for the study area, applicable land use and circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved traffic study scope of work. The landowner or subsequent project applicant shall construct, bond for, or enter into a funding agreement for necessary improvements identified in the updated traffic study and/or participate in the City fee program (Tran 2 above) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of this EIR.

Traffic signals that are on-site or directly related to the Great Park development will be installed as warranted through the mitigation implementation plan process.

- Tran 5.** In conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, the landowner or subsequent project applicant and the City will take the following actions:
1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-tollway ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in this EIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines.

2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency.
3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to recordation of the first final map for each Master Tentative Map or equivalent to establish the method and timing of payment of the identified percentage responsibility.
4. The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.

Tran 6. The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.

Tran 7. Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval, proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-complete clause or any similar agreement restricting a public agency's authority to construct improvement.

Finding

Pursuant to CEQA § 15091 (a)(3), specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the FEIR.

Facts in Support of Finding

The traffic analysis indicates that the cumulative impact of project traffic along with other regional growth at the identified ramp and freeway locations will be mitigated through a combination of regional programs that are the responsibility of other agencies. If these programs are not implemented by the agencies with the responsibility to do so, the cumulative freeway/tollway ramp impacts would remain significant and unavoidable. As a result, the proposed project will result in a cumulatively significant traffic impact that may remain significant and unavoidable.

F. CUMULATIVE AGRICULTURAL RESOURCES

1. Significant and Unavoidable Impact:

The geographic scope for agricultural resources includes Orange County and the growth expected within the County. The encroachment of urban areas on agricultural lands is a long and continued trend in Orange County. Though it is difficult to quantify the amount of agricultural land that is under development pressure within the County, it is evident that such pressure exists and will continue to with or without implementation of the project. The rising cost of irrigation, increased land values, labor costs, and damage from vandalism have made it difficult to maintain a successful large scale agricultural operation. The conversion of agricultural land to urban uses is an important policy decision that is ultimately left to each jurisdiction. In order to address the cumulative loss of agricultural land within Irvine, the City has established an Agricultural Legacy Program, which intends to retain certain sites within Irvine for metro farming activities. Despite the fact that the project will help implement the City's Agricultural Legacy Program by retaining agricultural uses on-site, the loss of the remaining agricultural land is a cumulatively significant loss of local and regional agriculture. The project will result in a cumulatively significant and unavoidable impact associated with the loss of agriculture.

Mitigation Measures

Mitigation Measures Considered But Determined to be Infeasible:

CEQA Section 21002.1(b) requires that "each public agency shall mitigate or avoid the significant effects on the environment of projects that it carries out or approves whenever it is feasible to do so." The term "feasible" is defined by CEQA Section 21061.1 to mean "capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors."

A number of mitigation measures were considered for mitigating or avoiding the impact of the conversion of agricultural lands to other uses; however, no feasible mitigation measures are available that would reduce the impacts of the Base Plan or the Overlay

Plan to a level less than significant. Potential mitigation measures considered include: the retention of agricultural land on-site; the purchase, set-aside, or transfer of development rights to preserve agricultural land elsewhere in the City or region, and assessing agricultural impact fees. The following is a brief discussion of the mitigation considered to attempt to reduce the impacts of the project to a level less than significant and the reasons why these measures were found to be infeasible.

Retention of Agricultural Uses

The encroachment of urban areas on agricultural lands is a long and continuing trend in Orange County. Although it is difficult to quantify the amount of agricultural land that is under development pressure within the County, it is evident that such pressure exists and will continue to exist with or without implementation of the project. The rising costs of irrigation water, increased land values, labor costs, and damage from vandalism have made it difficult to maintain a successful large scale agricultural operation in the County. The conversion of agricultural land to urban uses is thus an important decisions that must ultimately be left to each local jurisdiction. The following describes actions considered by the City of Irvine to mitigate the loss of agricultural land.

Onsite Retention of Agricultural Uses

As discussed in subsection 5.8.1 *Environmental Setting* above, the City is working to establish an Agricultural Legacy Program, which is intended to address the local and regional loss of agricultural land. As part of this program, an initial assessment of candidate sites has been prepared (City of Irvine, November 26, 2002). Based on this preliminary assessment, several hundred acres of land will, within the next five years, be made available for metro farming, which may include such activities as specialty farming, model farming, heritage farming, and community service/educational farming. The proposed project helps implement the Agricultural Legacy Program on-site by proposing the OCGP General Plan designation and 1.1 Exclusive Agriculture Zoning designation on land within PAs 51 and 30, which will help retain on-site agricultural uses.

The retention of additional areas of the site in agricultural use is considered to be infeasible due to the constraints on the continued long-term viability of large scale agriculture in the area as discussed in the *Environmental Setting* subsection above. These constraints, particularly the economic constraints and constraints due to increased environmental regulation, will become greater over time. Despite any City actions to zone additional land for agricultural uses on-site, the City does not have the authority to require landowners to continue farming operations on land that is zoned for agricultural use. The retention of agricultural land use designations on the site will not, therefore, necessarily result in the continuation of agricultural uses. Moreover, a reduction in the development of the site would impede the City from achieving the voters' and the City's objectives for the site in a fiscally sound manner.

As noted above, the proposed project will retain a portion of the site in agricultural use, and agricultural uses may continue on other portions of the site until such time that development is to occur. These proposed long-term and interim uses, however, do not mitigate the significant impact of the conversion of significant farmland and existing agricultural land to non-agricultural uses.

Preservation of Agricultural Uses Citywide

The Irvine General Plan and the Phased Dedication and Compensating Development Opportunities Program will require the preservation of approximately 500 acres of land that has the soil quality and growing season that would otherwise qualify it as Significant Farmland.

Agricultural uses will continue on the South Coast Research and Extension Center SCREC site, which is owned by the University of California and is therefore not subject to many of the constraints on continued agricultural operations noted above. Land uses immediately adjacent to this facility should be planned with the continued agricultural operations at this facility in mind. In addition, agricultural operations are currently occurring in open space areas or lands owned by utilities whose operations are compatible with continuing agricultural activities, such as utility corridors.

As discussed above, the City is working to establish an Agricultural Legacy Program, which is intended to address the local and regional loss of agricultural land. As part of this program, an initial assessment of candidate sites has been prepared (City of Irvine, November 26, 2002). All of the potential sites are undeveloped and most are currently available for agriculture. The topography, climate, and other factors associated with the sites make them conducive to growing a variety of crops. Based on the preliminary assessment of the candidate sites, several hundred acres of land will be made available for metro farming, which may include such activities as specialty farming, model farming, heritage farming, and community service/educational farming.

No other area of Significant Farmland within the City is planned for agricultural uses in the Irvine General Plan. The restriction of additional lands within the City for permanent and exclusive agricultural uses would be inconsistent with the goals and objectives of the Irvine General Plan. In addition, the same constraints on the continued viability of long-term, large-scale, agricultural production noted above with respect to the onsite preservation of agricultural uses would apply to these lands as well, regardless of the land use designation. Without some type of economic support or developed agreements, the mere designation of these lands for agricultural land uses will not ensure long-term agricultural operations.

Finally, even if it were feasible to preserve existing agricultural uses elsewhere in the City, the preservation of such uses would not result in the replacement of the agricultural land converted by the project. There is a finite amount of land suitable for agricultural production and there would still be a net reduction in Significant Farmland and land in

agricultural production. The acquisition of fee title or conservation easements over off-site parcels would not, therefore, avoid, reduce, or compensate for the conversion of agricultural land to non-agricultural uses as a result of implementation of the project. At most, the acquisition might prevent the conversion of other farmland and agricultural uses as a result of other hypothetical future projects. This does not meet the requirement of a feasible measure as defined by CEQA.

Agricultural Impact Fees

Agriculture impact mitigation fees could be assessed against the project and used to purchase development rights in other areas so as to assure that permanent agriculture will be maintained. There are several programs that might be funded by impact fees.

The State Department of Conservation operates the California Farmland Conservancy Program, which provides grants to qualifying agencies for the acquisition of agricultural conservation easements. Establishing agricultural conservation easements involves purchasing deed restrictions on prime agricultural lands that preclude their use for development or non-agricultural purposes. The deed restriction would be permanent unless otherwise negotiated. The land under an easement remains in private ownership and use. Typically, restrictions imposed by an agricultural conservation easement limit residential, non-farm commercial, industrial, and extractive uses of the land. Deeds often allow construction of facilities for the production and processing of agricultural products. This program does accept private contributions. Applications, however, must be made by public agencies such as a county or a city, or certain qualifying not-for-profit entities. The County of Orange and the City of Irvine have not participated in this program. No other agency in Orange County has been identified that participates in this program.

Also, the General Plan of the County of Orange contemplates an evaluation of the establishment of an Agricultural Preservation Program, which would use funds generated from the cancellation of agricultural preserves to fund grants, loans, research, and other programs relating to agricultural resources in an effort to mitigate the long-term impact of Williamson Act contract cancellations and to provide economic and technical support to County agricultural activities. The County has not yet initiated the evaluation of such a program, and has no plans to implement such a program (Northern Sphere EIR, December 2001).

Neither the City of Irvine nor the County of Orange has a fee mitigation program, nor has any specific local program been identified that might be funded by such an impact fee. To be successful, such a program would have to be implemented on a regional basis. In view of the lack of a regional fee mitigation program or any other program for the acquisition of development easements in the vicinity of the project, the imposition of a mitigation fee on a project-by-project basis is not considered to be feasible mitigation because it would not be capable of being accomplished within a reasonable period of time. Also, as is the case with the preservation of off-site agricultural resources, the preservation of existing agricultural resources by the acquisition of agricultural

conservation easements would not prevent the net loss of significant farmlands and agricultural uses, and would not, therefore, mitigate the direct adverse effects of the project. Finally, the preservation of agricultural resources in the City of Irvine or even the County of Orange will not have a measurable impact on the availability of agricultural resources or agricultural production on a statewide or regional basis.

Since none of the potential mitigation measures are feasible, as discussed above, the impact related to the loss of agricultural land and significant farmland resulting from the implementation of the proposed project will remain significant and unavoidable.

Mitigation Measures Determined to be Feasible:

Ag 1. In order to encourage agriculture as an interim land use pending development on the project site by warning future residents that they are buying or renting a house adjacent to existing agricultural operations, City Of Irvine Standard Discretionary Case Condition B.4 and City Of Irvine Standard Subdivision Condition 3.4 regarding disclosure statements shall be amended to include the following for subdivisions proposed adjacent to existing agricultural operations:

Prior to issuance of building permits, the applicant shall submit, and the Director of Community Development shall have approved, a completed occupancy disclosure form for the project. The approved disclosure form, along with its attachments, shall be included as part of the rental/lease agreement and as part of the sales literature for the project. The disclosure statement shall include the following information:

C Continuation of agricultural operations adjacent to the site and their potential effects (spraying of pesticides, noise, dust, odor, etc.) on future residents or tenants.

Ag 2. Heritage and community service/educational farming operations shall be encouraged within utility easements and other lands. Heritage farming is defined as small-scale specialty farming operations that can be accommodated in an urban environment. An example would be the Edible Landscape project located adjacent to Harvard Avenue within the Edison right-of-way.

Ag 3. Future landowners and the City shall work cooperatively with farmers to minimize conflicts between agricultural operation and adjacent urban uses.

Finding

Pursuant to CEQA § 15091 (a)(3), specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the FEIR.

Facts in Support of Finding

In order to address the cumulative loss of agricultural land within Irvine, the City has established an Agricultural Legacy Program, which intends to retain certain sites within Irvine for metro farming activities. Despite the fact that the project will help implement the City's Agricultural Legacy Program by retaining agricultural uses on-site, the loss of the remaining agricultural land is a cumulatively significant loss of local and regional agriculture. The project will result in a cumulatively significant and unavoidable impact associated with the loss of agriculture.

G. CUMULATIVE POPULATION AND HOUSING

1. Significant and Unavoidable Impact:

The geographic scope for population and housing includes Orange County and the growth projections for the County. Other cumulative projects generally have been accounted for in these growth projections; however, future unknown development may also result in an exceedance of projections. Based on future projections, the Orange County Subregion is anticipated to become increasingly jobs-rich over the next 20 years. The proposed Base Plan and Overlay Plan for the former MCAS El Toro site would substantially add to employment generation characteristics of Irvine and the region. Since, the project-related employment would exacerbate the cumulative subregional jobs/housing imbalance, the cumulative population and housing impact is considered significant and unavoidable.

Mitigation Measures

No mitigation is available to rectify conflicts with the numerical objectives of regional planning documents including the jobs/housing ratio.

Finding

Pursuant to CEQA § 15091 (a)(3), specific economic, legal, social, technological, or other considerations, including provision of employment opportunities for highly trained workers, make infeasible the mitigation measures or project alternatives identified in the FEIR.

Facts in Support of Finding

Since, the project-related employment would exacerbate the cumulative subregional jobs/housing imbalance, the cumulative population and housing impact is considered significant and unavoidable.

VIII. FINDINGS REGARDING ALTERNATIVES

Because the proposed Project will cause unavoidable significant environmental effects related to Air Quality, Agricultural Resources, Population and Housing, and cumulative Traffic/Circulation, Agricultural Resources, and Population and Housing, the City must consider the feasibility of any environmentally superior alternative to the proposed Project, evaluating whether these alternatives could avoid or substantially lessen the unavoidable significant environmental effects while achieving most of the objectives of the proposed Project. The FEIR evaluated five alternatives to the Project and evaluated the feasibility of each of the alternatives in light of the Project objectives and other considerations. As described in Section 3.0 of the FEIR, the specific objectives of the proposed Project are as follows:

1. Annex the former MCAS El Toro site and adjacent lands within the City's Sphere of Influence.
2. Convert MCAS El Toro to a Great Park with regional open space, cultural and recreational facilities.
3. Amend the Irvine General Plan and Zoning Ordinance to implement proposed Orange County Great Park land use designations.
4. Coordinate location and development of roadways and transportation systems in the project area with the local and regional circulation and transportation systems.
5. Create a wildlife corridor connection through the property which may potentially connect the Cleveland National Forest to the north and the coastal open space preserves to the south.
6. Respond positively and effectively to the Department of Navy's decision to sell the property to private interests by allowing private development of some land while ensuring the implementation of park and open space amenities.

The alternatives presented in the FEIR constitute a reasonable range of alternatives necessary to permit a reasoned choice among the options available to the City and/or the Project proponent. Based upon the administrative record for the Project, the City makes the following findings concerning the alternatives to the proposed Project.

A. Alternatives Considered and Rejected During the Scoping/Project Planning Process

Millennium Plan

In June 1999, the City of Irvine considered an annexation, General Plan amendment, and zone change for the project area based on the proposed land uses of the El Toro Reuse Planning Authority Millennium Plan.¹ The Millennium Plan proposed over 21,000,000 square feet of non-residential development and 5,897 dwelling units. Unlike the Orange County Great Park, the Millennium Plan did not propose a wildlife corridor through the project area. Additionally, the proposed central park was not large enough to meet plan objectives of implementing a diverse urban park with active and passive recreational amenities consistent with the recent passage of Measure W. Implementation of the Millennium Plan, as originally proposed, would create greater impacts than the proposed project in most of the environmental categories including traffic, air quality, noise, geology and seismicity, hydrology and water quality, agricultural resources, biological resources, paleontological resources, cultural resources, aesthetics, population/housing and public services, facilities and utilities. Also, because of its intensity it would not be as compatible with the surrounding communities. As such, the Millennium Plan is rejected from further consideration.

Alternative Location

The City did not consider alternative locations to the proposed project. Section 15126(f) (2) of the CEQA Guidelines states, in part, that the “key question and first step in analysis is whether any of the significant effects of the project would be avoided or substantially lessened by putting the project in another location. Only locations that would avoid or substantially lessen any of the significant effects of the project need to be considered for inclusion in the EIR.” Development of the proposed project at an alternative location would likely result in similar and, in some cases, greater impacts than those identified in this EIR. Furthermore, it has been determined that no feasible alternative locations exist considering the fact that the project is the reuse of the former MCAS El Toro.

Aviation Reuse

The project site was previously proposed by the County of Orange to be reused as a commercial airport. Under the aviation reuse plan, the site would be developed with a full international passenger and cargo service airport with a projected 2020 service level of approximately 28.8 million annual passengers (MAP). The aviation reuse plan would

¹ The City of Irvine previously considered implementing the Millennium Plan land use plan for the project site. However, the Millennium Plan was not adopted by the City and was subsequently followed by the Millennium Plan II. The Millennium Plan II was adopted for the City and represents the City’s General Plan land uses for the project site.

include a terminal area and associated facilities, aircraft parking areas, and cargo facilities. Non-aviation uses included in the aviation reuse plan include habitat, open space, and recreation land uses, as well as several public facilities. (EIR #573)

According to the analysis of potential environmental impacts contained in EIR #573, implementation of this, or a similar, aviation reuse plan will result in a greater impacts to land use, traffic/circulation, air quality, noise, public health and safety, geology and seismicity, hydrology and water quality, agricultural resources, biological resources, aesthetics, population/housing, public services and facilities, and utilities.

An aviation reuse plan would not meet the primary objectives of the proposed project. Also, the spirit and intent of the recently passed Measure W, by the county voters would not be met. As such, this alternative is rejected from further consideration.

Agricultural Preservation

The Agricultural Preservation Alternative assumes that all of the existing agriculture on site will be permanently retained for agricultural production. The primary difference between this alternative and the proposed project is that this alternative would preserve all of PA 30 for agricultural production (in addition to the existing agricultural area located north of Irvine Boulevard in PAZ 1, which is proposed to be preserved under the project). Additionally, the area north and south of Irvine Boulevard in PAZ 4 and a portion of PAZ 18 would be preserved. The remainder of PA 51 would be developed according to the proposed project.

The feasibility of preserving agricultural resources in perpetuity is addressed in detail in *Section 5.8 Agricultural Resources* of this EIR. The long-term viability of agricultural production in Orange County continues to deteriorate. As described in Section 5.8, factors that impact the viability of agricultural uses include: 1) the cost of land; 2) the cost of water; 3) the cost of labor; 4) property taxes; 5) the impact of urbanization; 6) competition; and 7) the impact of environmental regulation. The retention of more area of the site in agricultural use than is proposed under the plan is considered to be infeasible due to the constraints on the continued long-term viability of large scale agriculture in the area. These constraints, particularly the economic constraints and constraints due to increased environmental regulation, will become greater over time. Despite any City actions to zone additional land for agricultural uses on-site, the City does not have the authority to require landowners to continue farming operations on land that is zoned for agricultural use. The retention of agricultural land use designations on the site will not, therefore, necessarily result in the continuation of agricultural uses. Moreover, a reduction in the development of the site would impede the City from achieving the voter's and the City's objectives for the site in a fiscally sound manner.

As noted above, the proposed project will retain a portion of the site in agricultural use, and agricultural uses may continue on other portions of the site until such time that development is to occur. These proposed long-term and interim uses; however, do not mitigate the significant impact of the conversion of significant farmland and existing

agricultural land to non-agricultural uses. As such, this alternative is rejected from further consideration.

B. Alternatives Selected for Further Analysis

The alternatives considered in the EIR include:

1. No Project/Measure W PA 51/Millennium Plan II PA 30
2. Existing City of Irvine General Plan (Millennium Plan II Land Uses)
3. Measure W PA 51/Millennium Plan II PA 30 - Modified
4. Alternative Land Use Plan – University Village
5. Increased Residential Alternative

1. No Project/Measure W PA 51/Millennium Plan II PA 30

Description:

The No Project/Measure W PA 51/Millennium Plan II PA 30 assumes that the former base would eventually be redeveloped according to the general provisions of Measure W for PA 51, which is the unincorporated portion of the base, and Millennium Plan II for PA 30, which is the portion of the base located within the City of Irvine. To develop this comparison, the Great Park concept plan was relied on to project land uses in PA 51. PA 30 land uses were based on the adopted City of Irvine General Plan and zoning. As depicted, approximately 5,203,000 square feet of non-residential development, 165 dwelling units, and 7,637 students would occur under this alternative. Approximately 3,535 acres would be devoted to open space, recreation, and agricultural uses. This compares to a maximum of 3,625 dwelling units, 6,585,594 square feet of non-residential, and 7,637 students that could occur under the proposed project. This alternative is environmentally superior to the proposed project.

Finding

The City finds that specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make the No Project/Measure W PA 51/Millennium Plan II PA 30 Alternative infeasible. (Public Resources Code § 21081(a)(3), Guidelines § 15091(a)(3)).

Facts in Support of Finding

- a. This alternative would result in less impacts to traffic/circulation, air quality, noise, geology/soils, hydrology/water quality, biological resources, paleontological resources, cultural resources, public services and utilities.

Under this alternative, approximately 5,203,000 square feet of non-residential development would occur, 7,637 additional students in the area would be expected, and 165 dwelling units would be constructed. This is compared to 6,585,594 square feet of non-residential development, 7,800 students, and 3,625 dwelling units that could occur under the proposed project (pursuant to the Overlay Plan). Development of PA51 according to Measure W land uses would generate approximately 83,347 ADT and development of PA30 according to the Millennium Plan II land uses would generate approximately 34,750 ADT.⁵ As such, the total trips generated by this alternative is 118,097 ADT. This compares to 148,000 trips generated by the project according to the Overlay Plan. Therefore, this alternative would result in less impacts to traffic/circulation. This alternative would also result in less of an air quality impact associated with the proposed project as the level of development and corresponding trip generation would be less. Mobile source air quality emissions are estimated to be approximately 20% less than the project, as the trips generated by this alternative are approximately 20% less than the project. Additionally, this alternative would result in less of a noise impact as the proposed project, as the overall amount of development and vehicular trips on surrounding roadways would be less.

Alternative 1 would result in less of a geology and seismic impact associated with seismic ground shaking, soil erosion or loss of topsoil, and expansive soils since there would be less overall development within the project area. Under this alternative, the hydrology and water quality impacts would be less than the proposed project. Most of the development would be concentrated in PA30, and, as compared to the proposed project, significantly less development and impervious surfaces would occur within PA51. Additionally, under this alternative, the proposed drainage corridors would be implemented as is proposed under the project. Implementation of this alternative would result in less of an impact than the proposed project in regards to potential conflicts with the City of Irvine Urban Forestry Ordinance, since less development would occur under the alternative. Also, because less of the site would be converted to urban uses, potential biological impacts would be reduced. As with the proposed project, this alternative would allow for the creation of drainage corridors through the project site that could allow for wetland creation, and this alternative would provide the same wildlife corridor alignment as the proposed project.

Under Alternative 1, development would be concentrated primarily in PA30, with substantially less development occurring in PA51 as compared to the project. Therefore, the potential for this alternative to directly or indirectly destroy a

unique paleontological resource or unique geologic feature is less than the project. Also, under this alternative, development would be concentrated primarily in PA30, with substantially less development occurring in PA51 as compared to the project. Therefore, the potential for this alternative to directly impact cultural resources is less than the project. Additionally, implementation of this alternative would result in less of an impact than the project related to the construction or expansion of public facilities. This alternative would result in less of a demand for school facilities and parks, as only approximately 165 dwelling units would be allowed under this alternative as compared to 3,625 dwelling units that would occur under the proposed project.

- b. Implementation of the No Project/Measure W PA51/Millennium Plan II PA30 Alternative would result in a similar impacts to land use, public health and safety, and agricultural resources.

Implementation of this alternative would result in a similar land use impact as the proposed project. This alternative would implement the mandate of the voter approved Measure W for development of PA 51 with park uses. This alternative would have a similar impact as the proposed project regarding conflicts with the County of Orange Master Plan of Arterial Highways and the existing Airport Environs Land Use Plan (AELUP), Air Installation Compatible Use Zones (AICUZ), and Policy Implementation Line (PIL) since non-aviation reuse of the former base conflicts with these existing plans. No other land use conflict would occur under this alternative. Additionally, implementation of this alternative would result in a similar public health and safety impact as the proposed project. This alternative would cause portions of PA51 containing existing structures to be developed, resulting in the need to demolish existing structures. Development would occur in those areas containing remediation sites. However, the impact associated with structures and population being located adjacent to wildland fire hazard area would be less. Implementation of this alternative would result in a similar impact related to the loss of agriculture since this alternative would preserve the same amount of acreage of agriculture as is proposed under the Overlay Plan.

- c. The alternative meets the following three project objectives:
 - 2. Convert MCAS El Toro to a Great Park with regional open space, cultural and recreational facilities.
 - 4. Coordinate location and development of roadways and transportation systems in the project area with the local and regional circulation and transportation systems.

5. Create a wildlife corridor connection through the property which may potentially connect the Cleveland National Forest to the north and the coastal open space preserves to the south.
- d. The alternative does not meet the following three project objectives:
1. Annex the former MCAS El Toro site and adjacent lands within the City's Sphere of Influence.
 3. Amend the Irvine General Plan and Zoning Ordinance to implement proposed Orange County Great Park land use designations.
 6. Respond positively and effectively to the Department of Navy's decision to sell the property to private interests by allowing private development of some land while ensuring the implementation of park and open space amenities.
- e. Although, this alternative is environmentally superior to the proposed project, this alternative is infeasible because it does not meet three of the proposed project objectives.

Reference: FEIR pages 6-5 to 6-9.

2. Existing City of Irvine General Plan

Description:

The Existing City of Irvine General Plan Alternative (Millennium Plan II Land Uses) assumes that the former base would eventually be redeveloped according to the Millennium Plan II land use plan. Figure 6-1 depicts the City of Irvine adopted land uses for PAs 51 and 30 and Table 6-3 lists the land use summary. As depicted, the existing City of Irvine General Plan land use designations of the project area would allow a total of 15,773,000 square feet of non-residential uses and 3,216 maximum dwelling units. This compares to a maximum of 3,625 dwelling units and 6,585,594 square feet of non-residential uses that could be developed according to the Overlay Plan. Land uses that could occur under this alternative include preservation, recreation, low and medium density residential, multi-use, community commercial, research and industrial, and institutional. This alternative is environmentally inferior to the proposed project.

Finding

The City finds that specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make Existing City of Irvine General Plan Alternative infeasible. (Public Resources Code § 21081(a)(3), Guidelines § 15091(a)(3)).

Facts in Support of Finding

- a. Implementation of the Existing City of Irvine General Plan (Millennium Plan II Land Uses) Alternative would result in greater impacts to traffic/circulation, air quality, noise, geology and seismicity, hydrology and water quality, agricultural resources, biological resources, paleontological resources, cultural resources, aesthetics, population/housing, public services and facilities, and utilities than the proposed project.

The Existing General Plan Alternative would result in a greater amount of traffic generated within the project area as the development intensity of the Millennium Plan II is greater than the proposed project. The Existing General Plan (Millennium Plan II Land Uses) Alternative is anticipated to generate approximately 228,000 average daily trips (ADT) while the proposed project is anticipated to result in the generation of approximately 91,000 to 148,000 ADT. This alternative would place a significantly greater demand on the roadway system, in turn, impacting a larger area, and requiring more roadway infrastructure improvements.

Implementation of this alternative would result in a greater air quality impact than the proposed project since this alternative would have significantly more construction, development, and corresponding levels of traffic, resulting in substantially more construction and operational (both mobile and stationary) emissions than would occur under the project. The Existing General Plan (Millennium Plan II Land Uses) Alternative is anticipated to generate approximately 228,000 ADT while the proposed project is anticipated to result in approximately 91,000 to 148,000 ADT. Millennium Plan II project would generate unmitigated emissions amounting to approximately 1.56 tons per day of ROG, 2.10 tons per day of NO_x, 8.83 tons per day of CO, and 0.75 tons per day of PM₁₀. This is compared to the unmitigated emissions estimate for the proposed project (Overlay Plan) which are estimated at approximately .66 tons per day of ROG, .06 tons per day of NO_x, 1.38 tons per day of CO, and .21 tons per day of PM₁₀.

Implementation of this alternative would result in a greater noise impact than the proposed project since this alternative would generate greater traffic within the project area and greater traffic noise. Unlike the proposed project, this alternative would result in a significant traffic-generated noise impact for the segment of Trabuco Road between Bake Parkway and Lake Forest Drive. As indicated in Section 5.4 Noise of this EIR, no impact would occur at this location under the proposed project.

Implementation of this alternative would result in a greater geology and seismic impact associated with seismic ground shaking, soil erosion or loss of topsoil, and expansive soils since there would be substantially more development within the

project area. There would also be an increase in the number of residents and workers/employees impacted by seismic groundshaking and an increase in the amount of property and people subject to risk. Additionally, this alternative would result in a greater hydrology and water quality impact than the proposed project related, as substantially more development would occur than the proposed project. With more development, the rate and amount of surface runoff would be greater than under the Orange County Great Park plan. In addition, this alternative would not involve the creation of natural drainage corridors as proposed under the project.

Implementation of this alternative would result in a greater impact related to the loss and conversion of agricultural resources. Under existing General Plan designations, no portion of the project site would be retained for agricultural uses in perpetuity, whereas, the proposed project would preserve approximately 438 acres of agricultural land under the Base Plan, and 303 acres of agricultural land under the Overlay Plan. Also, implementation of this alternative would result in a greater impact than the proposed project with respect to potential conflicts with the City of Irvine Urban Forestry Ordinance as development would occur that would impact existing trees within the project area. This alternative would result in the creation of a wildlife corridor on the eastern boundary of the project area; however, the wildlife corridor would be more constrained by adjacent land uses than the wildlife corridor proposed under the project. This alternative would not involve the creation of natural drainage corridors through the project site that offer the opportunity for wetland creation. Additionally, because no agricultural lands would be preserved and less parkland would be developed, the potential raptor foraging area within the project site would be less than the project.

Implementation of this alternative would result in potentially a greater impact to paleontological resources and cultural resources than the proposed project. Because much more development would occur, the potential for disturbing paleontological resources as a result of grading activity is greater. Additionally, because much more development would occur, the potential for disturbing cultural resources as a result of grading activity and development is greater.

Implementation of this alternative would result in a greater aesthetic impact than the proposed project as this alternative would allow significantly more development which has the potential to increase the light and glare produced in the project area and cause a change to the visual quality of the project area. Additionally, less park and open space uses would be provided. Implementation of this alternative would provide approximately 3,261 housing units. However, this alternative would also provide approximately 30,000 to 35,000 jobs in the project area which would exacerbate the jobs/housing imbalance to a greater degree than the proposed project. In regards to inducing population growth in the area, this alternative would have a greater impact than the proposed project since

it would generate significantly more jobs that would attract new residents to the area and increase pressure for the construction of additional housing.

Implementation of this alternative would result in a greater impact related to the construction and expansion of public facilities, as there would be significantly more demand placed on these facilities from residential and non-residential development. This alternative would generate a similar for police, requiring approximately 20 sworn police officers, 2 sworn police supervisors, 2 non-sworn support staff, and 4 marked police vehicles. The alternative would generate approximately 2,251 students within the Irvine Unified School District. This is approximately 726 students more than the proposed project. Also, implementation of this alternative would result in a greater impact related to the construction or expansion of utilities as significantly more development would occur within PAs 51 and 30 that would require new or expanded utilities. The daily potable water demand under this alternative is 3.3 million gallons per day. The daily sewer generation is 2.9 million gallons per day. This is approximately 1.55 million gallons per day more water and 2 million gallons per day more sewage than the proposed project.

- b. This alternative would result in similar impacts to land use and public health and safety as the proposed project.

Implementation of this alternative would result in a similar land use impact as the proposed project. This alternative would implement, to some degree, the intent of the voter approved Measure W for development of PA 51 with park uses as a large portion of PA 51 is designated for recreation uses under the Millennium Plan II. This alternative would result in similar land use impacts related to conflicts with the County of Orange Master Plan of Arterial Highways and the existing Airport Environs Land Use Plan (AELUP), Air Installation Compatible Use Zones (AICUZ), and Policy Implementation Line (PIL), since the proposed development would conflict with these existing plans. This alternative would not impact off-site land uses. Additionally, this alternative would result in a similar impact as the proposed project related to the disturbance of structures with asbestos-containing building materials or lead based paints. Buildings would be demolished under this alternative, and mitigation would be required to ensure that the building materials are properly handled and disposed. Implementation of this alternative would also result in a similar impact related to the potential health risks from remediation activities. Remediation would need to occur consistent with the health risk standards of the existing General Plan land uses. This alternative would also result in a similar impact related to wildland fire hazards as development would occur adjacent to a wildland fire hazard area in the northeastern portion of PA 51.

- c. The alternative meets the following project objectives:
 - 1. Annex the former MCAS El Toro site and adjacent lands within the City's Sphere of Influence.
 - 4. Coordinate location and development of roadways and transportation systems in the project area with the local and regional circulation and transportation systems.
 - 5. Create a wildlife corridor connection through the property which may potentially connect the Cleveland National Forest to the north and the coastal open space preserves to the south.
 - 6. Respond positively and effectively to the Department of Navy's decision to sell the property to private interests by allowing private development of some land while ensuring the implementation of park and open space amenities.
- d. This alternative does not meet the following project objectives.
 - 2. Convert MCAS El Toro to a Great Park with regional open space, cultural and recreational facilities.
 - 3. Amend the Irvine General Plan and Zoning Ordinance to implement proposed Orange County Great Park land use designations.
- e. This alternative is infeasible since it is environmentally inferior to the proposed project and it does not meet two of the project objectives.

Reference: FEIR pages 6-9 to 6-15.

3. Measure W PA 51/Millennium Plan PA 30-Modified

Description:

The Measure W PA 51/Millennium Plan II PA 30-Modified assumes that the former base would eventually be redeveloped according to the general provisions of Measure W for PA 51, which is the unincorporated portion of the base, and modified land uses of the Millennium Plan II for PA 30, which is the portion of the base located within the City of Irvine. To develop this comparison, the Great Park concept plan was relied on to project land uses in PA 51. PA 30 land uses were generally based on the adopted General Plan and zoning; however, the Research and Industrial use was decreased by 1,190,000 square feet, and 500 residential units were added. Approximately 4,013,000 square feet of non-residential development, 665 dwelling units, and 7,637 students would occur under this alternative. Approximately 3,535 acres would be devoted to open space, recreation, and agricultural uses. This compares to a maximum of 3,625 dwelling units, 6,585,594

square feet of non-residential, and 7,637 students that could occur under the proposed project. This alternative is environmentally superior to the proposed project.

Finding

The City finds that specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make the Measure W PA 51/Millennium Plan – Modified Alternative infeasible. (Public Resources Code § 21081(a)(3), Guidelines § 15091(a)(3)).

Facts in Support of Finding

- a. This alternative would result in less impacts to traffic/circulation, air quality, noise, geology/soils, hydrology/water quality, biological resources, paleontological resources, cultural resources, public services and facilities.

Under this alternative, approximately 4,013,000 square feet of non-residential development would occur, 7,637 additional students in the area would be expected, and 665 dwelling units would be constructed. This is compared to 6,585,594 square feet of non-residential development, 7,800 students, and 3,625 dwelling units that could occur under the proposed project (pursuant to the Overlay Plan). Development of PA51 according to Measure W land uses would generate approximately 83,347 ADT and development of PA30 according to land uses in this alternative would generate approximately 28,513 ADT.⁵ As such, the total trips generated by this alternative is 111,860 ADT. This compares to 148,000 trips generated by the project according to the Overlay Plan. Additionally, implementation of this alternative would result in less of an air quality impact associated with the proposed project as the level of development and corresponding trip generation would be less. Mobile source air quality emissions are estimated to be approximately 25% less than the project, as the trips generated by this alternative are approximately 25% less than the project. Similarly, which alternative would result in less of a noise impact as the proposed project, as the overall amount of development and vehicular trips on surrounding roadways would be less.

Implementation of this alternative would result in less of a geology and seismic impact associated with seismic ground shaking, soil erosion or loss of topsoil, and expansive soils since there would be less overall development within the project area. Also, this alternative would result in less of a hydrology and water quality impact as the proposed project. Most of the development would be concentrated in PA30, and, as compared to the proposed project, significantly less development and impervious surfaces would occur within PA 51. Additionally, under this alternative, the proposed drainage corridors would be implemented as is proposed under the project.

Implementation of this alternative would result in less of an impact than the proposed project in regards to potential conflicts with the City of Irvine Urban Forestry Ordinance, since less development would occur under the alternative. Also, because less of the site would be converted to urban uses, potential biological impacts would be reduced. As with the proposed project, this alternative would allow for the creation of drainage corridors through the project site that could allow for wetland creation, and this alternative would provide the same wildlife corridor alignment as the proposed project.

Implementation of this alternative would result in less of an impact to paleontological and cultural resources than the proposed project. Under this alternative, development would be concentrated primarily in PA30, with substantially less development occurring in PA51 as compared to the project. Therefore, the potential for this alternative to directly or indirectly destroy a unique paleontological resource or unique geologic feature is less than the project. Similarly, under this alternative, development would be concentrated primarily in PA30, with substantially less development occurring in PA51 as compared to the project. Therefore, the potential for this alternative to directly impact cultural resources is less than the project.

This alternative would result in less of an impact than the project related to the construction or expansion of public facilities. This alternative would result in less of a demand for school facilities and parks, as only approximately 665 dwelling units would be allowed under this alternative as compared to 3,625 dwelling units that would occur under the proposed project.

- b. Implementation of the Measure W PA51/Millennium Plan II PA30 - Modified Alternative would result in a similar impact to land use, public health and safety, and agricultural resources.

This alternative would implement the mandate of the voter approved Measure W for development of PA 51 with park uses. Implementation of the Measure W PA51/Millennium Plan II PA30 - Modified Alternative would have a similar impact as the proposed project regarding conflicts with the County of Orange Master Plan of Arterial Highways and the existing Airport Environs Land Use Plan (AELUP), Air Installation Compatible Use Zones (AICUZ), and Policy Implementation Line (PIL) since non-aviation reuse of the former base conflicts with these existing plans. No other land use conflict would occur under this alternative.

Implementation of this alternative would result in a similar public health and safety impact as the proposed project. This alternative would cause portions of PA 51 containing existing structures to be developed, resulting in the need to demolish existing structures. Development would occur in those areas containing remediation sites. However, the impact associated with structures and population

being located adjacent to wildland fire hazard area would be less. Also, implementation of this alternative would result in a similar impact related to the loss of agriculture. This alternative would preserve the same amount of acreage of agriculture as is proposed under the Overlay Plan.

- c. The alternative meets the following three project objectives:
 - 3. Convert MCAS El Toro to a Great Park with regional open space, cultural and recreational facilities.
 - 4. Coordinate location and development of roadways and transportation systems in the project area with the local and regional circulation and transportation systems.
 - 5. Create a wildlife corridor connection through the property which may potentially connect the Cleveland National Forest to the north and the coastal open space preserves to the south.
- d. The alternative does not meet the following project objectives:
 - 1. Annex the former MCAS El Toro site and adjacent lands within the City's Sphere of Influence.
 - 2. Convert MCAS El Toro to a Great Park with regional open space, cultural and recreational facilities.
 - 6. Respond positively and effectively to the Department of Navy's decision to sell the property to private interests by allowing private development of some land while ensuring the implementation of park and open space amenities.
- e. Although, this alternative is environmentally superior to the proposed project, this alternative is infeasible because it does not meet three of the project objectives.

Reference: FEIR pages 6-16 to 6-19.

3. Alternative Land Use Plan – University Village

Description:

The Alternative Land Use Plan – University Village, generally involves redesignation of Planning Area Zone (PAZ) 5 from Research and Development (R&D) to Medium High Density Residential (MHDR). The student population of the proposed university is increased from 7,800 to 15,000, including approximately 1,500 dorm rooms on PAZ 7. Figure 6-2 depicts the Alternative Land Use Plan – University Village. As compared to the Overlay Plan, the changes are as follows:

PAZ 5 – Land Use changes from R&D to MHDR. Square feet change from 1,000,000 to 0. Dwelling units change from 0 to 1,580.

PAZ 7 – Students increase from 1,306 to 2,512. Square footage changes from 243,302 to 467,900. 1,500 residence hall rooms are added.

PAZ 8 – Students increase from 5,570 to 10,711. Square footage changes from 1,037,234 to 1,994,735.

PAZ 9 – Students increase from 172 to 331. Square footage changes from 32,013 to 61,566.

PAZ 10 – Students increase from 752 to 1,446. Square footage changes from 140,045 to 269,248.

The unincorporated area would be annexed into the City. No new development is proposed for the Musick Jail and IRWD properties, though the County of Orange may decide to expand the jail according to the proposed jail expansion plans. This alternative is environmentally inferior to the proposed project.

Finding

The City finds that specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make the Alternative Land Use Plan – University Village Alternative infeasible. (Public Resources Code § 21081(a)(3), Guidelines § 15091(a)(3)).

Facts in Support of Finding

- a. Implementation of the Alternative Land Use Plan – University Village would result in greater impacts to traffic/circulation, air quality, noise and public services and utilities.

Under this alternative, more development would occur than would occur under the proposed project, including an increase in the student population of the university. Total vehicular trip generation would be approximately 161,117 average daily trips as compared to 148,000 average daily trips generated by the Overlay Plan. Also, implementation of this alternative would result in a greater air quality impact than the project. This alternative would place housing (1,580 dwelling units) in proximity to the proposed university, thereby, potentially reducing commuter trip lengths and associated air emissions; however, the increase in permitted student population would result in an additional 13,117 vehicle trips generated within the project area. As such, the mobile emissions would be approximately 8% higher than the proposed project. Similarly, this alternative would result in a greater noise impact than the proposed project, as the overall amount of vehicular trips on surrounding roadways would be greater.

Implementation of this alternative would also result in a greater impact than the project related to the construction or expansion of public facilities. This alternative would significantly increase the demand for school facilities and parks, as approximately 1,580 additional dwelling units and 1,500 dorm rooms, and the corresponding population would be allowed under this alternative as compared to the proposed project.

- b. The impact to land use, public health and safety, geology and seismicity, hydrology and water quality, agricultural resources, biological resources, paleontological resources, cultural resources, and aesthetics would be similar to the proposed project.

Implementation of this alternative would have a similar impact as the proposed project regarding conflicts with the County of Orange Master Plan of Arterial Highways and the existing Airport Environs Land Use Plan (AELUP), Air Installation Compatible Use Zones (AICUZ), and Policy Implementation Line (PIL) since non-aviation reuse of the former base conflicts with these existing plans. As with the project, this alternative would not impact off-site land uses. Implementation of this would result in a similar public health and safety impact as the proposed project. As with the proposed project, this alternative would result in all of the area within PA 51 containing existing structures to be developed, resulting in the need to demolish existing structures. Development would occur in those areas containing remediation sites and structures and population would be located adjacent to wildland fire hazard area.

This alternative would result in a similar geology and seismic impact associated with seismic ground shaking, soil erosion or loss of topsoil, and expansive soils since there would generally be a similar amount of overall development within the project area as would the proposed project. Similarly, implementation of this alternative would result in a similar hydrology and water quality impact as the proposed project, since under this alternative, the proposed drainage corridors would be implemented as is proposed under the project.

Implementation of this alternative would result in a similar impact as the proposed project related to the loss of agriculture. This alternative would preserve the same amount of acreage of agriculture as is proposed under the Overlay Plan. Also, this alternative would result in a similar impact to the proposed project in regards to potential conflicts with the City of Irvine Urban Forestry Ordinance, since the area of the project site that is developed would be similar to the project. As with the proposed project, this alternative would allow for the creation of drainage corridors through the project site that could allow for wetland creation, and this alternative would provide the same wildlife corridor alignment as the proposed project.

Implementation of the Alternative Land Use Plan – University Village would result in a similar impact to paleontological and cultural resources as the proposed project. Under this alternative, development would occur in the same areas as would occur under the proposed project, therefore the potential for this alternative to directly or indirectly destroy a unique paleontological resource or unique geologic feature is similar to the proposed project. Similarly, under this alternative, development would occur in the same areas as would occur under the proposed project, therefore the potential for this alternative to impact cultural resources is similar to the proposed project. Additionally, implementation of this alternative would result in a similar light and glare as the project since the area of the project site that is developed would be similar. The impact related to the change in visual quality of the project area would also be similar as development would occur in the same areas as proposed under the project.

- c. The alternative will result in less of an impact to population/housing.

Implementation of this alternative would result in less of a population/housing impact related to the jobs/housing balance than the proposed project. There would be a reduction in the overall amount of employment generating land uses, and an increase in housing units with the change in PAZ 5 to residential. In regards to inducing population growth in the area, this alternative would have a similar impact as the proposed project since it would generate jobs and new residential opportunities that would attract new residents to the area.

- d. The alternative meets all of the following project objectives:

1. Annex the former MCAS El Toro site and adjacent lands within the City's Sphere of Influence.
2. Convert MCAS El Toro to a Great Park with regional open space, cultural and recreational facilities.
3. Amend the General Plan and Zoning Ordinance to implement proposed Orange County Great Park land use designations.
4. Coordinate location and development of roadways and transportation systems in the project area with the local and regional circulation and transportation systems.
5. Create a wildlife corridor connection through the property which may potentially connect the Cleveland National Forest to the north and the coastal open space preserves to the south.
6. Respond positively and effectively to the Department of Navy's decision to sell the property to private interests by allowing private development of

some land while ensuring the implementation of park and open space amenities.

- e. Although, this alternative meets all of the proposed project objectives, this alternative is infeasible because this alternative is environmentally inferior to the proposed project.

Reference: FEIR pages 6-20 to 6-28.

5. Increased Residential Alternative

Description:

This alternative would increase the amount of residential units provided in the project area. Under this alternative, the land uses proposed within PAZs 17a and 17b would be changed as shown in the following table.

PAZ/Acreage	Project Land Use	Alternative Land Use	Development Potential
17a/236	Commercial Recreation	Medium High Residential	3,540 d.u.'s
17b/73	Cemetery	Medium High Residential	1,095 d.u.'s
TOTAL/310			4,635

The medium high density residential units would be comprised of approximately 3,476 single-family residential units and 1,159 multi-family residential units. All other land uses would be the same as proposed under the Overlay Plan.

Finding

The City finds that specific economic, legal, social, technological, or other considerations, including considerations for the provision of employment opportunities for highly trained workers, make the Alternative 4 infeasible. (Public Resources Code § 21081(a)(3), Guidelines § 15091(a)(3)).

Facts in Support of Finding

- a. This alternative is environmentally superior to the proposed project with respect to the impact to population/housing.

This alternative would reduce the overall amount of employment generating land uses by approximately 236 acres and would increase the number of residential units by 1,010 dwelling units as compared to the project. As such, the alternative would reduce the project's contribution to the jobs housing imbalance. While the alternative would reduce the impact, it would remain significant and unavoidable.

- b. This alternative will result in a greater impact to traffic/circulation, air quality, noise, geology and seismicity, hydrology and water quality, aesthetics, and public services and facilities, and utilities than the proposed project.

Implementation of this alternative will result in a greater traffic/circulation impact than the proposed project. The increase of 4,635 residential dwelling units would generate approximately 37,010 daily trips (3,476 single-family dwelling units would generate approximately 28,733 daily trips and 1,159 multi-family dwelling units would generate approximately 8,277 daily trips). The commercial recreation and cemetery land uses as proposed under the project would generate approximately 5,867 daily trips. Therefore, implementation of this alternative would represent an increase in daily trips by 31,143 over the proposed project. Also, implementation of this alternative will result in a greater air quality impact than the proposed project as more development would occur, resulting in greater construction and operational emissions. The trip generation of this alternative is substantially greater (31,143 average daily trips) than the proposed project; therefore, the mobile air quality emissions generated by this alternative would be greater. Similarly, since this alternative would result in the generation of approximately 31,143 additional trips than the proposed project, which would be distributed on the surrounding roadway system, this alternative would increase the traffic noise levels along these roadways.

Implementation of this alternative will result in a greater geology and seismic impact associated with seismic ground shaking, soil erosion or loss of topsoil, and expansive soils, as there will be a greater amount of overall development within the project area. Implementation of this alternative would also result in a greater impact associated with hydrology and water quality than the proposed project. A greater amount of development and impervious surfaces would occur under this alternative as the proposed cemetery use in PAZ 17b would be developed with residential uses. This alternative would also result in a greater aesthetic impact related to light and glare than the project since there will be an overall increase in the amount of development occurring within the project area.

Implementation of this alternative will result in a greater impact related to the construction or expansion of public facilities as significantly more residential units would be constructed on the project site. The impact related to the construction of new school facilities will also be greater than the proposed project as there will be a greater amount of residential units and corresponding student generation. Similarly, this alternative will result in a greater impact related to the

construction or expansion of utilities as the increased residential uses would likely require a larger utility backbone system to support the alternative.

- c. This alternative will result in similar impacts to land use, public health and safety, agricultural resources, biological resources, paleontological resources and cultural resources as would occur under the proposed project.

Implementation of this alternative will have a similar impact as the proposed project regarding conflicts with the County of Orange Master Plan of Arterial Highways and the existing Airport Environs Land Use Plan (AELUP), Air Installation Compatible Use Zones (AICUZ), and Policy Implementation Line (PIL) since non-aviation reuse of the former base conflicts with these existing plans. As with the project, this alternative would not impact off-site land uses. Implementation of this alternative will result in a similar public health and safety impact to the proposed project. As with the proposed project, this alternative would result in all of the area within PA 51 containing existing structures to be developed, resulting in the need to demolish existing structures. Development will occur in those areas containing remediation sites and structures and population will be located adjacent to wildland fire hazard area.

Additionally, implementation of this alternative would result in a similar impact to agricultural resources as the proposed project. Under this alternative, the same areas of the project site that are currently used for agricultural production would be developed with an alternative land use. Likewise, as with the proposed project, PAZ 1 would be retained for agricultural use.

Implementation of this alternative will result in a similar impact as the proposed project in regards to potential conflicts with the City of Irvine Urban Forestry Ordinance. Although a different land use is proposed for PAZ's 17a and 17b, the potential for disturbance to biological resources would be similar. Also, this alternative would allow for the implementation of the proposed wildlife corridor, as is proposed under the project.

Implementation of the Increased Residential Alternative will result in a similar impact to paleontological and cultural resources as the same area of the project site would be disturbed by development activity as would occur under the proposed project. As with the proposed project, future development under this alternative has less potential to directly or indirectly destroy a unique paleontological resource, unique geologic feature or a cultural resource.

- d. The alternative meets the following project objectives:
 - 1. Annex the former MCAS El Toro site and adjacent lands within the City's Sphere of Influence.

2. Convert MCAS El Toro to a Great Park with regional open space, cultural and recreational facilities.
 4. Coordinate location and development of roadways and transportation systems in the project area with the local and regional circulation and transportation systems.
 5. Create a wildlife corridor connection through the property which may potentially connect the Cleveland National Forest to the north and the coastal open space preserves to the south.
 6. Respond positively and effectively to the Department of Navy's decision to sell the property to private interests by allowing private development of some land while ensuring the implementation of park and open space amenities.
- e. The alternative does not meet the following project objective:
3. Amend the General Plan and Zoning Ordinance to implement proposed Orange County Great Park land use designations.
- f. This alternative is infeasible, because this alternative is environmentally inferior to the proposed project and it does not meet one of the project objectives.

Reference: FEIR pages 6-28 to 6-33.

IX. FINDINGS REGARDING GROWTH INDUCING IMPACTS

Guidelines Section 15126.2(d) requires that an EIR:

Discuss the ways in which the proposed project could foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment.

Direct Growth Inducing Impacts:

The former MCAS El Toro site is largely developed, and changes in land uses as proposed under the proposed project will involve the demolition of existing structures, construction of new development, and the provision of new roadways and infrastructure systems to serve this development. Areas on the northern and southern sections of the site that are currently in agricultural use are planned to be developed with urban land uses. In addition, there are adjacent agricultural areas and underutilized sites near the former MCAS El Toro (to the northwest, northeast, and southeast) that may be induced

by the proposed project to develop in the future. However, the proposed project is primarily conversion of the former MCAS El Toro to park/open space/recreation uses that will not contribute to conversion of adjacent agricultural areas to urban areas. The roadway and infrastructure improvements that will accompany future development under the proposed project may improve access to nearby vacant areas (over 1,000 acres located north of the site and designated for low-density residential development) and increase pass-by traffic. The provision of infrastructure improvements under the proposed project may also decrease the costs associated with extending or improving the existing infrastructure to these vacant sites and, therefore, make future development less costly and more expedient for developers. The proposed roadways will provide traffic access through the site. These roadways may make the surrounding area more attractive to investors, property owners and future residents and, thus, induce development in these areas. Therefore, the proposed project may facilitate development in these nearby vacant areas by making them more attractive residential sites or commercial and industrial centers.

The proposed project is designed to develop the former MCAS El Toro facility with primarily open space/recreational, commercial, research and development (R&D), and institutional uses. The planned residential development on the site is expected to partially accommodate housing demand that will be created by employees on-site wanting to reside near their places of work. These housing units, in addition to the estimated 55,000 housing units planned, but not yet built, in the County, will increase the housing stock of Orange County. The project is primarily focused on providing park/open space/recreation opportunities. These land uses will not generate a significant number of jobs. The planned land uses under the proposed project that would attract jobs to the area, include research and development, institutional, and educational. With the exception of research and development, these sectors are not considered economic drivers. Thus, the proposed project promotes economic growth; however, that is not the goal of the project. The presence of a qualified labor force in the region and the high demand for R&D and office space in Orange County led to the provision of adequate space for these sectors under the proposed project. The provision of a university campus on the site to support and develop this labor force is planned to attract high technology industries that demand a highly skilled labor force.

Since 1981 the recognized planning document for land use in the environs of the former MCAS El Toro has been the 1981 Air Installation Compatibility Use Zones (AICUZ) study. As part of this study, noise and accident potential zones were developed for areas surrounding the former MCAS El Toro installation. A land use compatibility matrix and applicable land use and zoning strategies were developed in an effort to achieve and maintain compatible land uses near the former MCAS El Toro site. The Noise Element of the Orange County General Plan establishes the 65 dB(A) CNEL contour contained in the 1981 AICUZ as the Policy Implementation Line (PIL) in which new residential construction is not permitted, although exceptions may exist for neighborhood infill conditions. At the time of development of the 1981 AICUZ, some residential development had already occurred within what will become the 65 dB(A) CNEL contour.

Since 1973, the City of Irvine has incorporated such factors as noise and accident potential into its General Plan, zoning, and development policies. In 1980, the City and the Marine Corps entered into a Memorandum of Understanding (MOU) that established the AICUZ study as the “basic planning resource in conjunction with the amendment of the City’s adopted General plan in so far as it relates to aircraft noise and hazard.”

Consistent with the passage of Measure W by Orange County voters and the County of Orange plans for the project site, the proposed project does not include aviation uses on the site, and thus will allow removal of development restrictions associated with the aircraft clear zones and flight patterns and the noise-restricted areas around the former MCAS El Toro. Previously development-restricted areas in the City, adjacent cities, and unincorporated areas in the County of Orange could develop with residential and other land uses, at higher densities, and at higher building heights. Such a scenario could allow new development in the surrounding area that would not have been possible if the aviation uses remained on the site.

Indirect Growth Inducing Impacts:

The adoption and implementation of the proposed project will allow for the intensification of urban land uses on-site and will create short-term construction employment, as well as long-term employment in research and development, institutional, and educational land uses. Additional employment opportunities in the City will be partially met by the local labor force, although individuals from areas outside the region may relocate to the County to be near these jobs. These off-site employees may, in turn, create additional demand for housing. While planned residential development on the site is expected to accommodate some of this demand, adjacent residential areas are expected to experience an increase in demand due to the availability of jobs on the site. As indicated earlier, some 55,000 housing units have yet to be built in planned developments in the surrounding area. These units are expected to meet demand resulting from new jobs on-site. The jobs and households on-site will also create demand for goods and services in the area. This demand may be met by the existing Irvine Spectrum development and new commercial, recreational, and retail uses that will be developed on-site, as well as in the surrounding area. Providing the goods and services needed to support new development on-site will lead to increases in demand for housing and support services, which in turn will induce additional growth in the City and the surrounding area. Thus, new development under the proposed project is expected to produce a multiplying pattern of development, investment, and growth in the community.

Roadway improvements, infrastructure systems, and provision of public services in the area may encourage residential, commercial, and industrial construction in adjacent areas, which will increase local population and employment bases. The intensification of land uses will foster growth and increases in utility consumption, as well as in demand for public services. Construction of capital improvements that are needed to support development will affect the pace of growth in the project area. The availability of

adequate utilities and infrastructure in the area is expected to indirectly serve to promote development of adjacent areas.

The reduction of land in the project area in agricultural production will have the indirect effect of increasing development pressure and accelerating the loss of the remainder of the agricultural land within the area. A net decrease in farmland under cultivation in an area has a consequent increase in agricultural production costs such as transportation and labor. Agricultural activities tend to be incompatible with urban and suburban neighbors because of factors such as dust, odors, pesticide use, and machinery noise associated with normal farming operations. Farmers may also experience increased costs associated with garbage dumping on their property, theft of produce and equipment, vandalism of equipment, and increased traffic on roads used to move equipment between fields. Development within the project area may reduce the attractiveness of continued production on nearby farmlands, and may increase the financial rewards of taking land out of agricultural use. However, conversion of agricultural land to urban uses is a long and continuing trend in Orange County. Though it is difficult to quantify the amount of agricultural land that is under development pressure within the County, it is unarguable that such pressure exists and will continue with or without implementation of the proposed project. As a result, while there are existing pressures that would result in the conversion of agricultural land within and adjacent to the project area with or without implementation of the proposed project, it is expected that the conversion of agricultural land within the project area will serve to indirectly promote the conversion and development of agricultural land within the area.

X. FINDINGS REGARDING SIGNIFICANT IRREVERSIBLE ENVIRONMENTAL CHANGES

Guidelines Section 15126.2(c) indicates that:

“Uses of nonrenewable resources during the initial and continued phases of the project may be irreversible since a large commitment of such resources makes removal or nonuse thereafter unlikely.”

The Guidelines also indicate that:

“Irretrievable commitments of resources should be evaluated to assure that such current consumption is justified.”

Primary Impacts:

In summary, annexation of the former MCAS El Toro site, Musick Jail site, and IRWD parcel and implementation of the proposed project will involve the following irreversible environmental changes:

- New development under the proposed project will lead to the loss of agricultural land on-site. These existing agricultural areas are planned for the development of the wildlife corridor, open space/park, and sports park uses.
- The project involves the commitment of approximately 4,738 acres (former MCAS El Toro) to land uses proposed under the proposed project, resulting in the elimination of existing on-site development. Some structures (“The Castle”, former bachelor housing) and uses (golf course, habitat preserve) may be retained, and some may serve as interim facilities until permanent facilities are constructed (i.e., El Toro Marine School and some existing office buildings, some of which have been retrofitted for other uses).
- New vehicle trips on proposed and surrounding roadways will be generated by new development under the proposed project. Planned roadways on-site are expected to provide access into the site and allow changes in traffic patterns due to the alternative routes provided on-site.
- Vehicle trips generated by new development under the proposed project will result in increases in air pollutants, including criteria air pollutants, associated with vehicle exhaust. Greater pollutant emissions are also expected from new stationary sources that may be built within the project area.
- New development under the proposed project will introduce long-term noise from vehicles traveling to and from the project site. The vehicular noise will add to ambient noise levels on-site and in the surrounding area. New sources of stationary noise are also expected from future development and on-site activities.
- The project will require the commitment of energy, water, and other natural resources for the construction and operation of new development. However, existing resources are available to meet the projected demand and utility providers can serve new development under the proposed project without adverse impacts.
- Implementation of the proposed project will involve demolition of existing structures that have asbestos-containing materials and lead-based paint and the disposal of other hazardous materials on the site. Abandonment of water wells and fuel tanks will also occur, along with the remediation of identified contaminated soils. Thus, elimination of existing public health and safety hazards will accompany the proposed project.
- Implementation of the proposed project will result in an increase in the demand for utilities and will require the extension of existing infrastructure to individual lots on the site. An increase in demand for public services and facilities operated by the City of Irvine and affected service agencies will also occur. This demand can be served by facilities and staffing of public service agencies.
- The proposed project will lead to demolition of existing structures on site, the construction of new structures, and changes in the visual quality of the site. New light sources will be introduced to the environment. These changes will not result in significant adverse impacts after mitigation.
- The preclusion of an airport and airport uses in accordance with Measure W, which was passed by Orange County voters in 2002.

Secondary Impacts:

Annexation of the proposed project area and its implementation will alter the pattern of on-site development through development of a primarily park/open space in the area and demolition of existing military facilities. New development planned under the proposed project will involve the provision of new roadways and infrastructure systems to serve individual lots and projects on-site. The proposed project will provide an extensive circulation network on-site and will divide the existing site into smaller planning areas for future development. While the former MCAS El Toro is not open to public access, the proposed project will provide public access to most of the site, as well as allow vehicles and people to pass through the site.

In the post-buildout period, when planned land uses change or areas are redeveloped within the project area, public service facilities and infrastructure that are constructed under the proposed project will continue to permit on-site urban development. These public improvements will also allow the site and the surrounding area to develop and accommodate additional population growth well beyond buildout of the project area. Recycling of land uses in and around the project area will be subject to City of Irvine General Plan policies for planned growth, phased development, and provision of public facilities and services. Therefore, no environmentally significant secondary impacts are anticipated to result from project implementation.

XI. STATEMENT OF OVERRIDING CONSIDERATIONS

Pursuant to Public Resources Code Section 21081(b) and the Guidelines Section 15093, the City has balanced the benefits of the proposed Project against the following unavoidable adverse impacts associated with the proposed Project and has adopted all feasible mitigation measures with respect to these impacts: (1) Traffic/Circulation, (2) Air Quality, (3) Population and Housing, and (4) Agriculture. The City also has examined alternatives to the proposed Project, none of which both meet the Project objectives and are environmentally preferable to the proposed Project.

The City, after balancing the specific economic, legal, social, technological, and other benefits of the proposed Project, has determined that the unavoidable adverse environmental impacts identified above may be considered “acceptable” due to the following specific considerations which outweigh the unavoidable, adverse environmental impacts of the proposed Project. Each of the separate benefits of the proposed Project, as stated herein, is determined to be, unto itself and independent of the other Project benefits, a basis for overriding all unavoidable adverse environmental impacts identified in these Findings.

- **Dedication of Open Space:** The proposed Base Plan will result in the dedication of approximately 1,564 acres of permanent open space/park, Sports Park, and golf

course, far in excess of open space dedication under traditional City requirements. The proposed Overlay Plan would result in the dedication of 1,073-acres of open space/park, Sports Park, and golf course, which will create one of the largest open space areas in Southern California, for the benefit of the residents of Irvine and the entire Orange County. These dedications are consistent the 1988 Open Space Initiative which identified as its purpose to give Irvine an open space system that provides relief from increasing congestion and urbanization of Irvine and the surrounding communities and which encapsulated a policy to move the City toward a planned open space system. The Initiative directed that the open space system should be created in a manner consistent with key objectives stated in the Initiative, including the consolidation of “important conservation and open space area into large continuous areas that may be integrated into local and regional open space areas”. The proposed project is consistent with and advances these open space objectives which have since been incorporated into the City’s General Plan Land Use Element and Conservation and Open Space Element.

- **Parks and Recreation:** According to the Base Plan, majority of land uses in PAs 51 and 30 are proposed for open space and recreation. Overlay Plan, the majority of land uses in PA 51 are proposed for open space and recreation. The project provides for a variety of open space features to serve the City and the surrounding region. These open space features include parks, sports parks, golf courses, habitat preserve, drainage and wildlife corridors, fairgrounds, and a cemetery. The parkland acreage proposed under the project will greatly exceed the existing City of Irvine’s standards described above, providing a regional open space amenity for the benefit of all Orange County. Under the Overlay Plan, the allowable development will fund the development of the park and recreation areas, and result in one of the largest single park and recreation areas in the urbanized area of Southern California, which will provide significant recreational and leisure benefits to residents of Irvine and throughout Orange County.
- **Wildlife Corridor:** Wildlife movement corridors are of substantial importance to the viability of regional planning efforts to obtain habitat linkages. Presently there is no wildlife corridor within the project area. However, a major feature of the proposed project is the inclusion of a wildlife corridor land use which would allow for the creation of a wildlife corridor connecting the Lomas Ridge and the San Joaquin Hills. The wildlife corridor provides connection to the estimated 974-acre habitat preserve, as well as the Limestone-Whiting Wilderness Park. To the south, the corridor will connect to the Laguna Coast Wilderness Park through existing and future major open space linkages. As a result, approval and development of this project will maintain and enhance wildlife movement, and provide significant benefits for wildlife.
- **Preservation of Agricultural Resources:** A major component of the Orange County Great Park Plan is the preservation of agriculture within several areas of the property. Under the proposed Base Plan, 443-acres of land are proposed for

an Agriculture land use. Similarly, under the proposed Overlay Plan, 307-acres of land are designated as an Agriculture land use. The proposed project helps implement the Agricultural Legacy Program by proposing agricultural land uses in the portion of PA 51 that is identified by the Irvine Agricultural Legacy Program Preliminary Sites Assessment (City of Irvine November 26, 2002).

- **Drainage Corridors:** The proposed project includes a land use category for the creation of drainage corridors through the project site. The proposed drainage plan for the project is based on an earthen open channel and landscaped drainage corridor (corridor) method. These drainage corridors offer an opportunity to control surface water flow, improve surface water quality, and create wetland/riparian habitats where none currently exist in the project area. The development of these drainage corridors will provide significant regional wildlife, aesthetic and water quality benefits for the entire region.
- **Hydrology/Water Quality Benefits:** The existing channels have all been improved/channelized and are proposed to remain the same under the Orange County Great Park Plan. Sediment loads currently carried by these channels may decrease in the future due to recently installed detention basins in Bee Canyon, Round Canyon, and the Marshburn Basin. Additionally, to improve water quality within the San Diego Creek watershed, natural drainage corridors will be included in the Great Park Plan. In addition, the Irvine Ranch Water District is proposing to develop water quality wetlands within the project area. The wetlands are planned to be located along the Bee Canyon Channel, Aqua Chinon Channel, Serrano Creek, and the Upper San Diego Creek. To the extent that the project would improve water quality, that benefit would be shared by the watershed. As a result, development of the project will have region-wide water quality benefits, including beneficial impacts on the watercourses emptying into Newport Bay and the Pacific Ocean.
- **Housing Opportunities:** The proposed project will provide additional housing on the site to accommodate demand for housing in Orange County and the impact will be beneficial. The Base Plan is expected to result in provision of 225 dwelling units, while the Overlay Plan is expected to result in provision of 3,625 dwelling units.
- **Employment Generation:** Temporary short-term construction jobs will be created during the lifetime of the proposed project. Additionally, the proposed project is expected to create a diverse range of long-term jobs on site. The Base Plan is expected to generate approximately 11,380 jobs, while the Overlay Plan would generate approximately 16,510 jobs.
- **Transit-Oriented Development:** The Base Plan proposes 99-acres of Transportation and Transit related facilities and 20 acres of Transit Oriented Development in the southern portion of the project area. The Overlay Plan

proposes 210-acres of Transit Oriented Development in the southern portion of the project area. These land use proposals take advantage of the existing commuter rail station (the Irvine Multimodal Transportation Center), the I-5 Freeway, the Foothill and Eastern Transportation Corridor toll facilities located within the project vicinity and encourage the increased use of transit in this area. Additionally, as mitigation for the project, the City will coordinate with the Orange County Transportation Authority to restructure transit service plans to provide effective service to the project area.

- **Pedestrian-Friendly Development:** By developing immediately adjacent to an existing urbanized area and in the vicinity of commuter rail and passenger facilities, the project also enhances the options for non-motorized access throughout the larger area. The project proposes pedestrian sidewalks, bikeways and transit routes that will link to surrounding trails, land uses, and activity centers. This will reduce the number of auto trips and vehicle miles traveled, and create opportunities for residents to walk or bike. Additionally, as mitigation for the project, the City will coordinate with the Orange County Transportation Authority to restructure transit service plans to provide effective service to the project area.
- **Major Central Park:** With the approval of Orange County Central Park and Nature Preserve Initiative (Measure W) in March 2002, the County of Orange General Plan was amended to create a major central park at the former MCAS El Toro site. Following this decision by the voters of Orange County, the Department of the Navy issued its Record of Decision to dispose of the former military base using the mixed land use alternative, leaving “the particular means to achieve redevelopment to the acquiring entity and the local zoning authorities.” Subsequently, representatives from the Department of the Navy and the General Services Administration met with City staff and began a dialogue on meeting the Navy’s interests in disposing of the former Base expeditiously while realizing the City’s goals of annexing the property within its sphere of influence and remaining consistent with the intent of Measure W. These meetings held in both the City of Irvine and Washington D.C. resulted in a mutual understanding among the parties regarding both the development opportunities and the open space requirements that need to be accommodated in the reuse plan.

In keeping with the mutual understanding between the Navy and the City of Irvine, the Orange County Great Park plan permits a certain level of mixed use development, with its attendant environmental impacts, in return for allocation of substantial portions of the property to open space uses. The City’s partnership with the Navy has produced a plan which will create one of America’s greatest parks right in the heart of Orange County. The City accepts the significant environmental impacts associated with development of the property in recognition of 2,600 acres of educational, open space, and recreational opportunities that will be created through the land use regulations. Specifically, a 165-acre Sports Park

will serve as a regional benefit by providing a venue for large-scale tournament play as well as the opportunity for instructional programs to benefit youth throughout the County. The creation of a 275-acre educational campus will meet the growing needs for higher education in South Orange County. The construction of a 73-acre cemetery site will meet the City's General Plan objective regarding public facilities development (Objective G-1). The 974-acre Habitat Preserve will expand and enhance the County's Natural Communities Conservation Program/Habitat Conservation Plan (NCCP/HCP). The 367-acre Meadows Park will be centrally located in Orange County and accessible by automobile, bus, and train, providing a close and available respite from suburban pressures. The 156-acre Exposition Center South will provide opportunities for future art, history, and science museums, botanical gardens, and other cultural facilities that currently do not exist anywhere else in the County.

When considered as a whole, the benefits to the residents of Irvine, to the voters who supported Measure W, and to the citizens of Orange County outweigh the significant environmental impacts of the project.

For the foregoing reasons, the City finds that the proposed project's adverse unavoidable environmental impacts associated with traffic/circulation, air quality, population and housing, and agriculture are outweighed by these considerable benefits.

XII. CONCLUSION

For the foregoing reasons, the City of Irvine concludes that the Orange County Great Park will result in a beneficial mix of regional open space, cultural and recreational facilities providing significant open space, recreation, hydrology/water quality, housing, employment and transit related benefits of local and regional significance, as well as various public infrastructure improvements, which outweigh the unavoidable environmental impacts. Therefore, the City of Irvine has adopted this Statement of Overriding Considerations.

ORANGE COUNTY GREAT PARK

Mitigation Monitoring Program

**ORANGE COUNTY GREAT PARK
FINAL EIR
CITY OF IRVINE
MITIGATION MONITORING AND REPORTING PROGRAM CHECKLIST**

1.0 INTRODUCTION

Section 21081.6 to the State of California Public Resources Code requires a lead or responsible agency that approves or carries out a project where an environmental impact report (EIR) has identified significant environmental effects to adopt a “reporting or monitoring program for adopted or required changes to mitigate or avoid significant environmental effects.” The City of Irvine is the lead agency for the Great Park Plan EIR, and therefore is responsible for implementation of the mitigation monitoring program. An EIR has been prepared for this project which addresses potential environmental impacts and, where appropriate, recommends measures to mitigate these impacts. As such, a mitigation reporting or monitoring program is required to ensure that adopted mitigation measures are implemented.

The project is located in the center of Orange County and includes land within the City or Irvine as well as unincorporated area. The project area encompasses approximately 4,701 acres, or 7.5 square miles. The total area proposed for annexation is 4,287 acres.

The project area is bounded by the City of Lake Forest to the south and southeast, the City of Irvine to the west and southwest, and the County of Orange to the north. The former MCAS El Toro is generally located north of the Santa Ana (I-5) Freeway, east of the Eastern Transportation Corridor (SR-133), and south of the Foothill Transportation Corridor (SR-241). Major roadways bordering the project area include Barranca Parkway to the south, Sand Canyon Avenue to the west, Portola Parkway and Irvine Boulevard to the north, and Alton Parkway to the east. The James A. Musick Jail Facility is located on a 105-acre site northwest of existing Bake Parkway and east of the future extension of Alton Parkway. The northern boundary of the Musick Jail abuts the former MCAS El Toro. Existing buildings of the Irvine Spectrum abut the Musick Jail site to the west/southwest. An eight-acre parcel west of the Musick Jail contains the IRWD East Irvine Pumping Station, Zone III 5-million gallon potable water reservoir, and a 7-million gallon potable water reservoir.

The project consists of the following actions: 1) Annexation, General Plan Amendment, Pre-Zoning (prior to annexation), and Zoning of the unincorporated portion of Planning Area 51; 2) Annexation of the unincorporated portion of Planning Area 35 (the Irvine Ranch Water District Parcel); 3) General Plan Amendment and Zone Change for Planning Area 30 with is presently in the City of Irvine; and, 4) Approval in the form of a Development Agreement vesting approval of higher intensity overlay uses in consideration of dedication of land for public purposes and for funding certain infrastructure improvements and maintenance of the public uses by the

purchaser/developer and subsequent landowners and funds for specified park, roadways, and other circulation facilities and infrastructure. The proposed project also includes the dedication of approximately 21 acres to be used for the Jeffrey Pine Open Space Spine (JOSS). The JOSS acreage will serve as a connector to the regional open space system and will provide recreational opportunities in the Northern Sphere.

2.0 PROGRAM MANAGEMENT

The mitigation monitoring and reporting program (MMRP) for the Great Park Plan will be in place through all phases of project approval. Enforcement of the MMRP will be the responsibility of a Project Manager (PM) at the City of Irvine.

2.1 Roles and Responsibilities: Project Manager

The role is assigned by the Community Development Director. The PM assigned to the proposed project will supervise the MMRP during design, construction, and operation of the project and is responsible for the overall management of the MMRP. The PM is thoroughly familiar with the project and qualified to determine if an adopted measure is being properly implemented. The PM oversees the MMRP and reviews the Reporting and Implementation (R&I) Forms to ensure they are filled out correctly and proper action is being taken on each measure. The PM and/or an assignee will also be responsible for the filling and updating of the R&I Forms during all phases of the project. The PM will determine the need for a measure to be modified and ensure the use of a mitigation specialist if technical expertise beyond the PM's is required. If it is found that an adopted mitigation measure is not being properly implemented, the PM will require corrective actions to ensure adequate implementation. The responsibilities of the PM include the following:

1. An MMRP Reporting Form will be prepared for each potential significant impact and its corresponding mitigation, as identified in the list of significant impacts and mitigation measures attached hereto.
2. Appropriate specialists will be retained, as needed, to monitor specific mitigation activities and provide appropriate written approvals to the PM.
3. The PM and/or an assignee will approve, by signature and date, the completion of each action item that was identified on the MMRP Reporting Form.
4. All MMRP Reporting Forms for an impact issue requiring no further monitoring will be signed off as completed by the PM and/or an assignee at the bottom of the MMRP Reporting Form.

5. Unanticipated circumstances may arise requiring the refinement or addition of mitigation measures. The PM is responsible for approving any such refinements or additions. An MMRP Reporting Form will be completed by the PM and/or an assignee. The completed form will be provided to the appropriate design, construction, or operational personnel.
6. The PM has the authority to stop the work of construction contractors if compliance with any aspects of the MMRP is not occurring after written notification has been issued. The PM also has authority to hold certificates of occupancies if compliance with a mitigation measure attached herein is not occurring. The PM also has authority to hold the issuance of a building permit until all mitigation measures are implemented. Should the applicant/contractor disagree with the findings and actions of the PM, an appeal to the Community Development Director can be submitted.

2.2 General Procedures

MMRP Program Definitions

The MMRP consists of key program elements. The elements are summarized below.

MMRP Files

Files are established to document and retain records of the MMO. The file organization is established by the PM according to mitigation measures and project phases.

R&I Forms

R&I Forms are designed to record the monitoring activity in a consistent manner with appropriate approvals. The R&I Forms are placed in the MMRP files.

Environmental Compliance Verification

At the completion of construction contracts that are part of the overall development of the project, a verification of environmental compliance is executed by the PM. The verification concludes the construction monitoring process for the contract.

Mitigation Monitoring and Reporting Program Procedures

The policies and procedures for the MMRP described herein are intended to provide focused, yet flexible guidelines for monitoring the implementation of the mitigation measures discussed in the final EIR. The Mitigation Monitoring and Reporting Checklist lists each mitigation measure, the method of verification for each mitigation measure, and the party responsible for monitoring efforts. The Mitigation Monitoring and Reporting Checklist also provides the PM a verification of compliance for each mitigation measure during each applicable phase of the project. An R&I form is prepared for each potential significant impact and its corresponding mitigation measure. After each measure is verified for compliance, no further action is required for the specific phase. The PM shall initial and date the measure on Mitigation Monitoring and Reporting Checklist.

Disposition of Monitoring Forms

All actions and completed R&I Forms are kept in the MMRP file with the City of Irvine during the pre-design, design, construction, and operational phases of the project. Reports will be available from the city upon request at the following address:

City of Irvine (Lead Agency)
Community Development Department
One Civic Center Plaza
Irvine, California 92623-9575

MITIGATION MONITORING AND REPORTING PROGRAM

ORANGE COUNTY GREAT PARK

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
5.1 LAND USE (Base Plan and Overlay Plan)					
	No mitigation measures are required.				
5.2 TRAFFIC/CIRCULATION (Base Plan and Overlay Plan)					
TRAN1	<p>Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) ("Spectrumotion") in accordance with Article X of the recorded Declaration of Covenants, Conditions and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs. The primary purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described below:</p> <p>Transportation Management Plan (TMP)</p> <p>The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for the Great Park Project. This document summarizes the key elements of the TMP.</p>	Requires submittal of annexation plans by project applicant in accordance with the Irvine Spectrum TMA. Failure to obtain approval of such plans requires project applicant to develop and implement a TMP as described in TRAN1.	Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>1.0 Introduction</p> <p>The purpose of this document is to provide an outline for a comprehensive TMP for the Great Park. This report is not intended to provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.</p> <p>It is the intent to annex Planning Area 51 and a portion of Planning Area 35 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo-commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed restrictions requiring participation in the TMA. Membership dues provide the funding for the Association and its programs, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.</p> <p>In the event that annexation of PAs 51 and 35 into Spectrumotion is not approved, a TMP similar to that provided by Spectrumotion will be implemented. This document sets forth the components of the TMP should it be necessary.</p> <p>2.0 Transportation Management Plan Framework</p> <p>The key elements of the Great Park TMP are set forth below:</p> <p>New Hire Orientation: Inform newly hired employees of commuting services available to them.</p> <p>Public Transportation Pass Sales: Provide a central</p>				

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>location for purchase of passes to available transit services ((i.e., OCTA buses, Metrolink, Amtrak, etc.).</p> <p>Vanpool and Carpool Formation Assistance: Perform all of the administrative work necessary to establish van pools and car pools.</p> <p>On-site Promotions: Hold rideshare promotions at work sites and assist in employer assistance promotions.</p> <p>Telecommuting/Alternative Work Schedule Consulting: Assist employers in developing and implementing a telecommuting or alternative work schedule program.</p> <p>Personalized Commute Consulting: Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.</p> <p>Website: Maintain a website with all of their program information available.</p> <p>Rideshare Promotions: Conduct high visibility rideshare promotions as a means to advertise its services.</p> <p>Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.</p> <p>Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.</p> <p>3.0 Transportation Management Plan Implementation</p> <p>As part of the TMP, a process will be established to monitor its</p>				

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	effectiveness in reducing peak hour trip generation in the Great Park. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.				
TRAN2	Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of this EIR.	Requires contractual agreement between the City of Irvine and project applicant to fund improvement listed in the EIR.	Prior to the issuance of the first building permit.	Director of Community Development or designee.	
TRAN3	Prior to issuance of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the project traffic study (Urban Crossroads, December 2002) to maintain satisfactory levels of service as defined by the City's General Plan, based on thresholds of significance, performance standards, and methodologies used in this EIR, Orange County Congestion Management Program, and established in the transportation system/infrastructure fee program described in Mitigation Measure Tran 2 above.	Requires contractual agreement between the City of Irvine and project applicant to fund improvement listed in the EIR.	Prior to issuance of any building permits for permanent improvements in the project area.	Director of Community Development or designee.	
TRAN4	Prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate the cumulative impact of the subject map and all previously approved or concurrently submitted maps. The methodology for the study area, applicable land use and circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved	Requires the separate submission of updated traffic study developed in accordance with City of Irvine Traffic Study Guidelines.	Prior to the approval of each Master Tentative Map or equivalent document.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>traffic study scope of work. The landowner or subsequent project applicant shall construct, bond for, or enter into a funding agreement for necessary improvements identified in the updated traffic study and/or participate in the City fee program (Tran 2 above) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of this EIR.</p> <p>Traffic signals that are on-site or directly related to the Great Park development will be installed as warranted through the mitigation implementation plan process.</p>				
TRAN5	<p>In conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, the landowner or subsequent project applicant and the City will take the following actions:</p> <ol style="list-style-type: none"> 1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-tollway ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in this EIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines. 2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency. 3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to 	Requires the separate submission of updated traffic study developed in accordance with City of Irvine Traffic Study Guidelines.	Prior to the approval of each Master Tentative Map or equivalent document.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>recordation of the first final map for each Master Tentative Map or equivalent to establish the method and timing of payment of the identified percentage responsibility.</p> <p>The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.</p>				
TRAN6	The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.	Requires the separate submission of updated traffic study developed in accordance with City of Irvine Traffic Study Guidelines. May require additional documentation and/or submission to other jurisdictions, depending on location of proposed improvement.	Prior to the approval of each Master Tentative Map or equivalent document.	Director of Community Development or designee.	
TRAN7	Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval, proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern	Requires the development and submission of a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study by the City of Irvine.	Prior to the approval of each Master Tentative Map or equivalent document.	Director of Community Development for submission to Caltrans and potentially effected TCA's.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-compete clause or any similar agreement restricting a public agency's authority to construct improvement.				
TRAN8	Following adoption of a land use plan and circulation plan for the Great Park property and before the issuance of any building permits within the base property, the City of Irvine shall enter into a cooperative study with OCTA and other affected jurisdiction to amend the Orange County Master Plan of Arterial Highways. Marine Way, Trabuco Road from the SR-133 tollway to College Road, and Y Street should be included on the MPAH.	Requires cooperate study and subsequent amendment to Orange County Master Plan of Arterial Highways.	Following adoption of a land use plan and circulation plan for the project site and before the issuance of any building permits.	Director of Community Development, OCTA, and other affected jurisdictions.	
5.3 AIR QUALITY (Base Plan and Overlay Plan)					
AQ1	Prior to the start of demolition and construction within the project area, adjacent sensitive receptors shall be informed of the planned demolition and construction activities. Measures to avoid significantly impacting these receptors shall be developed and implemented by the project proponent in coordination with these uses. Other applicable mitigation measures such as erection of fences around construction areas; staggered use of equipment near sensitive receptors; diversion of truck trips away from receptors; etc.; shall be employed as necessary. Compliance with this measure shall be verified by the Director of Community Development.	Requires written notification to potentially affected sensitive receptors (residents and landowners).	Prior to the start of demolition and construction within the project area.	Director of Community Development or designee.	
AQ2	Prior to the commencement of construction activities required to demolish and/or remove existing DON infrastructure, including runways, the Director of Community Development shall receive and approve a construction emissions mitigation plan from the chosen demolition contractor. Prior to the issuance of grading permits, the applicant of any future development project shall submit, and the Director of Community Development shall approve a construction emissions mitigation plan. The plans shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation	Requires the development, submission, and approval of a construction emissions mitigation plan by project applicant.	Prior to the start of demolition and construction within the project area.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.</p> <ul style="list-style-type: none"> C Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase. C Water exposed soils at least twice daily and maintain equipment and vehicle engines in good condition and in proper tune. C Wash off trucks leaving the site. C Replace ground cover on construction sites when it is determined that the site will be undisturbed for lengthy periods. C Reduce speeds on unpaved roads to less than 15 miles per hour. C Halt all grading and excavation operations when wind speeds exceed 25 miles per hour. C Suspend all emission generating activities during smog alerts. C Use propane- or butane-powered on-site mobile equipment instead of diesel/gasoline, whenever feasible. C Properly maintain diesel-powered on-site mobile equipment. C Sweep streets at the end of the day if substantial visible soil material is carried over to the adjacent streets. C Use electricity from power poles rather than temporary on-site diesel- or gasoline-powered generators, whenever feasible. C Use of low-VOC asphalt. C Cover all trucks hauling dirt, sand, soil or other loose material to and from the site. C Provide temporary traffic controls (e.g., flag persons) during all phases of construction to ensure minimum disruption of traffic. C Schedule construction activities that affect traffic flow on adjoining streets to off-peak hours to the extent possible. C Reroute construction trucks away from congested streets, whenever feasible. 				

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	C Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, whenever feasible.				
AQ3	<p>Prior to the issuance of building permits for any future development, the applicant shall submit, and the Director of Community Development shall have approved, an operation-emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.</p> <p>C Utilize built-in energy-efficient appliances to reduce energy consumption and emissions.</p> <p>C Utilize energy-efficient and automated controls for air conditioners and lighting to reduce electricity consumption and associated emissions.</p> <p>C Install special sunlight-filtering window coatings or double-paned windows to reduce thermal loss, whenever feasible.</p> <p>C Utilize light-colored roofing materials as opposed to dark roofing materials to conserve electrical energy for air-conditioning.</p> <p>C Provide shade trees in residential subdivisions as well as public areas, including parks, to reduce building heating and cooling needs, whenever feasible.</p> <p>C Ensure that whenever feasible, commercial truck traffic is diverted from local roadways to off-peak periods.</p> <p>C Centralize space heating and cooling for multiple-family dwelling units and commercial space.</p> <p>C Orient buildings north/south for reducing energy-related combustion emissions.</p> <p>C Use solar energy, when feasible.</p> <p>C Use high rating insulation in walls and ceilings.</p>	Requires the development, submission, and approval of an operation-emissions mitigation plan by project applicant.	Prior to the issuance of building permits within the project area.	Director of Community Development or designee.	
AQ4	Information on available housing and employment opportunities within the project area shall be provided to employees and residents of the project area, so as to encourage employees to live within the residential developments planned on-site and future residents to find	Requires written notification to employees and residents within the project area.	On-going (prior to and during the development of the project area).	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	employment nearby.				
AQ5	Future employment generating non-residential development shall include measures to reduce vehicle trips including carpool incentives, easy access to public transit systems, trail linkages between uses, low-emissions vehicle fleets, and the provision of on-site facilities such as banking and food courts.	Requires submission of potential measures to reduce vehicle trips, as identified in AQ5.	On-going (prior, during and upon completion of development of the project area).	Director of Community Development or designee.	
5.4 NOISE (Base Plan and Overlay Plan)					
	No mitigation measures are required.				
5.5 PUBLIC HEALTH AND SAFETY (Base Plan and Overlay Plan)					
HH1	<p>a. Prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the DON or its transference shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property, including:</p> <ul style="list-style-type: none">C The type, location and condition of ACMsC The results of any asbestos testingC Description of asbestos control measures taken, if anyC The costs or time necessary to remove existing ACMsC The results of any site-specific asbestos inventory updates <p>b. For any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DON shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements.</p> <p>c. Prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or</p>	Requires submission of Record of Decision (ROD) or similar applicable federal/state documentation to verify information provided to the City of Irvine by the DON. NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DON. This requirement can be waived if an architect or project engineer responsible for the construction of the structure or an accredited asbestos inspector signs a statement that no ACM was specified as a building material, and to the best of their knowledge, no ACMs were used as a building material.</p> <p>d. Any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws.</p> <p>e. Any renovation and/or LBP abatement activities on residential units at former MCAS EI Toro shall be conducted in accordance with all applicable federal, state and local regulatory requirements.</p>				
HH2	<p>a. Prior to transfer, the City of Irvine shall receive from the DON, with the concurrence of the appropriate regulatory agencies, a statement that the "Action Required" IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been identified and implemented. The City of Irvine will adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards,</p>	Requires submission of Record of Decision (ROD) or similar applicable federal/state documentation to verify information provided to the City of Irvine by the DON.	Prior to the conveyance of the former MCAS EI Toro property; prior to the use of Locations of Concern on the former MCAS EI Toro property.	Manager of Building and Safety; Director of Community Development; City Council.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>boundaries and acreages are approximate and shall be established by master plan approval.</p> <p>b. Prior to transfer, if the DON chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DON a statement of temporary restrictions on the use of the sites and the release of the sites for unrestricted use following implementation of adequate remediation of groundwater. The City of Irvine shall adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.</p>				
HH3	<p>The Community Development Department, in coordination with the Orange County Fire Authority (OCFA), will be responsible for review of all development plans, which would include evaluation of very high fire severity zones, special fire protection plans, and any requirements for fuel modification zones. Projects potentially impacted by wildland fire hazards will be subject to OCFA Guidelines for “Development Within and Exclusion from Very High Fire Severity Zones” and “Fuel Modification Plans and Maintenance.” Additionally, all demolition, renovation, and construction activities in the project area will be subject to review by OCFA to ensure adequate fire protection, water flow, emergency access, design features, etc., according to the standards of the Uniform Fire Code and the California Fire Code. Due to the implementation of these standard fire protection procedures, the proposed project is not</p>	<p>Requires submission of development plans by potential project applicants for review and approval.</p>	<p>Prior to the approval of development plans.</p>	<p>Manager of Building and Safety ; Orange County Fire Authority.</p>	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	anticipated to result in significant short- or long-term adverse impacts related to fire hazards.				
HH4	Prior to issuance of occupancy permits of any existing structure at the former MCAS El Toro, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval.	Requires submission of development plans for existing structures for review and approval of required improvements.	Prior to the occupation of existing structures located on the former MCAS El Toro property.	Manager of Building and Safety; Orange County Fire Authority.	
HH5	Prior to the issuance of a grading permit, the applicant shall prepare and the Director of Community Development shall approve a protocol plan (including but not limited to worker training, health and safety precautions, additional testing requirements, and emergency notification procedures) in the event of unknown hazardous materials are discovered during grading, construction, and/or related development activities. Additionally, said protocol plan will be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities. The applicant and/or property owner that discovers contamination due to past military operations not previously identified by the DON shall be responsible for notifying the DON, appropriate regulatory agencies, and the Director of Community Development of the City of Irvine in a timely manner.	Requires the development, submission, and approval of a protocol plan by the potential project applicant.	On-going (prior to the issuance of a grading permit within the project area; in the event of the discovery of unknown hazardous materials).	Director of Community Development or designee; the DON.	
HH6	The City of Irvine shall develop and maintain the location and status, as well as other pertinent information, of all monitoring wells located on the former MCAS El Toro in a geographic information systems database (GIS). The City will review all permit applications on the former air station for well locations that may be affected by a permit, and require applicants to maintain appropriate access. Access to wells will be limited to authorized personnel.	Requires the development and maintenance of a GIS database by the City of Irvine.	On-going (prior to the issuance of grading permits; during construction activities).	Department of Public Works.	
4.6 GEOLOGY AND SEISMICITY (Base Plan and Overlay Plan)					
GS1	Prior to issuance of a building permit, the City of Irvine shall	Requires potential	Prior to the	Director of

	require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest Building Codes adopted by the City of Irvine. Compliance with this measure shall be verified by the Community Development Department.	project applicant to address seismic design provisions in geotechnical reports per adopted Building Codes.	issuance of a building permit.	Community Development.	
GS2	<p>Prior to issuance of a building permit, as per existing City policies, geotechnical studies shall be prepared at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.</p> <p>1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing, shall be conducted. The purpose of the subsurface evaluation is to:</p> <ul style="list-style-type: none"> a. Further evaluate the subsurface conditions in the area of the proposed structures. b. Provide specific data on potential geologic and geotechnical hazards. c. Provide information pertaining to the engineering characteristics of earth materials in the project area. <p>From this data, recommendations for grading/earthwork, surface, and subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural sections, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General</p>	Requires potential project applicant to prepare geotechnical studies in support of specific development plans.	Prior to the issuance of a building permit.	Director of Community Development.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>recommendations are as follows:</p> <ul style="list-style-type: none"> C Seismic Ground Shaking - Measures to prevent risk of loss, injury or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults. C Erosion or Loss of Topsoil – Erosion and sediment control measures shall be implemented as required by the City's Grading and Water Quality ordinances. C Where Expansive Soils Exist – Measures for the design of foundations, slabs, flatwork and other improvements subject to drainage from expansive soils. <p>Compliance with this measure shall be verified by the Community Development Department.</p>				
GS3	Prior to issuance of building permits for the occupancy of any existing structure at the former MCAS El Toro, or occupancy of any existing structure if a building permit is not issued, a seismic evaluation of the structure including recommendations for seismic improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required seismic improvements shall be submitted to the Chief Building Official for review and approval.	Requires potential project applicant to develop and submit a seismic evaluation in accordance with adopted Building Codes.	Prior to the issuance of a building permit for the occupation of any existing structure at the former MCAS El Toro.	Manager of Building and Safety.	
GS4	Prior to issuance of a grading permit, detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specifically address erosion control and surface runoff for both construction and long-term operations on the site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx into the drainage system	Requires potential project applicant to develop and submit geotechnical and hydrology reports in accordance with adopted	Prior to the issuance of a grading permit.	Director of Community Development.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	shall be implemented. Compliance with this measure shall be verified by the Community Development Department.	local/state/federal regulations.			
5.7 Hydrology/Water Quality (Base Plan and Overlay Plan)					
H/WQ1	<p>Prior to issuance of a grading permit, the applicant shall provide evidence that the development of the project area shall comply with City of Irvine adopted Grading and Water Quality Ordinances to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area . . . and residential construction sites that result in the disturbance of five acres or more . . . shall be required to develop and implement BMPs . . . to control erosion and siltation and contaminated runoff from the construction sites." Note: In March 2003 this provision will apply to residential construction sites that result in the disturbance of one acre or more.</p> <p>The City's standard conditions of approval indicate that a Storm Water Pollution Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.</p> <p>Additionally, prior to the issuance of a grading permit, project applicants must submit, and the Director of Community Development or designee must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff after the site is occupied. Ongoing operations after construction would be</p>	<p>Potential project applicant must show compliance with City of Irvine Grading and Water Quality Ordinances via approval of a NPDES permit, SWPPP, and WQMP.</p> <p>Notices of Intent (NOIs) for coverage of potential projects under the General Construction Activity Storm Water Runoff Permit must be submitted to the State Water Resources Control Board.</p>	Prior to the issuance of a grading permit.	Director of Community Development; Manager of Building and Safety; City Engineer; State/Regional Water Quality Control Boards.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>subject to the Countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural, and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, leasee, etc.), and shall reference the location(s) of structural BMPs.</p> <p>Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the Director of Community Development for any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.</p> <p>The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.</p>				
H/WQ2	Prior to issuance of a grading permit, evidence (e.g., in the form of a construction management plan) shall be provided that demonstrates that all stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to	Submission of a construction management plan required by the potential project	Prior to the issuance of a grading permit.	Director of Community Development; City Engineer; State/Regional	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	comply with water quality requirements identified in the Santa Ana Regional Water Quality Control Board Basin Plan, including Total Maximum Daily Load (TDML) Implementation Plan adopted for this watershed.	applicant.		Water Quality Control Boards.	
H/WQ3	Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrology studies and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.	Requires the submission of a hydrology study and hydraulic analysis by the potential project applicant.	Prior to the approval of the first tentative tract or parcel map in the project area.	Director of Community Development; City Engineer.	
H/WQ4	Prior to issuance of a building permit, developers with property located in the newly delineated 100-year floodplain shall be required to construct such improvements as necessary to remove the property from the 100-year floodplain. Additionally, the developer shall prepare a Letter of Map Revision (LOMR) request to have the FIRMs revised to remove the development areas from the 100-year floodplain upon completion of the approved flood control facilities. The LOMR request shall be filed upon completion of design of the flood control improvements to contain or redirect the 100-year flood flows away from the property.	Requires the development, review, and approval of a Letter of Map Revision; physical improvement of property located in 100-year floodplain by project applicant.	Prior to the issuance of a building permit.	Director of Community Development; City Engineer.	
5.8 AGRICULTURAL RESOURCES (Base Plan and Overlay Plan)					
AG1	In order to encourage agriculture as an interim land use pending development on the project site by warning future residents that they are buying or renting a house adjacent to existing agricultural operations, City Of Irvine Standard Discretionary Case Condition B.4 and City Of Irvine Standard Subdivision Condition 3.4 regarding disclosure statements shall be amended to include the following for subdivisions proposed adjacent to existing agricultural operations:	Project applicant shall complete and receive approval for an occupancy disclosure form per the standards stated in Mitigation Measure AG1.	Prior to the issuance of a building permit.	Director of Community Development.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>Prior to issuance of building permits, the applicant shall submit, and the Director of Community Development shall have approved, a completed occupancy disclosure form for the project. The approved disclosure form, along with its attachments, shall be included as part of the rental/lease agreement and as part of the sales literature for the project. The disclosure statement shall include the following information:</p> <p>C Continuation of agricultural operations adjacent to the site and their potential effects (spraying of pesticides, noise, dust, odor, etc.) on future residents or tenants.</p>				
AG2	Heritage and community service/educational farming operations shall be encouraged within utility easements and other lands. Heritage farming is defined as small-scale specialty farming operations that can be accommodated in an urban environment. An example would be the Edible Landscape project located adjacent to Harvard Avenue within the Edison right-of-way.	May require development of a cooperative agreement.	On-going (prior to and during development of the project area).	Director of Community Development.	
AG3	Future landowners and the City shall work cooperatively with farmers to minimize conflicts between agricultural operations and adjacent urban uses.	May require development of a cooperative agreement.	On-going (prior to and during development of the project area).	Director of Community Development.	
5.9 BIOLOGICAL RESOURCES (Base Plan and Overlay Plan)					
BIO1	Prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl shall be conducted. Prior to approval of a subdivision map for development within, or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owls, least Bell's vireo, or southwestern willow flycatcher in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement, or if impacts cannot be avoided, then mitigation shall be negotiated	Requires the development and submission of focused biological surveys for resources indicated in BIO1.	Prior to the approval of a subdivision map.	Director of Community Development; US Fish and Wildlife Service; California Department of Fish and Game.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG).				
BIO2	Prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan subarea that contain the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a wetland mitigation plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). Wetlands impacted on-site shall be mitigated through on-site or off-site replacement, re-creation (i.e. within the proposed wildlife corridor), and/or revegetation as deemed acceptable by the appropriate jurisdictional agencies.	Requires the development and submission of wetland survey for potential wetland resources.	Prior to the approval of a subdivision map.	Director of Community Development; US Army Corps of Engineers; US Fish and Wildlife Service; California Department of Fish and Game.	
BIO3	The City shall continue to work with State and federal agencies during the implementation of the proposed project to implement the revegetation/restoration plan for the wildlife corridor. Measures such as sight and sound barriers, including artificial sound walls and natural diversions (e.g. hedges and tree lines) shall be incorporated into corridor design to ensure the viability of the corridor. The City shall implement the corridor consistent with the design criteria and viability analysis established in the EIR.	May require development of a revegetation and/or restoration plan for the identified wildlife corridor.	On-going (prior to and during development of the project area).	Director of Community Development; US Fish and Wildlife Service; California Department of Fish and Game.	
BIO4	Prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height (DBH) greater than six inches and any significant (as determined by a certified arborist selected by the City) plants on the project site, excluding those within the habitat preserve shall be prepared. This inventory shall be prepared by an arborist certified by the International Society of Arboriculture and shall include (but not be limited to) data for each tree such as species, variety, DBH, condition (excellent, good, fair, poor, dead), and any recommendations. All trees in this inventory shall be considered "Significant Trees" under the City of Irvine's Urban Forestry Ordinance (UFO) (Section 5-7-401 et al) and the UFO shall apply to all trees included in this	Requires the development and submission of a tree inventory per the regulations outlined in the City of Irvine Urban Forestry Ordinance.	Prior to the issuance of a grading permit.	Director of Community Development; International Society of Arboriculture.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	inventory.				
5.10 PALEONTOLOGICAL RESOURCES (Base Plan and Overlay Plan)					
P1	<p>Prior to issuance of a grading permit for any portion of the project area, a qualified paleontologist shall be retained by the City or designee to carry out an appropriate paleontology investigation of the area proposed for grading. (A qualified paleontologist is defined as an individual with an M.S. or Ph.D. in paleontology or geology who is familiar with paleontological procedures and techniques.) The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant paleontological sites, and paleontological monitoring conditions have not been attached to the previous map approval. These standard conditions include retaining a qualified paleontologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process.</p> <p>When fossils are discovered, the paleontologist (or paleontological monitor) shall recover them. In most cases, this fossil salvage can be completed in a short period of time. However, some fossils specimens (such as a complete large mammal skeleton) may require an extended salvage period. In these instances the paleontologist (or paleontological monitor) shall be allowed to temporarily direct, divert or halt grading to allow recovery of fossil remains in a timely manner. Because of the potential for the recovery of small fossil remains, such as isolated mammal teeth, it may be necessary in certain instances to set up a screen-washing operation on-site.</p> <p>Fossil remains collected during the monitoring and salvage portion of the mitigation program shall be cleaned, repaired, sorted, and cataloged. Compliance with this measure shall be verified by the Community Development Department.</p>	Submittal of resource recovery and disposition plans to the Community Development Department; qualified paleontologists' attendance at pre-grading conference(s) and field observation.	Prior to issuance of a grading permit and during site grading.	Director of Community Development or designee.	
5.11 CULTURAL RESOURCES (Base Plan and Overlay Plan)					

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
CULT1	Prior to subdivision for development, a detailed archaeological report(s) shall be prepared within PAs 51 and 30. This report(s) shall specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. Recommendations contained in the report shall be implemented. Compliance with this measure shall be verified by the Community Development Department.	Requires development and submission of an archaeological resources report for PAs 51 and 30 by project applicant.	Prior to the issuance of subdivision maps.	Director of Community Development or designee.	
CULT2	Monitoring of excavation and grading activities associated with future development in PAs 51 and 30 shall be conducted by a certified archaeologist in accordance with the report required in Mitigation Measure Cult1. If resources are encountered in the course of ground disturbance, the archaeological monitor shall be empowered to halt grading and to initiate an archaeological testing program. The testing shall include recordation of artifacts, controlled removal of the materials, and an assessment of their importance under CEQA and the City's local guidelines. Compliance with this measure shall be verified by the Community Development Department.	Requires field inspection and monitoring by qualified archaeologist implementing recommendations outlined in the report noted above.	Field inspection and monitoring required during grading activities.	Director of Community Development or designee.	
CULT3	Prior to the issuance of grading permits and/or building permits for any future development in PAs 51 and 30, a detailed mitigation program shall be submitted by the applicant to the City of Irvine to address archaeological resources discovered during grading. Provisions of the program shall include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be a unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation shall be available. Work may continue on other parts of the construction site while archaeological resource mitigation takes place. The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant archaeological sites. These include retaining a qualified archaeologist, establishing procedures for cultural and	Requires the development and submission of an archaeological mitigation program by project applicant.	Prior to the issuance of grading permits and/or building permits in PAs 51 and 30.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	scientific resource surveillance, and protection of any resources discovered during the grading process. Compliance with this measure shall be verified by the Community Development Department.				
CULT4	<p>Prior to the issuance of any grading and/or building permits, a mitigation program shall be submitted by the developer to the City of Irvine to address the accidental discovery or recognition of any human remains. The program shall include the following:</p> <p>C There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:</p> <p>The county coroner must be contacted to determine that no investigation of the cause of death is required, and</p> <p>If the coroner determines the remains to be Native American:</p> <p>C The coroner shall contact the Native American Heritage Commission within 24 hours.</p> <p>C The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased Native American.</p> <p>C The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriated dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or</p> <p>C Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject</p>	Requires the development and submission of an archaeological mitigation program by project applicant.	Prior to the issuance of grading permits and/or building permits.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>to further subsurface disturbance.</p> <ul style="list-style-type: none"> C The Native American Heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission. C The descendant identified fails to make a recommendation; or C The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner. <p>Compliance with this measure shall be verified by the Community Development Department.</p>				
5.12 AESTHETICS (Base Plan and Overlay Plan)					
A1	Prior to issuance of grading permits, lighting plans and signage plans for new development shall be reviewed by the Community Development Department to ensure that minimal light intrusion and spillover into adjacent residential areas occurs.	Requires review of site specific plans for light intrusion and spillover by City of Irvine.	Prior to the issuance of grading permits, lighting plans, and/or signing plans.	Director of Community Development or designee.	
A2	Prior to the issuance of grading permits, and during the master plan review process for future development in the project area, the Director of Community Development shall ensure that mirrored and highly reflective surfaces are discouraged or, where proposed, shall be accompanied by a design-level glare impact analysis that demonstrates no adverse visual impairment to motorists or other visual nuisance occurs.	Discourages use of mirrored or reflective surfaces in proposed development; designs to be reviewed by the City of Irvine.	On-going (prior to the issuance of grading permits; during master plan review).	Director of Community Development or designee.	
5.13 POPULATION AND HOUSING (Base Plan and Overlay Plan)					
	No mitigation measures are available.				

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
5.14 PUBLIC SERVICES AND FACILITIES (Base Plan and Overlay Plan)					
	Mitigation Measures identified in other sections of this EIR (Section 5.1 – 5.13) address the impacts associated with the construction and operation of new public services and facilities (including law enforcement, fire and emergency medical services, parks and recreation, and school services). Refer to the individual sections mentioned above for a discussion on specific mitigation monitoring and reporting programs.				
5.15 UTILITIES (Base Plan and Overlay Plan)					
	Mitigation Measures identified in other sections of this EIR (Section 5.1 – 5.13) address the impacts associated with the construction and operation of new utilities (including potable water, recycled water, and sewer). Refer to the individual sections mentioned above for a discussion on specific mitigation monitoring and reporting programs. Mitigation Measures pertaining to solid waste are described below.				
SW1	<p>It is anticipated that much of the solid waste resulting from the demolition, dismantling, or other deconstruction of the aged structures and property, including but not limited to buildings and runways, at El Toro MCAS, is contaminated with lead based paints, asbestos, or other materials that may render it unsuitable for recycling or reuse. At the sole cost and expense of the project applicant, in order to evaluate this condition and determine the feasibility of recycling of solid waste material from the MCAS El Toro site by ordinary means, a technical evaluation by a qualified environmental consultant must be conducted. The technical evaluation shall include sufficient sample testing of all types of solid waste materials to be generated by the project to analyze its composition. A copy of the full technical evaluation and its findings must be submitted to the City of Irvine Community Development Department. The City of Irvine must confirm the adequacy of the technical evaluation prior to authorizing the demolition, dismantling, or deconstruction project to proceed.</p> <p>If it is determined by the technical evaluation that the material is contaminated and prohibited from being recycled by ordinary means, a further evaluation must be conducted to identify and evaluate other feasible methods approved by state law to divert the material from landfills. This may include the delivery of the waste material to other appropriate non-disposal or transformation facilities, such as “waste-to-energy” (WTE)</p>	Requires the development and submission of a technical evaluation by the project applicant to determine the composition of solid waste materials generated during the development of the project area.	Prior to the issuance of grading permits.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	plants.				
SW2	For that solid waste which is determined to be inappropriate for recycling (as that term is defined by California Public Resources Code Section 40180), the project applicant must submit a written plan to the City and implement such plan to ensure that 75 percent of the material, or the maximum amount feasible as determined by the technical evaluation, is diverted from the landfill through other methods that comply with state statutes and regulations.	Requires the project applicant to submit written plans to the City of Irvine to ensure recycling maximum feasible levels of solid waste material is recycled.	Prior to the issuance of grading permits.	Director of Community Development or designee.	
SW3	For that solid waste which the technical study deems to be suitable for recycling, the project applicant must submit a written plan to the City and implement such plan to ensure that solid waste material generated by the demolition, dismantling, or deconstruction project, land use operations and maintenance is collected by a City authorized solid waste hauler or recycling agent, and that a minimum of 75% of the solid waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180. ("Recycling" does not include transformation, as defined in Public Resources Code Section 40201.)	Requires the project applicant to submit written plans to the City of Irvine to ensure recycling maximum feasible levels of solid waste material is recycled.	Prior to the issuance of grading permits.	Director of Community Development or designee.	
SW4	<p>To ensure ongoing compliance with these mitigation measures, the project applicant will be required to submit solid waste tonnage reports to the City of Irvine on City approved forms, accompanied by "weight ticket" receipts from state-certified disposal, nondisposal, or transformation facilities, on a quarterly basis to demonstrate that solid waste diversion has occurred in accordance with these required mitigation measures and in a manner that is consistent with, and not detrimental to, the efforts of the City of Irvine to comply with AB939.</p> <p>To assure compliance with applicable statutes related to the disposal of solid waste, it is necessary for the City to require appropriate and effective mitigation measures to limit the disposal and ensure significant recycling of solid waste on-site.</p>	Requires the project applicant to submit quarterly solid waste tonnage reports to the City of Irvine in order to demonstrate solid waste diversion has occurred.	Prior to the issuance of grading permits.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
SW5	For green waste, the project applicant must submit a written plan to the City and implement such plan to ensure that the green waste material generated by landscape maintenance operations is collected by a City authorized waste hauler or recycling agent, that the maximum feasible amount of that collected green waste is recycled, and that a minimum of 50 percent of the green waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180.	Requires the project applicant to submit a written plan to the City of Irvine to ensure recycling of the maximum feasible amount of green waste material (minimum of 50 percent) by qualified agent.	Prior to the issuance of grading permits.	Director of Community Development or designee.

I. INTRODUCTION

A. Background on the Addendum Process

This draft Addendum to the Orange County Great Park Final Environmental Impact Report (FEIR), SCH No. 2002101020, has been prepared in accordance with the California Environmental Quality Act (CEQA) Guidelines Section 15164 and Health and Safety Code Sections 33333.3 and 33352.3. The draft Addendum updates the FEIR, which was certified by the City of Irvine on May 27, 2003. The purpose of the draft Addendum is to provide additional environmental review of the Orange County Great Park Redevelopment Plan (OCGPRP) as proposed by the City of Irvine.

The OCGPRP (proposed project) does not present a specific plan for the redevelopment, rehabilitation, and/or revitalization of any area within the Orange County Great Park boundaries; instead, the OCGPRP establishes a process and framework within which specific development plans will be presented, priorities for specific development projects will be established, and specific solutions will be proposed.

This draft Addendum is the result of an evaluation of the proposed project in relation to the Orange County Great Park as analyzed in the FEIR. The evaluation, contained in the attached Initial Study/Environmental Checklist, determined that the proposed project does not meet the CEQA Guidelines' requirements for preparation of a Subsequent or Supplemental EIR as described in Sections 15162 and 15163 of the Guidelines. Upon completion of the Initial Study/Environmental Checklist, the City of Irvine has determined, on the basis of substantial evidence in the light of the whole record, that the proposed project does not trigger any of the following conditions:

- substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- substantial changes occur with respect to the circumstances under which the project analyzed in the FEIR is undertaken which will require major revisions to the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or,
- new information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete or the Negative Declaration was adopted, shows any of the following:
 - The project analyzed in the FEIR will have one or more significant effects not discussed in the previous EIR or negative declaration;
 - significant effects previously examined will be substantially more severe than shown in the previous EIR;

- mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponents decline to adopt the mitigation measure or alternative; or
- mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.

Section 15164 of the CEQA Guidelines states that an Addendum to an EIR may be prepared “if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a Subsequent EIR or Negative Declaration have occurred.” If none of the aforementioned conditions have been met, preparation of a Subsequent or Supplemental EIR is not required. Rather, the Lead Agency may:

- Decide that no further environmental documentation is necessary; or
- require that an Addendum be prepared.

Information and data sources referenced in preparation of the draft Addendum and associated Initial Study/Environmental Checklist include the following:

- Orange County Great Park Final Environmental Impact Report (Certified May 27, 2003).
- Orange County Great Park Redevelopment Project: Redevelopment Plan (March 8, 2005).
- California Environmental Quality Act Statutes and Guidelines (2005).

The conclusions drawn in this draft Addendum are based on a review of these documents and the data and information utilized in the Initial Study/Environmental Checklist.

As illustrated in Table 1 (Summary Matrix), implementation of the Orange County Great Park Redevelopment Plan would not result in any new significant environmental impacts not already analyzed in the FEIR, nor would there be a substantial increase in the severity of environmental impacts previously discussed in the FEIR. In addition, no new information of substantial importance has become available since the FEIR was prepared regarding new significant environmental impacts, or feasibility of mitigation measures or project alternatives.

Table 1: Summary Matrix - CEQA Guidelines Determinations Requiring a Supplemental/Subsequent EIR by Environmental Category

This matrix summarizes the results of the attached Initial Study/Environmental Checklist and the draft Addendum to the Orange County Great Park Final EIR, concluding that none of CEQA Guidelines determinations requiring preparation of a Supplemental or Subsequent or EIR exists. Note: N = No		Environmental Categories															
		Aesthetics	Agricultural Resources	Air Quality	Biological Resources	Cultural Resources	Geology & Seismicity	Hydrology & Water Quality	Land Use & Planning	Mineral Resources	Noise	Population & Housing	Public Health & Safety	Public Services & Facilities	Traffic	Utilities	Cumulative Impacts

d)	Mitigation measures or alternatives which are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponents decline to adopt the mitigation measure or alternative.	N	N	N	N	N	N	N	N	N	N	N	N	N	N	N	N

The draft Addendum is consistent with the provisions set forth in Sections 15168(c)(2) and 21083.3 of the CEQA Guidelines. Accordingly, Section 15168(c)(2) states that, should the Lead Agency determine that no new environmental effects or no new mitigation measures would be required to implement the proposed project, the Lead Agency may approve the proposed activity as being within the scope of the project covered under the previous EIR. The draft Addendum also meets the requirements of Section 21083.3 by maintaining consistency between the City's General Plan and zoning designations.

B. Notice of Preparation for the Addendum

A Notice of Preparation (NOP) for this draft Addendum was developed in accordance with Section 15082 of the CEQA Guidelines and circulated to applicable taxing agencies on November 30, 2005. The City of Irvine accepted responses to the NOP and attached Initial Study until January 3, 2006.

C. Orange County Great Park

With the approval of Measure W by the voters of Orange County on March 5, 2002, the electorate expressed their desire to create a regional park on the former grounds of the Marine Corps Air Station El Toro (Figure 1). As outlined the FEIR, the City of Irvine developed the "Base Reuse Plan" and amended the City's General Plan and zoning ordinance to ensure that the reuse of the former military installation would be consistent with Measure W, while balancing the U.S. Department of the Navy's interest in disposing of the federal lands by means of public auction.

The Orange County Great Park is located with the City of Irvine (Figure 2). The OCGPRP consists of three sub-categories of property ownership/land use status: Public Ownership/Public Land Uses; Private Ownership/Public Land Uses; and Private Ownership/Private Land Uses (Figure 3). Of the 4,693 total acres of the Orange County Great Park, Public Ownership/Public Land Uses will comprise 55 percent of the acreage (2,574 acres) as identified in the OCGPRP. Private Ownership/Public Land Uses encompasses another 28 percent (1,327 acres), while Private Ownership/Private Land Uses are to be accommodated on the remaining 17 percent (792 acres). Once redeveloped, the Orange County Great Park shall consist of the following land uses: open space and habitat preservation; parks and recreation; educational and institutional; agricultural resources; research and development; and transit-oriented commercial and residential. The Orange County Great Park Redevelopment Plan pertains to approximately 3,905 acres of the overall 4,693 acres of the Orange County Great Park.

D. City of Irvine

The Orange County Great Park is located within the corporate boundaries of the City of Irvine. With the exception of the property that remains in ownership of the federal government (Federal Aviation Administration), the City of Irvine has land use regulation and development review authority over all remaining acreage.

In May of 2003 the City of Irvine certified the FEIR. As part of the adoption of the FEIR, the City of Irvine established a two-tier zoning arrangement. Under the arrangement, the new property owner

(Lennar Corporation) had the option to “opt out” of the Base Plan and implement the Overlay Plan if it entered into a Development Agreement with the City. The Lennar Corporation selected the Overlay Plan option. The resulting Development Agreement requires the dedication of land and the funding of infrastructure improvements in excess of the City of Irvine’s standard requirements, as well as the commitment of long-term maintenance of public facilities. Additionally, the Development Agreement requires that the property owner convey to the City of Irvine, at no cost to the City, the following proposed elements: open space (367 acres); sports park (165 acres); drainage corridors (229 acres); wildlife corridor (179 acres); exposition center south (156 acres); transit facilities (35 acres); and roadways (185 acres) totaling 1,316 acres. The Development Agreement obliges the City of Irvine to ensure that the baseline infrastructure for the entire project site is completed with funding provided by the creation of a Community Facilities District.

E. City of Irvine Redevelopment Agency

The City of Irvine Redevelopment Agency has established the Orange County Great Park Project Area boundaries and is in the process of adopting the OCGPRP for the majority of the acreage of the former military installation. The OCGPRP is a legal document that describes the City’s duties and obligations to manage and allocate redevelopment funds as outlined below:

1. Construct public facility and infrastructure improvements;
2. provide affordable housing opportunities in conjunction with the Housing Element of the City’s General Plan;
3. fund property rehabilitation programs;
4. acquire property for sale or lease within the Orange County Great Park Project Area;
5. collect tax increment revenue to fund rehabilitation programs, public improvements, and other City activities; and,
6. sell bonds to fund, in whole or in part, rehabilitation programs, public improvements, and other City activities.

F. Private Landowners

The Lennar Corporation obtained ownership of approximately 4,693 acres of the Orange County Great Park at auction from the federal government. As the sole private landowner, Lennar Corporation will design and develop the buildings and facilities to be located on the estimated 2,119 acres of private property located within the Orange County Great Park; infrastructure improvements will be subject to the regulatory oversight of the City of Irvine Redevelopment Agency. Under the Development Agreement prepared for the Orange County Great Park, the Lennar Corporation became responsible for the payment of Community Facilities District fees and assessments, as well as for the development of baseline infrastructure improvements (e.g., public streets, stormwater drain improvements, wet/dry utilities, etc.).

G. Public Agency Landowners

Previously, the U.S. Department of the Navy transferred ownership of approximately 974 acres of the former Marine Corps Air Station El Toro to the U.S. Federal Aviation Administration. This acreage is located within the boundaries of the Natural Communities Conservation Plan, adopted by the County of Orange for the preservation of significant habitat for federal- and State-protected sensitive species. Under the Development Agreement, the U.S. Federal Aviation Administration will convey to the City of Irvine, at no cost to the City, the following open space parcels: Alton Parkway extension agricultural sites (90 acres); the Marshburn basin (46 acres); and the institutional site (135 acres), for a total of 271 acres. Additionally, the U.S. Federal Aviation Administration will convey to the Irvine Unified School District a 13-acre school site, the location of which will be determined in the future.

H. Great Park Corporation

The City of Irvine will enter into an Operating Agreement with the Great Park Corporation for the design, operation, and maintenance of the Park's public lands. The Great Park Corporation will be responsible for creating design guidelines for the "framework" lands. This entails preparing the master design for the landscaping of the streets and edge parcels which frame the gateways to the park and form the edge around the privately- and publicly-held lands. The Great Park Corporation's duties will also include the management of park development funds and the airport infrastructure (i.e., tarmacs and runways) recycling contract, as well as the development of public facilities and infrastructure on the Orange County Great Park lands.

II. PROJECT DESCRIPTION

A. Orange County Great Park Redevelopment Plan

The Orange County Great Park Redevelopment Plan (OCGPRP) (proposed project) has been prepared by the City of Irvine Redevelopment Agency pursuant to the California Community Redevelopment Law (Health and Safety Code Section 33000, et. Seq.), the California Constitution, and other applicable laws. It does not present a specific plan for the redevelopment, rehabilitation, and/or revitalization of any area within the Orange County Great Park project area; instead, the OCGPRP establishes a process and framework within which specific development plans will be presented, priorities for specific development projects will be established, and specific solutions will be proposed. The OCGPRP is based upon the Preliminary Plan formulated and adopted by the City of Irvine Planning Commission and the Irvine Redevelopment Agency on January 15, 2004 and January 27, 2004, respectively. This draft Addendum incorporates by reference the OCGPRP and the Orange County Great Park Final EIR (certified on May 27, 2003).

The OCGPRP pertains to approximately 3,905 acres of the 4,693 acres of the future Orange County Great Park. Once redeveloped, the OCGPRP shall consist of the following land uses: open space and habitat preservation; parks and recreation; education; agriculture; research and development; transit-oriented commercial and residential.

B. Redevelopment Plan Goals

Implementation of the OCGPRP is intended to achieve the following goals and objectives:

- To eliminate and prevent the spread of blight and deterioration, and the conservation, rehabilitation, and redevelopment of the Project Area in accord with the City of Irvine General Plan, the Redevelopment Plan, applicable specific plans, the Zoning Ordinance, and other applicable laws.
- To eliminate or ameliorate certain environmental deficiencies, including unsafe and unhealthy buildings, hazardous wastes, inadequate infrastructure and other similar public improvements, and facility and utility deficiencies that adversely affect the Orange County Great Park project area.
- To convert the former U.S. Marine Corps Air Station (MCAS) El Toro into a “Great Park” with associated regional open space, cultural, education, and recreational facilities.
- To construct needed public improvements to facilitate the redevelopment and reuse of the former MCAS El Toro.
- To encourage investment by the private sector in the development and redevelopment of the Orange County Great Park project area by eliminating impediments to such development and redevelopment.
- To assure reuse of the site of the former MCAS El Toro installation in accord with the Orange County Great Park plan.
- To provide for the development of a regional park, recreation, and other public uses.
- To implement the plan in a manner that avoids or minimizes local taxpayer responsibility or financial exposure to significant redevelopment costs, and to effectively finance the plan in a manner allowing recovery of development costs from users directly benefited by the redevelopment.
- To be reasonably capable of timely and effective project implementation.
- To be sensitive to local environmental concerns and considerations.
- To be sensitive to existing and planned patterns of development, particularly in the immediate vicinity of the Orange County Great Park project area.
- To remove materials and facilities that impede development.
- To provide for diverse means of transportation and access to the area.
- To encourage the timely recovery of military lands.

- To ensure the compatibility of uses on adjacent sites and create a symbiotic relationship between uses on the individual sites.
- To encourage and foster opportunities for continued, sustained growth of existing City business sectors.
- To expand the community's supply of housing, including opportunities for lower- and moderate-income households.
- To provide opportunities to sufficiently address the needs of persons and households seeking shelter and/or affordable housing.
- To encourage the use of energy efficient and sustainable design principles throughout the Orange County Great Park project area, especially in regard to City of Irvine Redevelopment Agency-assisted affordable housing.

C. Redevelopment Plan Actions

The City of Irvine Redevelopment Agency proposes to eliminate and prevent the recurrence of blight, while improving the economic base of the Orange County Great Park project area, through the implementation of the following actions:

- Implementing the Orange County Great Park plan.
- Acquiring, installing, developing, constructing, reconstructing, redesigning, planning, replanning, or reusing street, curbs, gutters, sidewalks, medians, and crossings, parking facilities, utilities, traffic control devices, flood control facilities, and other public improvements and public facilities.
- Clearing, altering, remodeling, improving, modernizing, rehabilitating, or reconstructing buildings, structures, and improvements.
- Providing open space, habitat reserve, wildlife corridor, drainage and riparian corridors.
- Facilitating the development or redevelopment of land for purposes and uses consistent with the Redevelopment Plan.
- Acquiring real property by purchase, lease, gift, grant, request, devise or any other lawful means, including eminent domain, pursuant to the terms stated in Section 503 and 504 of the Redevelopment Plan for the Orange County Great Park.
- Combining parcels and properties where and when necessary.
- Preparing building sites and constructing necessary off-site improvements.
- Managing property owned or acquired by the City of Irvine Redevelopment Agency.

- Disposing of property including, without limitation, the lease or sale of land at a value determined by the City of Irvine Redevelopment Agency for reuse in accordance with the Redevelopment Plan for the Orange County Great Park.
- Establishing controls, restrictions, or covenants running with the land, so that property will continue to be used in accordance with the Redevelopment Plan for the Orange County Great Park.
- If applicable, vacating or abandoning streets, alleys, and other thoroughfares, as necessary, and dedicating other areas for public purposes consistent with the objectives of the Redevelopment Plan for the Orange County Great Park.
- Applying for and utilizing grants, loans, and any other assistance from federal and State governments, or other sources.
- Taking actions that the City of Irvine Redevelopment Agency determines are necessary and consistent with State, federal, and local laws to remedy or remove a release of hazardous substances on, under, or from property within the Orange County Great Park project area, or to remove hazardous waste from said property.
- Periodically preparing and implementing plans for the improvement, rehabilitation, and redevelopment of blighted areas and creating a variety of economic development programs, which will help build a stronger economic base within the Orange County Great Park project area.
- Adopting specific design guidelines for projects to ensure a consistent design theme, which will guide rehabilitation, new development, developers, architects, and builders.
- Any and all other actions authorized directly or arising by implication pursuant to any statute or other legal authority permitting the City of Irvine Redevelopment Agency to eliminate blight; to prevent the recurrence of blight; and to improve the economic base of the Orange County Great Park project area.
- Rehabilitating, preserving, developing, or constructing affordable housing in compliance with State law.

In order to accomplish these goals/actions and implement the OCGPRP, the City of Irvine Redevelopment Agency proposes to use its authorized powers provided in the Redevelopment Plan, as well as the powers now or hereafter permitted by Community Redevelopment Law and any other applicable State laws.

III. ENVIRONMENTAL ISSUES

The following pages describe environmental issues for the proposed project. Each section contains an analysis of project modifications and potential impacts resulting from the changes, if any. This analysis has been undertaken, pursuant to the provisions of CEQA and its Guidelines, to provide decision makers with a factual basis for determining whether any modifications to the project, changes in circumstances, or receipt of new information not available during preparation of the Orange County Great Park Final EIR, require additional review or preparation of a Subsequent or Supplemental EIR. The findings for each environmental topic area are included in the analyses that follow.

A. AESTHETICS

Existing Environmental Setting

Please see Section 5.12 (Aesthetics) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for aesthetics. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts associated with viewsheds, visual quality, light and glare, and topography for the project site. Two significant impacts were identified pertaining to light and glare. Specifically, new sources of street lights along planned roadways and exterior lighting (excluding security lighting and parking lot lighting) for various educational/institutional developments as well as lighting associated with athletic fields were noted. The potential for a significant light impact may occur should proposed light sources be directed into or located near existing or planned residential land uses (which are sensitive to light intrusion). Through certification of the FEIR, the City Council determined that implementation of Mitigation Measure A1 would reduce the significant impact to below a level of significance.

In addition, the FEIR identified that implementation of the proposed project would introduce new sources of glare within the project area. Reflective materials and glazed/polished surfaces associated with research and development land uses may create glare, causing visual nuisance to residential land uses. Through certification of the FEIR, the City Council determined that implementation of Mitigation Measure A2 would reduce the significant impact to below a level of significance.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to aesthetics. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to aesthetics. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant

environmental impact, nor is there substantial increase in the severity of impacts related to aesthetics from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant aesthetic effects identified in and considered by the certified FEIR.

B. AGRICULTURAL RESOURCES

Existing Environmental Setting

Please see Section 5.8 (Agricultural Resources) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for agricultural resources. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts to agricultural resources, including direct impacts to on-site prime farmlands, existing farmland operations, and lands under an Agricultural Zoning and/or Williamson Act contract as well as indirect impacts to surrounding agricultural operations. Although no land in the project area is zoned for Agriculture or under a Williamson Act contract, the FEIR did identify that project implementation would result in the permanent loss of a maximum of 802 acres of land classified as Prime Farmland, Unique Farmland, or Farmland of Statewide Importance. Additionally, the FEIR found that project implementation would involve changes in the existing environment, which, due to their location or nature, could result in conversion of existing farmland to non-agricultural use.

To partially reduce impacts to agricultural resources on-site and in the region, the Orange County Great Park project proposed the designation of a minimum of 307 acres of farmland for on-going agricultural use. Several mitigation measures were also investigated for their feasibility in reducing impacts to existing agricultural resources. Of the numerous measures evaluated, three were determined to be feasible to apply to the project. However, even with implementation of mitigation measures AG 1 through AG 3, the City Council determined that impacts to existing agricultural resources would remain significant and unavoidable. Thus, the City Council weighed the benefits of the projects against the unmitigated impacts to agricultural lands, and opted to adopt a Statement of Overriding Considerations.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to agricultural resources. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to agricultural resources. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below.

Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to agricultural resources from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant agricultural resources effects identified in and considered by the certified FEIR.

C. AIR QUALITY

Existing Environmental Setting

Please see Section 5.3 (Air Quality) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for air quality. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts to air quality associated with five significance thresholds, including: 1) obstructing or conflicting with an applicable air quality management plan; 2) violating an air quality standard or contributing to an existing violation; 3) resulting in a cumulatively considerable net increase in a criteria pollutant; 4) exposing sensitive receptors to substantial pollutant concentrations; and 5) creating objectionable odors. The FEIR identified significant impacts associated with construction (dust emissions) and increased vehicular trips. Despite the inclusion of Mitigation Measures AQ1 through AQ5, the City Council determined that the impact associated with construction and vehicular trips would remain significant and unavoidable. Thus, the City Council weighed the benefits of the project against the unmitigated impacts to air quality and opted to adopt a Statement of Overriding Considerations.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to air quality. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to air quality. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to air quality from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant air quality effects identified in and considered by the certified FEIR.

D. BIOLOGICAL RESOURCES

Existing Environmental Setting

Please see Section 5.9 (Biological Resources) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for biological resources. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts to a variety of biological resources, including sensitive and special status species, riparian habitat, wetlands, and wildlife corridors. The FEIR also analyzed the Overlay Plan's potential to conflict with local policies for tree preservation and adopted habitat management plans. Impacts to the southern tarplant and a limited amount of highly disturbed wetland habitat were expected to occur. Additionally, implementation of the Great Park project was found to potentially result in damage and destruction to a large number of trees, many of them mature, representing a wide range of species. A significant impact related to conflicts with the City of Irvine's Urban Forestry Ordinance was identified. In certifying the FEIR, the City Council determined that mitigation measures BIO 1 through BIO 4 would reduce the identified impacts to below a level of significance.

No significant impact to wildlife corridors or conflict with a habitat management plan was anticipated to occur.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to biological resources. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to biological resources. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant

environmental impact, nor is there substantial increase in the severity of impacts related to biological resource from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant biological resources effects identified in and considered by the certified FEIR.

E. CULTURAL RESOURCES

Existing Environmental Setting

Please see Sections 5.10 (Paleontological Resources) and 5.11 (Cultural Resources) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for paleontological and cultural resources. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts to a variety of cultural resources, including historical, archaeological, and paleontological resources, as well as human remains, with implementation of the proposed project. Impacts to historical resources were determined to be less than significant. However, potential impacts to significant prehistoric and paleontologic sites were identified. Through certification of the FEIR, the City Council determined that implementation of mitigation measures CULT 1 through CULT 3 and P1 would reduce impacts to these resources to a level below significance. Impacts associated with disturbing human remains were also identified in the FEIR. In certifying the FEIR, the City Council also determined that implementation of mitigation measure CULT 4 would reduce potential impacts to human remains to a level below significance.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to cultural resources. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to cultural resources. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to cultural resources from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant cultural resource effects identified in and considered by the certified FEIR.

F. GEOLOGY AND SEISMICITY

Existing Environmental Setting

Please see Section 5.6 (Geology and Seismicity) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for geology and seismicity. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts associated with geology and seismicity, including the potential for substantial risks associated with: 1) rupture of earthquake faults; 2) seismic groundshaking; 3) seismically-induced ground failure; 4) landslides; 5) soil erosion; 6) unstable soils and geologic units; and 7) expansive soils. The FEIR also investigated the potential for impacts associated with soils incapable of supporting the use of septic tanks. A less than significant impact was identified associated with seismically-induced ground failure, unstable soils and geologic units, and soils incapable of supporting the use of septic tanks. Significant impacts were found associated with seismic groundshaking and the use/reuse of potentially unreinforced structures. Soil erosion and expansive soils were also found to pose significant impacts to development in the project area. Through certification of the FEIR, the City Council determined that implementation of mitigation measures GS 1 through GS 4 would reduce these impacts to below a level of significance.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to geology and seismicity. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to geology and seismicity. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to geology and seismicity from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant geology and seismicity effects identified in and considered by the certified FEIR.

G. HYDROLOGY AND WATER QUALITY

Existing Environmental Setting

Please see Section 5.7 (Hydrology/Water Quality) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for hydrology and water quality. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts to hydrology and water quality, including impacts to surface and groundwater resources, drainage, and flood hazards. Potential impacts associated with seiches, tsunamis, and mudflows were also analyzed. The FEIR found that no significant impact to depletion of groundwater supplies, alteration of existing drainage patterns, placement of people or structures at substantial risk of flooding, or inundation by seiche, tsunami or mudflow would occur. However significant impacts associated with violating water quality standards and waste discharge requirements were identified. The proposed project's potential for increased erosion during construction and grading and increased impervious surfaces during operation also increases the possibility for drainage systems to become overwhelmed, thereby increasing the chance for flooding off-site. Through certification of the FEIR, the City Council determined that implementation of mitigation measures H/WQ 1 through H/WQ 4 would reduce the significant impacts related to water quality, drainage, and flooding to below a level of significance.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to hydrology and water quality. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to hydrology and water quality. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to hydrology and water quality from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant hydrology and water quality effects identified in and considered by the certified FEIR.

H. LAND USE AND PLANNING

Existing Environmental Setting

Please see Section 5.1 (Land Use) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for land use and planning.

FEIR

The FEIR evaluated impacts to land use and planning, including whether implementation of the proposed project would physically divide an established community or conflict with an applicable land use plan including the Natural Community Conservation Plan/Habitat Conservation Plan. No impacts to these issue areas were identified in the FEIR and no mitigation was required.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to land use and planning. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to land use and planning. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to land use and planning from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the

Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. No potentially significant land use and planning effects were identified in the FEIR.

I. MINERAL RESOURCES

Existing Environmental Setting

Please see Section 5.6 (Geology and Seismicity) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for mineral resources.

FEIR

The FEIR evaluated impacts to mineral resources and determined that no impact to mineral resources would occur with implementation of the proposed project because there are no known mineral resources in the project area. Because no impact was identified, no mitigation for mineral resources would be required.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to mineral resources. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to mineral resources. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to mineral resources from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the

Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. No potentially significant mineral resources effects were identified in the FEIR.

J. NOISE

Existing Environmental Setting

Please see Section 5.4 (Noise) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for noise.

FEIR

The FEIR evaluated impacts associated with noise, including substantial increases in temporary and permanent ambient noise levels and groundborne vibration and noise levels associated with public and private airports. No significant noise impact was identified with implementation of the proposed project because the project area is not in the vicinity of a public or private airstrip and the noise modeling showed that potential short-term and long-term mobile and stationary noise would be less than significant. Additionally, the proposed project does not propose activities that would result in significant groundborne vibration. Because no impacts were identified, no mitigation for noise would be required.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to noise. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to noise. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to noise from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was

not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. No potentially significant noise effects were identified in the FEIR.

K. POPULATION AND HOUSING

Existing Environmental Setting

Please see Section 5.13 (Population and Housing) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for population and housing.

FEIR

The FEIR evaluated impacts to population and housing, including the proposed project's potential to induce substantial population growth and displace substantial numbers of existing people and housing. Because no substantial numbers of people or occupied housing units exist in the project area, the FEIR found no significant impact associated with displacement. However, the FEIR found that because the substantial project-related employment opportunities generated by the proposed project would exacerbate the jobs/housing imbalance in the Orange County Subregion, implementation of the project would result in a significant impact. The FEIR found that no mitigation is available to rectify conflicts with the numerical objectives of regional planning documents including the jobs/housing ratio. Therefore, the population and housing impact is expected to remain significant and unavoidable. However, the City Council weighed the benefits of the project against the population and housing impacts and opted to adopt a Statement of Overriding Considerations.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to population and housing. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to population and housing. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to population and housing from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant population and housing effects identified in and considered by the certified FEIR.

L. PUBLIC HEALTH AND SAFETY

Existing Environmental Setting

Please see Section 5.5 (Public Health and Safety) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for public health and safety. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts to public health and safety, including impacts associated with hazardous materials and airport and fire hazards. The proposed project's potential to impair implementation of an adopted emergency response and/or emergency evacuation plan was also evaluated. No impacts were identified associated with airport hazards because the project proposes non-aviation uses and is not within the vicinity of a private airstrip. Additionally, implementation of the project is not expected to result in a significant impact related to the use, transport, storage or disposal of hazardous waste, nor will the project emit hazardous materials within one-quarter mile of a school. However, the demolition, construction, and re-use activities associated with project implementation may release hazardous materials into the environment. Hazards associated with past uses on the project site may also pose a significant impact. Finally, implementation of the proposed project would increase hazards related to wildfires and structural fires. Through certification of the FEIR, the City Council determined that implementation of mitigation measures HH 1 through HH 6 would reduce these public health and safety hazards to below a level of significance.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation as it pertains to public health and safety. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to public health and safety. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to public health and safety from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant public health and safety effects identified in and considered by the certified FEIR.

M. PUBLIC SERVICES AND FACILITIES

Existing Environmental Setting

Please see Section 5.14 (public Services and Facilities) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for public services and facilities.

FEIR

The FEIR evaluated public services and facilities impacts associated with providing the following services: fire and emergency medical services; police; schools; parks and recreation; and other public facilities. The FEIR also evaluated the proposed project's potential for increasing the use of regional parks and other recreational facilities such that substantial deterioration would occur. As outlined in the FEIR, the physical impacts of the development of public services and facilities are addressed by the mitigation measures identified throughout the FEIR. Existing City standards would also ensure the appropriate level of services are provided to serve the proposed project. The project would provide parks and facilities in excess of the City's adopted standards for parks and recreational facilities. Therefore, no deterioration of other facilities would be increased by the Orange County Great Park project. No mitigation is required as no significant impact has been identified.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to public services and facilities. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to public services and facilities. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to public services and facilities from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. No potentially significant public services and facilities effects were identified in the FEIR.

N. TRANSPORTATION/TRAFFIC

Existing Environmental Setting

Please see Section 5.2 (Traffic) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for transportation/traffic. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts to transportation and traffic, including vehicular traffic, air traffic, hazards associated with proposed project's design features, emergency access, and parking. No impacts were identified associated with air traffic, hazards due to design features, emergency access, or parking. However, as evaluated in the FEIR, implementation of the proposed project will cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system and exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways in the 2007 and 2025 scenarios. The proposed project is also inconsistent with the Orange County Master Plan of Arterial Highways. Through certification of the FEIR, the City Council determined that implementation of mitigation measures TRAN 1 through TRAN 8 would reduce the potential transportation/traffic impacts to below a level of significance.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to transportation/traffic. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to transportation/traffic. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to transportation/traffic from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant transportation/traffic effects identified in and considered by the certified FEIR.

O. UTILITIES AND SERVICE SYSTEMS

Existing Environmental Setting

Please see Section 5.15 (Utilities) of the FEIR (certified on May 27, 2003) for a summary of the existing environmental setting for utilities and service systems. The specific mitigation measure language referenced below is presented in the Mitigation Monitoring and Reporting Program of the FEIR, provided as an attachment to this document.

FEIR

The FEIR evaluated impacts to utilities and service systems, including: water supply and delivery; wastewater treatment and transmission lines; stormwater drainage facilities, solid waste disposal, and communications and energy infrastructure. No impact associated with wastewater treatment or water supply would occur. However, the proposed project would require the expansion of potable water, wastewater and stormwater conveyance facilities to increase transmission capacity. Also, the project may produce solid waste that is unsuitable for recycling or reuse. Despite this, anticipated increases in solid waste generation resulting from the implementation of the proposed project is not anticipated to exceed the capacity of IWMD facilities since the current capacity exceeds 30 years. Private solid waste hauling services will expand to meet the needs of the projected growth and development anticipated in the proposed project. Mitigation Measures SW 1 through SW 5 adequately address the solid waste impacts generated by the project. Finally, no substantial demand for energy and communication facilities is anticipated as a result of the proposed project even though the extension of these facilities into the project area would be required. Through certification of the FEIR, the City Council determined that implementation of the mitigation measures identified throughout the FEIR address impacts associated with the extension and construction of utilities and service systems.

Proposed Project Modifications

The Orange County Great Park Redevelopment Plan evaluated in this Addendum does not propose any modifications to the project described in the FEIR that would require additional environmental documentation pertaining to utilities and service systems. Therefore, the Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions within the FEIR for this environmental category.

Findings

The Orange County Great Park Redevelopment Plan is consistent with the certified FEIR and would not result in any new significant environmental impacts related to transportation/traffic. Therefore, the comparison of anticipated environmental effects of the proposed project with the impacts disclosed in the previously certified FEIR support the required CEQA findings summarized below. Specifically, none of the conditions defined in Sections 15162 and 15163 of the State CEQA Guidelines that would require preparation of a subsequent or supplemental EIR have been met.

Major Revisions Not Required. Based on the foregoing analysis and information, there is no substantial evidence that the changes to the project require a major change to the certified FEIR. The Orange County Great Park Redevelopment Plan would not result in any new significant environmental impact, nor is there substantial increase in the severity of impacts related to utilities and service systems from that described in the certified FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no substantial evidence in the record or otherwise that indicates that there are substantial changes in circumstances that would require major changes to the certified FEIR.

No New Information Showing Greater Significant Effects Than Previous EIR. This Addendum has analyzed available relevant information to determine whether there is new information that was not available at the time the FEIR was certified, indicating that a new significant effect not reported in the certified FEIR may occur. Based on the information and analysis above and presented in the Initial Study/Environmental Checklist, there is no substantial new information that there would be a new significant impact requiring major revisions of the certified FEIR.

No New Information Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the potentially significant utilities and service systems effects identified in and considered by the certified FEIR.

ATTACHMENT 1

**INITIAL STUDY/ENVIRONMENTAL CHECKLIST
(INCLUDING FIGURES)**

INITIAL STUDY/ENVIRONMENTAL CHECKLIST CITY OF IRVINE, CALIFORNIA

1. **PROJECT:** Orange County Great Park Redevelopment Plan
2. **LEAD AGENCY:** City of Irvine
3. **CONTACT PERSON AND PHONE:** David R. Law, AICP, Senior Planner, (949) 724-6385
4. **PROJECT LOCATION**

The Orange County Great Park is located in the City of Irvine California (Figure 1). The Orange County Great Park consists of approximately 4,693 acres of which an estimated 3,905 acres are covered by the Orange County Great Park Redevelopment Plan (project) (Figure 2). The irregularly shaped project area is generally bounded by the following street and highways: Interstate-5 to the southwest; Eastern Transportation Corridor (SR-133) to the northwest; Portola Parkway/Foothill Transportation Corridor (SR-241) to the northeast; and Alton Parkway to the southeast. Figure 3 illustrates the proposed land uses by ownership type for the future Great Park.

5. **APPLICANT**

City of Irvine
One Civic Center Plaza
P.O. Box 19575
Irvine, California 92623-9575

6. **GENERAL PLAN DESIGNATION**

The City of Irvine General Plan was amended, along with certification of the Final Environmental Impact Report (FEIR) for the Orange County Great Park project, on May 27, 2003 (Resolution No. 03-60). All 4,693 acres of the Orange County Great Park were designated as "Great Park" in the City's General Plan. The "Great Park" General Plan designation permits a base intensity of development with an overlay of additional intensity available through compliance with established criteria and in accord with the Development Agreement entered into between the City and the Lennar Corporation. Specifically, the following land uses are allowed and proposed under the Great Park General Plan designation: agriculture; low-density and medium-density residential; habitat preserve; research and development; educational; retail; sports park; exposition center; cemetery; golf course; drainage corridor; wildlife corridor; institutional; transportation; auto center; and open space (Figure 4).

7. **ZONING ORDINANCE**

The City of Irvine Zoning Ordinance was amended, along with certification of the FEIR for the Orange County Great Park project, on May 27, 2003 (Ordinance No. 03-18). The project area contains new and/or expanded zoning categories and overlay zones to address specific components of and be consistent with the Orange County Great Park. The specific zoning/overlay designations permitted within the project area include: exclusive agriculture; preservation; recreation; golf course (overlay); low-density residential; medium-density residential; transit-oriented development; community commercial; vehicle-related commercial; commercial recreation; general industrial; medical and science; and institutional (Figure 5).

8. PROJECT DESCRIPTION

The Orange County Great Park Redevelopment Plan (project) establishes a process and framework within which specific development plans for the Orange County Great Park will be presented, priorities for specific projects will be established, specific solutions will be proposed, and tools will be identified for the City of Irvine Redevelopment Agency to fashion, develop, and proceed with said specific plans, projects, and solutions. The Orange County Great Park Redevelopment Plan (OCGPRP) does not present or advocate a specific plan for redevelopment, rehabilitation, and/or revitalization within the project area boundaries.

The Orange County Great Park is located with the City of Irvine. Of the 4,693 total acres of the Orange County Great Park, public ownership and public land uses will comprise 55 percent of the acreage (2,574 acres) as identified in the OCGPRP, with private ownership and public land uses encompassing another 28 percent (1,327 acres). Private ownership and private land uses are to be accommodated on 17 percent (792 acres). The OCGPRP pertains to approximately 3,905 acres of the 4,693 acres of the Orange County Great Park. Once redeveloped, the OCGPRP shall consist of the following land uses: open space and habitat preservation; parks and recreation; education; agriculture; research and development; and transit-oriented commercial and residential.

9. SURROUNDING LAND USE(S) AND PROJECT SETTING

The project area is generally bounded by the city of Irvine to the north and west and the cities of Irvine and Lake Forest to the south and east. Other nearby local jurisdictions include the cities of Laguna Hills, Laguna Niguel, Laguna Woods, Mission Viejo, Aliso Viejo, Tustin, and unincorporated areas of the County of the Orange.

The project area is located north of the Santa Ana Freeway (Interstate-5), east of the Eastern Transportation Corridor (SR-133), and south of the Foothill Transportation Corridor (SR-241). Major roadways bordering the project area include Barranca Parkway to the south, Sand Canyon Avenue to the west, Portola Parkway and Irvine Boulevard to the north, and Alton Parkway to the east.

The Irvine Transportation Center, a major multimodal transit center linking Orange County Transportation Authority bus, Metrolink commuter rail, and Amtrak rail services, is adjacent to the Southern California Regional Rail Authority tracks, which bisects the project area.

Surrounding land uses include the Irvine Spectrum business park, Wild Rivers Water Park and the Verizon Wireless Amphitheater to the southwest, industrial/business parks to the southeast, residential neighborhoods to the east within the City of Lake Forest, and agriculture, open space, and a corrections facility to the northeast.

The project site is located on the lands of the former Marine Corps Air Station El Toro, which was closed under the Base Realignment and Closure Act in July, 1999. Portions of the military infrastructure, including aircraft runways, buildings, structures, and ancillary facilities, remain on the project site. The project outlined in the FEIR will be implemented and the remaining military infrastructure will be razed and removed.

10. PUBLIC AGENCIES THAT MAY USE THIS ADDENDUM

Public agencies identified in the certified Final EIR for the Orange County Great Park that may use this Addendum in association with the Final EIR to assure development of the Great Park Redevelopment Plan include the following:

- California Department of Fish and Game
- California Department of Toxic Substance Control

- California Department of Transportation
- California Public Utilities Commission
- County of Orange
- Irvine Unified School District
- Local Agency Formation Commission Orange County
- Orange County Transportation Authority
- Regional Water Quality Control Board
- Saddleback Unified School District
- South Coast Air Quality Management District
- Southern California Association of Governments
- Southern California Regional Rail Authority
- Transportation Corridor Agency
- U.S. Army Corps of Engineers
- U.S. Department of Defense (Department of the Navy and General Services Administration)
- U.S. Fish and Wildlife Service

11. PREVIOUS ENVIRONMENTAL DOCUMENTATION

- Orange County Great Park Final Environmental Impact Report (City of Irvine, certified May 27, 2003)

12. CONSULTATION

- A. City of Irvine
Tina Christensen, Director of Community Development
Brian Fisk, Manager of Planning Services
Glen Worthington, Planning Manager, Great Park Corporation
Barry Curtis, Principal Planner
David R. Law, Senior Planner
- B. Documents and Resources:
- Orange County Great Park Final Environmental Impact Report (City of Irvine, certified May 27, 2003)
 - Orange County Great Park Redevelopment Plan (City of Irvine, March 8, 2005)

13. SUMMARY OF ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

A summary of the environmental factors potentially affected by this project, consisting of a "Potentially Significant Impact" or "Potentially Significant Impact Unless Mitigated", include:

- AESTHETICS
- AGRICULTURAL RESOURCES
- AIR QUALITY
- BIOLOGICAL RESOURCES
- CULTURAL RESOURCES
- GEOLOGY AND SEISMICITY
- HYDROLOGY AND WATER QUALITY
- LAND USE AND PLANNING
- MINERAL RESOURCES
- NOISE
- POPULATION AND HOUSING
- PUBLIC HEALTH AND SAFETY
- PUBLIC SERVICES AND FACILITIES
- TRANSPORTATION/TRAFFIC

- UTILITIES AND SERVICE SYSTEMS

14. ENVIRONMENTAL CHECKLIST AND DISCUSSION OF ENVIRONMENTAL EVALUATION

The City of Irvine certified the Orange County Great Park Final EIR (FEIR) on May 27, 2003. The Orange County Great Park Redevelopment Plan establishes a process and framework within which specific development plans will be presented, priorities for specific development projects will be established, and specific development solutions will be proposed. This Initial Study/Environmental Checklist has been prepared in accordance with Section 15063 of the CEQA Guidelines to determine whether any of the conditions requiring preparation of a Subsequent or Supplemental EIR (outlined in Section 15162) is evident. Where potentially significant environmental impacts and associated mitigation are the same for both the Orange County Great Park Redevelopment Plan and FEIR, no Subsequent or Supplemental EIR is required.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
I. AESTHETICS. Would the project:				
a) Have a substantial adverse effect on a scenic vista?			✓	
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			✓	
c) Substantially degrade the existing visual character or quality of the site and its surroundings?			✓	
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?		✓		
<p>Discussion:</p> <p>(a through c) The Orange County Great Park FEIR (certified on May 27, 2003) states that impacts to aesthetic resources, including scenic vistas/resources and visual character, would be less than significant with implementation of the prescribed mitigation measures. The primary land use component of the Orange County Great Park would be open space. Open space amenities, including parks, golf courses, sports parks, and an exposition center would provide visual amenities to the entire project area. Landscaped parkways and pedestrian greenways would provide linkages to different areas of the proposed community between land uses and parks. Additionally, necessary grading due to implementation of the proposed project is not expected to involve more than 5,000 cubic yards of material on any 20-acre portion of the project site (due to the relatively flat to gently-rolling terrain). Since there are no scenic routes designated in the immediate area of the project site, no impact on existing scenic resources of the City or the region is anticipated. Finally, new development within the Orange County Great Park would be consistent with the FEIR and the City's General Plan and Zoning Ordinance. Although some development may be visible to motorists along adjacent roadways (i.e., Sand Canyon Avenue) and from homes located west and at higher elevations to the southeast and northeast of the project site, all development would be required to comply with the development standards outlined in the City's Zoning Ordinance. This entails City approval of architectural plans, landscape plans, and signage for each phase of development to ensure consistency with the City's Land Use Element, Circulation Element, and various design policies. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to aesthetics. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.</p> <p>d) As outlined in the Orange County Great Park FEIR (certified on May 27, 2003), future redevelopment of the project site may lead to the introduction of new sources of light and glare. These sources include street lighting along planned roadways and exterior lighting (e.g., security and parking lot lighting) for various educational and institutional land uses. Additionally, lighting associated with proposed athletic fields and glare from reflective surfaces have the potential to cause visual nuisance to residential land uses. Accordingly, the Orange County Great Park FEIR requires mitigation that, prior to the issuance of grading permits, lighting plans and signage permits for proposed development shall be reviewed by the Community Development Director (CDD) to ensure that minimal light intrusion and spillover into adjacent residential areas occurs. The CDD shall also ensure that mirrored and highly-reflective surfaces are discouraged or, where proposed, shall be accompanied by a design-level</p>				

glare impact analysis that demonstrates no adverse visual impairment to motorists or other visual nuisance occurs. With implementation of the above mitigation requirements, potential impacts to aesthetics would be reduced to below a level of significance. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to aesthetics. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
II. AGRICULTURAL RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to a non-agricultural use?	✓			
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?				✓
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to a non-agricultural use?	✓			
Discussion: a) As identified in the Orange County Great Park FEIR (certified on May 27, 2003), implementation of the Overlay Plan would result in the conversion of approximately 651 acres of Prime Farmland, 63 acres of Unique Farmland, and 88 acres of Farmland of Statewide Importance to non-agricultural land uses. This impact remains significant and unavoidable despite mitigation incorporation outlined in the FEIR. The City of Irvine determined, in its adoption of a Statement of Overriding Considerations, that the economic, legal, social, technological, and/or other benefits of the proposed project outweigh the unavoidable adverse environmental effects to agricultural resources. The Statement of Overriding Considerations was adopted by the City on May 27, 2003 and was supported by substantial evidence in the record. It should also be noted that the Overlay Plan outlined in the Orange County Great Park FEIR proposed preservation in perpetuity of approximately 307 acres of land (to be designated as Prime Farmland, Unique Farmland, and/or Farmland of Statewide Importance). The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to agricultural resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category. b) No agricultural lands located within the project site are currently covered under Williamson Act contracts. c) Implementation of the FEIR would not have a significant indirect effect on increasing development pressure and accelerating loss of the remainder of the agricultural land in the surrounding area. Development pressure already exists in these surrounding lands as a result of newly constructed roads that provide access to the area. Additionally, surrounding land owners have already submitted, or				

received approval for plans to develop the surrounding agricultural lands with a variety of urban uses. The conversion of agricultural lands to urban land uses is a long and continuing trend in Orange County. As a result, while there are existing pressures that would result in the conversion of agriculture within and adjacent to the project site with or without implementation of the Overlay Plan, the project would result in a significant and unavoidable impact associated with the conversion of existing agricultural land to nonagricultural uses. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to agricultural resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
III. AIR QUALITY: Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:				
a) Conflict with or obstruct implementation of the applicable air quality plan?	✓			
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	✓			
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	✓			
d) Expose sensitive receptors to substantial pollutant concentrations?			✓	
e) Create objectionable odors affecting a substantial number of people?			✓	
<p>Discussion:</p> <p>a) through e) Implementation of the Orange County Great Park FEIR (certified May 27, 2003), would result in significant and unavoidable impacts to air quality. Construction-related emissions are expected to result in unavoidable short-term impacts associated with reactive organic gases, nitrogen dioxide, and fine particulate matter. Short-term impacts on sensitive receptors are expected to be mitigated during project construction, and no long-term carbon monoxide hotspots would be created that may affect sensitive receptors. Operational emissions from future development under the Overlay Plan would consist of area source and motor vehicle emissions which will exceed South Coast Air Quality Management District (SCAQMD) thresholds even with mitigation incorporation. Emissions resulting from post-construction and routine operation of various sources within the project site would contribute to long-term impacts on air quality.</p> <p>The inclusion of the Orange County Transportation Authority facility in the FEIR is aimed at encouraging the use of alternative transportation, thereby reducing motor vehicle congestion and related air quality emissions. The implementation of an emission reduction program under SCAQMD Rule 2202 would also likely result in reducing motor vehicle emissions. However, the air quality impacts remain significant and unavoidable despite mitigation incorporation outlined in the FEIR. The City of Irvine determined, in its adoption of a Statement of Overriding Considerations, that the economic, legal, social, technological, and/or other benefits of proposed project outweigh the unavoidable adverse environmental effects to agricultural resources. The Statement of Overriding Considerations was adopted by the City on May 27, 2003 and was supported by substantial evidence in the record. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to air quality. The Orange County Great Park Redevelopment Plan is consistent with the analysis and</p>				

conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
IV. BIOLOGICAL RESOURCES. Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?		✓		
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the California Department of Fish and Game or US Fish and Wildlife Service?		✓		
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?		✓		
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?				✓
e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?		✓		
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?			✓	
Discussion: a) and b) No federally-listed plant species were identified on the project site. Of the several species of concern that have a high potential to occur on the project site, only the habitat preserve portion of the project site contains suitable habitat for the southern tarplant. No federally-listed endangered wildlife species were identified on the project site. Several federal- and state-listed wildlife species were observed within the project site and may be impacted by project implementation, including the				

mountain plover, burrowing owl, least Bell's vireo, and southwestern willow flycatcher.

Mitigation outlined in the Orange County Great Park FEIR (certified May 27, 2003) requires that prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl shall be conducted. Additionally, prior to the approval of a subdivision map for wash development within or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey(s) identify a significant population or southern tarplant or mountain plover, or the presence of the burrowing owl, least Bell's vireo, or southwestern willow flycatcher, in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement, or if impacts cannot be avoided, then mitigation shall be negotiated with the U.S. Fish and Wildlife Service and/or the California Department of Fish and Game. The Orange County Great Park Redevelopment Plan does not propose any modifications to the Overlay Plan that would require additional environmental documentation pertaining to biological resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

c) Limited riparian and wetland habitat exists on the project site. As identified in the FEIR, the City will permit and mitigate impacts to jurisdictional waters through consultation with the U.S. Army Corps of Engineers and California Department of Fish and Game. Wetland and riparian habitat creation and enhancement are available for mitigation within the proposed park/open space areas identified under the FEIR.

Mitigation outlined in the FEIR requires that prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan subarea that contain the potential for wetland habitat and/or jurisdictional waters of the U.S. The loss of impacted wetlands shall be mitigated through the implementation of a wetland mitigation plan prepared and accepted by the appropriate agency(s). Wetlands impacted on-site shall be mitigated through on-site or off-site replacement, recreation, and/or revegetation as deemed acceptable by the appropriate jurisdictional agency(s). The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to biological resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

d) As identified in the FEIR, no evidence of a wildlife corridor was found during biological surveys. In addition, according to the Natural Community Conservation Plan/Habitat Conservation Plan and Implementation Agreement, there are no Existing Use Areas or Special Linkage Areas within the project area. Such designations would indicate the presence of important populations of sensitive species or migration corridors of designated preserve areas. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to biological resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

e) The project site contains a number of large-diameter trees, many of them mature, representing a wide range of species. The potential destruction or damage to these trees was considered a significant impact under the FEIR. Mitigation required to reduce the potential impact to these tree resources to below a level of significance is as follows: prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height greater than six-inches and any significant (as determined by a certified arborist selected by the City) plants on the project site. All trees in this inventory shall be considered "significant trees" under the City's Urban Forestry Ordinance (Section 5-7-401 et al.) and mitigated as such under the ordinance. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to biological resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

f) The Overlay Plan designated by the Orange County Great Park FEIR (certified on May 27, 2003)

designates lands in the project area for habitat conservation, consistent with the Natural Community Conservation Plan/Habitat Conservation Plan. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to biological resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
V. CULTURAL RESOURCES. Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?			✓	
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?		✓		
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?		✓		
d) Disturb any human remains, including those interred outside of formal cemeteries?		✓		
<p>Discussion:</p> <p>a) Implementation of the FEIR would result in the demolition of existing structures on the project site. However, the U.S. Department of the Navy has determined that existing buildings on the project site are not Cold War legacy eligible, nor are they eligible for the National Register of Historic Places. Furthermore, there are no features or characteristics of the project area which define or include unique ethnic cultural values, or culturally significant religious or sacred uses. The potential impact to historical resources is less than significant. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to cultural resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.</p> <p>b) Per the Orange County Great Park FEIR (certified May 27, 2003), no intensive development is proposed in areas with known archaeological resources. However, two known prehistoric sites are located on the project site, and there is the potential that archaeological resources are present that may be disturbed during grading activities associated with future development. Mitigation prescribed in the FEIR requires that, prior to subdivision development; a detailed archaeological report (s) shall be prepared for areas with known archaeological resources. The report(s) shall specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. Monitoring of excavation/grading activities shall be conducted by a certified archaeologist. If resources are encountered in the course of ground disturbance, the archaeological monitor shall be empowered to halt grading and to initiate an archaeological testing program. The testing shall include recordation of artifacts, controlled removal of the materials, and as assessment of their importance under CEQA and the City's guidelines. Finally, a detailed mitigation program shall be submitted to the City by the developer to address archaeological resources encountered, if any, during excavation/grading. Provisions of the program shall include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be a unique archaeological resource, contingency funding and a time allotment sufficient to allow for the implementation of avoidance measures or appropriate mitigation shall be afforded. Work may continue on other portions of the project site. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to cultural resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.</p>				

c) The potential for discovering paleontological resources varies depending upon the geologic formations, or rock units underlying the project area. Alluvium of moderate- to high-sensitivity for paleontological resources underlies most of the project site. Indeed, three recorded fossil sites have been identified on the project site, while terrestrial vertebrate fossils were recovered during excavation of a flood control basin within close proximity of the project site. The three known fossil sites are located in an area not to be developed under the FEIR. Direct, significant impacts to paleontological resources may occur during ground disturbing activities, requiring mitigation to reduce the impact to below a level of significance. As a result, the FEIR requires that, prior to the issuance of a grading permit, a qualified paleontologist conduct an appropriate investigation of the area proposed for grading. If and when fossils are encountered, the paleontologist shall recover them. In certain instances the paleontologist/monitor shall be allowed to temporarily direct, divert, or halt grading to allow for fossil remains to be recovered in a timely manner. Due to the potential for the recovery of small fossil remains, it may be necessary in some instances to erect temporary screen-washing station(s) on the project site. Fossil remains collected during the monitoring and salvage portion of the mitigation program outlined in the FEIR shall be cleaned, repaired, stored, and cataloged per the City of Irvine specifications.

The City of Irvine maintains standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant paleontological sites and appropriate monitoring conditions have not been stipulated on previous map approvals. These standard conditions include retaining a qualified paleontologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to cultural resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

d) There are no known human remains in the project area. However, excavation/grading activities could uncover previously unknown human remains. Excavation/grading activities would result in a significant impact in regards to this cultural resource issue and requires mitigation to reduce to below a level of significance. Accordingly, the FEIR requires that, prior to issuance of any grading and/or building permit, a mitigation program shall be prepared to address the accidental discovery or recognition of any human remains. To this end, there shall be no further ground disturbance of the site or nearby areas reasonably suspected to overlie adjacent human remains until the County Coroner has determined that no investigation into the cause of death is warranted. If the County Coroner determines that the remains are Native American, the Native American Heritage Commission (NAHC) shall be contacted within 24 hours, and the NAHC shall identify the most likely descendent (MLD). The MLD may make recommendations to the landowner for means of treating or disposing of, with appropriate dignity, the human remains and any associated grave goods as provided in the Section 5097.98 of the Public Resources Code. Where the following conditions occur, the landowner shall rebury the remains with appropriate dignity on the property in a location not subject to further surface disturbance: The NAHC is unable to identify a MLD; the MLD fails to make a recommendation; and/or the landowner rejects the recommendation of the MLD and mediation by the NAHC fails to provide measures acceptable to the landowner. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to cultural resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
VI. GEOLOGY AND SEISMICITY. Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:				
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.			✓	
ii) Strong seismic ground shaking?		✓		
iii) Seismic-related ground failure, including liquefaction?			✓	
iv) Landslides?		✓		
b) Result in substantial soil erosion or the loss of topsoil?		✓		
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?			✓	
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?		✓		
e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?			✓	
Discussion: a. i-iv) The project area is located in the seismically active region of southern California. There is no known or potentially active fault crossing or projecting into the project area. The site has a low potential for liquefaction because the alluvial sediments are relatively coarse and the water table is generally more than 80 feet below the ground surface. The majority of the project site is located in the City's Seismic Response Area (2), meaning it is considered suitable for development. The potential for fault rupture in the project area is extremely low; no significant impact is anticipated through the post-2025 level of development outlined in the FEIR. No intensive development is proposed for areas on the project site that have the potential to experience liquefaction. However, future development on				

the project site has the potential to result in the exposure of people and structures to strong seismic ground shaking in the event of a major earthquake. This is considered a significant impact. New development in the project area would be required to be constructed according to the latest adopted building codes which address construction practices related to seismic safety. Finally, the proposed development of habitable structures would be allowed under the FEIR in areas with the potential for landslides to occur. This is also considered a significant impact.

Under the Orange County Great Park FEIR (certified on May 27, 2003), mitigation is required for the geology and seismicity impacts identified above to be reduced to below a level of significance. As a result, prior to the issuance of a building permit the City of Irvine shall require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest Building Codes adopted by the City. Geotechnical studies shall be prepared at the time specific development projects are proposed to address specific geotechnical conditions. These reports shall be required to provide measures to prevent settlement. Prior to the issuance of a building permit for the occupancy of an existing structure, a seismic evaluation of the structure, including recommendations for seismic improvements required for compliance with current Building Codes and plans for any seismic improvements, shall be submitted to the City. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to geology and seismicity. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

b) through e) Grading associated with future development in any portion of the project area would involve the removal of soils, soil compaction, and possible import and/or export of fill material. Grading would include the removal of existing runways, exposing soil surfaces to increased rates of wind and water erosion. The majority of the soil material in the project area is identified as well suited for grading and construction. Some expansive soils may be present in localized areas of the project site, however. The presence of expansive soils could create a risk to life and/or property.

The Orange County Great Park FEIR (certified on May 27, 2003) requires that erosion and sediment control measures be implemented as required by the City's Grading and Water Quality ordinances. Design measures for foundations, slabs, flatwork, and other improvements subject to drainage from expansive soils shall also be included. Specifically, prior to the issuance of a grading permit for a specific development project, detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specify erosion control and surface runoff measures for both construction and long-term operations on the project site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx in the drainage system shall be implemented. Compliance with this measure shall be verified by the City and would reduce the potential impact to below a level of significance. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to geology and seismicity. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
VIII. HYDROLOGY AND WATER QUALITY. Would the project:				
a) Violate any water quality standards or waste discharge requirements?		✓		
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?			✓	
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on- or off-site?			✓	
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on- or off-site?		✓		
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?		✓		
f) Otherwise substantially degrade water quality?		✓		
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?		✓		
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?		✓		

i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?			✓	
j) Inundation of seiche, tsunami, or mudflow?			✓	

Discussion:

a) Grading and excavation required for future development would result in the exposure of bare soils, which could result in both wind and water-related erosion, and a significant water quality impact if not properly treated. Through buildout of the Overlay Plan, wind and water-related erosion would have the potential to violate water quality standards or waste discharge requirements.

As stated in the Orange County Great Park FEIR (certified on May 27, 2003), mitigation is required to reduce the significant impact to hydrology and water quality to below a level of significance. As a result, prior to the issuance of a grading permit, the development applicant shall provide evidence that the proposed development of the project area shall comply with the City of Irvine adopted Grading and Water Quality ordinances to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the National Pollutant Discharge Elimination System (NPDES) permit requirements to which the City is obligated would ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities.

The City's standard conditions of approval indicate that a Stormwater Pollution Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.

Additionally, prior to the issuance of a grading permit, developer applicants must submit a Water Quality Management Plan (WQMP) that identifies the best management practices (BMP) that would be used on the site to control predictable pollutant runoff after the site is occupied. Ongoing operations after construction would be subject to the County-wide Municipal NPDES Stormwater permit. The WQMP shall identify, at a minimum, the routine, structural, and nonstructural measures specified in the County-wide NPDES index which details implementation of the BMPs. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to hydrology and water quality. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

b) As identified in the Orange County Great Park FEIR (certified on May 27, 2003), implementation of the project would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to hydrology and water quality. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

c) As identified in the Orange County Great Park FEIR (certified on May 27, 2003), implementation of the project would not substantially alter the existing drainage patterns of the project site or surrounding area, including through the alteration of the course of a stream or river in a manner which would result in substantial erosion or siltation on- or off-site. All proposed storm conveyance systems and detention facilities are intended to reduce siltation in area flood control facilities, including the San Diego Creek and in the receiving waters of Newport Bay. As flood control improvements are implemented, they would augment existing capacity within channels and facilities but would not substantially alter the existing drainage pattern of the site or area in a way that would result in substantial erosion or siltation on- or off-site. Future proposed development would be planned and phased in accordance with the

capacities of existing or planned stormwater drainage systems and pollutant reduction programs. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to hydrology and water quality. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

d) and e) As identified in the Orange County Great Park FEIR (certified on May 27, 2003), the existing drainage patterns of the project site would not be substantially altered nor would stream courses or rivers be substantially altered. With recent improvements to upstream flood control facilities, the floodplain area has likely decreased and fewer areas of the project site are subject to inundation. Although the project proposes flood control facilities to control runoff off-site, without proposed project drainage improvements a substantial increase in the rate or amount of surface runoff due to new development in localized areas may occur resulting in flooding on- or off-site. This potential for flooding to occur either on- or off-site as a result of future development is considered a significant impact.

The FEIR identifies appropriate mitigation to reduce this impact to below a level of significance. The phasing of the flood control system improvements proposed for the project site would be coordinated with the street-phasing schedule so that the storm drains are installed prior to (or in concert with) road construction. Improvements to the flood control system shall be evenly scheduled during the various phases of development. In addition, prior to approval of the first tentative tract or parcel map in the project area detailed hydrology and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with the Orange County Flood Control District methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of the project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to the proposed development shall be implemented. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to hydrology and water quality. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

f) Flood control conveyance and detention systems that are proposed to be implemented during project buildout would comply with the requirements of the Basin Plan and decrease the project area contribution to sediment loading and toxic pollutants in downstream facilities and the receiving waters of Newport Bay. As per the requirements of the Regional Water Quality Control Board, proposed projects occurring upstream of or discharging into impaired waterbodies listed on the Clean Water Act Section 303(d) list may be subject to additional controls (specifically, Total Maximum Daily Loads) pursuant to that regulation. Depending on the specific type of project proposed, these controls could include discharge prohibitions, revisions to discharge permits, or management plans to address water quality impacts. This future potential to degrade surface water quality is considered a significant impact in the FEIR and requires mitigation.

As identified in the Orange County Great Park FEIR (certified on May 27, 2003), in order to reduce the potentially significant impact to below a level of significance, prior to the issuance of a grading permit evidence (in the form of a construction management plan) shall be provided that demonstrates that all stormwater runoff and dewatering discharges from the project areas shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality requirements identified in the Santa Ana Regional Water Quality Control Board Base Plan, including the Total Maximum Daily Load Implementation Plan adopted for this watershed. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to hydrology and water quality. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

g) and h) With recent improvements to upstream flood control facilities, the floodplain areas has likely decreased and fewer areas of the project site are subject to inundation. However, future development may be proposed in areas that are prone to flooding as the exact boundaries of the 100-year floodplain were unknown at the time of the certification of the FEIR. Consequently, this issue was identified as a potentially significant issue requiring mitigation.

As outlined in the Orange County Great Park FEIR (certified on May 27, 2003), in order to reduce this potentially significant issue to below a level of significance the City shall ensure that prior to the issuance of a building permit, developers with property located in a delineated 100-year floodplain shall be required to construct such improvements as necessary to remove the property from the 100-year floodplain. Additionally, the developer shall prepare a letter of Map Revision (LOMR) request to have the Flood Insurance Rate Map revised to remove the development areas from the 100-year floodplain upon completion of the approved flood control facilities. The LOMR request shall be filed upon completion of design of the flood control improvements to contain or redirect the 100-year flood flows away from the subject property. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to hydrology and water quality. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

i) and j) Implementation of the FEIR would not expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam because there is not a levee or dam in the vicinity of the project area. Additionally, the proposed project would not place people or structures in a location that would be adversely affected by a seiche, tsunami, or mudflow. There is not a dam or levee in the vicinity of the project site that could result in a potentially harmful seiche or mudflow resulting from an earthquake. The project site is located far enough from the shoreline as to avoid the affects of a tsunami. These issues are considered less than significant in the FEIR. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to hydrology and water quality. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
IX. LAND USE AND PLANNING. Would the project:				
a) Physically divide an established community?			✓	
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?			✓	
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?			✓	

Discussion:

a) As presented in the Orange County Great Park FEIR (certified on May 27, 2003), all of the project site is located in the City of Irvine's Sphere of Influence, except a portion that is already within the City Limits (Planning Areas 30 and a portion of 35). There were no residents living within the former military installation at the time of certification of the FEIR, nor are there now. While there are persons residing within the James A. Musiak Jail Facility, any community created within the facility is contained within the jail confines. In addition, no land use change is proposed for the jail facility and the project does not have the potential to physically divide an established community. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to land use and planning. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

b) As part of certification of the FEIR, several Elements of the General Plan were amended to reflect passage of Measure W (approved by the voters of Orange County in March, 2002). The specific Elements of the General Plan that were successfully amended include: Land Use; Circulation; Housing; Seismic; Cultural Resources; Noise; Public Facilities and Services; Integrated Waste Management; Safety; Parks and Recreation; Conservation and Open Space; and Growth Management. In addition, zoning ordinances were amended to implement the Overlay Plan identified in the FEIR. Finally, the Orange County Master Plan of Arterial Highways was amended to reflect the General Plan amendments (mentioned above) and the zoning ordinance change. As a result of the adoption of these amendments during certification of the FEIR on May 27, 2003, the proposed project is consistent with all applicable land use plans, policies, and regulations (including the General Plan and zoning ordinance) adopted for the purpose of avoiding or mitigating environmental effects. No significant impact is identified. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to land use and planning. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

c) With certification of the Orange County Great Park FEIR on May 27, 2003, the City incorporated a 974 acre Natural Community Conservation Plan habitat preserve into the project design. The habitat preserve has been conveyed to the federal government, the U.S. Department of the Interior managing

the land as part of the Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP). Since the inclusion of the habitat preserve in the NCCP/HCP is consistent with the County's adopted NCCP/HCP, the FEIR would not result in a significant impact to any applicable conservation plan or natural community conservation plan. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to land use and planning. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
X. MINERAL RESOURCES. Would the project:				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				✓
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				✓
<p>Discussion:</p> <p>a) and b) There are no known mineral resources located on the project site. Implementation of the FEIR would not result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state, nor would it result in the loss of availability of a locally-important mineral resource recovery site delineated on any land use plan. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to mineral resources. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.</p>				

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XI. NOISE. Would the project result in:				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?			✓	
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?			✓	
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?			✓	
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?			✓	
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?				✓
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?				✓
<p>Discussion:</p> <p>a) through d) The construction phases (short term noise events) are scheduled to correspond with the capacity and development of proposed roadways and growth of the surrounding community. Specific construction activities, level of activity, and the location of the construction would continually change throughout the course of project development. Development phasing would result in staggered noise impacts from demolition and construction activities and prevent significant short-term noise at any one time. The proposed project has been designed so that noise-sensitive areas are buffered from noise sources that surround the project areas and is compatible with the City's General Plan and zoning ordinance. Sensitive receptors would be located away from major noise sources such as the sports park and Orange County Transit Authority facility, as well as the existing railroad line and the Interstate-5 freeway. New development approved under the FEIR (certified on May 27, 2003) would be required to comply with all applicable federal, state, and local noise regulations as they relate to publicly funded roadway and housing projects, employee safety, and noise compatibility. All commercial uses proposed in the project site must comply with the Office of Safety and Health Administration and state-equivalent noise exposure limits. California Building Standards related to noise would apply to all new hotels, motels, dormitories, long-term care facilities, and multi-family housing associated with the FEIR.</p> <p>Total development of the project is expected to occur over approximately a 20-year period. The</p>				

construction phases are scheduled to correspond with the capacity and development of the proposed railways and growth of the local community. The specific construction activities, the level of activity, and the location of the construction would continually change throughout the course of project development. The phasing of development would stagger the noise effects at any one time during the 20-year development period.

Long-term impacts (operational noise events) include those post-construction noise impacts due to the operation and occupancy of the various land uses proposed for the project area. Post-construction noise sources include vehicle traffic generated by the project and stationary sources associated with the project land uses. Quantitative modeling and qualitative assessment presented in the FEIR conclude that the potential impact from both mobile and stationary noise sources (in the short- as well as long-term) would be less than significant.

The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to noise. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

e) The FEIR supports no aviation uses; no public airport, public-use airport, or airport land use plan is located in the vicinity. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to noise. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

f) The project site is not located in the vicinity of a private airstrip that could impact the proposed project. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to noise. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XII. POPULATION AND HOUSING. Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	✓			
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?			✓	
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?			✓	
<p>Discussion:</p> <p>a) As outlined in the Orange County Great Park FEIR (certified on May 27, 2003), implementation of the project is expected to result in the provision of approximately 3,625 dwelling units. Based upon the City of Irvine's zoning categories planned for the site, these dwelling units could accommodate up to 9,000 people. This increase in population would not substantially exceed projections contained for the site in <i>Orange County Projections 2000</i> (OCP-2000), and thus this impact is considered less than significant. Additionally, the FEIR is expected to result in 1,100 low-density, 860 medium-density, and 1,500 medium high-density residential dwelling units at buildout. An estimated 165 dwelling units would be ensure for homeless providers, and the provision for these dwelling units would not substantially exceed projections contained in OCP-2000.</p> <p>Implementation of the FEIR would substantially alter the projected employment generation characteristics of the City of Irvine. Since the Orange County Subregion is anticipated to become increasingly job-rich and housing-poor over the next 20 years, the project-related employment would exacerbate the subregional jobs/housing balance. As a result, the proposed project would not improve and would only exacerbate the County's overall job/housing imbalance; the impact is considered significant and unavoidable as there is no feasible mitigation. The City of Irvine determined, in its adoption of a Statement of Overriding Considerations, that the economic, legal, social, technological, and/or other benefits of proposed project outweigh the unavoidable adverse environmental effects to population and housing. The Statement of Overriding Considerations was adopted by the City on May 27, 2003 and was supported by substantial evidence in the record. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to population and housing. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.</p> <p>b) Military operations on the former Marine Corps Air Station El Toro ceased in 1999, and direct population and employment levels on the site are currently negligible. Therefore, the loss of military jobs and housing is not project-related. Depending on the decisions of the Lennar Corporation (private landowner) and the City of Irvine, it is likely that some or all of the existing vacant housing stock may be demolished. However, implementation of the FEIR would provide an estimated 3,625 dwelling units; this impact is considered beneficial. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to population and housing. The Orange County Great Park Redevelopment Plan is</p>				

consistent with the analysis and conclusions of the FEIR for this environmental category.

c) Military operations on the former Marine Corps Air Station El Toro ceased in 1999, and direct population and employment levels, as well as the associated population on the site, are currently negligible. Therefore, the displacement of residents from the project site is not project-related. Implementation of the FEIR would provide an estimated 3,625 dwelling units to help accommodate the demand for housing in Orange County; this impact is considered beneficial. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to population and housing. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
PUBLIC HEALTH AND SAFETY. Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?			✓	
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?		✓		
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?			✓	
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?		✓		
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?			✓	
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?			✓	
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?			✓	
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?		✓		

Discussion:

a) There is a potential impact resulting from the routine transportation of hazardous materials on the proposed streets in the project area. This same potential impact exists for all freeways, local streets, and railroad tracks in the project vicinity, surrounding areas, and the region. However, federal and state regulations strictly control the design and size of transport vehicles, the training of vehicle operators, the types and quantities of materials that may be transported, the documentation of the material from its source to its destination, and procedures in the event of an accidental spill. Many of the proposed land uses, such as recreational/cultural/open spaces and sports parks, are not likely to use and/or store substantial quantities of hazardous materials other than typical materials (such as cleaners) and relatively small amounts of paints and thinners, fuels and oil, pesticide and other chemicals used for building and/or grounds maintenance. All business activities and facilities would be required to comply with federal, state, and local regulatory agencies with jurisdictions over hazardous materials storage and use and hazardous waste management. As identified in the Orange County Great Park FEIR (certified on May 27, 2003), the proposed project would not be expected to result in a significant impact related to the transport, use, storage, and/or disposal of hazardous materials on or through the project site. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public health and safety. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

b) Construction activities involving demolition and possible substantial remodeling of existing structures on the project site, as the project develops, could result in the disturbance of soils and/or structures containing lead-based paint (LBP) and asbestos-containing materials (ACM). The presence of LBP and/or ACM in structures and/or soils of properties conveyed by the federal government may pose a future hazard to the public if materials degrade or are otherwise disturbed. This is considered a significant impact that requires mitigation in order to be reduced to below a level of significance.

As outlined in the FEIR, prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the U.S. Department of the Navy (DON) or its transferee shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property, including: the type, location and condition of ACMs; the results of any asbestos testing; description of asbestos control measures taken, if any; the costs or time necessary to remove existing ACMs; and the results of any site-specific asbestos inventory updates. For any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DON shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements. Prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DON. This requirement can be waived if an architect or project engineer responsible for the construction of the structure or an accredited asbestos inspector signs a statement that no ACM was specified as a building material, and to the best of their knowledge, no ACMs were used as a building material. Any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws. Any renovation and/or LBP abatement activities on residential units on the project site shall be conducted in accordance with all applicable federal, state, and local regulatory requirements. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public health and safety. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

c) A regional educational campus is planned on the west side of the former MCAS El Toro site. The campus could support both corporate and public educational and training facilities (research and development) with ancillary retail, lodging and housing uses. These facilities will likely store, use and transport some hazardous materials as well as generate some hazardous waste. Typical hazardous materials/waste will likely consist of, but not be limited to: oils and petroleum products, paints, solvents, pesticides and herbicides, and VOC air emissions. These substances are regulated and controlled

through federal, state and local regulations governing the storage, handling, transportation and manifesting of hazardous materials and wastes. None of these hazardous materials are considered atypical for research and development purposes, and should not represent a significant risk to people residing and working within one-quarter mile of the proposed project area. Therefore, the proposed project is not anticipated to result in a significant impact related to hazardous emissions or materials within one-quarter mile of a proposed school. This issue is not considered a significant impact. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public health and safety. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

d) The FEIR noted that IRP Sites 3, 16 and 24 may be conveyed by the DON with temporary restrictions on land uses that not appropriate for these parcels. These restrictions represent potentially significant impacts that require mitigation to reduce to below a level of significance. Consequently, per the Final EIR, prior to transfer of these parcels to the City of Irvine, the City shall receive from the DON with the concurrence of the appropriate regulatory agencies a statement that the "Action Required" IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been identified and implemented. The City of Irvine will adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area, indicating location, acreage, and types of land use within the Planning Area. As stated under Section 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.

Prior to transfer, if the DON chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DON a statement of temporary restrictions on the use of the sites and the release of the sites for unrestricted use following implementation of adequate remediation of groundwater. The City of Irvine shall adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Section 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public health and safety. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

e) and f) The proposed project is a nonaviation plan for the former military installation. The absence of aviation uses on the site eliminates the risk of aviation accidents. Additionally, the project site is not located in the vicinity of a private airstrip. These issues are considered less than significant. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public health and safety. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

g) There is a minimal impact as a result of changes that would be necessary to current emergency response and evacuation plans. Following annexation, the City of Irvine would assume responsibility for the project area and would need to revise its existing emergency response and evacuation plans. The land use changes associated with the proposed project would also require revisions to the Orange County Emergency Plan. Currently, the project site is designated a potential emergency response staging area for fixed-wing aircraft and emergency response equipment. The implementation of a nonaviation plan for the project area would remove the site as a potential emergency response staging area for fixed-wing aircraft. Two other sites in the County, the Los Alamitos Armed Forces Reserve

Center in Los Alamitos and Mile Square Regional Park in Fountain Valley, would remain designated emergency staging areas. Portions of the proposed project area could remain available to nonaviation emergency response equipment. Therefore, the proposed project is not expected to interfere with emergency response and evacuation plans once they are revised and would not result in a significant impact related to emergency response and evacuation plans. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public health and safety. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

h) There is a potential impact resulting from exposure of people and structures to wildland fires, as identified in the FEIR. The open space/recreational areas located in the northeastern portion of Planning Area 51 would be exposed to the highest level of fire risk from wildfires because these areas and adjacent areas are currently defined as having high risk for wildland fires. The proposed project would result in an increase in both population and structures adjacent to this high fire risk area and the impact is considered significant. Additionally, the City has no record of construction of existing structures on the site. Reuse of existing structures would require the City to inspect the building for conformance to fire life safety code requirements. This is a potentially significant impact requiring mitigation to reduce the impact to below a level of significance.

To this end, the FEIR requires that the Community Development Department, in coordination with the Orange County Fire Authority (OCFA), shall be responsible for review of all development plans, which would include evaluation of very high fire severity zones, special fire protection plans, and any requirements for fuel modification zones. Projects potentially impacted by wildland fire hazards would be subject to OCFA Guidelines for "Development Within and Exclusion from Very High Fire Severity Zones" and "Fuel Modification Plans and Maintenance." Additionally, all demolition, renovation, and construction activities in the project area would be subject to review by OCFA to ensure adequate fire protection, water flow, emergency access, design features, etc., according to the standards of the Uniform Fire Code and the California Fire Code. Due to the implementation of these standard fire protection procedures, the proposed project is not anticipated to result in significant short- or long-term adverse impacts related to fire hazards.

Additionally, prior to issuance of occupancy permits of any existing structure on the project site, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval.

Prior to the issuance of a grading permit, the landowner/applicant shall prepare and the Director of Community Development shall approve a protocol plan (including but not limited to worker training, health and safety precautions, additional testing requirements, and emergency notification procedures) in the event of unknown hazardous materials are discovered during grading, construction, and/or related development activities. Additionally, said protocol plan would be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities. The applicant and/or property owner that discovers contamination due to past military operations not previously identified by the DON shall be responsible for notifying the DON, appropriate regulatory agencies, and the Director of Community Development of the City of Irvine in a timely manner.

Finally, the City of Irvine shall develop and maintain the location and status, as well as other pertinent information, of all monitoring wells located on the former military installation in a geographic information systems database (GIS). The City would review all permit applications on the former military installation for monitoring well locations that may be affected by a permit, and require applicants to maintain appropriate access. Access to monitoring wells would be limited to authorized personnel. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public health and safety. The

Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XIII. PUBLIC SERVICES AND FACILITIES. Would the project:				
a) Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:				
i. Fire and emergency medical services?			✓	
ii. Police services?			✓	
iii. Schools?			✓	
iv. Parks and Recreation?			✓	
v. Other public facilities?			✓	
b) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur?			✓	
<p>Discussion:</p> <p>a) As outlined in the Orange County Great Park FEIR (certified May 27, 2003), the general significant impacts associated with the construction and operation of public facilities, including fire protection, police protection, schools, and parks/recreation, have been addressed within the FEIR under other specific environmental issue sections (e.g., Transportation/Traffic, Air Quality, Land Use/Planning, etc.). These mitigation measures would be applicable to any new construction and operation of facilities to serve new growth in the northern portion of the City of Irvine. The need for new public facilities would be mitigated by using existing City standards. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public services and facilities. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.</p> <p>b) Future development proposed under the FEIR would result in additional population growth and an increased demand for park and recreational facilities. A significant impact is not noted for existing parks and recreational facilities, however, as the FEIR would provide new parks and recreational facilities that are in excess of the City of Irvine's adopted standards for parks and recreation. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to public services and facilities. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.</p>				

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XIV. TRANSPORTATION/TRAFFIC. Would the project:				
a) Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?		✓		
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?		✓		
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?			✓	
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?			✓	
e) Result in inadequate emergency access?			✓	
f) Result in inadequate parking capacity?			✓	
<p>Discussion:</p> <p>a) and b) As identified in the Orange County Great Park FEIR (certified on May 27, 2003), implementation of the project would cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., resulting in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on road, or congestions at intersections) in the 2007, 2025, and post-2025 scenarios.</p> <p>Locations experiencing peak hour deficiencies and significantly impacted by the project have been evaluated in the FEIR to determine necessary improvements to provide acceptable levels of service in accordance with the City of Irvine and the standards of adjacent jurisdictions. Project mitigation in the form of (1) constructing new on-site arterial highways, (2) constructing new off-site roadway improvements, and (3) participating on a fair share basis to needed off-site freeway/tollway ramp improvements, have all been identified in the FEIR.</p> <p>The FEIR presents a multi-phase analysis of the potential traffic-related impacts that would be anticipated to occur under the proposed project's network and land use concepts. The following mitigation measures are to be employed to reduce the significant transportation impacts to below a level of significance. As the planning process for the project proceeds, and the land use plan becomes more defined and refined, additional analyses would be required to determine the cost, assign responsibility, and refine the phasing of mitigation measures.</p>				

Mitigation Measure Tran1:

Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) ("Spectrumotion") in accordance with Article X of the recorded Declaration of Covenants, Conditions and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs. The primary purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described below:

Transportation Management Plan (TMP)

The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for the Great Park Project. This document summarizes the key elements of the TMP.

1.0 Introduction

The purpose of this document is to provide an outline for a comprehensive TMP for the Great Park. This report is not intended to provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.

It is the intent to annex Planning Area 51 and a portion of Planning Area 35 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo-commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed restrictions requiring participation in the TMA. Membership dues provide the funding for the Association and its programs, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.

In the event that annexation of PAs 51 and 35 into Spectrumotion is not approved, a TMP similar to that provided by Spectrumotion will be implemented. This document sets forth the components of the TMP should it be necessary.

2.0 Transportation Management Plan Framework

The key elements of the Great Park TMP are set forth below:

- **New Hire Orientation:** Inform newly hired employees of commuting services available to them.
- **Public Transportation Pass Sales:** Provide a central location for purchase of passes to available transit services ((i.e., OCTA buses, Metrolink, Amtrak, etc.).
- **Vanpool and Carpool Formation Assistance:** Perform all of the administrative work necessary to establish van pools and car pools.
- **On-site Promotions:** Hold rideshare promotions at work sites and assist in employer assistance promotions.
- **Telecommuting/Alternative Work Schedule Consulting:** Assist employers in developing and implementing a telecommuting or alternative work schedule program.
- **Personalized Commute Consulting:** Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.
- **Website:** Maintain a website with all of their program information available.
- **Rideshare Promotions:** Conduct high visibility rideshare promotions as a means to advertise its

services.

- Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.
- Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.

3.0 Transportation Management Plan Implementation

As part of the TMP, a process will be established to monitor its effectiveness in reducing peak hour trip generation in the Great Park. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.

Mitigation Measure Tran2:

Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of this EIR.

Mitigation Measure Tran3:

Prior to issuance of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the project traffic study (Urban Crossroads, December 2002) to maintain satisfactory levels of service as defined by the City's General Plan, based on thresholds of significance, performance standards, and methodologies used in this EIR, Orange County Congestion Management Program, and established in the transportation system/infrastructure fee program described in Mitigation Measure Tran 2 above.

Mitigation Measure Tran4:

Prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate the cumulative impact of the subject map and all previously approved or concurrently submitted maps. The methodology for the study area, applicable land use and circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved traffic study scope of work. The landowner or subsequent project applicant shall construct, bond for, or enter into a funding agreement for necessary improvements identified in the updated traffic study and/or participate in the City fee program (Tran 2 above) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of this EIR.

Traffic signals that are on-site or directly related to the Great Park development will be installed as warranted through the mitigation implementation plan process.

Mitigation Measure Tran5:

In conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, the landowner or subsequent project applicant and the City will take the following actions:

1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-tollway ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in this EIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines.

2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency.

3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to recordation of the first final map for each Master Tentative Map or equivalent to establish the method and timing of payment of the identified percentage responsibility.

The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.

Mitigation Measure Tran6:

The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.

Mitigation Measure Tran7:

Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval, proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-compete clause or any similar agreement restricting a public agency's authority to construct improvement.

Mitigation Measure Tran8:

Following adoption of a land use plan and circulation plan for the Great Park property and before the issuance of any building permits within the base property, the City of Irvine shall enter into a cooperative study with OCTA and other affected jurisdiction to amend the Orange County Master Plan of Arterial Highways. Marine Way, Trabuco Road from the SR-133 tollway to College Road, and Y Street should be included on the MPAH.

The Orange County Great Park Redevelopment Plan does not propose any modifications to the Overlay Plan that would require additional environmental documentation pertaining to transportation/traffic. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the Orange County Great Park Final EIR for this environmental category.

c) The proposed project would not result in an impact to air traffic patterns associated with increased air traffic or the location of the development. No impact associated with air traffic would occur. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to transportation/traffic. The Orange

County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

d) The proposed project is intended to reduce incompatible uses and improve the street system in the area in accordance with local, regional, and State agency engineering requirements. No impact associated with increased hazards due to design features would occur. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to transportation/traffic. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

e) The existing and proposed roadway system would provide adequate emergency access to all uses on-site during all phases of the project, and would not affect off-site emergency access. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to transportation/traffic. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

f) The proposed project would not result in inadequate parking capacity as all new development would be required to provide parking in accordance with the City's parking requirements and standards per given land use. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to transportation/traffic. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XVI. UTILITIES AND SERVICE SYSTEMS. Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?			✓	
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing significant environmental effects?		✓		
c) Require or result in the construction of new stormwater drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?		✓		
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?			✓	
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?		✓		
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?		✓		
g) Comply with federal, state, and local statutes and regulations related to solid waste?		✓		
h) Result in substantial adverse physical impacts associated with the provision of new or physically altered energy and communication transmission facilities, need for new or physically altered energy and communication transmission facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable levels of service?		✓		
i) Result in the use of substantial amounts of fuel and/or energy?			✓	

Discussion:

a) The proposed project would not result in the exceedance of the Irvine Regional Water District's (IRWD) capacity to treat wastewater emanating from the project site. The IRWD is regulated by law to treat wastewater consistent with the requirements and standards of the Regional Water Quality Control Board. No significant impact is identified for this issue. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to utilities and service systems. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

b) through e) The proposed project would require the expansion of potable water facilities, stormwater conveyance systems, and wastewater treatment facilities to increase transmission capacity. The specific environmental impact of constructing new potable water facilities that would be needed to serve the proposed project cannot be determined at this level of analysis as the site-specific plans for the installation of the potable water system have not been prepared. However, the general impacts associated the construction and operation of public utilities and service systems have been addressed in the Orange County Great Park FEIR (certified on May 27, 2003), and include the construction and operation of potable water facilities, stormwater conveyance systems, and wastewater treatment facilities. Mitigation measures required for any significant impacts identified in other sections of the FEIR (i.e., Transportation/Traffic, Air Quality, Land Use/Planning, etc.) would apply to future construction and operation of potable water facilities, stormwater conveyance systems, and wastewater treatment facilities. Project-level environmental review, at the time that specific development plans have been prepared, would also be required. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to utilities and service systems. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

f) and g) The Orange County Great Park FEIR (certified on May 27, 2003) notes that the project site may contain solid waste unsuitable for recycling and reuse. Also, the proposed project may generate solid waste as a result of demolition, operation of proposed land uses, and landscape maintenance. These issues represent potentially significant impacts that require mitigation to reduce to below a level of significance. As outlined in the FEIR, it is anticipated that much of the solid waste resulting from the demolition, dismantling, or other deconstruction of the aged structures and property, including but not limited to buildings and runways, are contaminated with lead-based paints, asbestos-containing materials, or other materials that may render it unsuitable for recycling and reuse. At the sole cost and expense of the project applicant, in order to evaluate this condition and determine the feasibility of recycling of solid waste material by ordinary means, a technical evaluation by a qualified environmental consultant must be conducted. The technical evaluation shall include sufficient sample testing of all types of solid waste materials to be generated by the project to analyze its composition. A copy of the full technical evaluation and its findings shall be submitted to the City of Irvine Community Development Department. The City of Irvine shall confirm the adequacy of the technical evaluation prior to authorizing the demolition, dismantling, or deconstruction project to proceed.

If it is determined by the technical evaluation that the material is contaminated and prohibited from being recycled by ordinary means, a further evaluation shall be conducted to identify and evaluate other feasible methods approved by state law to divert the material from landfills. This may include the delivery of the waste material to other appropriate non-disposal or transformation facilities, such as "waste-to-energy" (WTE) plants.

For that solid waste which is determined to be inappropriate for recycling (as that term is defined by California Public Resources Code Section 40180), the project applicant shall submit a written plan to the City and implement such plan to ensure that 75 percent of the material, or the maximum amount feasible as determined by the technical evaluation, is diverted from the landfill through other methods that comply with state statutes and regulations.

For that solid waste which the technical study deems to be suitable for recycling the project applicant

shall submit a written plan to the City and implement such plan to ensure that solid waste material generated by the demolition, dismantling, or deconstruction project, land use operations and maintenance is collected by a City authorized solid waste hauler or recycling agent, and that a minimum of 75 percent of the solid waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180. ("Recycling" does not include transformation, as defined in Public Resources Code Section 40201.)

Finally, to ensure ongoing compliance with these mitigation measures, the project applicant shall be required to submit solid waste tonnage reports to the City of Irvine on City-approved forms, accompanied by "weight ticket" receipts from state-certified disposal, nondisposal, or transformation facilities, on a quarterly basis to demonstrate that solid waste diversion has occurred in accordance with these required mitigation measures and in a manner that is consistent with, and not detrimental to, the efforts of the City of Irvine to comply with AB939.

For green waste, the project applicant shall submit a written plan to the City and implement such plan to ensure that the green waste material generated by the landscape maintenance operations is collected by a City authorized waste hauler or recycling agent, that the maximum feasible amount of that collected green waste is recycled, and that a minimum of 50 percent of the green waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to utilities and service systems. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

h) and i) As outlined the Orange County Great Park FEIR (certified on May 27, 2003), the specific environmental impact of constructing new energy and communication transmissions facilities that would be needed to serve the proposed project cannot be determined at this level of analysis as site-specific plans have not been prepared. However, the general significant impacts associated with the construction and operation of the public facilities has been addressed in the FEIR. No significant impact is anticipated related to the substantial use of fuel and/or energy sources by the Overlay Plan. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation pertaining to utilities and service systems. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

Issues:	Potentially Significant Impact	Less Than Significant With Mitigation	Less Than Significant Impact	No Impact
XVII. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	✓			
b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	✓			
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	✓			
<p>Discussion: a) The proposed project has the potential to degrade the quality of the environment by possibly resulting in significant and unavoidable impacts to agricultural resources, air quality, housing and population, and transportation/traffic. The project would not substantially reduce the habitat of a fish or wildlife species or cause a fish or wildlife population to decrease below self-sustaining levels; nor would it eliminate a plant or animal community or eliminate important example of major periods of California history or prehistory. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.</p> <p>b) The 2003 FEIR analyzed cumulative effects of the Great Park Plan using the Center for Demographic Research's Orange County projections (OCP-2000). This cumulative analysis took into consideration buildout of local and regional general plans as well as population forecasts for the County of Orange and the region as a whole. Major projects included within the buildout assumptions and this cumulative analysis include: Eastern Transportation Corridor (ETC); Alton Parkway Extension; Foothill Transportation Corridor North (FTC); Saddleback Meadows; Foothill Aliso Commercial Center; Natural Community Conservation Plan (NCCP); MCAS Tustin Reuse Plan; James A. Musick Facility; Planning Area 17; Planning Area 27; Planning Area 40; Northern Sphere; Woodbridge General Plan Amendment (Planning Area 15); and the Irvine Ranch Land Reserve.</p> <p>Since certification of the FEIR, additional regionally significant projects have continued to come forward that should be considered in the cumulative analysis of the Great Park Redevelopment Plan. Most of these projects share a common trend, replacing employment generating uses such as commercial and industrial uses with a variety of residential products. For example, projects in Irvine Planning Areas 1, 2, 9, 18, 33, 34, and 39 would reduce non-residential development intensity by about 5 million square</p>				

feet and transfer that intensity into the development of approximately 12,000 residential units. The City of Lake Forest is also proposing removing nearly 800 acres of land ("Opportunities Areas") currently zoned for business and industrial uses for new residential uses and public facilities such as a sports park and community center. Lake Forest's proposal would allow development of about 5,415 new residential dwelling units in place of the previously planned commercial and industrial uses.

Residential areas generally generate less traffic. For example, in the Lake Forest Opportunities areas, the proposed land uses would generate 72,816 average daily trips, whereas the previous land uses would have generated 152,790. Less traffic generally means less air quality and noise impacts. Additionally, because the Orange County Subregion is exceptionally "jobs rich and housing poor" and is projected to remain so, an increase in residential dwelling units versus employment-generating land uses helps improve the region's job/housing ratio. A better balance between jobs and housing in a region also helps reduce vehicular miles traveled and associated air quality and noise impacts. Based on this, the cumulative analysis in the FEIR assumed a worse scenario than the current cumulative setting suggests.

The 2025 and post-2025 transportation/traffic analysis contained in the Orange County Great Park FEIR (certified May 27, 2003) assesses the traffic impacts of all cumulative development anticipated by the year 2025 and beyond. As shown in the FEIR, all intersections and roadway/freeway/tollway ramp segments would operate at acceptable levels of service with the existing and proposed improvements. However, it has been assumed in the traffic analysis that the cumulative traffic impact of project traffic, along with other regional growth at the identified ramp and freeway locations, would be mitigated through a combination of regional programs that are the responsibility of other regulatory agencies. If these programs are not implemented by the agencies with the responsibility to do so, the cumulative freeway/tollway ramp impact would remain significant and unavoidable. This cumulatively significant impact remains significant and unavoidable despite mitigation incorporation outlined in the FEIR and the expected reduction in average daily trips associated with the transfer of non-residential uses to residential development currently proposed in Irvine and Lake Forest. The City of Irvine determined, in its adoption of a Statement of Overriding Considerations, that the economic, legal, social, technological, and/or other benefits of proposed project outweigh the unavoidable adverse environmental effects to cumulative transportation/traffic impacts. The Statement of Overriding Considerations was adopted by the City on May 27, 2003 and was supported by substantial evidence in the record.

As noted in the FEIR, air quality in the South Coast Air Basin (SCAB) does not comply with federal and state standards. Emissions due to project development would exceed South Coast Air Quality Management District threshold of significance for nitrogen oxide and reactive organic gases during construction, and for nitrogen oxides, reactive organic gases, carbon monoxide, and fine particulate matter during project operation. Consequently, as the proposed project would contribute pollutant emissions into a nonattainment air basin, a cumulatively significant air quality impact is noted. Similar to project-specific air quality impacts, no feasible mitigation measures exist to reduce this cumulative impact to below a level of significance as any project of substantial size would result in this impact. The City of Irvine determined, in its adoption of a Statement of Overriding Considerations, that the economic, legal, social, technological, and/or other benefits of proposed project outweigh the unavoidable adverse environmental effects to cumulative air quality impacts. The Statement of Overriding Considerations was adopted by the City on May 27, 2003 and was supported by substantial evidence in the record.

The encroachment of urban areas on agricultural lands is a long and continued trend in Orange County. As identified in the FEIR, project implementation would result in the loss of Prime Farmland, Unique Farmland, and Farmlands of Statewide Importance. In order to address the cumulative loss of agricultural lands within the City of Irvine, the City has established the Agricultural Legacy Program by retaining agricultural uses on the project site; however, the loss of the remaining agricultural land is considered a cumulatively significant impact. Even with incorporation of all feasible mitigation measures this impact remains significant and unavoidable. The City of Irvine determined, in its

adoption of a Statement of Overriding Considerations, that the economic, legal, social, technological, and/or other benefits of proposed project outweigh the unavoidable adverse environmental effects to cumulative agricultural resources impacts. The Statement of Overriding Considerations was adopted by the City on May 27, 2003 and was supported by substantial evidence in the record.

Based on future growth projections identified in the FEIR, the Orange County Subregion is forecasted to become increasingly job-rich and housing-poor over the next 20 years. However, recent cumulative projects in the region point to a trend of increasing housing development as evidenced by recent projects in Irvine and Lake Forest that would result in nearly 17,000 more housing units in the region. Despite this fact, the Overlay Plan adopted as part of the FEIR would substantially add to the employment generation characteristics of the City of Irvine and the region. As a result, the project-related employment would exacerbate the cumulative subregional jobs/housing imbalance, the cumulative population and housing impact remains significant and unavoidable. The City of Irvine determined, in its adoption of a Statement of Overriding Considerations, that the economic, legal, social, technological, and/or other benefits of proposed project outweigh the unavoidable adverse environmental effects to cumulative population and housing impacts. The Statement of Overriding Considerations was adopted by the City on May 27, 2003 and was supported by substantial evidence in the record. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

c) Please refer to the discussion in subsection "b" above for a summary of the significant and unavoidable impacts that remain after implementation of the proposed project. The Orange County Great Park Redevelopment Plan does not propose any modifications to the FEIR that would require additional environmental documentation. The Orange County Great Park Redevelopment Plan is consistent with the analysis and conclusions of the FEIR for this environmental category.

15. CEQA COMPLIANCE.

The Orange County Great Park Redevelopment Plan has been analyzed in this Initial Study/Environmental Checklist and the following environmental documents (which were prepared prior to this Initial Study/Environmental Checklist and are incorporated by reference):

- Orange County Great Park Final Environmental Impact Report. City of Irvine. Certified on May 27, 2003.
- Orange County Great Park Redevelopment Project – Redevelopment Plan. Irvine Redevelopment Agency. Dated March 8, 2005.

This Initial Study/Environmental Checklist has been prepared in compliance with the requirements for an Initial Study according to Section 15063 of the CEQA Guidelines.

16. SUMMARY OF FINDINGS.

The following findings are derived from the environmental review documented by this Initial Study/Environmental Checklist and the FEIR certified on May 27, 2003:

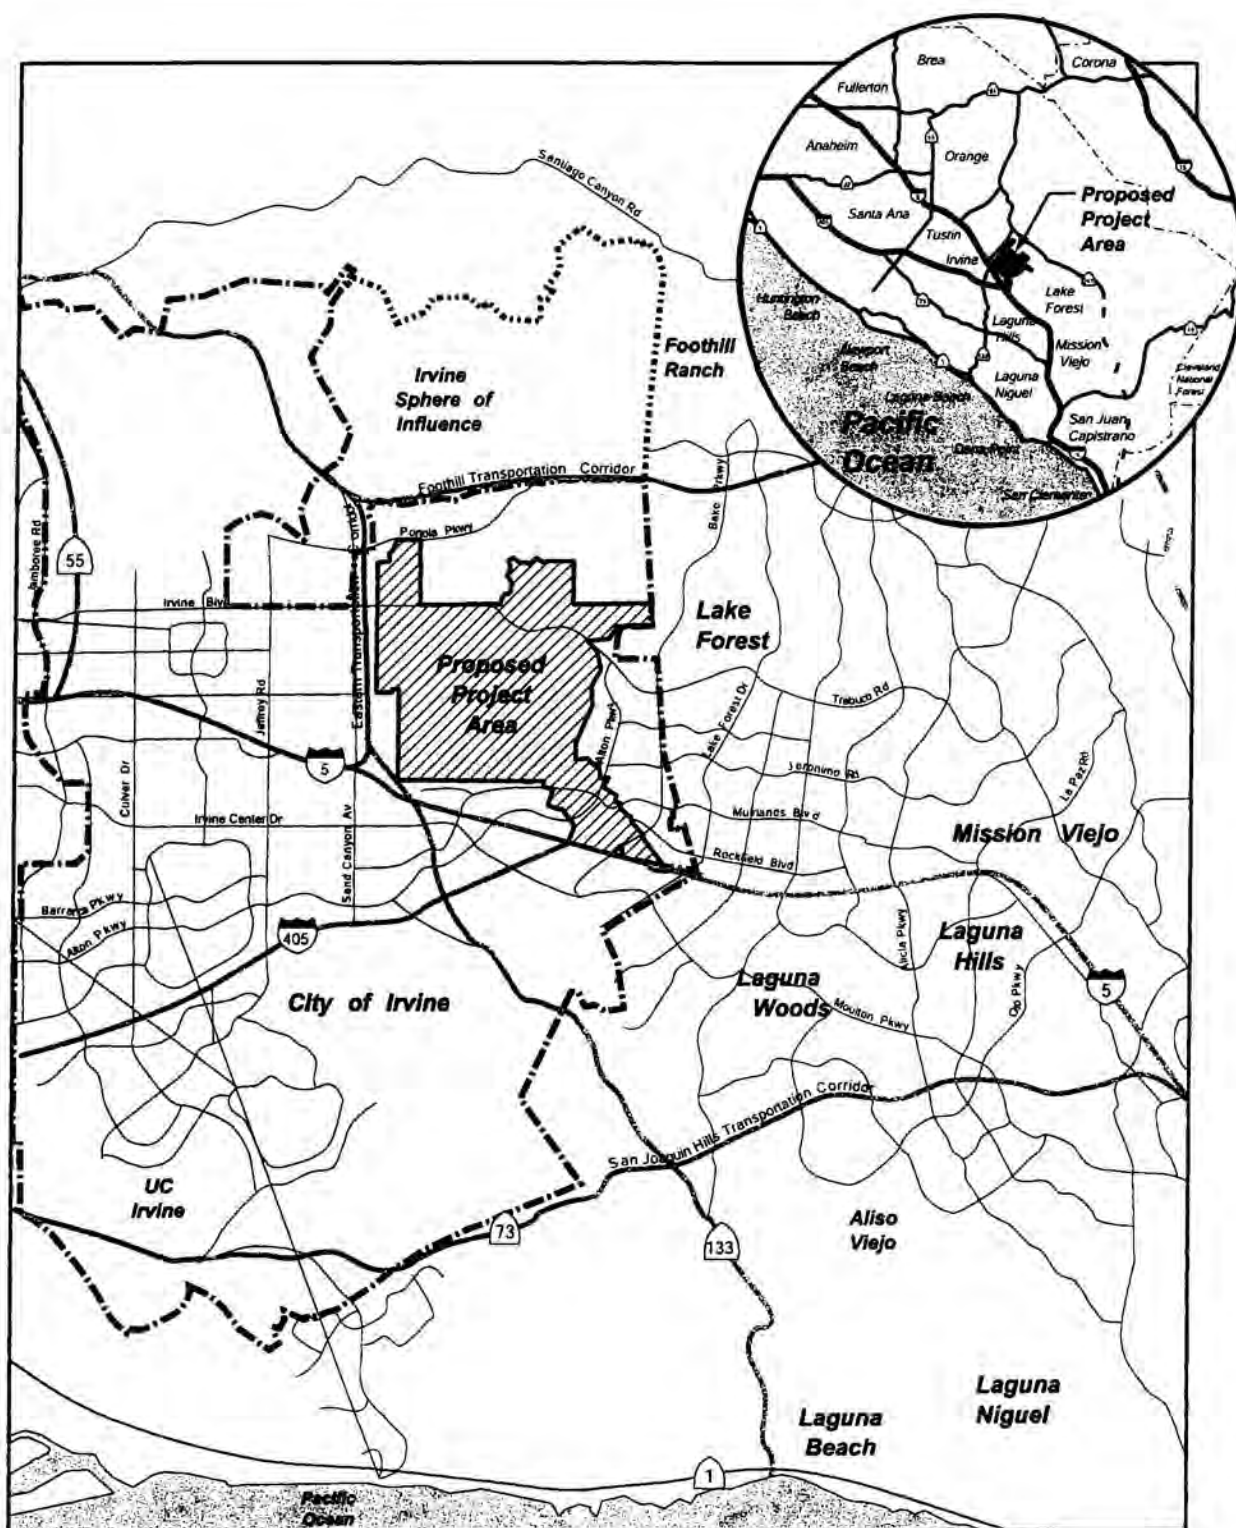

1. No substantial changes are proposed in the Orange County Great Park Redevelopment Plan, or with respect to the circumstances under which the Redevelopment Plan is to be undertaken as a result of the proposed activity, which will require important or major revisions in the FEIR;
2. No new information or substantial importance to the Orange County Great Park Redevelopment Plan has become available which was not known or could not have been known at the time the FEIR was certified as complete, and which shows that the Orange County Great Park Redevelopment Plan will have any significant effects not discussed previously in the FEIR, or that any significant effects previously examined will be substantially more severe than shown in the FEIR, or that any mitigation measures or alternatives previously found not to be feasible or not previously considered would substantially reduce or lessen any significant effects of the project on the environment;
3. No Negative Declaration, Subsequent EIR, or Supplemental EIR to the FEIR is necessary and/or required; an Addendum to the Orange County Great Park FEIR shall be prepared;
4. The implementation of the Orange County Great Park Redevelopment Plan will have no significant effect on the environment, except as identified and considered in the Orange County Great Park FEIR. No new or additional project-specific mitigation measures are required for this activity.

17. ENVIRONMENTAL ADMINISTRATOR DETERMINATION.

The initial study for this project has been reviewed and the environmental determination is hereby approved.

1. *EIR Addendum Summary*

1.1 **PURPOSE AND SCOPE**

This Initial Study/Addendum provides the basis for an addendum to the previously certified Final Environmental Impact Report (State Clearinghouse Number 2002101020) for the Orange County Great Park (OCGP) and serves as the environmental review of a proposal to adjust the boundary between the City and Heritage Fields properties, introduce limited revisions to the text and figures for Planning Areas 30 and 51, and to amend the zoning in the northwest portion of Planning Area 51 from the current land use zoning configuration of multiple zoning districts (e.g. residential, medical and science, institutional, community commercial) to a single mixed-used zoning district. This mixed-used zoning district is referred to as the Lifelong Learning District (LLD). This Addendum has been prepared pursuant to the provisions of the California Environmental Quality Act (CEQA), Public Resources Code Sections 21000 et seq., the State CEQA Guidelines, and the City of Irvine Local Guidelines for Implementing CEQA (Local CEQA Guidelines).

The analysis in this document discusses the adequacy of the OCGP Environmental Impact Report (EIR) to address the proposed General Plan Amendment 00416079-PGA and Zone Change 00416080-PZC. The proposed General Plan Amendment and Zone Change will incorporate minor adjustments to the boundary between the public and private areas of the OCGP, revisions to text and figures related to Planning Areas 30 and 51, and create a mixed-use zoning category called the Lifelong Learning District (LLD) within Planning Area 51 in the City of Irvine. The GPA also includes minor technical changes to the General Plan, as described in Section 2.3. The LLD would allow for a combination of residential, commercial, and educational uses that would promote and support a mixed-use environment. Specific uses that serve to enhance the cultural, education and recreational environment would be especially encouraged in the LLD. The land use intensity would be based on the currently allowed maximum residential units and non-residential square footage within the planning analysis zones (PAZs). The maximum intensity of development in the 8.1 Lifelong Learning District zone is stipulated as follows:

- 1,025 dwelling units
- 1,452,600 square feet of Institutional
- 1,000,000 square feet of Medical & Science
- 708,000 square feet of Commercial Recreation
- 225,000 square feet of Community Commercial
- 50,000 square feet of cemetery-related building space
- 40,000 square feet of elementary school.

1.2 **ENVIRONMENTAL PROCEDURES**

Pursuant to CEQA, the State CEQA Guidelines, and the City of Irvine CEQA Guidelines, the City's review of the proposed Initial Study/Addendum focuses on the proposed General Plan Amendment and Zone Change to determine if the project would cause a change in the conclusions of the OCGP EIR, and any change in circumstances or new information of substantial importance that would substantially change the conclusions of the OCGP EIR. This Addendum only relates to the proposed changes to the project including the creation of the Lifelong Learning District in the northwest portion of the site, revisions to text and figures related to Planning Areas 30 and 51, and minor boundary adjustments.

Pursuant to Section 21166 of CEQA and Section 15162 of the State CEQA Guidelines, when an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for the project unless the lead agency determines, on the basis of substantial evidence, that one or more of the following conditions are met:

1. *EIR Addendum Summary*

- Substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, shows any of the following:
 - 1) The project will have one or more significant effects not discussed in the previous EIR or negative declaration.
 - 2) Significant effects previously examined will be substantially more severe than identified in the previous EIR.
 - 3) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives.
 - 4) Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives.

Section 15164 of the State CEQA Guidelines states that an Addendum to an EIR shall be prepared “if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.” This Initial Study/Addendum reviews the changes proposed by the project and any changes to the existing conditions that have occurred since the OCGP EIR was certified. It also reviews any new information of substantial importance that was not known and could not have been known with exercise of reasonable diligence at the time that the OCGP EIR was certified. It further examines whether, as a result of any changes or any new information, a subsequent or supplemental EIR may be required. This examination includes an analysis of the provisions of Section 21166 of CEQA and Section 15162 of the State CEQA Guidelines and their applicability to the proposed project. This Initial Study/Addendum relies on the attached Environmental Analysis, which addresses environmental checklist issues on a section-by-section basis.

The City of Irvine Environmental Checklist Form has been completed by the City and included in Section 3.0, *Environmental Checklist*. The Environmental Checklist Form is marked with the findings of the Redevelopment Director as to the environmental effects of the proposed project in comparison with the findings of the OCGP EIR certified in 2003. The checklist has been prepared pursuant to Section 15168(c)(4) of CEQA, which states that “where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.”

Using that approach, the City of Irvine, the Lead Agency, determined that an Addendum to the previously approved OCGP EIR is the appropriate environmental clearance for the project application.

1. EIR Addendum Summary

1.3 PREVIOUS ENVIRONMENTAL DOCUMENTATION

The OCGP EIR was certified by the City of Irvine in May 2003. The project analyzed in the OCGP Program EIR consisted of the following actions: (1) Annexation, General Plan Amendment, Pre-Zoning (prior to annexation), and Zoning of the unincorporated portion of Planning Area 51; (2) Annexation of the unincorporated portion of Planning Area 35 (Irvine Ranch Water District Parcel); (3) General Plan Amendment and Zone Change for Planning Area 30; and (4) Approval of the form of a Development Agreement vesting approval of overlay uses and intensities in consideration for dedication of land for public purposes and for developing and funding certain infrastructure improvements and maintenance of the public uses by the purchaser/developer and subsequent landowners and funding for specific park, roadways, and other circulation facilities and infrastructure. Together, these actions establish the policy and legislative structure to guide the development of the former MCAS El Toro property.

The OCGP EIR mitigation measures are provided in the adopted Mitigation Monitoring Program included in Appendix A. The table includes:

- Mitigation number and a description of the action;
- Timing for implementation;
- Approving authority and reviewing agency(s), if any; and
- Method of compliance

The OCGP EIR and associated technical documents are on file at the City of Irvine, Redevelopment Department, located at 7000 Trabuco Road, Building 873, Irvine, California 92618.

1.4 ENVIRONMENTAL SETTING

The Orange County Great Park (which consists of City of Irvine Planning Areas 30 and 51) is located in the central portion of Orange County, approximately 45 miles southeast of Los Angeles. The project area is generally bounded by the Woodbury residential development to the west, future Portola Springs residential development to the north, Irvine Spectrum to the south, and the City of Lake Forest to the west. Other nearby local jurisdictions include: the Cities of Laguna Hills, Laguna Niguel, Laguna Woods, Mission Viejo, Aliso Viejo, and Tustin. Specifically, the proposed Lifelong Learning District consists of Planning Area Zones (PAZ) 1, 5, 6, 7, 8, 9, 11, 17a and 17b, which are located in the northwest portion of Planning Area 51. Refer to Figure 2-7 for details of the PAZ.

The Irvine Transportation Center, a major multimodal transit center linking Orange County Transportation Authority (OCTA) bus, Metrolink commuter rail, and Amtrak rail services, is located adjacent to the Southern California Regional Rail Authority (SCRRA) Metrolink tracks, which bisect the project area and separate Planning Areas 30 and 51. The existing conditions within the project site include the California State University, Fullerton, Marine Memorial Golf Course, equestrian facilities, and agricultural and nursery operations. The OCGP EIR also describes interim activities that might occur on the site, including short-term use of the land or existing buildings on-site. Currently, there are offices occupied by the City of Irvine Redevelopment Department, Great Park Corporation (GPC), and Heritage Fields on-site. A day-care facility is located immediately adjacent to these office uses. Finally, a small portion of the existing runway has been removed within the southerly portion of PA 51.

Ownership of Planning Areas 30 and 51 has changed since certification of the OCGP EIR, including certain parcels that have been transferred to the Federal Aviation Administration, City of Irvine, County of Orange, and Heritage Fields, LLC, by the Department of Navy (DoN) or leased in furtherance of conveyance.

1. EIR Addendum Summary

This page intentionally left blank.

2. *Project Description*

2.1 **PROJECT LOCATION**

The Orange County Great Park, encompassing Planning Areas 30 and 51, is located northeast of the freeway junction at Interstate 5 (Santa Ana Freeway) and Interstate 405 (San Diego Freeway), within the City of Irvine. Figure 2-1 depicts the project location in a regional context and Figure 2-2 shows its local context.

Major roadways bordering the project are Sand Canyon Avenue to the northwest, Portola Parkway and Irvine Boulevard to the north, and Bake Parkway to the northeast. An aerial photograph of the project site and surrounding area is shown on Figure 2-3. The Irvine Transportation Center is situated adjacent to the SCRR Metrolink tracks, which traverse the site and separate Planning Areas 30 and 51. Surrounding the site are residential and nonresidential uses under construction to the north and west, open space to the northeast, and nonresidential and mixed land uses to the east and southeast within the City of Lake Forest and City of Irvine.

2.2 **PROJECT CHARACTERISTICS**

2.2.1 **Project Background**

On May 27, 2003, the City Council certified a Final Environmental Impact Report and adopted a general plan amendment and zone change to implement the development of the Orange County Great Park. In order to develop at the maximum intensities allowed in the Overlay Plan shown in the General Plan and zoning, the property owners entered into a development agreement, which required the dedication of land and the development or funding of infrastructure improvements in excess of the City's standard requirements, and the commitment to long-term maintenance of the public facilities.

In February 2005, Heritage Fields, LLC, purchased all four bid parcels through a U.S. Department of Navy/General Services Agency online auction process. Subsequent to the land purchase, the Great Park Corporation and Heritage Fields initiated their respective master design and development processes for the OCGP. To facilitate additional design options, both the Great Park Corporation and Heritage Fields, LLC, requested and the City initiated an amendment to the general plan and the zoning code to reconfigure the boundaries between the two properties. In addition, Heritage Fields has requested the creation of a new mixed-use zoning district called the 8.1/8.1A Lifelong Learning District. They have also proposed minor clarifications to the zoning text within Planning Areas 30 and 51. These requests will not result in any changes to the approved land use intensities or allowable uses within the Great Park/Heritage Fields site.

2. *Project Description*

2.2.2 Project Components

According to the Great Park Development Agreement, the City of Irvine must initiate any requests to amend the General Plan and/or zoning within Planning Areas 30 and 51 (Great Park). The City, on behalf of Heritage Fields, LLC, is proposing to amend the zoning in the northwest portion of Planning Area 51 from the current land use zoning configuration of multiple zoning districts (e.g. residential, medical and science, institutional, community commercial) to a single mixed-used zoning district. This mixed used zoning district is referred to as the Lifelong Learning District (LLD). The LLD would allow the same type of land uses and intensities as currently allocated to this area, but under a single blended zoning district as compared to smaller multiple zoning districts. Heritage Fields is also proposing minor modifications to the zoning text in Planning Areas 30 and 51. These requests will not result in any changes to the approved land use intensities within the Great Park site. In addition, the Great Park Corporation and Heritage Fields are proposing minor changes to the boundaries between the Great Park and Heritage Fields properties.

On May 23, 2006, the City Council authorized staff to commence an analysis and environmental review of the Heritage Field's and the Great Park Corporation's request to revise the Orange County Great Park Overlay Plan (Revised Overlay Plan).

General Plan Amendment (00416079-PGA)

The City-adopted OCGP Overlay Plan shown in Figure 2-4 depicts the land use patterns and types initially envisioned for the Property. As shown on Figure 2-5, the Revised Overlay Plan creates a mixed used district referred to as the Lifelong Learning District (LLD), consistent with the proposed zoning for the property. The LLD would encompass a mix of residential and nonresidential land uses within the western portion of the OCGP community, and is envisioned as a unique urban setting that promotes and supports a mixed-use environment with an emphasis on cultural, sports, and recreational opportunities offered throughout the OCGP area.

The LLD would comprise of 1,025 residential units targeted for the senior, student and academic community and approximately 3,475,000 square feet of educational, civic, commercial, mixed-use, medical and science, and cemetery uses within an integrated urban setting. The 1,025 residential units in the proposed 8.1 Lifelong Learning District include 800 senior housing units, 165 ETHIC housing units and 60 faculty housing units. The proposed modifications will not result in any changes to the approved land use intensities for the project area.

The General Plan Amendment includes modifications to three elements as outlined below:

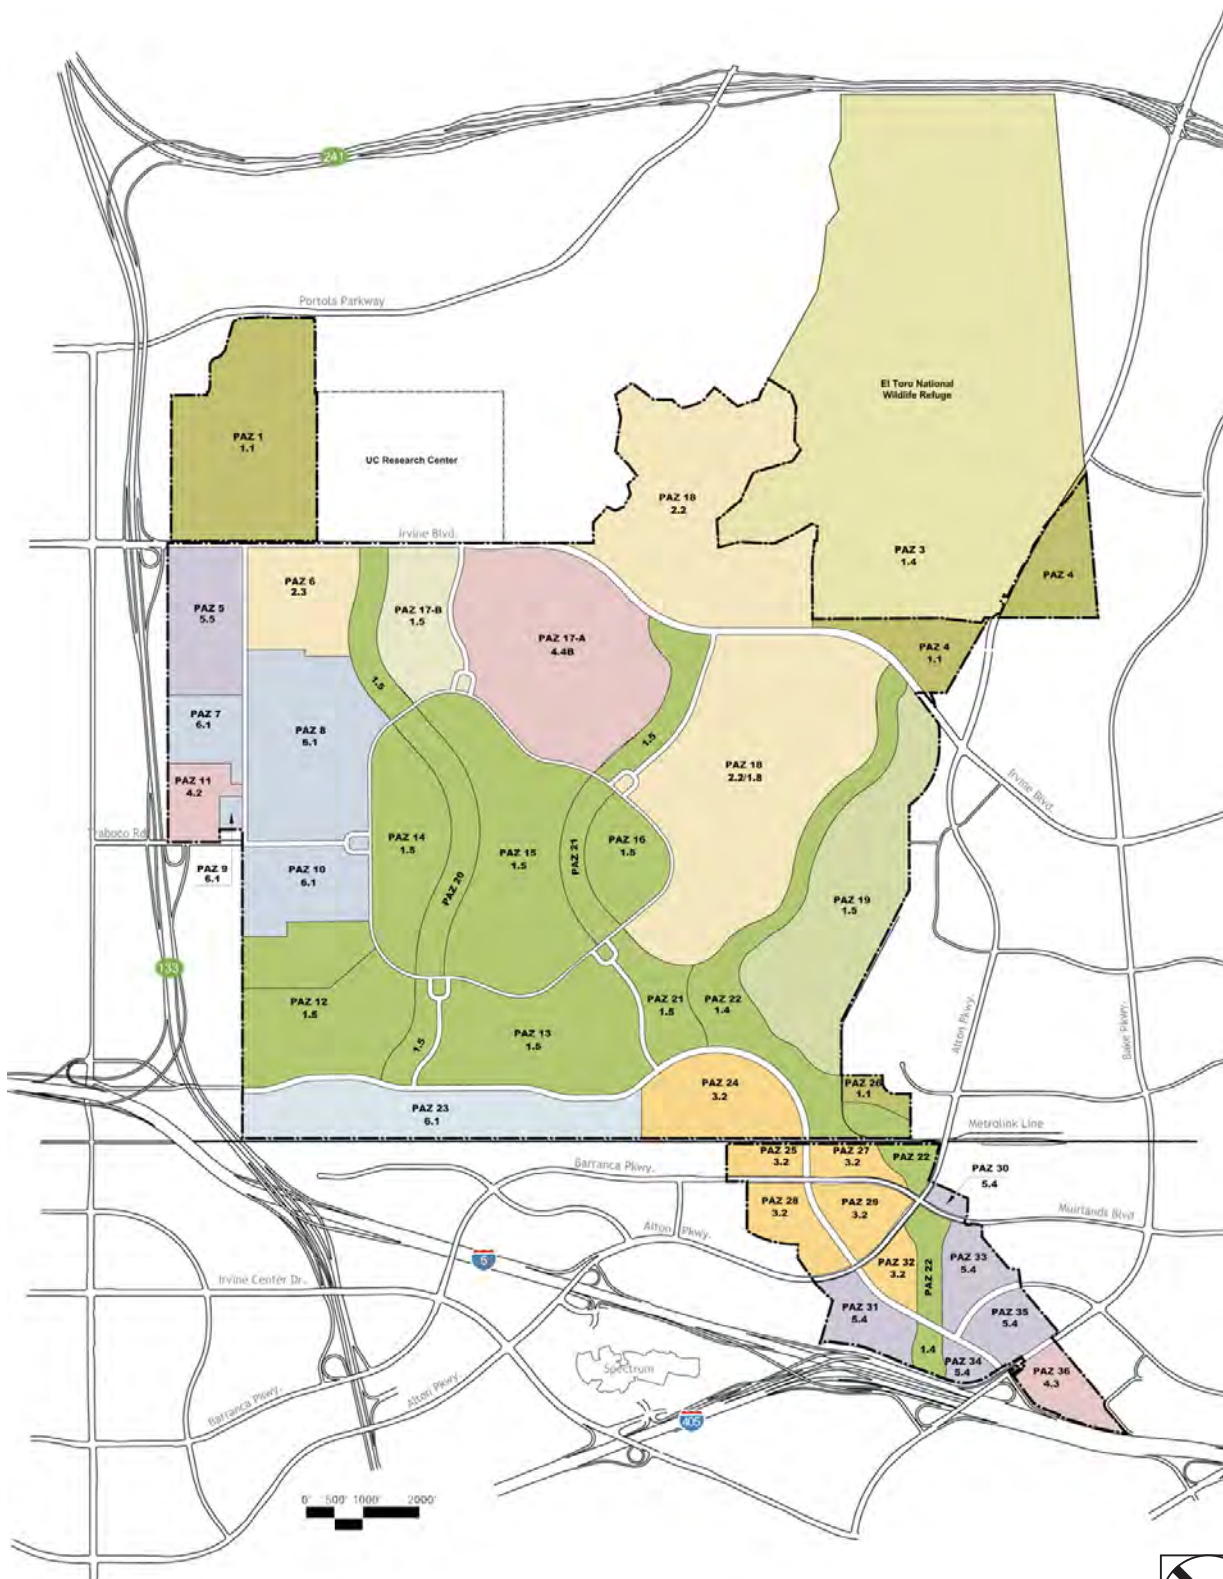

- 1) Modify the footnotes in Tables A-1, A-2, and A-5 of the Land Use Element in the General Plan to update the reallocation of land use intensities related to the creation of the new mixed-use zoning category - Lifelong Learning District.
- 2) Amend Figure A-3 (O) of the Land Use Element in the General Plan to reflect the proposed creation of the new mixed-use zoning category - Lifelong Learning District.
- 3) Amend Figures K-1 and L-2 in the General Plan to reflect the proposed boundary adjustments between the City of Irvine and Heritage Fields properties
- 4) Modifying Figure B-1 (Master Plan of Arterial Highway) of the Circulation Element of the General Plan to change the incorrect designation for Marine Way from a Major Highway to a Primary Highway.

2. *Project Description*

- 5) Amend Figure B-4 to modify the existing trail network to reflect the previously approved trail linkages as well as the inclusion of the known trail framework connections that will occur in conjunction with the build-out of Planning Areas 30 & 51.

Zone Change (00416080-PZC)

Figures 2-6 and 2-7 depict the existing and proposed zoning for Planning Areas 30 and 51, respectively. The project includes changes to Chapter 3-37, Zoning District Land Use Regulations and Development Standards; Chapter 9-30, Planning Area 31 Special Development Requirement; and Chapter 9-51, Planning Area 51 Special Development Requirement. Chapter 3-37 would be modified by adding a new section which would set forth land use regulations and development standards for the 8.1 and 8.1A Lifelong Learning District. The new district would apply to planning analysis zones (PAZs) 1, 5 through 11, and 17, as depicted in Figure 2-7.

The Zone Change request includes the following items:

- 1) Add a new zoning category, 8.1 Lifelong Learning District, to the list of zoning districts in Section 3-37-1 of the Zoning Code.
- 2) Modify Section 2-17-2 of the Zoning Code to add the new zoning category, 8.1 Lifelong Learning District, to the list of non-residential and residential developments that would require a master plan.
- 3) Modify Section 9-30 and 3-37-33 of the Zoning Code to add text related to interim uses, to update the parcels designated as 5.4 General Industrial to 5.4B General Industrial. Additional changes to section 9-30 include a development tracking and monitoring report, requirements for network trail connections, and language that subsequent traffic studies may be required by the Director of Public Works in the event that subsequent projects are found not to be in conformance with this zone change traffic study.
- 4) Revise Chapter 9-51 of the Zoning Code to update text and changes related to the proposed zoning category 8.1 Lifelong Learning District.
- 5) Amend the land use matrix in Section 3-3-1 of the Zoning Code to include the permitted and conditionally permitted land uses in the 8.1 Lifelong Learning District.

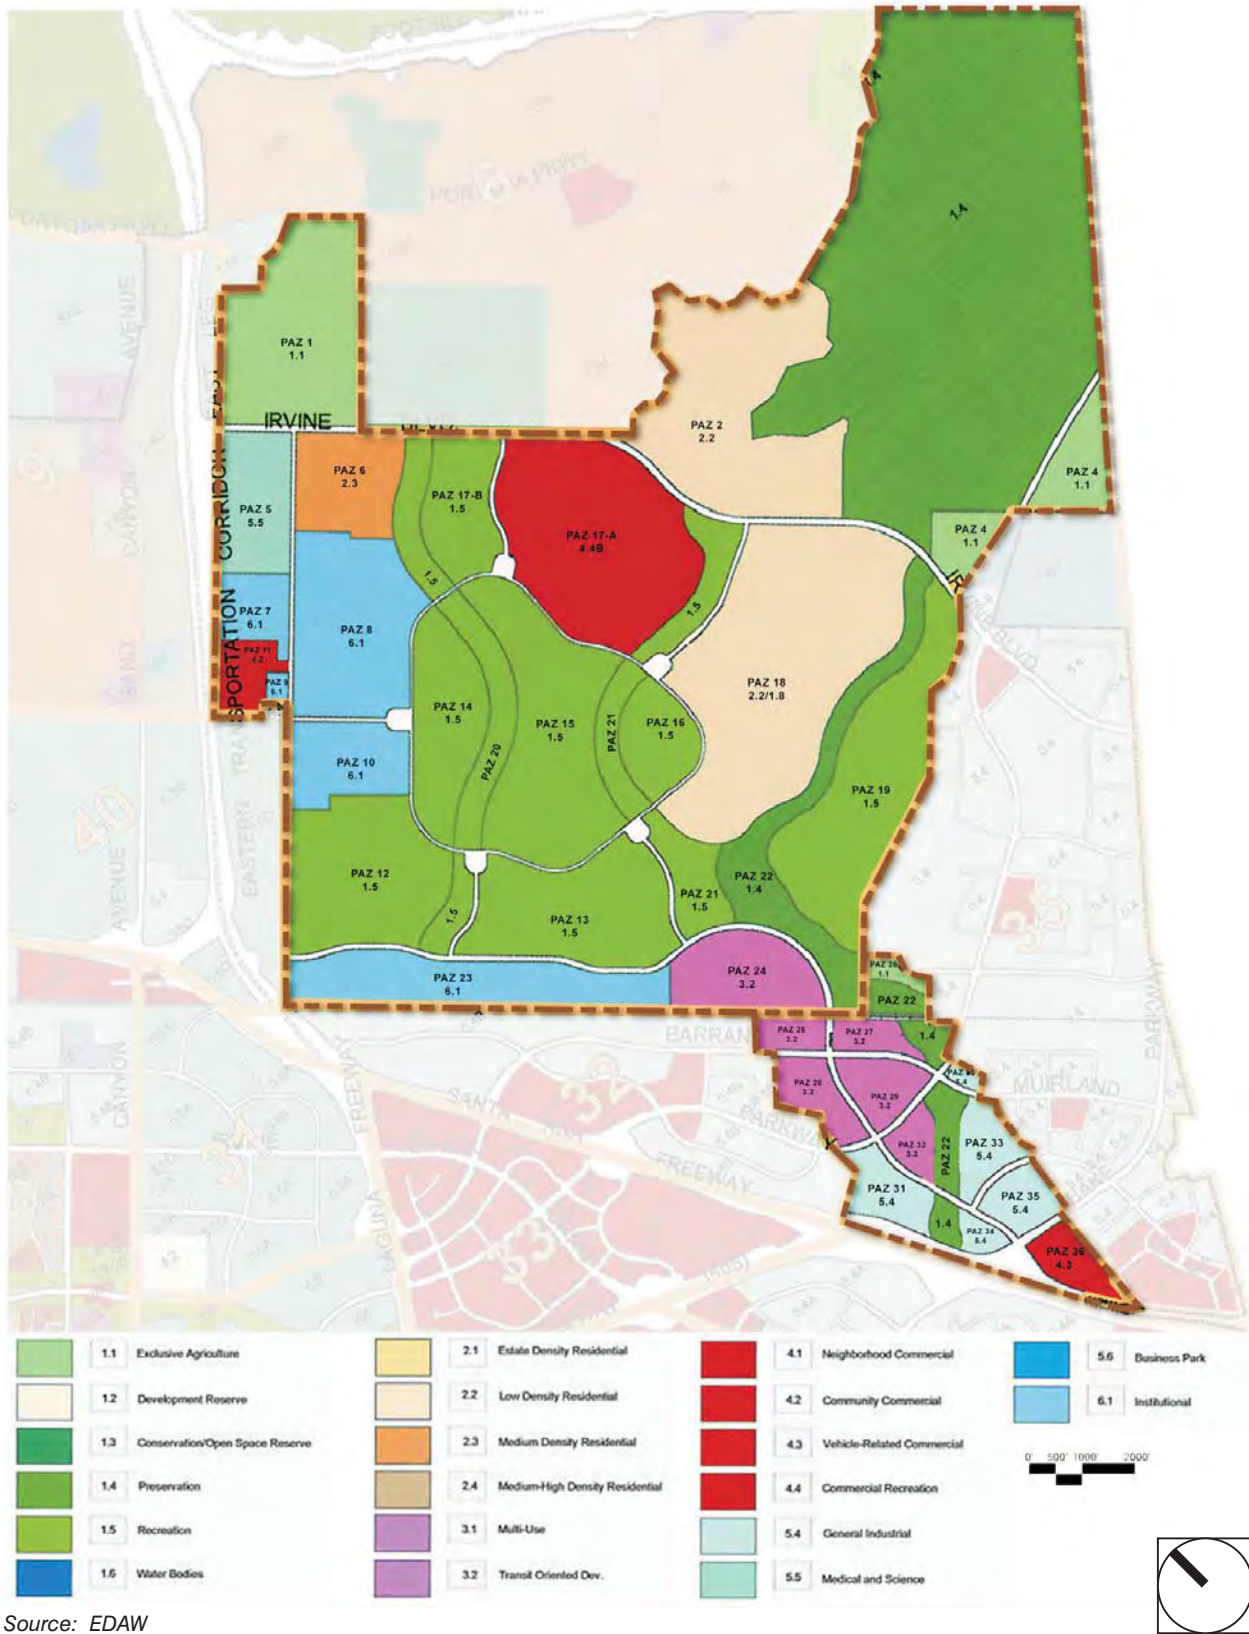

The proposed LLD, which would be assigned to land within PA 51 only, would not change the established land use intensity for residential and nonresidential uses within PA 51. Chapter 3-37 describes the intent of the district as a unique urban setting with a wide variety of land uses allowed on the same site consistent with the Great Park land use category as defined in the General Plan.

Addendum to the Orange County Great Park EIR

The Planning Center • **Figure 2-7**

2. *Project Description*

This page intentionally left blank.

2. Project Description

The LLD would allow for a combination of residential, commercial, and educational uses that would promote and support a blended mixed-use environment. Specific uses that serve to enhance the cultural, educational, and recreational environment would be especially encouraged in the LLD. The land use intensities are based on the currently allowed maximum residential units and nonresidential square footage within the PAZs. The maximum intensity of development of the 8.1 LLD is stipulated as follows:

- 1,025 dwelling units
- 1,452,600 square feet of Institutional
- 1,000,000 square feet of Medical & Science
- 708,000 square feet of Commercial Recreation
- 225,000 square feet of Community Commercial
- 50,000 square feet of cemetery-related building space
- 40,000 square feet of elementary school

The proposed modifications to Chapter 9-51 of the Zoning Ordinance would not change the trip allocation of the adopted zoning for Planning Area 51. Therefore, the maximum trip allocation for Planning Area 51 must not exceed 117,047 ADT as established in the Overlay Zone.¹ In addition, the proposed Chapter 3-37 includes a list of permitted and conditionally permitted residential and nonresidential uses similar to other mixed-use categories in the Zoning Ordinance, and identifies the Master Plan process (Zoning Ordinance Ch. 2-17) as a requirement for all future development within the LLD.

The proposed revisions to Chapter 9-51 for Planning Area 51 include the changes noted in Table 2-1. In addition, the Statistical Analysis (Overlay Zone Table) would be revised to reflect a total of 1,100 residential dwelling units allocated to the Park District PAZs 2 and 18, distributed as 470 dwelling units to PAZ 2 and 630 dwelling units to PAZ 18. The existing table allocates 850 dwelling units to PAZ 2 and 250 dwelling units to PAZ 18.

Table 2-1
Planning Area 51 Proposed Lifelong Learning District—
Existing and Proposed Zoning

Planning Area Zone	Acres	Zoning District Designation	
		Existing	Proposed
1	200	Exclusive Agriculture, 1.1	LLD, 8.1
5	79	Medical & Science, 5.5	LLD, 8.1
6	80	Medium Density Residential (senior housing), 2.3	LLD, 8.1
7	38	Institutional, 6.1	LLD, 8.1
8	162	Institutional, 6.1	LLD, 8.1
9	5	Institutional, 6.1	LLD, 8.1
10	70	Institutional, 6.1	LLD, 8.1
11	33	Community Commercial, 4.2	LLD, 8.1
17a	249	Commercial Recreation, 4.4	LLD, 8.1A
17b	73	Recreation (cemetery), 1.5	LLD, 8.1A
Total	989		

Source: SEMA Associates, LLC (June 7, 2006).

The LLD would encompass approximately 962 acres, including 200 acres of state-designated Prime Farmland and Unique Farmland. (Refer to section 3.8 of this document.) An existing nursery occupies 173 acres of state-designated farmland and the Marshburn Basin occupies approximately 27 acres of designated prime farmland. The proposed project would not affect the 27 acres of designated prime farmland. Although

¹ The existing zoning provides trip allocations for the Base Zone, which is not proposed to be deleted, notwithstanding the adoption of the Overlay Plan. Trip allocation for the Base Zone is 83,021 ADT.

2. *Project Description*

designated as Prime and Unique Farmland, the existing nursery operation is not dependent on the current site since all of the plants are grown in pots and it does not utilize the existing soils for growing of crops. In addition, all of the soils within the proposed LLD consist of alluvial soils similar to the existing nursery site and would support the growing of crops. Therefore, the proposed zoning stipulations within Section 9-51-3 (Statistical Analysis) include a footnote to ensure that 173 acres of Exclusive Agriculture is maintained within Planning Area 51, each with the following text:

An additional 173 acres of Exclusive Agriculture shall be located in PA 51. The total Agricultural acreage for Planning Areas 30 and 51 combined is 303 acres. (Refer to Section 9-51-3, footnotes * and ***)

Proposed Boundary Adjustments

The current Overlay Plan provides the general land use patterns and types of development envisioned for the property. Subsequent to the approval of the Overlay Plan, the Great Park Corporation and Heritage Fields recognized that the original plans could be enhanced, thus both entities have collaborated to refine the boundary between these properties, which will allow the consideration of a broader range of design options.

The adjustments to the boundaries include an even exchange of land (ranging from 2 to 33 acres) between the City and Heritage Fields. The adjustment occurs in two general locations: 1) Heritage Fields to provide land along the riparian corridor located in the western portion of Planning Area 51 totaling 35 acres. In exchange, the City proposes to provide land to Heritage Fields along the western edge of the park and the northern edge of the Sports Park totaling 35 acres; and 2) Heritage Field and City-owned properties along the Agua Chinon drainage corridor along the eastern edge of Planning Area 51 totaling 20 acres. A total of 90 acres will be impacted by the boundary adjustment. No boundary adjustments are proposed in Planning Area 30. Refer to Figure 2-8 for a depiction of the proposed adjustment between the City-owned and Heritage Fields property.

2.3 DISCRETIONARY APPROVALS

Implementation of the project includes the following discretionary actions for Planning Areas 30 and 51 to be undertaken by the City:

- CEQA related actions and approvals; and
- General Plan Amendment 00416079-PGA and Zone Change 00416080-PZC.

The OCGP EIR lists additional discretionary actions to be taken by the City and other public agencies at or as part of the completion of the project—the adopted Overlay Plan (OCGP EIR pages 3-29 and 3-30). The actions listed therein which have not yet been undertaken also are necessary for implementation of the project. The actions and responsible public agencies include, but are not necessarily limited to, these approvals:

- Master plans and subdivisions for development (City)
- Community facilities districts or other assessment districts (City)
- Actions to improve interim use activities (City and DoN)
- Transfer of parcels within Planning Area 51 (DoN)
- Clean Water Act section 404 permits (U.S. Army Corps of Engineers)
- Endangered Species Act compliance (U.S. Fish and Wildlife Service)
- Clean Water Act section 401 and National Pollutant Discharge Elimination System (NPDES) permits (Regional Water Quality Control Board)
- California Fish and Game Code 1602 permits (California Department of Fish and Game)

3. Environmental Checklist

The City of Irvine Environmental Information Form and Environmental Checklist Form have been completed by the City and are included on the following pages. The Environmental Checklist Form is marked with the findings of the Redevelopment Department as to the environmental effects of the proposed changes to the project in comparison with the findings of the certified OCGP EIR.

As explained above, this comparative analysis has been undertaken, pursuant to the provisions of the California Environmental Quality Act, to provide the City with the factual basis for determining whether any changes in the project, any changes in the circumstances, or any new information requires additional environmental review or preparation of a subsequent or supplemental EIR. The basis for each of the findings listed in the attached Environmental Checklist Form is explained in Section 4.0 of the Addendum.

Irvine, California 92618

6. **General Plan Designation:** OCGP (Orange County Great Park)

7. **Zoning:** 1.1 Exclusive Agriculture, 1.4 Preservation, 1.5 Recreation, 1.8 Golf Course Overlay, 2.2 Low Density Residential, 2.3 Medium Density Residential, 3.2 Transit Oriented Development, 4.2 Community Commercial, 4.3 Vehicle-Related Commercial, 4.4 Commercial Recreation, 5.4 General Industrial, 5.5 Medical & Science, and 6.1 Institutional

Proposed Zoning: 1.5 Recreation, 1.8 Golf Course Overlay, 2.2 Low Density Residential, 3.2 Transit Oriented Development, 4.3 Vehicle-Related Commercial, 5.4B General Industrial, 6.1 Institutional, 8.1/8.1A Lifelong Learning District

8. **Description of Project**

The proposal is to introduce minor boundary adjustments to the City and Heritage Fields properties, limited revisions to the existing policy and regulatory documents for Planning Areas 30 and 51, and to create a mixed-use category called the Lifelong Learning District (the "project"). No change to the land use intensities of the adopted General Plan and Zoning Ordinance, and other applicable development parameters are proposed. Please refer to Section 2.3, *Project Description*, for a more detailed description of the proposed actions.

3. Environmental Checklist

9. Surrounding Land Uses and Setting (Briefly describe the project's surroundings):

The proposed project area (which consists of City of Irvine Planning Areas 30 and 51) is located in the central portion of Orange County, approximately 45 miles southeast of Los Angeles. The project area is generally bounded by the Irvine Spectrum to the south, City of Lake Forest to the east, the Woodbury residential community to the west, and the future Portola Springs residential development to the north.

The project area is located north of the Santa Ana (I-5) Freeway, east of the Eastern Transportation Corridor (SR-133), and south of the Foothill Transportation Corridor (SR-241). Major roadways bordering the project area include Barranca Parkway to the south, Sand Canyon Avenue to the west, Portola Parkway and Irvine Boulevard to the north, and Alton Parkway to the east.

10. Other Public Agencies Whose Approval Is Required (e.g., permits, financing approval, or participation agreement):

None.

3. Environmental Checklist

3.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a “Potentially Significant Impact” as indicated by the checklist on the following pages.

- | | | |
|--|---|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agricultural Resources | <input type="checkbox"/> Air Quality |
| <input type="checkbox"/> Biological Resources | <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Geology / Soils |
| <input type="checkbox"/> Hazards and Hazardous Materials | <input type="checkbox"/> Hydrology / Water Quality | <input type="checkbox"/> Land Use / Planning |
| <input type="checkbox"/> Mineral Resources | <input type="checkbox"/> Noise | <input type="checkbox"/> Population / Housing |
| <input type="checkbox"/> Public Services | <input type="checkbox"/> Recreation | <input type="checkbox"/> Transportation / Traffic |
| <input type="checkbox"/> Utilities / Service Systems | <input type="checkbox"/> Mandatory Findings of Significance | |

3.3 DETERMINATION

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

David Law, AICP, Senior Planner

Date

3. *Environmental Checklist*

3.4 **EVALUATION OF ENVIRONMENTAL IMPACTS**

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 1 5063(c) (3)(D). In this case, a brief discussion should identify the following:
 - a) **Earlier Analysis Used.** Identify and state where they are available for review.
 - b) **Impacts Adequately Addressed.** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) **Mitigation Measures.** For effects that are “Less Than Significant With Mitigation Incorporated,” describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

3. Environmental Checklist

- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
- a) the significance criteria or threshold, if any, used to evaluate each question; and
 - b) the mitigation measure identified, if any, to reduce the impact to less than significant.

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
I. AESTHETICS: Would the project:						
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway or local scenic expressway, scenic highway, or eligible scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in the visible grading of over 5,000 cubic yards on any 20-acre portion of the project site; or visible cut and fill slope over 25 vertical feet?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in the creation of light spillover and glare effects that present a nuisance to residential land uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Result in the substantial alteration of the existing landform of the site or of a unique topographic feature on the site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
II. AGRICULTURAL RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Mode (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:						
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
III. AIR QUALITY: Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:						
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
IV. BIOLOGICAL RESOURCES: Would the project:						
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate,	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

	Subsequent or Supplemental EIR				Addendum to EIR	
ENVIRONMENTAL ISSUES	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?						
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
V. CULTURAL RESOURCES: Would the project:						
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5 of the CEQA Guidelines and/or identified on the Qualified Historic Structures list of the Anaheim Colony Historic District Preservation Plan (July 20, 1999)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the CEQA Guidelines?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

	Subsequent or Supplemental EIR				Addendum to EIR	
ENVIRONMENTAL ISSUES	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
c) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
d) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
VI. GEOLOGY AND SOILS: Would the project:						
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:						
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■
d) Be located on expansive soil, as defined by Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
VII. HAZARDS AND HAZARDOUS MATERIALS: Would the project:						
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
environment?						
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project located within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VIII. HYDROLOGY AND WATER QUALITY: Would the project:						
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through alteration of the course of a stream or river, in	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
a manner which would result in substantial erosion or siltation on-site or off-site?						
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on-site or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of pollutant runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j) Inundation by seiche or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
IX. LAND USE AND PLANNING: Would the project						
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of any agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
X. MINERAL RESOURCES: Would the project:						
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XI. NOISE: Would the project result in:						
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, heliport or helistop, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XII. POPULATION AND HOUSING: Would the project:						
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through the extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people,	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

	Subsequent or Supplemental EIR				Addendum to EIR	
ENVIRONMENTAL ISSUES	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
necessitating the construction of replacement housing elsewhere?						
XIII. PUBLIC SERVICES: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:						
a) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XIV. RECREATION: Would the project:						
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XV. TRANSPORTATION/TRAFFIC: Would the project:						
a) Cause an increase in traffic, which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
c) Result in a change in air traffic patterns, including either an increase in traffic levels or change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in inadequate parking capacity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus stops/routes, bicycle lanes, sidewalks, etc.)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XVI. UTILITIES AND SERVICE SYSTEMS: Would the project:						
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Have sufficient water supplies available to serve the project (including large scale developments as defined by Public Resources Code Section 21151.9 and described in Question No. 20 of the Environmental Checklist) from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Comply with Federal, State, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Result in a need for new systems or supplies, or substantial alterations related to electricity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Result in a need for new systems or supplies, or substantial alterations related to natural gas?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
j) Result in a need for new systems or supplies, or substantial alterations related to telephone service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
k) Result in a need for new systems or supplies, or substantial alterations related to television service/reception?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XVII. MANDATORY FINDINGS OF SIGNIFICANCE						
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4. *Discussion of Checklist and Mitigation Measures*

This section is intended to provide evidence to substantiate the conclusions set forth in the Environmental Checklist. The section will briefly summarize the OCGP EIR conclusions and then discuss whether or not the proposed project is consistent with the findings contained in the OCGP EIR.

4.1 AESTHETICS

4.1.1 Environmental Setting

The OCGP EIR addressed in detail the potential visual impacts associated with the development of the former MCAS El Toro. The OCGP EIR discussed the project's visual setting associated with its location adjacent to various arterial highways and state and federal highways. None of these roadways are designated County or State scenic highways; although Sand Canyon Avenue is designated as a highway with rural/natural character. The City's General Plan also designates the Santa Ana (I-5) Freeway as an urban character Scenic Highway.

Generally, views of the former military base are from the surrounding highways. From these highways, a variety of land uses, structures, and facilities of differing ages, sizes, and architectural styles may be viewed. Though agricultural areas are located adjacent to and within the base, the predominant features are associated with the military use of the base, including runways, aprons, hangars, warehouses, barracks housing, recreational facilities, golf course, single-family housing, offices, and commercial structures.

The City of Lake Forest and the James A. Musick Branch Jail are located to the southeast; Irvine Spectrum abuts the former base along the eastern and southern boundaries; and existing and developing residential developments are located to the north and west. Further to the south are the residential areas of the Cities of Laguna Woods and Laguna Hills. These communities are at higher elevations and therefore have panoramic views of the project.

4.1.2 Impacts Identified in the OCGP EIR

The OCGP EIR discussed the potential aesthetic effects of the development of PAs 30 and 51 under the adopted Overlay Plan and found that future development of these two planning areas would introduce new sources of light within the project area. These sources include street lighting along planned roadways and various forms of exterior lighting including security lighting, parking lots, educational facilities, institutional and commercial developments, and lighting associated with athletic fields. The OCGP EIR concluded that significant light impacts may occur should proposed light sources be directed into or located near existing or planned residential uses, which are sensitive to light intrusion during nighttime hours.

4.1.3 Impacts Associated with the Revised Overlay Plan

The project would not introduce new light sources or highly reflective building materials that would result in new sources of potential glare beyond those already considered by the OCGP EIR, because it includes the same land uses and intensity, and comparable physical area for future development as the adopted Overlay Plan.

Although the project includes limited boundary adjustments along the Great Park edge, the adjustments would not result in new or more severe aesthetic impacts or impacts associated with new sources of light and glare. The project includes a more proportionate distribution of the residential dwelling units allowed within Park District PAZs 2 and 18 under the adopted Overlay Plan, which would result in the potential for a more even distribution of the light sources that were addressed in the OCGP EIR. This project feature would not introduce new significant or more severe aesthetic, light and glare impacts than those discussed in the OCGP EIR.

4. *Discussion of Checklist and Mitigation Measures*

The project creates a new land use category, LLD, to approximately 962 acres of land within the northwest quadrant of the project site. The LLD designation retains all of the land use and building intensities of the adopted Overlay Plan. The project could result in a spatial arrangement of development and agricultural land uses that would differ from the land use patterns assumed in the OCGP EIR for the 962-acre LLD area, because the LLD promotes the vertical and horizontal integration of land uses and activities. The use descriptions, square footage, and other planning standards of both the project and the adopted Overlay Plan are sufficiently similar that development under either set of regulations would be expected to result in comparable visual, light and glare effects. Accordingly, the introduction of the Lifelong Learning District to the project area would not result in new significant or more severe aesthetic, light and glare impacts than those disclosed in the OCGP EIR.

The project retains the commitment to satisfy the mitigation measures of the OCGP EIR related to potential light impacts.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP EIR due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4. *Discussion of Checklist and Mitigation Measures*

4.1.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified mitigation measures A 1 and A 2 which, if fulfilled, would reduce the effects of development under the adopted Overlay Plan to a less than significant level. Measures A1 and A2 are applicable to future development under the project.

- A 1 Prior to issuance of grading permits, lighting plans and signage plans for new development shall be reviewed by the Community Development Department to ensure that minimal light intrusion and spillover into adjacent residential areas occurs.
- A 2 Prior to the issuance of grading permits, and during the master plan review process for future development in the project area, the Director of Community Development shall ensure that mirrored and highly reflective surfaces are discouraged or, where proposed, shall be accompanied by a design-level glare impact analysis that demonstrates no adverse visual impairment to motorists or other visual nuisance occurs.

4.2 AGRICULTURAL RESOURCES

4.2.1 Environmental Setting

The OCGP EIR described the Farmland Mapping and Monitoring Program of the California Department of Conservation Division of Land Resources Protection classifications of agricultural lands present within the project area as follows:

- Prime Farmland: Land which has the best combination of physical and chemical features able to sustain long-term production of agricultural crops. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for production of irrigated supply needed to produce sustained high yields. Land must have been used for production of irrigated crops at some time during the previous two map updates.
- Farmland of Statewide Importance: Similar to Prime Farmland, except this land has minor shortcomings such as greater slopes or less ability to store soil moisture than Prime Farmland. This land has minor shortcomings, such as greater slopes or less ability to store soil moisture than Prime Farmland. Land must have been used for production of irrigated crops at some time during the previous two map updates.
- Unique Farmland: Lesser quality soils used for the production of the state's leading crops. This land is usually irrigated, but may include non-irrigated orchards or vineyards as found in some climate zones in California. This land is used for the production of specific high economic value crops such as oranges, olives, avocados, rice, grapes, or cut flowers. Land must have been cropped at some time during the two previous maps updates.
- Farmland of Local Importance: Land of importance to the local agricultural economy as determined by each county's board of supervisors and a local advisory committee.

Figure 4-1 depicts the farmland classifications within the project site and surrounding area. The OCGP EIR identified approximately 659 acres of designated Prime Farmland, 70 acres of designated Unique Farmland, and 99 acres of designated Farmland of Statewide Importance. The Orange County Board of Supervisors has not designated any farmland as being of "Local Importance."

4. *Discussion of Checklist and Mitigation Measures*

City of Irvine Policies and Programs

The City of Irvine General Plan Objective L-10, as amended in 2002 and presented in the OCGP EIR, includes the following policies to “encourage the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development”:

Policy (a): Provide for farming opportunities in the community, where feasible and appropriate, through an Agricultural Legacy Program facilitating limited-scale agricultural operations and program on public lands. The program may include components such as edible landscape, metro-farming, heritage farming, model farming, education and community service farming and other farm or farm market program. Location for implementation of the Agricultural Legacy Program to be considered should, at a minimum, include:

- Designated open space spine network,
- Designated open space areas not subject to the Natural Community Conservation Plan (NCCP), and
- Other appropriate publicly owned lands.

Policy (b): Consider creating a “working model” farm to act as a center for education and enjoyment of all age groups pursuant to the Agricultural Legacy Program in conjunction with the City’s planning efforts concerning the reuse of MCAS El Toro, or with the South Coast Research Extension owned by UC Regents.

Policy (c): Permit agricultural use of land which is unsuitable for building because it is within flood plains, or is subject to hazards to public health, safety, and welfare or similar constraints precluding development. Conversion from agricultural use may be allowed where the identified hazard conditions have been eliminated.

Policy (d): Permit agricultural uses, on an interim bases, on land designated for development, and consider agricultural uses as part of the City’s planning efforts for the re-use of MCAS El Toro.

Policy (e): Encourage and support federal and state legislation proposed for the purpose of preservation of agricultural lands which are compatible with the City’s goals and objectives.

Policy (f): Allow for conversion of interim and permanent agricultural uses to development to provide land for the construction of housing units consistent with the Land Use and Housing Elements, and the development of commercial and industrial buildings consistent with the provision of job opportunities as described in the Land Use Element, where such conversion does not conflict with other L-10 policies.

Policy (g): Pursue the open space policies contained in the Conservation and Open Space Element and address any open space or aesthetic impacts from the conversion of interim and permanent agricultural uses to development as part of the City’s existing policies for the preservation of open space and existing policies for mitigation of views and aesthetic impacts under the policies in the Conservation and Open Space Element.

4. *Discussion of Checklist and Mitigation Measures*

4.2.2 Impacts Identified in the OCGP EIR

The OCGP EIR determined the adopted Overlay Plan would preserve in perpetuity 303 acres² of land for agricultural use, of which 251 acres are classified as Prime Farmland, Unique Farmland, and Farmland of Statewide Importance. The locations of the 303 acres of permanent agricultural land are listed below:

- **PA 30:** 13 acres within Planning Area Zone (PAZ) 26; and
- **PA 51:** 90 acres within PAZ 4; and 200 acres within PAZ 1.

The adopted Overlay Plan also would result in the permanent loss of 802 acres of designated farmland comprised of 651 acres of Prime Farmland, 63 acres of Unique Farmland, and 88 acres of Farmland of Statewide Importance. This impact was considered significant and unavoidable.

Lastly, it was determined the adopted Overlay Plan would result in a significant impact associated with the conversion of agricultural land to nonagricultural use. The OCGP EIR noted the context of agricultural production in Orange County—including development pressures that have contributed to the decrease in agricultural production in the County overtime—which suggested that conversion of agricultural land to urban uses would occur with or without the project.

4.2.3 Impacts Associated with the Revised Overlay Plan

The adopted Overlay Plan designates 290 acres of land zoned as 1.1 Exclusive Agriculture in PA 51: specifically, PAZ 1 and PAZ 4. PAZ 1 is located northeast of Irvine Boulevard and consists of approximately 200 acres. PAZ 4 consists of two parcels, one on each side of Alton Parkway and both located east of Irvine Boulevard; their combined size is approximately 90 acres. PAZ 1 is proposed to be rezoned to 8.1 Lifelong Learning District (LLD).

PAZ 1 is currently developed with Bordier's Nursery (173 acres) and the Marshburn Retarding Basin (27 acres). These uses existed prior to and at the time the OCGP EIR was prepared and certified. A wholesale nursery use is consistent with the City's zoning definition for agricultural use.³

The proposed project would not affect the 27 acres of designated prime farmland within the Marshburn. Although designated as Prime and Unique Farmland, the existing nursery operation is not dependent on the current site since all of the plants are grown in pots and it does not utilize the existing soils for growing crops. In addition, all of the soils within the proposed LLD District consist of alluvial soils similar to the existing nursery site and would support the growing of crops. Therefore, the proposed zoning stipulations within Section 9-51-3 (Statistical Analysis) include two footnotes to ensure that 173 acres of Exclusive Agriculture is maintained within Planning Area 51, each with the following text:

An additional 173 acres of Exclusive Agriculture shall be located in PA 51. The total Agricultural acreage for Planning Areas 30 and 51 combined is 303 acres. (Refer to Section 9-51-3, footnotes * and ***)

² Please note that there is a scribe's error within the OCGP EIR: Table 1-2 on page 1-8 and Table 3-4 on pages 3-12 and 3-13 identify the total agricultural land as 303 acres; however on page 5.8-10 the agricultural use acreage is noted as 307.

³ "Agricultural use: the production, keeping or maintenance of plants and/or animals useful to man, including but not limited to food and fiber crops, livestock forage and grazing, orchards, nursery and ornamental plants. This includes wholesale nurseries and produce stands..." (City of Irvine Zoning Ordinance Section 1-2-1).

4. *Discussion of Checklist and Mitigation Measures*

A majority of PAZ 1 is classified as Prime Farmland; however, there is a small area immediately south of Portola Parkway that is classified as Unique Farmland (OCGP EIR Figure 5.8-1). Since the nursery operation exists under a long-term lease, the adopted Overlay Zone identified PAZ 1 as 1.1 Exclusive Agriculture and the OCGP EIR impact analysis assumed the site would remain in agricultural use. In addition to the agricultural uses permitted in the Exclusive Agricultural land use category, a kennel, manufactured structure, and public stable are permitted subject to a conditional use permit (See City of Irvine Zoning Ordinance Sec. 3-37-2).

The total acreage to be preserved in agricultural use within PA 51 consists of 90 acres of existing cultivated land owned by the County of Orange, 27 acres of area containing the existing Marshburn Retarding Basin; and 173 acres of land used by an existing commercial nursery. Of this acreage, only the commercial nursery and the retarding basin are located within the proposed LLD. The proposed zoning requires that 200 acres be retained as 1.1 Exclusive Agriculture within the LLD. As a result, no new impacts to agricultural resources beyond those evaluated in the OCGP EIR would occur.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4. *Discussion of Checklist and Mitigation Measures*

4.2.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

Mitigation measures AG 1 through AG 3 would be implemented in conjunction with master plan review and subsequent development permits. The project would neither change these mitigation measures nor their application to future development projects.

- AG 1 In order to encourage agriculture as an interim land use pending development on the project site by warning future residents that they are buying or renting a house adjacent to existing agricultural operators, City of Irvine Standard Discretionary Case Condition B.4 and City of Irvine Subdivision Condition 3.4 regarding disclosure statements shall be amended to include the following for subdivisions proposed adjacent to existing agricultural operations:

Prior to issuance of building permits, the applicant shall submit, and the Director of Community Development shall have approved, a completed occupancy disclosure form for the project. The approved disclosure form, along with its attachments, shall be included as part of the rental/lease agreement and as part of the sales literature for the project. The disclosure statement shall include the following information:

- Continuation of agricultural operations adjacent to the site and their potential effects (spraying of pesticides, noise, dust, odor, etc.) on future residents or tenants.

- AG 2 Heritage and community service/educational farming operations shall be encouraged within utility easements and other lands. Heritage farming is defined as small-scale specialty farming operations that can be accommodated in an urban environment. An example would be the Edible Landscape project located adjacent to Harvard Avenue within the Edison right-of-way.

- AG 3 Future landowners and the City shall work cooperatively with farmers to minimize conflicts between agricultural operation and adjacent urban uses.

4.3 AIR QUALITY

4.3.1 Environmental Setting

The OCGP EIR described the existing air quality regarding the following regulated pollutants: ozone (O₃), carbon monoxide (CO), suspended particulate matter (PM₁₀), nitrogen oxides (NO_x), sulfur dioxide (SO₂), lead (Pb), volatile organic compounds (VOC), and reactive organic gases (ROG). The South Coast Air Basin (SCAB) is described as a nonattainment area for O₃, CO, and PM₁₀; annual maximum concentrations of O₃, CO, PM₁₀, and SO₂ exceeded both federal and state standards in some or all areas in the SCAB during the reporting period (2000). In contrast, standards for nitrogen dioxide (NO₂), SO₂, and Pb were not exceeded during the reporting period.

The OCGP EIR also noted the pending promulgation by the U.S. Environmental Protection Agency (EPA) and California Air Resources Board of standards for PM_{2.5} (particulate matter less than 2.5 microns in diameter). The standards are provided in Table 4-1 of this document. EPA has identified several counties, including Orange County, as PM_{2.5} nonattainment areas. EPA is in the process of responding to comments on related regulations. The California Air Resources Board adopted the annual standard identified in Table 2.3-1 but has postponed establishing a 24-hour standard for PM_{2.5}. At the local level, the South Coast Air Quality Management District (SCAQMD) is in the process of developing a methodology for calculating PM_{2.5} and PM_{2.5} significance thresholds for the purpose of analyzing local and regional air quality impacts in CEQA.

4. Discussion of Checklist and Mitigation Measures

documents. A draft communication issued in May 2006 by the SCAQMD to its working group indicated that the methodology for calculating PM₁₀ could also be used to calculate PM_{2.5}.

4.3.2 Impacts Identified in the OCGP EIR

The OCGP EIR identified significant air quality impacts associated with construction and operation of the adopted Overlay Plan. The construction impact analysis assumed demolition, grading and new construction would occur in two phases: the first phase would begin in 2007 and end in 2016 and the second phase would begin in 2017 and end in 2025. The emissions associated with demolition of existing structures, including 31.2 million cubic feet of concrete from removal of the runways, site grading, and development would generate construction air emissions above the significance thresholds for ROG, NO_x, and PM₁₀. The OCGP EIR described the construction air impacts after mitigation as significant and unavoidable. (Refer to OCGP EIR pp. 5.3-16 through 5.3-20.)

Table 4-1
Federal and State Standards¹ for PM_{2.5}

Averaging Time	Federal Standards	California Standards²
Annual Arithmetic Mean	15 µg/m ³	12 µg/m ³
24-Hour	65 µg/m ³	No Separate Standard

Source:

¹ www.epa.gov/pmdesignations/state/California.htm [June 5, 2006].

² 17 CFR §70200, Table of Standards.

The operations-related air quality impacts associated with build-out under the adopted Overlay Plan included emissions associated with energy consumption and vehicular trips. The Urban Emissions (URBEMIS) 2001 model and EMFAC7F (motor vehicle emission factor model) were used to estimate air emissions associated with operation of the project site through the analysis year post-2025. The operations air emissions for project area and vehicular mobile sources were estimated at above the significance thresholds for ROG, NO_x, CO, and PM₁₀, and described in the OCGP EIR as significant after mitigation, and an unavoidable consequence of the project (adopted Plan). No other construction- and operations-related significant air quality impacts were identified in the OCGP EIR. (Refer to OCGP EIR pp. 5.3-20 through 5.3-58, and 7-19.)

In addition, the OCGP EIR disclosed the results of the CO “hotspots” analysis, in which CO concentrations were predicted for intersections with a LOS of “D” or higher at a.m. and p.m. peak hours using the CALINE 4.0 model and EMFAC7F motor vehicle emission factors. No intersections in the traffic study area were expected to result in one-hour and eight-hour CO concentrations above the state standard of 20 parts per million (ppm) for one-hour concentrations and 9 ppm for eight-hour concentrations (Refer to OCGP EIR pp. 5.3-31 through 5.3-53).

4.3.3 Impacts of the Revised Overlay Plan

The project includes the same land use types, intensity, and density as the adopted Overlay Plan. In addition, the analytical assumptions concerning construction, development phasing, and operations of the adopted Overlay Plan remain appropriate for the project (Refer to OCGP EIR Table 5.3-14). Since the analysis assumptions did not change, the results of the impact assessment conducted for the adopted Overlay Plan would adequately characterize the potential air quality effects of the project.

The traffic study prepared for the project describes the traffic conditions in 2010, 2025, and post-2025 with and without implementation of the project. As presented in section 4 of the traffic study, the trip generation

4. *Discussion of Checklist and Mitigation Measures*

and traffic impact associated with the project would be comparable to that described for the adopted Overlay Plan; therefore, Project operations-related mobile source air emissions would be comparable to the operations-related mobile source emissions of the adopted Overlay Plan. Overall, implementation of the project would generate construction air emissions above the significance thresholds for ROG, NO_x, CO, and PM₁₀; the emissions would be associated with demolition of existing structures and land preparation and excavation for the construction of new development. Operations would result in mobile source air emissions of ROG, NO_x, CO, and PM₁₀ above the significance thresholds for these criteria pollutant; however, these impacts are comparable to those analyzed under the OCGP EIR.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.3.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified mitigation measures AQ 1 through AQ 5, which reduce the air quality effects of construction and operations of development under the adopted Plan. However, as noted above, the OCGP EIR found that short-term and long-term air quality impacts would remain significant and unavoidable. The measures are applicable to future development under the project.

- AQ 1 Prior to the start of demolition and construction within the project area, adjacent sensitive receptors shall be informed of the planned demolition and construction activities. Measures to avoid significantly impacting these receptors shall be developed and implemented by the project proponent in coordination with these uses. Other applicable mitigation measures such as erection of fences around construction areas; staggered use of equipment near sensitive receptors; diversion of truck trips away from receptors; etc.; shall be employed as

4. *Discussion of Checklist and Mitigation Measures*

necessary. Compliance with this measure shall be verified by the Director of Community Development.

AQ 2 Prior to the commencement of construction activities required to demolish and/or remove existing DoN structures, including runways, the Director of Community Development shall receive and approve a construction emissions mitigation plan from the chosen demolition contractor. Prior to the issuance of grading permits, the applicant of any future development project shall submit, and the Director of Community Development shall approve a construction emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.

- Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase. Water exposed soils at least twice daily and maintain equipment and vehicle engines in good condition and in proper tune.
- Wash off trucks leaving the site.
- Replace ground cover on construction sites when it is determined that the site will be undisturbed for lengthy periods.
- Reduce speeds on unpaved roads to less than 15 miles per hour.
- Halt grading and excavation operations when wind speeds exceed 25 miles per hour.
- Suspend all emission generating activities during smog alerts.
- Use propane- or butane-powered on-site mobile equipment instead of diesel/gasoline, whenever feasible.
- Properly maintain diesel-powered on-site mobile equipment.
- Sweep streets at the end of the day if substantial visible soil material is carried over to the adjacent streets.
- Use electricity from power poles rather than temporary on-site diesel- or gasoline-powered generators, whenever feasible.
- Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase.
- Use of low-VOC asphalt.
- Cover all trucks hauling dirt, sand, soil or other loose material to and from the site.
- Provide temporary traffic controls (e.g., flag persons) during all phases of construction to ensure minimum disruption of traffic.
- Schedule construction activities that affect traffic flow on adjoining streets to off-peak hours to the extent possible.
- Reroute construction trucks away from congested streets, whenever feasible.
- Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, whenever feasible.

4. *Discussion of Checklist and Mitigation Measures*

- AQ 3 Prior to the issuance of building permits for any future development, the applicant shall submit, and Director of Community Development shall have approved, an operation-emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.
- Utilize built-in energy-efficient appliances to reduce energy consumption and emissions.
 - Utilize energy-efficient and automated controls for air conditioners and lighting to reduce electricity consumption and associated emissions.
 - Install special sunlight-filtering window coatings or double-paned windows to reduce thermal loss, whenever feasible.
 - Utilize light-colored roofing materials as opposed to dark roofing materials to conserve electrical energy for air-conditioning.
 - Provide shade trees in residential subdivisions as well as public areas, including parks, to reduce building heating and cooling needs, whenever feasible.
 - Ensure that whenever feasible, commercial truck traffic is diverted from local roadways to off-peak periods.
 - Centralize space heating and cooling for multiple-family dwelling units and commercial space.
 - Orient buildings north/south for reducing energy-related combustion emissions.
 - Use solar energy, when feasible.
 - Use high rating insulation in walls and ceilings.
- AQ 4 Information on available housing and employment opportunities within the project area shall be provided to employees and residents of the project area, so as to encourage employees to live within the residential developments planned on-site and future residents to find employment nearby.
- AQ 5 Future employment generating nonresidential development shall include measures to reduce vehicle trips including: the promotion of carpool incentives and alternative work schedules, easy access to public transit systems, trail linkages between uses, low emissions vehicles fleets, and the provision of on-site facilities such as banking and food courts, and bicycle parking facilities, and other transportation demand management measures, as deemed appropriate.

4.4 BIOLOGICAL RESOURCES

4.4.1 Environmental Setting

The OCGP EIR described the biological resources within Planning Areas 30 and 51, including 995 acres of land retained in federal ownership and designated as habitat reserve and a part of the Orange County Central-Coastal Subregion Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP).

4. *Discussion of Checklist and Mitigation Measures*

The areas outside the habitat reserve were described as: (1) providing minimal native or undisturbed habitat; and (2) consisting of agricultural, ornamental, and domestic landscapes. The OCGP EIR identified nine vegetative communities within the project site, including Venturan-Diegan sage scrub, southern cactus scrub, chaparral, woodland, riparian scrub, grassland, open water, agriculture, and disturbed or developed areas. Several sensitive plant species and a large number of mature trees also were identified as potentially occurring within the project site. The sensitive plant species potentially occurring in both Planning Areas 30 and 51 include the southern tarplant, Palmer's grapplehook, many-stemmed dudleya, Coulter's Matilija poppy, Catalina mariposa lily, and intermediate mariposa lily. The OCGP EIR also noted the Coulter's saltbush, Laguna Beach dudleya, San Fernando Valley spineflower, and the Lewis's evening-primrose as having a moderate potential for occurrence. Species with a low potential for occurrence include the Los Angeles sunflower, south coast saltscale, Santa Monica Mountains dudleya, heart-leafed pitcher sage, coast wooly-heads, slender-horned spineflower, Santa Barbara morning glory, tecate cypress, and salt spring checkerbloom.

The OCGP EIR documented that one sensitive wildlife species, the burrowing owl, was observed outside the habitat reserve at the southwest end of Planning Areas 30 and 51 along Serrano Creek. Forty other sensitive wildlife species or species of local concern were identified as having a potential to occur on the site. In addition, the areas outside the habitat reserve, such as the agricultural lands, generally provide suitable foraging habitat for raptor species, including Swainson's hawk.

Lastly, the OCGP EIR described the Wildlife Corridor Concept Plan that would be incorporated into the eastern portion of the project site (Refer to pp. 5.9-9 through 5.9-14 of the OCGP EIR).

4.4.2 Impacts Identified in the OCGP EIR

The OCGP EIR disclosed several significant impacts of the adopted Overlay Plan, including potential impacts on: (1) the southern tarplant, a federal species of concern; (2) the limited amounts of highly disturbed wetland habitat on the project site; and (3) the wide range of species of trees, many of which are mature specimens.

4.4.3 Impacts Associated with the Revised Overlay Plan

The project includes the same land uses and development areas as the adopted Overlay Plan; therefore the conclusions drawn in the OCGP EIR adequately describe the environmental effects of the project relative to biological resources, as well as the severity of the impacts. Furthermore, several of the proposed boundary adjustments would add land to the Great Park at locations adjoining the drainage features of the adopted Overlay Plan in exchange for equal amounts of Great Park land in locations that are mutually acceptable to the City and Heritage Fields, LLC. The boundary adjustments would facilitate drainage improvements to support the Great Park and Heritage Fields development areas, some of which would also contribute toward the Wildlife Corridor.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

4. *Discussion of Checklist and Mitigation Measures*

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR.

This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.4.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

Mitigation measures BIO 1 through BIO 4 would be implemented in conjunction with master plan review and subsequent development permits. The project would neither change these mitigation measures nor their application to future development projects.

- BIO 1 Prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl shall be conducted. Prior to approval of a subdivision map for development within or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owl, least Bell's vireo, or southwestern willow flycatcher in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement. If impacts cannot be avoided, then mitigation shall be negotiated through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG).
- BIO 2 Prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan sub-area that contain the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a wetland mitigation plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). Wetlands impacted on-site replacement, recreation (i.e., within the proposed wildlife corridor), and/or re-vegetation as deemed acceptable by the appropriate jurisdictional agencies.
- BIO 3 The City shall continue to work with State and federal agencies during the implementation of the proposed project to implement the re-vegetation/restoration plan for the wildlife corridor. Measures such as sight and sound barriers, including artificial sound walls and natural diversions (e.g., hedges and tree lines) shall be incorporated into corridor design to ensure

4. *Discussion of Checklist and Mitigation Measures*

the viability of the corridor. The City shall implement the corridor consistent with the design criteria and viability analysis established in the EIR.

- BIO 4 Prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height (DBH) greater than six inches and any significant (as determined by a certified arborist selected by the City) plants on the project site, excluding those within the habitat preserve shall be prepared. This inventory shall be prepared by an arborist certified by the International Society of Arboriculture and shall include (but not be limited to) data for each tree such as species, variety, DBH, condition (excellent, good, fair, poor, dead), and any recommendations. All trees in this inventory shall be considered "Significant Trees" under the City of Irvine's Urban Forestry Ordinance (UFO) (Sections 5-7-401 et al.) and the UFO shall apply to all trees included in this inventory.

4.5 CULTURAL RESOURCES

4.5.1 Environmental Setting

Cultural Resources

The discussion of Cultural Resources includes archaeological and historical resources. The OCGP EIR presents information pertaining to the regional setting of former MCAS El Toro from both a prehistoric and historic perspective. The OCGP EIR reported the presence of ten prehistoric archaeological sites and eight isolated prehistoric artifacts which have been recorded in the northeastern habitat preserve portions of Planning Area 51 (PA 51). These sites are generally located on the ridges between Borrego Canyon Wash and the Agua Chino Wash.

The former MCAS El Toro was surveyed to determine whether any of the structures would be eligible for the National Register. Generally, a structure which has achieved significance in the past 50 years is not considered eligible for the National Register unless it is of exceptional importance. The evaluation was expanded to include eligibility under the Legacy Cold War Project (Public Law No. 101-511, § 8120). Portions of PAs 30 and 51 (the former MCAS El Toro) were established during WWII, and no structure earlier than this period is at the former MCAS El Toro. Therefore, the historical significance of any structures at the former military base would be as part of the Cold War Legacy. Surveys conducted by the US Army Corps of Engineers and the Department of the Navy in conjunction with the base's closure concluded there were no structures eligible for designation as Cold War Legacy or for inclusion in the National Register of Historic Places.

Paleontological Resources

The OCGP EIR reported that a majority of Planning Areas 30 and 51 is located on the Tustin Plain, a coastal alluvial plain. Alluvium from the Late Pleistocene to Holocene Epochs (approximately 2 million to 11,000 years ago) immediately underlies the majority of the project area, including the part occupying the coastal plain and washes in the eastern portion of PA 51. The Pleistocene Alluvium formation is widespread and believed to extend to depths of 1,000 feet in PA 30. A significant deposit of Pleistocene terrestrial vertebrates was recovered during excavation of a flood control basin four miles from PA 30; thus, it is possible that similar beds underlie PA 30 (Refer to OCGP EIR 5.10-2).

The eastern portion of PA 51 is located in the western foothills of the northern Santa Ana Mountains. The hills and ridges in the eastern part of PA 51 are composed of older, underlying marine and nonmarine rock units of early Oligocene to late Pleistocene (23 million to 2 million years ago). In order of decreasing geologic age, these latter rock units include the undifferentiated Sespe and Vaqueros Formations, Topanga, and Monterey Formations, Oso Member of the Capistrano Formation, Niguel Formation, and Nonmarine Terrace Deposits.

4. *Discussion of Checklist and Mitigation Measures*

Nonmarine Terrace Deposits also underlie the terraces at the south corner of PA 51. The northwestern corner of PA 51 contains a small portion of the Santa Ana Mountains foothills, which were separated from the main formation by erosion. This small portion is composed of undifferentiated late Cretaceous (135 million years ago) marine Williams Formation. The rock units underlying portions of PA 51 have previously yielded important fossil remains at recorded fossil sites on and near the site. There are three recorded fossil sites in PA 51. These sites occur in undifferentiated Sespe and Vaqueros Formations and in the Topanga Formation. Fossil types include marine invertebrates and vertebrates, continental vertebrates, land plants, and land mammals. The three recorded fossil sites lie within the proposed habitat preserve portion of PA 51 (Refer to OCGP EIR p. 5.10-1 and Table 5.10-1).

4.5.2 Impacts Identified in the OCGP EIR

Cultural Resources

The OCGP EIR determined that development according to the adopted Overlay Plan would not cause a substantial adverse change in the significance of any historical structure. The consequence of grading activities associated with future development, however, could potentially result in a substantial adverse change in the significance of an archaeological resource. The OCGP EIR also stated that grading activities could uncover previously unknown human remains, including those interred outside formal cemeteries.

Paleontological Resources

The OCGP EIR stated that earthmoving operations associated with grading and trenching have the greatest potential to impact buried paleontological resources in the moderately to highly sensitive areas in the coastal plain and washes, northeast, northwest and southern portions of PA 51. The OCGP EIR considered the potential impact associated with earthmoving operations as a significant impact for which mitigation was necessary.

4.5.3 Impacts Associated with the Revised Overlay Plan

Cultural Resources

The project represents minor changes to the adopted Overlay Plan through boundary adjustments, revisions to General Plan and Zoning text for Planning Areas 30 and 51, and a general reallocation of land uses on-site. However, these changes would not reduce the potential for impacts associated with earthmoving operations. A key component of the project is that it would not open new areas to disturbance nor cause greater disturbance than reported in the OCGP EIR. Accordingly, the impacts disclosed in the OCGP EIR adequately describe the effects of the proposed project in that: (1) the project would not cause a substantial adverse change in the significance of any historical structure; (2) the consequence of grading activities associated with future development could potentially result in a substantial adverse change in the significance of an archaeological resource; and (3) grading activities could uncover previously unknown human remains, including those interred outside formal cemeteries.

Paleontological Resources

The project represents refinements to the adopted Overlay Plan through boundary adjustments and a general reallocation of land uses on-site. However, these refinements would not reduce the potential for impacts associated with earthmoving operations. A key component of the project is that it would not open new areas to disturbance nor cause greater disturbance than reported in the OCGP EIR. The paleontological mitigation measure developed for the OCGP EIR remains applicable to future development under the project.

4. *Discussion of Checklist and Mitigation Measures*

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.5.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

Cultural Resources

The OCGP EIR identified mitigation measures CULT 1 through CULT 4 which, if fulfilled, would reduce the effects of development under the adopted Plan to a level less than significant. Measures CULT 1 through CULT 4 are applicable to future development under the project.

- CULT 1 Prior to subdivision for development, a detailed archaeological report(s) shall be prepared within PAs 51 and 30. This report (s) shall specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. Recommendations contained in the report shall be implemented. Compliance with this measure shall be verified by the Community Development Department.
- CULT 2 Monitoring of excavation and grading activities associated with future development in PAs 51 and 30 shall be conducted by a certified archaeologist in accordance with the report required in Mitigation Measure CULT 1. If resources are encountered in the course of ground disturbance, the archaeological monitor shall be empowered to halt grading and to initiate an archaeological testing program. The testing shall include recordation of artifacts, controlled removal of the materials, and an assessment of their importance under CEQA

4. *Discussion of Checklist and Mitigation Measures*

and the City's local guidelines. Compliance with this measure shall be verified by the Community Development Department.

CULT 3 Prior to the issuance grading permits and/or building permits for any future development in PAs 51 and 30, a detailed mitigation program shall be submitted by the applicant to the City of Irvine to address archaeological resources discovered during grading. Provisions of the program shall include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation shall be available. Work may continue on other parts of the construction site while archaeological resource mitigation takes place. The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project includes potentially significant archaeological sites. These include retaining a qualified archaeologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process. Compliance with this measure shall be verified by the Community Development Department.

CULT 4 Prior to the issuance of any grading and/or building permits, a mitigation program shall be submitted by the developer to the City of Irvine to address the accidental discovery of recognition of any human remains. The program shall include the following:

There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

- The county coroner must be contacted to determine that no investigation of the cause of death is required, and

If the coroner determines the remains to be Native American:

- The coroner shall contact the Native American Heritage Commission within 24 hours.
- The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased Native American.
- The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for the means of treating or disposing of, with appropriated dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or
- Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.
- The Native American heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission.
- The descendant identified fails to make a recommendation; or
- The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage commission fails to provide measures acceptable to the landowner.

4. *Discussion of Checklist and Mitigation Measures*

Compliance with this measure shall be verified by the Community Development Department.

Paleontological Resources

The OCGP EIR identified mitigation measure P1 which, if fulfilled, would reduce the effects of development under the adopted Overlay Plan to a level less than significant. Measure P1 is applicable to future development under the project.

- P1 Prior to issuance of a grading permit for any portion of the project area, a qualified paleontologist shall be retained by the City or designee to carry out an appropriate paleontology investigation of the area proposed for grading. (A qualified paleontologist is defined as an individual with an M.S. or Ph.D. in paleontology or geology who is familiar with paleontological procedures and techniques.) The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant paleontological sites, and paleontological monitoring conditions have not been attached to the previous map approval. These standard conditions include retaining a qualified paleontologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process.

When fossils are discovered, the paleontologist (or paleontological monitor) shall recover them. In most cases, this fossil salvage can be completed in a short period of time. However, some fossils specimens (such as a complete large mammal skeleton) may require an extended salvage period. In these instances the paleontologist (or paleontological monitor) shall be allowed to temporarily direct, divert or halt grading to allow recovery of fossil remains in a timely manner. Because of the potential for the recovery of small fossil remains, such as isolated mammal teeth, it may be necessary in certain instances to set up a screening-washing operation on-site.

Fossil remains collected during the monitoring and salvage portion of the mitigation program shall be cleaned, repaired, sorted, and cataloged. Compliance with this measure shall be verified by the Community Development Department.

4.6 GEOLOGY AND SOILS

4.6.1 Environmental Setting

The OCGP EIR describes the topography of the project site as nearly flat and gently sloping down to the west to southwest with elevations ranging from 450 feet above mean sea level (MSL) to 200 feet above MSL. Planning Area 30 is located at the southeast margin of the Tustin plain with elevations ranging from about 260 to 300 feet above MSL. Planning Area 51 includes some slopes of the Santa Ana foothills which each elevations of about 750 feet above MSL. Alluvial soils of six major soil associations consisting of predominantly of varying sands, silts, and clayey silty sands are present within PA 51. Soils underlying PA 30 contain clayey loam alluvial material, terrace deposits, and old and unconsolidated recent alluvium of the Myford and Sorrento series.

The OCGP EIR identified the primary potential seismic hazard in the area as ground motion. Seismic Response Areas (SRA) designations are used by the City to assess the geologic and seismic risk associated with potential development. All of PA 30 and a majority of PA 51 are located within SRA-2 (denser soils/deeper groundwater) and are considered suitable for development. The planned development area of

4. *Discussion of Checklist and Mitigation Measures*

PA 51 situated north of Irvine Boulevard is designated SRA-3 (alluvium/shallow bedrock) and also susceptible to ground motion.

No known active faults crossing or projecting into the project area were identified; however, the project site is located within the seismically active Southern California region and there are two active faults—Whittier-Elsinore Fault and Newport-Inglewood Fault—located within 14 miles of the site.

4.6.2 Impacts Identified in the OCGP EIR

The OCGP EIR disclosed the potential for future development of the project area to result in the exposure of people or structures to strong ground shaking in the event of a major earthquake along any one of the active faults in the region. The OCGP EIR noted new construction would be required to adhere to current seismic safety building codes which address seismic concerns. Existing buildings within PA 51 do not meet current seismic codes; therefore, the temporary or permanent reuse of the existing buildings and the associated exposure of people or structures to potential substantial adverse effects due to strong seismic-related ground shaking were considered a significant impact.

Because of the documented landslides in the northeastern Santa Ana foothills area of the project site, the OCGP EIR analysis concluded the project would result in a significant impact associated with landslides in the affected area of PA 51 east of Irvine Boulevard, where future development of habitable structures could occur under the adopted Overlay Plan.

The OCGP EIR also concluded future development has the potential to result in soil erosion or the loss of topsoils, and risks to life and property due to with the presence of expansive soils; and that these impacts are considered significant. The project includes the same land uses and development areas as the adopted Overlay Plan; therefore the conclusions drawn in the OCGP EIR adequately describe the environmental effects of the project relative to soils, geologic hazards, and seismic safety, as well as the severity of the impacts.

4.6.3 Impacts Associated with the Revised Overlay Plan

The project includes the same land uses and development areas as the adopted Overlay Plan; therefore the conclusions drawn in the OCGP EIR adequately describe the environmental effects of the project relative to soils, geologic hazards, and seismic safety, as well as the severity of the impacts.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR.

This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

4. *Discussion of Checklist and Mitigation Measures*

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.6.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified four mitigation measures to reduce the effects of the adopted Overlay Plan on soils, geologic hazards and seismic safety. All of the mitigation measures are applicable to implementation of the project and would be carried forward to future development of the project site. Implementation of measures GS1 through GS4 (listed below) would reduce Project impacts to a level less than significant.

- GS 1 Prior to issuance of a building permit, the City of Irvine shall require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest Building Codes adopted by the City of Irvine. Compliance with this measure shall be verified by the Community Development Department.

- GS 2 Prior to issuance of a building permit, as per existing City policies, geological studies shall be prepared at the time specific development projects are proposed to address site specific geological considerations. The scope of each geological study is based on the underlying geological conditions of the individual site. These reports will provide measures to prevent settlement.

- 1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing, shall be conducted. The purpose of the subsurface evaluation is to:
 - a. Further evaluate the subsurface conditions in the area of the proposed structures.
 - b. Provide specific data on potential geologic and geotechnical hazards.
 - c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface, and subsurface drainage, temporary and/or subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural section, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

4. *Discussion of Checklist and Mitigation Measures*

- Seismic Ground Shaking – Measures to prevent risk of loss, injury or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.
- Erosion or Loss of Topsoil – Erosion and sediment control measures shall be implemented as required by the City's Grading and Water Quality ordinances.
- Where Expansive Soils Exist – Measures for the design of foundation, slabs, flatwork and other improvements subject to drainage from expansive soils.

Compliance with this measure shall be verified by the Community Development Department.

- GS 3 Prior to issuance of building permits for the occupancy of any existing structure at the former MCAS El Toro, or occupancy of any existing structure if a building permit is not issued, a seismic evaluation of the structure including recommendations for seismic improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required seismic improvements shall be submitted to the Chief Building Official for review and approval.
- GS 4 Prior to issuance of a grading permit, detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specifically address erosion control and surface runoff for both construction and long-term operations on the site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx into the drainage system shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

4.7 HAZARDS AND HAZARDOUS MATERIALS

4.7.1 Environmental Setting

Hazardous Materials and Hazardous Wastes

The OCGP EIR discussed an environmental baseline survey that was conducted for the project area. Information was used from the Base Realignment and Closure Business Plan for Marine Corps Air Station (MCAS) El Toro dated May 2002; the environmental baseline survey (EBS) dated 1995; and an update to the EBS—April 2003 Draft Final EBS. The 2003 EBS identified “76 potential release locations, all of which require further evaluation for potential releases to the environment and subsequent remediation, if required” (Refer to OCGP EIR p. 5.5-5).

Regarding the Installation Restoration Program (IRP), the OCGP EIR summarizes the status of each IRP site based on the information available at the time the EIR was prepared. Ten (10) IRP sites were identified as requiring “No Further Action,” including sites 4, 6, 7, 9, 10, 13, 14, 15, 19, 20, 21, 22 and 25. The IRP sites identified as “Action Required” included sites 1, 2, 3, anomaly 3, 5, 8, 11, 12, 16, 17, 18 (plume), and 24 (Refer to OCGP EIR pp. 5.5-6 through 5.5-9).

Of the 404 underground storage tanks (USTs) identified, 357 had been remediated and received findings of “no further action” at the time the OCGP EIR was prepared. Of the 39 aboveground storage tanks (ASTs) on the property, 36 had been remediated and received findings of “no further action” (Refer to OCGP EIR p. 5.5-10).

Evaluation and remediation of previously identified IRP sites within the project site continues with the resulting changes in the condition of the property largely anticipated in the OCGP EIR. The IRP sites are

4. *Discussion of Checklist and Mitigation Measures*

depicted in Figure 4-2. Subsequent to certification of the OCGP EIR, the DoN completed environmental related findings that support the suitability to transfer real property made available through the Base Realignment and Closure process and to support of the lease of areas not yet suitable for transfer.⁴

The areas suitable for lease encompass locations of concern identified in the 1995 and 2003 EBS, and in the OCGP EIR, where future evaluation and/or actions are ongoing or required. These areas were identified as “carve-outs” in the DoN documentation.⁵

Progress relative to conveyance of the carve-outs includes DoN transfer of approximately eight acres of the project site to Heritage Fields and the Great Park Corporation on March 22, 2006. At the time of the initial land sale, these properties (carve-outs) were retained by the DoN in order to complete environmental clean up, and have since been approved by the regulatory agencies for transfer (FOST #2). The following sites were included in this transfer:

- Carve-out parcel II-J, consists of approximately 0.2 acre situated in the central portion of former MCAS El Toro. It contains one building—Building No. 860—and one location of concern.
- Carve-out parcel II-Q (portion) consists of approximately 5 acres situated in the eastern portion of the former MCAS El Toro. It is an abandoned jet fuel (JP-5) pipeline.
- Carve-out parcel II-S consists of approximately 1.3 acres situated in the southeastern portion of former MCAS El Toro. It contains six buildings (347, 377, 447, 448, 566, and 726) and 13 locations of concern.
- Carve-out parcel II-T consists of approximately 0.5 acre situated in the southeastern portion of former MCAS El Toro. It contains one building—Building No. 761—and four locations of concern. The facility was a former aircraft wash rack.
- Carve-out parcel III-C consists of approximately one acre situated in the western portion of the former MCAS El Toro. It contains one building—Building No. 240—and seven locations of concern. This site was a former ordnance storage facility.

Emergency Plans

The OCGP EIR described the former MCAS El Toro site (Planning Areas 30 and 51) as a potential emergency response staging area because of its capacity for processing and storing large quantities of cargo. The Orange County Emergency Plan, which incorporates the statewide standardized emergency management system (SEMS), guides multijurisdictional response to emergency conditions. No substantial change to the description of the setting regarding emergency plans has occurred that would alter the analysis and conclusions of the OCGP EIR on emergency plans and response.

Wildland Fires

- The OCGP EIR identified high fire hazard areas within open space, undeveloped land northeast of and adjacent to Planning Area 51. The City has no construction records of existing buildings and structures extant on the property. No substantial change to the description of the setting relative to wildland fires has occurred that would alter the analysis and conclusions of the OCGP EIR regarding wildland fires.

4. *Discussion of Checklist and Mitigation Measures*

4.7.2 Impacts Identified in the OCGP EIR

Hazardous Materials and Wastes

The OCGP EIR identified no significant impacts associated with the No Further Action IRP sites, which are listed in Table 4-2. Table 4-3 identifies each Action Required IRP site and its location relative to the adopted Overlay Plan. The OCGP EIR disclosed the following environmental consequences of the adopted Overlay Plan as significant impacts:

- Construction activities involving demolition and possible substantial remodeling of existing structures in the project area as the project area develops could result in the disturbance of structures and soils containing asbestos-containing building materials (ACM) and lead-based paint.
- IRP site 24 is located in zoning districts categorized as 6.1 Institutional and 1.5 Recreation. The site may be conveyed with temporary restrictions on use that are not appropriate for transportation facility use. This is considered a significant impact.
- Future uses of IRP site 3 may be potentially constrained by the implementation of institutional controls.

IRP site 16 (Crash Crew Pit No. 2) is located in zoning district designation 1.5 Recreation. The site may be conveyed with temporary restrictions on use that are not appropriate for recreational land uses.

4. Discussion of Checklist and Mitigation Measures

4. *Discussion of Checklist and Mitigation Measures*

Emergency Plans

The OCGP EIR determined the Overlay Plan would not be expected to interfere with emergency response and evacuation plans on the bases that other sites within Orange County are already designated emergency staging areas and portions of the OCGP would remain available to non-aviation emergency response equipment. Accordingly, the OCGP EIR concluded the adopted Overlay Plan would not result in a significant impact related to emergency response and evacuation plans.

Wildland Fires

The OCGP EIR concluded the Habitat Reserve, Wildlife Corridor, and Recreational areas in the northeastern portion of Planning Area 51 would be exposed to the highest level of fire risk from wildland fires under the adopted Overlay Plan, and that reuse of existing buildings require inspection for conformance to fire life safety code requirements. The OCGP EIR identified the wildland fire impacts as potentially significant.

4.7.3 Impacts Associated with the Revised Overlay Plan

Hazardous Materials and Wastes

Table 4-2 lists each No Further Action IRP site, its designation, and its location relative to the project, and Table 4-3 lists each Action Required IRP site with similar information. Figure 4-2 depicts the general location of both No Further Action and Action Required IRP sites. In July 2004, two reports were completed under the auspices of the DoN for the property. The Finding of Suitability to Transfer (FOST) documented the environmental condition of the property and the appropriateness of its conveyance. The document concluded 2,798 acres are suitable for transfer by deed for residential purposes and that the parcels can be used with acceptable risk to human health and the environment, and without interference with the environmental restoration process (Refer to FOST, Ch. 8). The companion report, the Finding of Suitability for Lease (FOSL) documents the suitability for lease of 41 carve-out areas totaling approximately 921 acres (Refer to the FOSL p. 2-2). The carve-outs are locations within the Property where the potential or known release or disposal of hazardous substances or petroleum products has occurred. Based on the information provided in the FOSL, carve-outs have been deemed suitable for lease subject to specified conditions, notifications, and restrictions set forth in the FOSL and the terms of the leases. Use of these properties has been determined by the DoN to be appropriate, subject to use restrictions in the leases, with acceptable risk to human health and the environment and without interference with the environmental restoration process. The carve-out parcels remain in U.S. Department of Defense ownership.

The proposed boundary adjustment would move the City/Heritage Fields property ownership boundary in the vicinity of small areas with ongoing investigations and environmental cleanup activities. The boundary adjustment in the northeastern portion of Planning Area 51 and the Bee Canyon drainage corridor would move the park boundary to the southeast, over a site identified as suitable for lease (site II-L). Boundary adjustments proposed along the Agua Chion drainage corridor and the Park District of Planning Area 51 are near small areas also identified as suitable for lease (sites II-K, II-S and II-T) (DoN 2004a). Also, the boundary adjustments south of Trabuco Road would move the City/Heritage Fields property boundary to the northeast, over a small area deemed suitable for lease and located northwest of carve-out site I-I (Building/Facility No. 47, former Construction Shop). The boundary adjustments at these locations are not expected to result in new or more severe impacts than those disclosed in the OCGP EIR.

Creation of the mixed-use category Lifelong Learning District (LLD) includes planning area zones (PAZ) 1, 5 through 11, 17a and 17b and encompasses subparcels of land undergoing investigation and environmental cleanup by the DoN ("carve-outs"), and agricultural land (Bordier's Nursery), which routinely stores and uses hazardous materials. Regarding the carve-outs, the DoN has defined the boundaries of the subparcels to

4. *Discussion of Checklist and Mitigation Measures*

“allow use of the property without impeding environmental cleanup and to prevent human exposure to potential contaminants while remedial action is being conducted.” Use of the carve-outs suitable for lease is subject to restrictions (DoN 2004). The final disposition of each carve-out would be considered together with its specific future use—residential and nonresidential development. The existing nursery stores reportable quantities of hazardous substances and its operation over time is expected to have affected the quality of the soils on-site. As a provision under 8.1 LLD Zone, the required 173 acres of agricultural land would be provided but could be moved from its existing location northeast of Irvine Boulevard to another site(s) within the LLD. A land use change of this type would require approval of a Master Plan in accordance with City Zoning Ordinance Chapter 2.17, and associated environmental documentation. The discretionary permit process and required environmental review for future individual development projects provide sufficient safeguards to reduce the potential for human exposure to contaminants associated with past use of the existing nursery site.

The land use parameters for both the Park and Transit Oriented Development (TOD) Districts of the Overlay Plan would be modified slightly. Among the revisions would be a more proportionate distribution of planned residential development within the Park District and clarifications to the type of nonresidential development that would be allowed within the TOD. These project features are not expected to result in new or more severe public health and safety impacts relative to hazardous materials and waste.

Overall, the proposed project would not change the OCGP EIR conclusions; with mitigation measures HH1, HH2, HH5, and HH6, the project would result in less than significant impacts related to hazardous materials and waste.

Emergency Plans

Like the adopted Overlay Plan, the proposed project would not be expected to interfere with emergency response and evacuation plans on the bases that other sites within Orange County are already designated emergency staging areas and portions of the OCGP would remain available to non-aviation emergency response equipment. Accordingly, the proposed project would not change the OCGP EIR conclusions; the project would not result in a significant impact related to emergency response and evacuation plans.

Wildland Fires

Under the proposed project, the Habitat Reserve, Wildlife Corridor, and Recreational areas in the north-eastern portion of Planning Area 51 would be exposed to the highest level of fire risk from wildland fires and reuse of existing buildings would require inspection for conformance to fire life safety code requirements. As the potential significant wildland fire impacts of the proposed project are similar to those disclosed in the OCGP EIR, the project would not substantially change the findings and conclusions of the OCGP EIR regarding wildland fires.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is

4. *Discussion of Checklist and Mitigation Measures*

no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.7.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified six mitigation measures to reduce the effects of the adopted Overlay Plan on public health and safety; specifically, environmental effects associated with hazardous materials and waste, emergency response, and wildland fires to a level less than significant. All of the mitigation measures are applicable to implementation of the proposed project and would be carried forward to future development of the project site. Measures HH1 through HH6 are listed below:

- HH 1
- a. Prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the DoN or its transferee shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property, including:
 - The type, location and condition of ACMs
 - The results of any asbestos testing
 - Description of asbestos control measures taken, if any
 - The costs or time necessary to remove existing ACMs
 - The results of any site-specific asbestos inventory updates
 - b. For any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DoN shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements.
 - c. Prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DoN. This requirement can be waived if an architect or project engineer responsible for the construction of the structure or an accredited asbestos inspector signs a statement that no ACM was specified as a building material, and to the best of their knowledge, no ACMs were used as a building material.

4. *Discussion of Checklist and Mitigation Measures*

- d. Any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws.
 - e. Any renovation and/or LBP abatement activities on residential units at former MCAS El Toro, shall be conducted in accordance with all applicable federal, state and local regulatory requirements.
- HH 2
- a. Prior to transfer, the City shall receive from the DoN, with the concurrence of the appropriate regulatory agencies, a statement that the “Action Required” IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been identified and implemented. The City Irvine will adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are appropriate and shall be established by master plan approval.
 - b. Prior to transfer, if the DoN chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DoN a statement of temporary restrictions on the use of the sites and the release of the sites for restricted use following implementation of adequate remediation of groundwater. The City of Irvine shall adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are appropriate and shall be established by master plan approval.
- HH 3
- The Community Development Department, in coordination with the Orange County Fire Authority (OCFA), will be responsible for review of all development plans, which would include evaluation of very high fire severity zones, specified fire protection plans, and any requirements for fuel modification zones. Projects potentially impacted by wildland fire hazards will be subject to OCFA Guidelines for “Development Within and Exclusion from Very High Fire Severity Zones” and “Fuel Modification Plans and Maintenance.” Additionally, all demolition, by OCFA to ensure adequate fire protection, water flow, emergency access, design features, etc., according to the standards of the Uniform Fire Code and the California Fire Code. Due to the implementation of these standard fire protection procedures, the proposed project is not anticipated to result in significant short- or long-term adverse impacts related to fire hazards.
- HH 4
- Prior to issuance of occupancy permits of any existing structure at the former MCAS El Toro, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval.

4. *Discussion of Checklist and Mitigation Measures*

- HH 5 Prior to the issuance of a grading permit, the applicant shall prepare and the Director of Community Development shall approve a protocol plan (including but not limited to worker training, health and safety precautions, additional testing requirements, and emergency notification procedures) in the event that unknown hazardous materials are discovered during grading, construction, and/or related development activities. Additionally, said protocol plan will be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities. The applicant and/or property owner that discovers contamination due to past military operations not previously identified by the DoN shall be responsible for notifying the DoN, appropriate regulatory agencies, and the Director of Community Development of the City of Irvine in a timely manner.
- HH 6 The City of Irvine shall develop and maintain the location and status, as well as other pertinent information, of all monitoring wells located on the former MCAS El Toro in a geographic information systems database (GIS). The City will review all permit applications on the former air station for monitoring well locations that may be affected by a permit, and require applicants to maintain appropriate access. Access to monitoring wells will be limited to authorized personnel.

4.8 HYDROLOGY AND WATER QUALITY

4.8.1 Environmental Setting

The OCGP EIR describes the project site as located within the San Diego Creek watershed, which includes the San Diego Creek, Peters Canyon Channel, and the tributaries to these water courses. The major drainage channels that traverse the site (PA 51) are the Marshburn Channel, Bee Canyon Channel, Agua Chinon Channel, and Borrego Canyon Channel. Serrano Creek and Upper San Diego Creek Channel traverse PA 30 in the southern tip of the project site, south of the existing SCRRA Metrolink railroad tracks.

San Diego Creek and Upper Newport Bay are listed as impaired water bodies under Section 303(d) of the Clean Water Act. Accordingly, Total Maximum Daily Load (TMDL) for pollutants that have impaired these water bodies has been established and was included in the OCGP EIR (Refer to OCGP EIR Table 5.7-2). Figure 4-3 below shows the drainage areas and topography of the project area.

The OCGP EIR also notes the County of Orange and the City of Irvine hold a Nationwide Pollution Discharge Elimination System (NPDES) permit for the storm drain systems, and that the State has issued a NPDES general permit relating to construction activities on sites over five acres in the area. Lastly, the flood control improvements associated with the SR-133 Tollroad were noted in the OCGP EIR as having reduced the 100-year flood zone north and west of the property.

4.8.2 Impacts Identified in the OCGP EIR

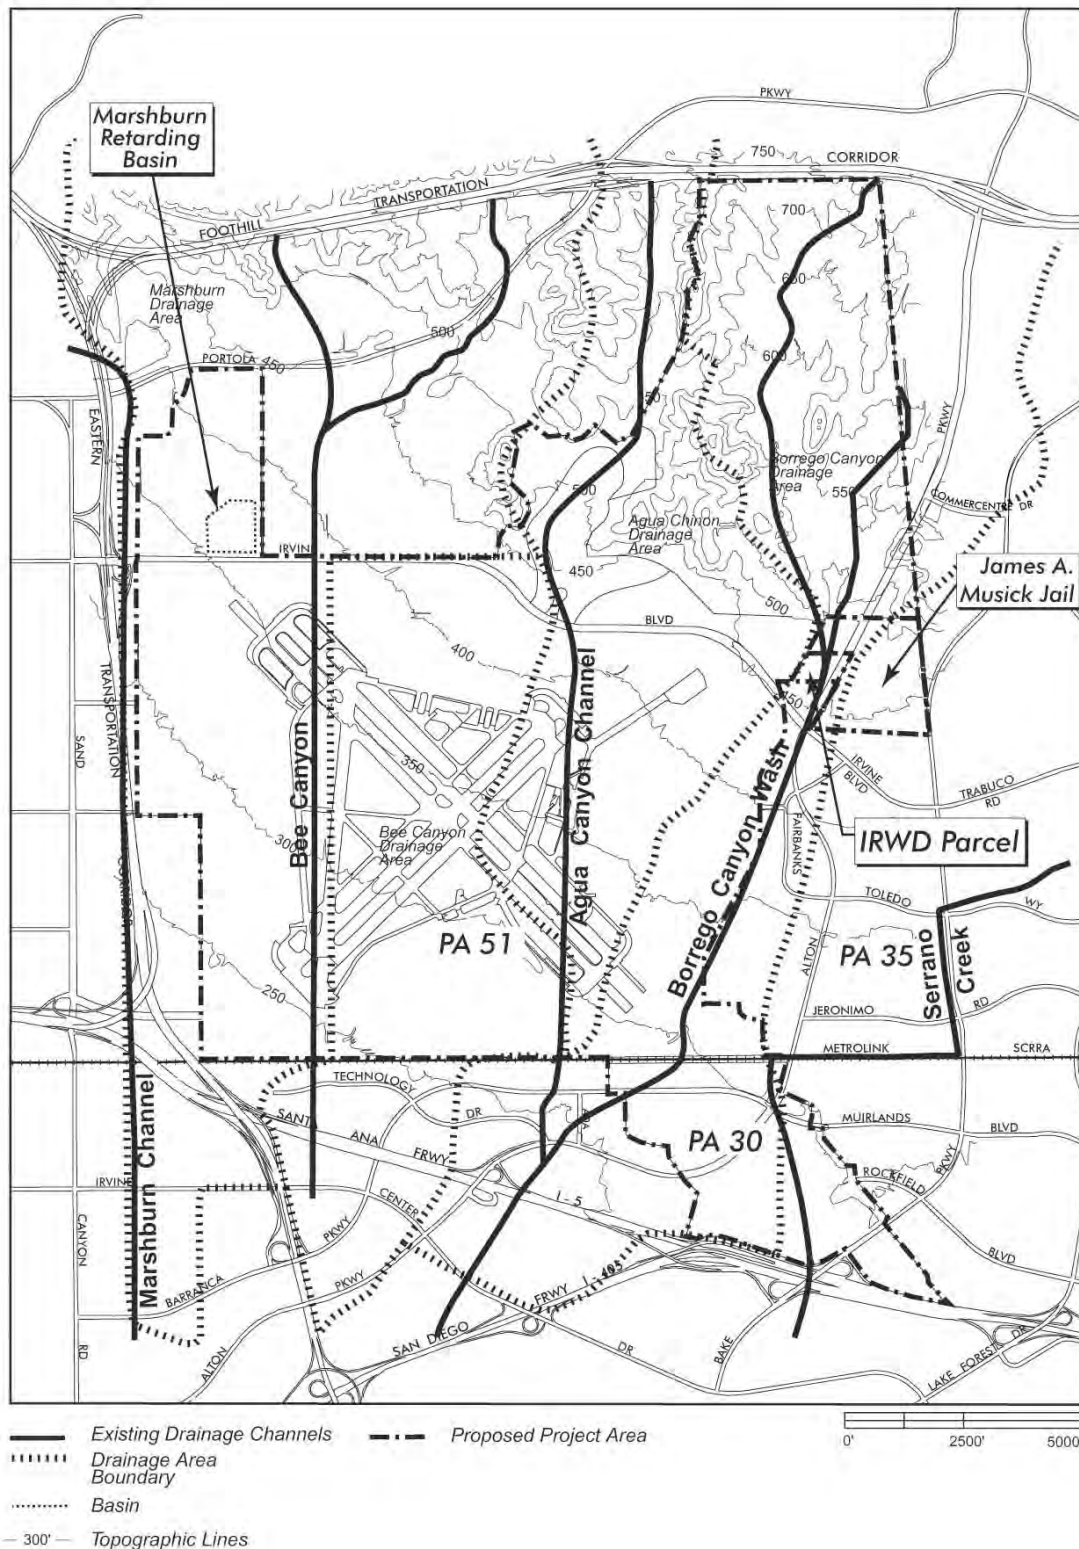

The OCGP EIR identified several significant impacts on hydrology and water quality associated with future development under the adopted Overlay Plan before mitigation. First, grading and excavation activities required for future development could result in the exposure of bare soils to both wind- and water-related erosion and associated significant water quality impacts; specifically, a violation of water quality standards or waste discharge requirements. Compliance with City grading and water quality regulations—including the NPDES discharge permitting requirements and preparation of a Storm Water Pollution Prevention Plan (SWPPP) and a Water Quality Management Plan (WQMP)—are the primary means of controlling the potential

Addendum to the Orange County Great Park EIR

The Planning Center • **Figure 4-3**

4. *Discussion of Checklist and Mitigation Measures*

This page intentionally left blank.

4. *Discussion of Checklist and Mitigation Measures*

impacts of grading and excavation activities. These City requirements, which are described in mitigation measures H/WQ 1 and H/WQ 2, would reduce the impact to a level less than significant.

According to the OCGP EIR, the existing drainage patterns and stream courses would not be substantially altered by future development under the adopted Overlay Plan. In addition, the potential for inundation was expected to have been reduced by improvements to upstream flood control facilities. Without project-related flood control facilities, the rate or amount of surface runoff due to new development would result in flooding on- and off-site, depending on the nature of the specific development. Although this impact was identified as significant, the effect of increased runoff would be reduced to a less than significant level through preparation and implementation of hydraulic studies and recommendations for the specific development and the construction of flood control improvements commensurate with the specific development (mitigation measure H/WQ 3).

The impact analysis for the adopted Overlay Plan assumed development of the land use patterns created by the zoning for PAs 30 and 51 and a backbone storm drain system. The storm drain system took into consideration and included improvements identified in the San Diego Creek Flood Control Master Plan (Refer to OCGP EIR p. 5.7-16 and Figure 5.7-2). The drainage plan for PAs 30 and 51 included the following improvements to the major drainage areas of the Property, as described in the OCGP EIR:

- Marshburn Channel—The existing Marshburn channel and detention basin would remain substantially the same. Future improvements to serve future development would include an extension of the existing 66-inch pipeline departing the main channel to capture runoff from the westerly most portion of the Property. Although no off-site improvements are necessary to serve the Property, other development projects are expected to improve the Marshburn Channel system.
- Bee Canyon Channel—Downstream (south) of Irvine Boulevard, the existing concrete box culverts and open channels would be demolished and replaced with the drainage corridor cross-section and supporting internal culvert crossings and storm drain laterals. The drainage corridor would extend a distance of about 10,200 linear feet. The new drainage corridor would reconnect to the existing Bee Canyon Channel in the vicinity of the SCRRA railroad tracks. A reinforced concrete box measuring 12 feet wide by 9 feet high would convey storm water to the property line where it would connect to a buried box concrete channel and continue downstream.
- Agua Chinon Channel—The drainage channel upstream of Irvine Boulevard would remain substantially unchanged. Select removal and replacement of the existing concrete box culvert and open channels with a corridor drainage cross-section and supporting culvert crossings and storm drain laterals would occur downstream of Irvine Boulevard. The corridor drainage cross-section would be approximately 8,000 feet in length. The new drainage corridor would reconnect to the existing Agua Chinon Channel in the vicinity of the SCRRA railroad tracks. Downstream from its crossing of the tracks, the channel would convey stormwater in a buried reinforced concrete box measuring 12 feet wide by 10 feet high.
- Borrego Channel, Wildlife Corridor and Serrano Creek—Under the adopted Overlay Plan low flows from the natural wash upstream and east of Irvine Boulevard would be rerouted from the existing wash and into a new Wildlife Corridor that would be created downstream and west of Irvine Boulevard. A concrete structure would be constructed to convey the flow toward and through the existing Magazine Road tunnel below Irvine Boulevard and to the new Wildlife Corridor. The rerouted flows would travel through the new Wildlife Corridor that would traverse the Property in a location generally parallel to the Borrego Channel. At a point near the SCRRA railroad tracks, the Corridor streamline would cross over the existing Borrego Channel, then under the railroad tracks. The Corridor streamline would continue uncovered and in tunnel structures that would be constructed to

4. *Discussion of Checklist and Mitigation Measures*

permit wildlife movement into the existing Serrano Creek Channel as the Corridor proceeds to the Property line east of the I-5 Freeway. From its intersection with the Wildlife Corridor, the Borrego Channel would continue west as an at-grade open channel then as a buried box culvert channel under the railroad tracks and in a southwesterly direction, beyond the Property line at Barranca Parkway.

- San Diego Creek—The existing segment of this creek within PA 30 is an unimproved earthen channel that would be replaced with 1,000 feet of buried storm drain conduit measuring approximately 96 inches in diameter.

4.8.3 Impacts of the Revised Overlay Plan

The project would adjust the boundaries between the Great Park and development areas within PA 51, exchanging land areas in equal amounts such that the total acreage identified for the Great Park and the proposed Lifelong Learning District and the Park District would not change. (Other portions of PA 51 and PA 30 would not be affected by the proposed boundary adjustments.) Additionally, the project proposes land uses and intensities are identical to those allowed under the adopted Overlay Plan; therefore no change in the development assumptions as they pertain to hydrology and water quality would be necessary. Accordingly, the impact analysis presented in OCGP EIR Section 5.7 adequately describes the project effects on hydrology and water quality.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4. *Discussion of Checklist and Mitigation Measures*

4.8.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified four mitigation measures to reduce the effects of the adopted Overlay Plan on hydrology and water quality. All of the mitigation measures are applicable to implementation of the project and would be carried forward to future development of the project site. Implementation of measures H/WQ 1 through H/WQ 4 (listed below) would reduce project impacts to a less than significant level.

- H/WQ 1 Prior to issuance of a grading permit, the applicant shall provide evidence that the development of the project area shall comply with City of Irvine adopted Grading and Water Quality Ordinances to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that “industrial/commercial construction operations that result in a disturbance of one acre or more of total land area...and residential construction sites that result in the disturbance of five acres or more...shall be required to develop and implement BMPs...to control erosion and siltation and contaminated runoff from the construction sites.” Note: In March 2003 this provision will apply to residential construction sites that result in the disturbance of one acre or more.

The City’s standard conditions of approval indicate that a Storm Water Pollution Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.

Additionally, prior to the issuance of a grading permit, project applicant must submit, and the Director of Community Development or designee must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff after the site is occupied. Ongoing operations after construction would be subject to the Countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural, and non-structural measures specified in the Countywide NPDES DAMP Appendix which they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.), and shall reference the location(s) of structural BMPs.

Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOI) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the Director of Community Development of any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future project are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will

4. *Discussion of Checklist and Mitigation Measures*

acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

- H/WQ 2 Prior to issuance of a grading permit, evidence (e.g., in the form of a construction management plan) shall be provided that demonstrates that all stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality requirements identified in the Santa Ana Regional Water quality Control Board Basin Plan, including Total Maximum Daily Load (TMDL) Implementation Plan adopted for this watershed.
- H/WQ 3 Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrologic and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.
- H/WQ 4 Prior to issuance of a building permit, developers with property located in the newly delineated 100-year floodplain shall be required to construct such improvements as necessary to remove the property from the 100-year floodplain. Additionally, the developer shall prepare a Letter of Map Revision (LOMR) request to have the FIRMs revised to remove the development areas from the 100-year floodplain upon completion of the approved flood control facilities. The LOMR request shall be filed upon completion of design of the flood control improvements to contain or redirect the 100-year flood flows away from the property.

After the improvements are constructed, Record Drawings and a maintenance agreement with, or letter from, a public agency shall be submitted to FEMA to complete the LOMR process.

4. *Discussion of Checklist and Mitigation Measures*

4.9 LAND USE

4.9.1 Environmental Setting

The OCGP EIR described the existing and former land uses on Planning Areas 30 and 51, and other areas adjoining and surrounding these planning areas. Subsequent to the City's approval of the General Plan Amendment and Zone Change for the Overlay Plan, the DoN initiated an auction process for the sale of the former MCAS El Toro property. To facilitate the transfer, the property was divided into and presented to prospective buyers as four distinct parcels. Interested parties were invited to bid on one or more of the parcels. In 2005, Heritage Fields, LLC, successfully purchased all four parcels from the DoN (3,671 acres), and entered into a Development Agreement with the City of Irvine on July 12, 2005. The Development Agreement sets forth the terms and conditions of subsequent development and implementation of the Great Park Plan, including dedication in fee of 1,096 acres of the property for development of the Great Park Plan.

Existing Land Uses within Planning Areas 30 and 51

The condition of Planning Area 30—generally, the cultivation of agricultural lands—is substantially the same as the OCGP EIR baseline year. Consistent with a provision in the Zoning Code, there are interim uses that reuse existing buildings on-site. These interim uses are currently comprised of administrative offices and are allowed a maximum of two years on-site without a conditional use permit. The City of Irvine, the Great Park Corporation, Heritage Fields, LLC, California State University, Fullerton, and a day care facility have established temporary operations within existing buildings in Planning Area 51.

4.9.2 Impacts Identified in the OCGP EIR

The OCGP EIR identified no significant impact to established communities. There were no residents living within Planning Areas 30 and 51 at the time the EIR was prepared and there has been no change in this regard; there are no residents living within the project site. The OCGP EIR analyzed certain amendments to the City's General Plan that were adopted on May 27, 2003, as part of the City's adoption of the Overlay Plan. The adopted Overlay Plan was determined to be consistent with each element of the General Plan, as summarized below:

Land Use Element: The goal of the Land Use Element is to “promote land use patterns that maintain safe residential neighborhoods, bolster economic prosperity, preserve open space, and enhance the overall quality of life in Irvine.” Creation of the “OCGP, Orange County Great Park” land use category to reflect the types, intensity, and density of uses and activities contemplated in the OCGP were determined consistent with the goal of the Land Use Element.

Circulation Element: The Circulation Element's goal is to “provide a balanced transportation system.” Adoption of the Overlay Plan included the following modifications to the General Plan Circulation Element:

- Policy B-1(c) was changed to include the following provision:

“In conjunction with individual subdivision map level traffic studies for development proposed in Planning Areas 30 and 51, a LOS [level of service] ‘E’ would be considered acceptable for application to intersections impacted in Planning Areas 13, 30, 31, 32, 34, 35, and 39.”

4. *Discussion of Checklist and Mitigation Measures*

- Figure B-1 (Master Plan of Arterial Highways) and Figure B-2 (Operation Characteristics) were amended to reflect the alignment of roadways within the OCGP, including:
 - Marine Way is aligned to join the Bake Parkway north bound exit ramp from Interstate 5 and terminate at Sand Canyon Avenue at Interstate 5.
 - Trabuco Road terminates at proposed Meadows Loop Road.
 - Rockfield Boulevard is realigned to terminate at Marine Way.
 - On-site circulation includes a new commuter highway/collector (Y Street [Ridge Valley]).
 - Research Parkway is renamed College Road and modified to extend from Irvine Boulevard to Marine Way.
- Figure B-3 (Public Transit) was amended to reflect the alignment of roadways within the OCGP.
- Figure B-4 (Trails Network) was amended to reflect the alignment of roadways within the OCGP.

Housing Element: The goal of the Housing Element is to “provide for safe and decent housing for all economic segments of the community.” The adopted Overlay Plan would add up to 3,625 new dwelling units and carry forward all adopted policies and objectives of the Housing Element; specifically, the residential development component would explore opportunities for maintenance of the housing stock and help the City meet its Regional Housing Needs Assessment through year 2025.

Conservation and Open Space Element: The goal of this element is to “maintain and preserve the environmental systems as a major feature in the City.” This goal would be achieved through the implementation of objectives L-1 through L-12 and corresponding policies. Objective L-10 encourages “the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development.” The adopted Overlay Plan includes 1,096 acres of Great Park recreational land, 290 acres of permanent agricultural land, and 974 acres of Habitat Preserve.

Cultural Resources: The goal of the Cultural Resources Element is to “ensure the proper disposition of historical, archaeological, and paleontological resources to minimize adverse impacts, and to develop an increased understanding and appreciation for the community’s historic and prehistoric heritage, and that of the region.” The OCGP EIR identified the flatland area of the property as a low paleontological sensitivity zone and the hillside areas north of Irvine Boulevard as a high paleontological sensitivity zone. No objective of this element was amended by the adopted Overlay Plan and all of the objectives and implementing policies were to be implemented as part of the adopted Overlay Plan.

Noise Element: The Noise Element’s goal is to “contribute to a healthy and safe environment by minimizing noise impacts. The adopted Overlay Plan would not affect the mobile noise, stationary noise, and noise abatement objectives and implementing policies of the Noise Element.

Public Facilities and Services Element: The goal of this element is to “provide a full range of necessary public facilities and services that are convenient to users, economical, reinforce City and community identity, and reflect the participation of citizens.” The facilities and services described in the Urban Service Plan for the adopted Overlay Plan were formulated through a public participatory process and found to implement the goal and adopted objectives and related policies of this element.

4. *Discussion of Checklist and Mitigation Measures*

Integrated Waste Management Element: This element seeks to “encourage solid waste reduction and provide for the efficient recycling and disposal of refuse and solid waste material without deteriorating the environment.” The OCGP EIR disclosed that the Overlay Plan would not affect the adopted objectives and implementing policies regarding solid waste, waste, wastewater, and solid waste facility siting requirements; rather, it would provide the opportunity to better respond to the City’s solid waste reduction requirements and other provisions of the element by broadening the range of design options.

Growth Management Element: The goal of the Growth Management Element is to “ensure that growth and development are integrally planned with, and phased concurrently with, the City of Irvine’s ability to provide an adequate circulation system and public facilities.” When the OCGP EIR was certified it was disclosed that though the project made changes to the Master Plan of Arterial Highways, the project would not change any of the objectives or implementing policies of the Growth Management Element.

Parks and Recreation Element: The goal of the Parks and Recreation Element is to “provide park and recreation opportunities at a level that maximizes available funds and enables residents of all ages to utilize their leisure time in rewarding, relaxing, and creative manner.” The OCGP EIR reported there would be no change to the objectives or implementing policies of this element.

Seismic Element: The goal of the Seismic Element is to “minimize the loss of life, disruption of goods and services, and the destruction of property associated with an earthquake.” Five Seismic Response Area (SRA) designations are used to describe the magnitude and types of potential seismic hazards present within the City, and to provide policy guidance. The OCGP EIR reported that the majority of the El Toro property was in category SRA-2 and that no objectives or implementing policies would be changed as a result of the project.

Safety Element: The goal of the Safety Element is to “minimize the danger to life and property from man made and natural hazards, including fire hazards, flood hazards, non-seismic geologic hazards and air hazards.” The OCGP EIR disclosed the need for fuel modification to mitigate potential wildland fire hazards and drainage improvements to lessen flood hazards associated with implementation of the adopted Overlay Plan, and concluded no objectives or implementing policies would be changed as a result of the adopted Overlay Plan.

4.9.3 *Impacts of the Revised Overlay Plan*

The following analysis discusses the proposed project in consideration of each General Plan element.

Land Use Element: The Land Use Element designates Planning Areas 30 and 51 as “OCGP, Orange County Great Park.” The City-initiated boundary adjustments and associated revisions to the adopted Overlay Plan requested by Heritage Fields would not change the existing land use designation; rather, it would slightly change the perimeter of the parkland area and add a land use category titled Lifelong Learning District (LLD). The proposed boundary adjustments would advance the goal of this element by facilitating opportunities for consideration of a broader range of land use patterns within both the open space/parkland and adjoining development areas.⁶

Through the creation of the mixed-use district, LLD, specific uses assigned to smaller lots would be replaced with a mixed-use district that would advance the stated goal through the master planning process. At that stage the creative arrangement of complementary and synergistic uses and activities can be discerned and deliberated, along with the need to separate homes and schools from incompatible future uses and parcels subject to ongoing evaluation and remediation by the DoN. To maintain consistency with the creation of the

⁶ The goal of the Land Use Element is to “promote land use patterns that maintain safe residential neighborhoods, bolster economic prosperity, preserve open space, and enhance the overall quality of life in [the City of] Irvine.”

4. *Discussion of Checklist and Mitigation Measures*

LLD, modifications were made to Figure A-3(O) and Tables A-1, A-2, and A-5 of the General Plan. The boundary adjustments and creation of the mixed use category will not change the previously approved acreages nor increase the intensity of development for the project area.

Circulation Element: The project would not substantially alter the planned network of arterials and connections to roadways in the surrounding area; nor would they materially change riding and hiking trails and trail linkages; pedestrian and bicycle circulation; and transit, air transportation, and telecommunication opportunities. All of these components of the park and future development under the project would be defined in conjunction with the master planning process, which is a longstanding practice and approach to site planning codified in the City's Zoning Ordinance (Refer to Div. 2, Ch. 2-17 of the Zoning Ordinance). The project would, however, allow a broader range of internal circulation options to be considered in conjunction with the master plan and subdivision map processes.

The goal of the Circulation Element—"to provide a balanced transportation system"—could be accomplished through various circulation alignments equal to or better than the internal roadway alignments shown on the referenced maps. To maintain consistency, Figure B-1 is modified to change the incorrect designation of Marine Way from a Major Highway to a Primary Highway. In addition, Figure B-4 is modified to depict the existing trail network to reflect the previously approved trail linkages as well as the inclusion of the known trail framework connections that will occur in conjunction with the build-out of the Planning Areas 30 & 51. The alignment for roadways, riding and hiking trails and trail connections, and pedestrian and bicycle circulation all would be defined at the master map and master plan stages, when land uses and associated circulation needs and connections can be discerned and the spatial relationships understood relative to the physical setting. Although General Plan Figure A-3(O) and the Zoning Ordinance Map would not depict all of the project streets, the project would implement the circulation improvements—streets, trails, bicycle, and pedestrian facilities—in accordance with the existing Development Agreement.

Housing Element: The proposed boundary adjustments, the creation of the LLD land use category, and distribution of residential dwelling units within the Park District would carry forward the adopted policies and objectives of the Housing Element; specifically, regarding development of up to 3,625 new dwelling units; help the City meet its Regional Housing Needs Assessment through 2025; and implement the provisions of the Development Agreement regarding the residential component of the adopted Overlay Plan.

Conservation and Open Space Element: The project, including the boundary adjustments, would modify the adopted zoning by incorporating minor changes to the parkland boundary and creating the LLD land use category wherein a variety of uses and activities could be established consistent with the intent of the LLD, subject to the approval of a master plan. To maintain consistency with the proposed boundary adjustments, minor modifications will be made to Figure L-2 of the General Plan.

The existing and proposed regulations regarding development intensity, socioeconomic trip generation, use-specific "caps" (i.e., maximum number of Low Density Residential dwelling units), and development standards serve as parameters for future development under the proposed new LLD.

The protection afforded City-reserved and state-designated farmlands would remain in full force and effect, notwithstanding the mixed-use envelope the LLD would create. The zoning stipulations within Section 9-51-3 (Statistical Analysis) include two footnotes as a safety-net, each with the following text:

An additional 173 acres of Exclusive Agriculture shall be located in Planning Area 51. (Refer to section 9-51-3, footnotes * and ***)

Cultural Resources: The project would not affect the adopted goals, objectives, and policies of this element. Subsequent development would be required to comply with its requirements and to implement mitigation

4. *Discussion of Checklist and Mitigation Measures*

measures found in the OCGP EIR. With implementation of OCGP EIR measures P1 and CULT 1 through CULT 4, the impacts of new development on paleontological and cultural resources would be less than significant. Furthermore, the proper disposition of such resources, if any are encountered prior to or during construction would be ensured; and through the information recovered, the community's understanding and appreciation for its historic and prehistoric heritage will have been enhanced.

Noise Element: The project would not affect the goal of this element—"to contribute to a healthy and safe environment by minimizing noise impacts"—or the mobile noise, stationary noise, and noise abatement objectives and implementing policies of the element. The additional flexibility the boundary adjustments and LLD components of the project would further ensure noise sensitive land uses could be arranged within the project site to lessen exposure to noise-generating uses and activities.

Public Facilities and Services Element: The project would not affect facilities and services described in the Urban Service Plan for the adopted Overlay Plan. As no substantive change in the Urban Service Plan is necessary, and that plan was a principle means of demonstrating consistency with the Public Facilities and Services Element, the project also is consistent with this element of the General Plan. Additionally, subsequent development would be required to implement the element's objectives and policies to ensure that a full range of necessary public facilities and services that are convenient to users are provided in conjunction with new development.

Integrated Waste Management Element: Like the adopted zoning, the project would not affect the adopted objectives and implementing policies regarding solid waste, waste, wastewater, and solid waste facility siting requirements; rather, it would provide the opportunity to better respond to the City's solid waste reduction requirements and other provisions of the element by broadening the range of design options. This element seeks to "encourage solid waste reduction and provide for the efficient recycling and disposal of refuse and solid waste material without deteriorating the environment."

Growth Management Element: The goal of the Growth Management Element is to "ensure that growth and development are integrally planned with, and phased concurrently with, the City of Irvine's ability to provide an adequate circulation system and public facilities." When the OCGP EIR was certified it disclosed that though the project made changes to the Master Plan of Arterial Highways, the project would not change any of the objectives or implementing policies of the Growth Management Element. The project likewise would not alter any of the objectives or implementing policies because it would remain consistent with the development phasing already a part of the overall development plan.

Parks and Recreation Element: The goal of the Parks and Recreation Element is to "provide park and recreation opportunities at a level that maximizes available funds and enables residents of all ages to utilize their leisure time in rewarding, relaxing, and creative manner." The OCGP EIR reported there would be no changes to the objectives or implementing policies of the Element. The proposed boundary adjustments and the associated LLD accentuate the General Plan goal by enhancing the park and recreation opportunities for residents of all ages. There will be minor modifications to Figure K-1 of the General Plan as a result of the minor boundary adjustments between City-owned and Heritage Fields, LLC properties. This modification will not result in any losses of park land or increases in development intensity for the project. In addition, the presence of age-qualified housing in proximity to recreation opportunities is one example of how the integrated proposal would promote leisure time "in rewarding, relaxing and creative manner." Furthermore, through the Great Park Development Agreement, Heritage Fields has dedicated 1,096 acres: 367 acres for the park, 165 acres for the sports park, 229 acres for the drainage corridor, 179 acres for the wildlife corridor, and 156 acres for the exposition center south.

Seismic Element: The goal of the Seismic Element is to "minimize the loss of life, disruption of goods and services, and the destruction of property associated with an earthquake." Five Seismic Response Area (SRA)

4. *Discussion of Checklist and Mitigation Measures*

designations are used to describe the magnitude and types of potential seismic hazards present within the City, and provide policy guidance. The OCGP EIR reported that the majority of the El Toro property was in category SRA-2. All of Planning Area 30 and the portions of the proposed LLD and the Park District located southwest of Irvine Boulevard are identified as SRA-2. The areas of the LLD and the Park District situated northeast of Irvine Boulevard are designated SRA-3; the SRA-4 classification has been applied to small areas along the northern edge of the LLD, and the Park District's boundary within the Habitat Preserve area.

The OCGP EIR reported that no objectives or implementing policies would be changed as a result of the project. Likewise, this current proposal would not alter that finding/conclusion because all project development remains within the previously established project boundaries.

Safety Element: The goal of the Safety Element is to “minimize the danger to life and property from man made and natural hazards, including fire hazards, flood hazards, non-seismic geologic hazards, and air hazards.” The OCGP EIR disclosed the need for fuel modification to mitigate potential wildland fire hazards and drainage improvements to lessen flood hazards associated with implementation of the project, and concluded no objectives or implementing policies would be changed as a result of the adopted Overlay Plan. The project does not contain elements that would alter the findings, conclusions and mitigation measures because all project development remains within the previously established project boundaries.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.9.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified no significant land use impact; therefore no mitigation measures were proposed.

4. *Discussion of Checklist and Mitigation Measures*

4.10 NOISE

4.10.1 Environmental Setting

The OCGP EIR described mobile noise sources from nearby freeways, roadways, rail facilities, and vehicle use at adjacent commercial businesses, light industrial facilities, and agricultural lands as the dominate noise source in the project area. Stationary sources of noise included temporary and intermittent noise from construction activities and agricultural operations, noise associated with the industrial/business parks located to the east and the business park and entertainment uses to the south.

The OCGP EIR presents the results of a noise survey conducted on December 10–12, 2002, in which noise measurements were conducted at nine locations. The Community Noise Equivalent Level (CNEL) sound levels at the four surveyed representative residential locations ranged from 58 dBA to 65 dBA (Refer to OCGP EIR p. 5.4-18, Figure 5.4-6, and Table 5.4-7).⁷ The audible noise sources included local traffic, distant traffic, birds, aircraft, and human voices, all of which were characterized as typical of suburban areas.

4.10.2 Impacts Identified in the OCGP EIR

The OCGP EIR identified no significant noise effects associated with future development under the adopted Overlay Plan.

The noise assessment considered a worst-case condition of simultaneous demolition and construction activities with the combined sound level of 20 pieces of large mobile equipment operating at a distance of 5,000 feet, five concrete breakers operating at a distance of 6,000 feet, and two crusher plants operating at a distance of 10,000 feet from the nearest off-project area residential location. The distances represented the closest possible location of the construction equipment to the nearest off-project area residences during a heavy construction period. The nearest off-site residential uses (sensitive noise source) were located approximately 4,000 feet from the property boundary. Under this scenario, the analysis estimated sound levels of approximately 56 dBA at the nearest off-site residential location (Refer to OCGP EIR p. 5.4-24 and Table 5.4-8).

As build-out of the project site was assumed to occur over time (years 2007–2025), construction-related noise impacts on residential areas within the project site were also estimated. Using the same construction equipment assumptions and a distance of 600 feet from the nearest residential area, the combined effect of the equipment was estimated at a sound level of 70 dBA at the nearest on-site residential locations during a heavy construction period. While the City of Irvine Noise Ordinance does not specify a limit on construction noise levels, it stipulates the days and hours during which construction activities may occur and when construction would not be allowed unless a temporary waiver is requested and granted; specifically, construction is allowed Monday through Friday between 7:00 a.m. and 7:00 p.m., and on Saturdays between 9:00 a.m. and 6:00 p.m.; no construction is allowed outside those hours, on Sundays, or on federal holidays (Refer to OCGP EIR p. 5.4-31).

⁷ California standards for community noise use the CNEL, in which the energy is averaged over a 24-hour day with a 5-decibel penalty from 7:00 P.M. to 10:00 P.M. and a 10-decibel penalty from 10:00 P.M. to 7:00 A.M. (OCGP EIR p. 5.4-4.) Sound is generated by the propagation of energy in the form of pressure waves, and is characterized by amplitude (sound level) and frequency (pitch) (OCGP EIR p. 5.4-1). Sound levels are measured in decibels (dB) and frequency is measured in hertz (Hz). The A-weighted decibel (dBA) is used for analysis and regulatory purposes because it focuses on the range of sound levels and frequencies more discernible to the human ear.

4. *Discussion of Checklist and Mitigation Measures*

4.10.3 Impacts of the Revised Overlay Plan

The project includes: land use types and intensity identical to the adopted Overlay Plan; no substantial change to the worst-case demolition and construction assumptions of the OCGP EIR; and no substantial change to the traffic volumes and circulation patterns surrounding the project site as presented in the OCGP EIR. The existing setting, however, includes residential development not extant at the time the OCGP EIR was certified, and which is closer to the project, as described in the following paragraph.

The OCGP EIR noise assessment considered a worst-case condition of simultaneous demolition and construction activities. The worst-case assumptions described for the adopted Overlay Plan remain reasonable assumptions for the project; no new information about future demolition and construction has become available that would increase the number of pieces of equipment to be operated simultaneously. The OCGP EIR noise analysis estimated the combined sound level of the following activities as measured from the nearest off-project area residential location:

- 20 pieces of large mobile equipment operating at a distance of 5,000 feet;
- 5 concrete breakers operating at a distance of 6,000 feet; and
- 2 crusher plants operating at a distance of 10,000 feet.

The residential dwelling units that have been constructed since certification of the OCGP EIR are located along the west side of Sand Canyon Avenue in the Woodbury residential development. The residences that front Sand Canyon Avenue are located approximately 1,500 feet from the project site's northwest property line. This distance (1,500 feet) is greater than the distance analyzed for future on-site residential areas (600 feet). The noise analysis for construction impacts to on-site residential areas used the same equipment and activity assumptions, and a distance of 600 feet from the nearest on-site residential area. The results of the analysis estimated construction sound levels at 70 dBA. At a distance of 1,200 feet from the noise source (conservatively assumed to be the project site's northwest property line), which generally represents a doubling of distance, the sound pressure level would be about 6 dB lower than the construction sound levels of 70 dBA estimated for the nearest on-site residential receptor when the noise is located a distance of 600 feet from the residential receptor.⁸ Accordingly, the project's construction-related noise effects on the nearest off-site residential receptor is not expected to be more severe than the noise impacts disclosed in the OCGP EIR.

Compliance with the City's Municipal Code⁹ would reduce construction-related noise impacts on residential areas (off-site and on-site), including the dwelling units that front Sand Canyon Avenue in the Woodbury residential development. In addition, because the project would not substantially change the traffic volumes and circulation patterns in the study area, the operations-related noise impacts from mobile noise sources disclosed in the OCGP EIR adequately describe the potential noise effects the project's mobile noise sources.

⁸ Sound intensity decreases in proportion with the square of the distance from the source. Generally, sound level for a point source will decrease by 6 dBA for each doubling of distance from the source. (Refer to U.S. Department of Transportation, 1995. *Highway Traffic Noise Analysis and Abatement Policy and Guidance*, Federal Highway Administration, June, p. 4.)

⁹ The City of Irvine Municipal Code, Sections 6-8-201 et seq. (Noise) provides regulations to control unnecessary, excessive, and annoying noise. Section 6-8-204 identifies noise zones (uses) and corresponding noise standards for interior and exterior areas. Section 6-8-205 identifies the days and hours during which construction activities may occur and when construction would not be allowed unless a temporary waiver is requested and granted. Construction is allowed Monday through Friday between 7:00 A.M. and 7:00 P.M., and on Saturdays between 9:00 A.M. and 6:00 P.M.; no construction is allowed outside those hours or on Sundays or federal holidays. Other requirements refers to the California Building Standards related to noise and specific uses such as hotels, dormitories, long-term care facilities, and multi-family housing; and California Occupational Safety and Health Administration noise exposure limits.

4. *Discussion of Checklist and Mitigation Measures*

The interim and future land uses (residential, commercial, institutional, recreation, and industrial) within the project site are comparable to those identified in the OCGP EIR. Similar to the adopted Overlay Plan's Transit Oriented Development District, the proposed Lifelong Learning District would allow a broad mix of uses subject to the approval of a master plan pursuant to City Zoning Ordinance Section 2-17. Inherent in a mixed-use planning district is the potential for noise-induced conflicts that can be identified and avoided during master plan review. At that stage the stationary noise sources associated with the on-site equipment, loading/unloading operations, heating/ventilation/air conditioning (HVAC) equipment, and other noise-generating features of the specific use would be evident. Accordingly, appropriate acoustical design features—such as sound insulation, perimeter barrier walls, acoustical equipment enclosures, and operational restrictions—can only be evaluated in the context of a specific project.

Overall, the noise effects associated with construction and operation of future development under the project would be similar to the impacts disclosed in the OCGP EIR for the adopted Overlay Plan. Accordingly, no significant noise effects are anticipated with implementation of the project.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.10.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified no significant noise impact; therefore no mitigation measures were proposed.

4. *Discussion of Checklist and Mitigation Measures*

4.11 POPULATION AND HOUSING

4.11.1 Environmental Setting

The OCGP EIR discussed the caretaker status of the base following its closure. At the time the OCGP EIR was prepared there was a limited number of military and civilian staff working on the base. There are no residents living on the base. Consequently, there are 4,380 vacant group quarters units and 1,209 residential dwelling units. The OCGP EIR examined demographics in the context of the existing and projected population of the Orange County region and the City of Irvine. Population and housing information was developed based on the 2000 United States Bureau of Census population, household, and employment census information. The areas surrounding the former base and the Orange County subregion are considered jobs-rich and housing-poor. The Southern California Association of Governments (SCAG) seeks to encourage housing growth over job growth in the Orange County subregion. The OCGP EIR reported that the ratio of jobs to housing in the area has environmental implications related to transportation and air quality. Thus, a major focus of the regional planning efforts has been to improve the ratio of jobs to housing in all affected subregions in order to reduce vehicular trips, costly infrastructure improvements, and resultant air emissions. Despite attempts, according to SCAG projections, the Orange County subregion's jobs/housing balance will worsen through the year 2025 as the number of jobs surpasses housing gains.

4.11.2 Impacts Identified in the OCGP EIR

As noted above the area surrounding the former MCAS El Toro and the Orange County subregion are considered jobs-rich and housing-poor. SCAG seeks to encourage job growth over housing growth in the Orange County subregion. The OCGP EIR reported that regional projections are dynamic and as a compilation of local land use projections, reflect changing community views on the location and the types of growth desired. Although implementation of the adopted Overlay Plan would not have exceeded the Orange County Preferred-2000 employment projections, its impact on employment was considered significant because the Orange County subregion is anticipated to become increasingly jobs-rich over the next 20 years and the Overlay Plan-related employment would exacerbate the subregional jobs/housing imbalance. No significant impact on population and housing were identified (www.scag.ca.gov).

4.11.3 Impacts Associated with the Revised Overlay Plan

The project would not substantially alter the population, housing, and employment information contained in the OCGP EIR. The project would not introduce new levels of development that would improve the ratio of jobs to housing beyond that already considered by the OCGP EIR. Both the proposed project and the adopted Overlay Plan would result in:

- an increase of 9,000 people (resident population);
- development of 3,625 residential dwelling units—1,100 low density, 860 medium density, 1,500 medium-high density, and 165 dwelling units allocated to homeless providers; and
- an approximate increase of 16,510 jobs.

The project's impacts would be the same as under the OCGP EIR, less than significant for population and housing, and significant and unavoidable for employment.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

4. *Discussion of Checklist and Mitigation Measures*

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.11.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified a significant impact associated with the jobs/housing ratio. The OCGP EIR also stated that no mitigation is available to rectify conflicts between the numerical objectives of regional planning documents including the jobs/housing ratio.

4.12 PUBLIC SERVICES

4.12.1 Environmental Setting

Law Enforcement

At the time of the certification of the OCGP EIR, law enforcement was provided by the Orange County Sheriff through a contract with the Department of the Navy (DoN) in PA 51 and the Irvine Police Department provided law enforcement within PA 30. Subsequent to the annexation of the property, the City of Irvine Police Department has assumed law enforcement responsibility within both planning areas. The Irvine Police Department is headquartered at the Irvine Civic Center Complex and also has a satellite facility located in the Irvine Spectrum Entertainment Complex. The OCGP EIR stated that the current police facilities are adequate to handle the personnel and equipment that are employed and utilized by the department for PA 30. The OCGP EIR also stated that the Irvine Police Department is researching the expansion of their facilities, although the specific details of constructing a substation were not known.

Fire and Emergency Medical Services

At the time of the certification of the OCGP EIR, primary fire protection to PAs 30 and 51 was provided by Orange County Fire Authority (OCFA) under contract to the County of Orange on an interim basis. Subsequent to the annexation of the property, OCFA has continued to provide fire protection service to the

4. *Discussion of Checklist and Mitigation Measures*

project area. The OCGP EIR stated that OCFA is planning two additional fire stations. OCFA also has in place an agreement with the Irvine Company as part of the Northern Sphere Area that should provide adequate service to all areas surrounding the project.

Parks and Recreation

At the time of the certification of the OCGP EIR, the DoN, acting in a caretaker's role, offered public access to a variety of existing recreational facilities including the existing Marine Memorial Golf Course and equestrian stables. Since there are no residents living on PA 30 and 51, there is no on-site demand for these facilities.

School Services

Planning Areas 30 and 51 are within the school service boundaries of the Irvine Unified School District (IUSD) and the Saddleback Valley Unified School District (SVUSD). Prior to the closure of the base, an IUSD elementary school with a 600-student capacity was located and operated on the former base property.

4.12.2 Impacts Identified in the OCGP EIR

Law Enforcement

The OCGP EIR discussed the law enforcement needs of both PAs 30 and 51 and stated that following annexation the Irvine Police Department would provide law enforcement for the entire project area. The OCGP EIR also analyzed the number of police officers, police supervisors and support staff, as well as the number of vehicles, equipment, and services. The OCGP EIR stated that police protection for the park area would be funded through the use of a special park assessment. As stated in the OCGP EIR, the general impacts associated with construction and operation of public facilities were analyzed in the OCGP EIR as part of the planned land uses which also included the construction of a new police substation.

Fire and Emergency Medical Services

Subsequent to annexation of the property, PAs 30 and 51 continue to be served by OCFA. The OCGP EIR stated that there is likelihood that additional fire services infrastructure will be required to support the proposed project. OCFA had not provided the detailed calculations of the exact extent of new services. The OCGP EIR stated that the final determination of fire station needs and locations would be made at a future date when more information is known about risk, layout and types of occupancy. The specific environmental impact of construction the new fire facilities to serve the project could not be determined at the General Plan level of analysis as specific site plans and locations have not been prepared. However, the general impacts associated with the construction and operation of public facilities has been addressed within the OCGP EIR.

Parks and Recreation

As discussed in detail in OCGP EIR, the parkland acreage under the project will greatly exceed the existing City of Irvine's standards, providing a regional open space amenity for the benefit of all of Orange County. The OCGP EIR calculated a total of 45.1 acres of parkland requirement for the proposed development. A portion of that acreage will be in neighborhood parks, primarily for pools and tot lots within close proximity of homes.

The OCGP EIR also discussed the Implementation Agreement regarding the Natural Community Conservation Plan (NCCP) for the Central/Coastal Orange County Sub-region of the Coastal Sage Scrub NCCP (July 1996), and the Habitat Reserve will be established on approximately 974 acres in the northeastern portion of PA 51. Two drainage corridors and one wildlife corridor are also designated in the

4. *Discussion of Checklist and Mitigation Measures*

project area. The project also includes opportunities for museums, theaters, gardens and other cultural facilities, as well as a sports park and two golf courses and a network of recreational riding and hiking trails throughout the project site.

School Services

The OCGP EIR discussed in detail the proposed project and the related student generation and the required school facilities. Based on an initial analysis, IUSD estimated, at project buildout the need for a 13-acre K-8 site as well as funding for expansion and modernization of existing middle and high school facilities.

4.12.3 Impacts Associated with the Revised Overlay Plan

Law Enforcement

The project does not change the intensity or type of land uses and therefore, the demand on law enforcement is within the envelope of analysis presented in the OCGP EIR.

Fire and Emergency Medical Services

Since the project does not change the intensity or type of land uses, the demand on fire protection is within the envelope of analysis presented in the previously certified OCGP EIR.

Parks and Recreation

The project does not propose changes to the land use intensities and types and maintains all of these facilities and amenities as project features. Therefore, the project remains within the envelope analyzed in the previously certified OCGP EIR.

School Services

Since the project does not propose change to the number and type of residential units or to any of the other land uses, the proposed project remains within the envelope analyzed in the previously certified OCGP EIR.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has

4. *Discussion of Checklist and Mitigation Measures*

determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.12.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR determined the mitigation measures identified in other sections of the OCGP EIR (Sections 5.1–5.13) address the impacts associated with the construction and operation of public facilities. These measures would be applicable to any new construction and operation of facilities for police, fire protection, park and recreation, and education to serve new growth expected in the northern portion of the City.

4.13 RECREATION

Issues related to Recreation are discussed above under Section 4.12, *Public Services and Facilities*.

4.14 TRANSPORTATION/TRAFFIC

4.14.1 Environmental Setting

The OCGP EIR describes the traffic and circulation conditions of a study area that encompassed 145 existing intersection analysis sites (2007) and an additional 11 future sites (Post 2025) located in the City of Irvine, and portions of 7 adjacent jurisdictions including the Cities of Lake Forest, Mission Viejo, Laguna Hills, Laguna Woods, Aliso Viejo, Laguna Beach, and unincorporated areas of Orange County. Figure 4-4 depicts the study area used in the OCGP EIR and the traffic study for the proposed project.

The OCGP EIR used the City of Irvine Traffic Performance Criteria, which establishes level of service (LOS) “A” to “D” as the peak-hour minimum acceptable service level. In its adoption of the Overlay Plan, the City General Plan Policy B-1 (C), which identified LOS E as acceptable for application to intersections in Planning Areas 13, 31, 32, 34, 35 and 39, was changed to include the effects of future development in Planning Areas 30 and 51 on the intersections in those Planning Areas. The City’s performance criteria also includes a standard of 0.02—roadway volume to capacity (V/C) ratio or the intersection capacity utilization (ICU)—to identify significant project impacts and associated need for improvements at both roadways and intersections.

The Planning Center • **Figure 4-4**

4. *Discussion of Checklist and Mitigation Measures*

This page intentionally left blank.

4. *Discussion of Checklist and Mitigation Measures*

At the time the OCGP EIR was prepared the following 10 study area intersections experienced deficient peak hour traffic operations:

- Culver Drive and Walnut Avenue
- Culver Drive and University Drive
- Jeffrey Road and Alton Parkway
- Jeffrey Road and I-405 Northbound Ramps
- Bake Parkway and Irvine Boulevard
- Bake Parkway and Jeronimo Road
- El Toro Road and Aliso Creek Road
- Los Alisos Boulevard and Los Alisos Boulevard
- Muirlands Boulevard and Los Alisos Boulevard
- Trabuco Road and Alicia Parkway

4.14.2 I Impacts Identified in the OCGP EIR

The OCGP EIR concluded that the adopted Overlay Plan would cause an increase in traffic which would be substantial in relation to the existing traffic load and capacity of the street system—that is, a substantial increase in either the number of vehicle trips, the V/C on roadways, or congestion at intersections—in the year 2007, year 2025 and post-2025 scenarios (OCGP EIR page 5.2-66):

Year 2007

- I-5 Freeway at Alton Parkway—southbound off-ramp (A.M.)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (A.M.)

Year 2025

- University Drive from the I-405 Freeway to Michelson Drive (A.M.)
- I-5 Freeway from Sand Canyon Avenue to Jeffrey Road—northbound (P.M.)
- I-5 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-405 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-5 Freeway at Jeffrey Road—southbound on-ramp (A.M.)
- I-5 Freeway at Sand Canyon Avenue—northbound on-ramp (P.M.)
- I-5 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-5 Freeway at Alton Parkway—southbound off-ramp (A.M.)
- I-5 Freeway at Bake Parkway—southbound off-ramp (A.M.)
- I-405 Freeway at Sand Canyon Avenue—northbound direct on-ramp (P.M.)
- I-405 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (A.M.)
- SR-241 Tollway at Lake Forest Drive—southbound off-ramp (A.M.)
- SR-133 Freeway at Barranca Parkway—northbound direct on-ramp (P.M.)

Post-2025

- I-5 Freeway from Sand Canyon Avenue to Jeffrey Road—northbound (P.M.)
- I-5 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-405 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)

4. *Discussion of Checklist and Mitigation Measures*

Intersections

For the list of impacted intersections by analysis year, please refer to the following OCGP EIR tables:

- Table 5.2-12 for year 2007
- Table 5.2-13 for year 2025
- Table 5.2-15 for post 2025

4.14.3 Impacts Associated with the Revised Overlay Plan

A traffic study was prepared by Austin-Foust Associates, Inc., dated September 2006 (see Appendix B) to determine the impacts of the Revised Overlay Plan. The proposed Revised Overlay Plan calls for boundary adjustments between Heritage Fields and City of Irvine properties involving a total of 90 acres in Planning Area 51 (See Section 2.3.2 of this document). Other limited revisions and clarifications to the Zoning Ordinance include the creation of a mixed-use category to reallocate land uses within the established maximum building intensities for certain portions of Planning Areas 30 and 51.

Many of the abandoned buildings throughout the project site will be demolished with the project. A few of the office buildings on the west side of the project near Trabuco Road are currently occupied by Lennar, GPC, and City of Irvine staff. In addition, other existing buildings are leased to a Montessori school and to California State University, Fullerton. The golf course is also currently in operation. In addition, there are several interim uses that reuse existing buildings on-site consistent with a provision of the Zoning Code. All of the existing land uses on-site generate nominal amounts of vehicle traffic.

Table 4-4 presents a comparison of the Great Park land uses including Heritage Fields and the daily trip generation by planning area for the Adopted and Revised Overlay Plan. According to the table, the Revised Overlay Plan generates 148,806 average daily trips (ADT) compared to 148,811 ADT for the Adopted Overlay Plan. The OCGP EIR established trip thresholds (also known as “trip caps”) for each of the planning areas within the Great Park area. The trip cap is based on socioeconomic data average daily trip generation for the approved Great Park plan referred to as the Overlay Plan of which the Heritage Fields project is a part. Table 4-4 shows that the proposed Revised Overlay Plan project minimally changes the current Adopted Overlay Plan with a total daily trip generation not exceeding the trip cap established for the entire Great Park.

Analysis Scope and Methodology

The traffic study for the project involves the analysis of traffic impacts associated with implementing the proposed GPA/ZC land use plan. This is accomplished by analyzing the traffic analysis study area circulation system based on three time frames: year 2010, year 2025 and post-2025 future traffic conditions. In each case, traffic conditions under no-project and with-project are compared to identify the traffic impacts of the

4. *Discussion of Checklist and Mitigation Measures*

project, and suitable mitigation measures, if necessary, are identified to offset the impacts of the project under each time frame.

Future traffic conditions were prepared using the Irvine Transportation Analysis Model (ITAM) and the Lake Forest Traffic Analysis Model (LFTAM). The traffic conditions also include recent demographic data for the City of Laguna Woods. In addition, since the time that the Adopted Overlay Plan was adopted in 2003, OCP-2004 countywide demographic data and local cumulative projects have been incorporated in the background conditions of ITAM.

Full build-out of the proposed project is assumed in the analysis of future (year 2025 and post-2025) with-project conditions. The year 2025 and post-2025 no-project traffic conditions presented in this report assume build-out of the approved Overlay Plan for PA 30 and PA 51 referred to as the Great Park Overlay Plan. The year 2025 and post-2025 with-project forecasts analyzed here are based on build-out of the proposed Heritage Fields GPA/Zone Change project (also referred to as the Revised Overlay Plan). Twenty (20) percent of build-out of both PA 30 and PA 51 is assumed for year 2010 with-project. The first evaluation compares the No Project, in which the approved development is zeroed out, and the With Project, which is 20 percent of the proposed build-out. The second comparison evaluates 20 percent of the approved overlay zone in the No Build scenario with 20 percent of the proposed overlay zone.

The List of NITM Improvements includes improvements throughout the traffic analysis study area that are either fully funded or partially funded (i.e., fair share funded) through the NITM Program. For this study only the fully funded intersection improvements identified in the NITM Program were included in the year 2010, year 2025, and post-2025 background circulation system settings.

As previously mentioned, buildout of the proposed project generates approximately the same number of daily trips as buildout of the Adopted Overlay Plan and the same number of trips within each of the two planning areas which make up the project area (PA 30 and PA 51). The project only involves moving land uses within the planning areas. Hence the effect of these changes on the circulation system is expected to be minimal. Accordingly, the methodology applied in the 2025 and post-2025 analysis was to determine the area of impact for the Adopted Overlay Plan versus Revised Overlay Plan based on average daily traffic (ADT). Differences of 1,000 ADT or more were used to define the study area within which intersection performance was then evaluated as defined in the next section.

STU – Student

TOD – Transit Oriented Development

Transp. Ctr./Fly-Away Ctr. – Transportation Center/Fly-Away Center

TSF – Thousand Square Feet

Project Impacts

The traffic impacts of the proposed s GPA/ZC project were analyzed by distributing project-related traffic over existing and future traffic conditions. The three future conditions (year 2010, year 2025 and post-2025) are based on the existing circulation system plus fully funded intersection improvements that are planned to be in place in each future time frame and the land use and development growth that is projected in each future time frame. In each case, project impacts were identified by comparing traffic conditions with and without the proposed GPA/ZC project.

The circulation system performance criteria applied in the analysis are the criteria approved in the 2003 NITM Program Nexus Study. The performance criteria are also consistent with the criteria adopted by the jurisdictions that are within the project study area. The criteria include components for arterial roadways, intersections, freeway/tollway ramps, and freeway/tollway mainline segments.

The results of the year 2010, year 2025 and post-2025 analysis, which are presented in detail in Chapters 4.0 through 6.0 of the Austin-Foust Traffic Study, indicate that the proposed GPA/ZC project is not forecast to significantly impact any roadway segment based on the second level of analysis (the City's peak hour link capacity analysis methodology), intersection, freeway/tollway ramp, or any freeway/tollway mainline segment.

4. *Discussion of Checklist and Mitigation Measures*

Special Issues

Pedestrian and Bicycle Circulation

The project area is planned to provide a system of private and public sidewalks and pathways to accommodate the recreational and transportation needs of the residents. These facilities will provide access to nearby recreational facilities, schools, public amenities, commercial centers, bus stops, and provide for an alternative mode of transportation for the area residents. Bicycle lanes will be provided along all public arterials in accordance with the City's standards and the General Plan. These facilities in addition to a system of internal pathways within each project area will serve the needs of recreational and experienced cyclists. The planned trails also provide an alternative mode of transportation for those wishing to ride their bicycle to work, shopping, school, and other destinations.

Class I off-street trails for pedestrian and bicycle use, will be located in the project site. Bicycle lanes will be provided along the arterials surrounding the development. The pedestrian and trail linkages will allow users to connect to the City's existing trail system and expanded trail network being developed to the north as part of Planning Area 6 and to the west as part of Planning Area 1 and Planning Area 9, as well as the future Orange County Great Park.

A detailed analysis of traffic control measures, including traffic signals, stop-sign control and pedestrian crossings, will be performed with the associated development's map level traffic study, master plan and street improvement plan reviews, and in coordination with the City Traffic Engineer, when specific project details are available. Appropriate traffic control measures will be in accordance with City Standards and implemented in the design of the development with the approval of the street improvement plans.

Through the implementation of the on-street and off-street trails, and a system of public and private sidewalks within the project area, the goals of the City's General Plan (Objectives B-3 and B-4) for providing alternative modes of transportation and recreational amenities would be met by future development under the proposed project.

Public Transit

The Traffic Study presents that public sidewalks and pedestrian/bike paths that will be provided throughout the Heritage Fields and Great Park developments to allow for access to future transit facilities. The detailed analysis of these needs will occur during the subsequent map level/subdivision map and street improvement plan approval process. In addition, the details of bus stops and future routes serving this area will be coordinated with the Orange County Transportation Authority during the future map level/subdivision map approval process.

The Irvine Transportation Center is adjacent to the Transit Oriented Development (TOD) district of the project area and provides access to the Metrolink commuter rail and Amtrak rail services using the Southern California Regional Rail Authority tracks which bisect the TOD district. Development of Planning Area 30 will include a 20-acre Remote Airport Terminal (also referred to as a "fly-away center"); 53,500 square feet of transit-related building facilities; and 675 parking spaces to encourage and support public transit use.

Congestion Management Program (CMP) Checklist

The CMP legislation requires that the CMP Agency monitor the implementation of the Orange County CMP, including CMP land use coordination component requirements. The goal of the CMP is to ensure that certain key intersections within the CMP Highway System (CMPHS) are operating at acceptable levels. The CMP

4. *Discussion of Checklist and Mitigation Measures*

has been developed to monitor impacts on CMPHS intersections. The CMP Monitoring Checklist for the Land Use Coordination Component can be found in Appendix D of the Traffic Study.

There are 18 intersection locations within the study area that are monitored as part of the CMP. The results summarized in the CMP Checklist in Appendix D of the Traffic Study indicate that each of the CMP intersections in the study area is forecast to operate at level of service (LOS) “E” or better, which is within the CMP performance standard for CMP intersections, based on an analysis of short-term (year 2010 in this case assuming 20 percent of project buildout compared with no build conditions, i.e., no development within PA 30 and PA 51) traffic conditions that is required by the CMP. These results demonstrate that the proposed project would not result in any adverse CMP intersection impacts.

Circulation Phasing Report Intersections

There are 11 intersection locations in the study area that are identified as impacted 2002 Circulation Phasing Report intersections. Table 7-1 of the Traffic Study presents the 2010 ICU results for these locations (assuming 20 percent of project buildout compared with no build conditions, i.e., no development within PA 30 and PA 51). It should be noted that the intersection locations within each category are presented according to priority for the need of addressing the intersection’s impacts. The results show that no location within the study area is adversely impacted by the GPA/ZC project under 2010 conditions.

Conclusion

The project would not produce or substantially worsen significant impacts identified in the OCGP EIR. Consistent with the conclusions in the OCGP EIR, traffic and circulation impacts associated with the project would be less than significant as the future development would implement all applicable laws and regulations to reduce impacts on traffic and circulation.

The OCGP EIR also disclosed the traffic analysis assumption that the cumulative impact of the adopted Overlay Plan traffic along with other regional growth at the identified ramp and freeway locations would be mitigated through a combination of regional programs that are the responsibility of other agencies, and if said programs are not implemented the cumulative freeway/tollway ramp impacts would remain significant and unavoidable (OCGP EIR page 7-19). The project would not alter this conclusion.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

4. *Discussion of Checklist and Mitigation Measures*

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.14.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR identified mitigation measures TRAN 1 through TRAN 8 which, if fulfilled prior to specified development approvals, would eliminate or substantially reduce the traffic and circulation effects of development under the adopted Plan. The measures are applicable to future development under the project.

- TRAN 1 Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) ("Spectrumotion") in accordance with Article X of the recorded Declaration of Covenants, Conditions, and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs. The primary purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described below:

Transportation Management Plan (TMP)

The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for the Great Park Project. This document summarizes the key elements of the TMP.

1.0 Introduction

The purpose of this document is to provide an outline for a comprehensive TMP for the Great Park. This report is not intended to provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.

It is the intent to annex Planning Area 51 and a portion of Planning 35 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed

4. *Discussion of Checklist and Mitigation Measures*

restrictions requiring participation in TMA. Membership dues provide the funding for the Association and its program, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.

In the event that annexation of PAs 51 and 35 into Spectrumotion is not approved, a TMP similar to that provided by Spectrumotion will be implemented. This document sets forth the components of the TMP should it be necessary.

2.0 Transportation Management Plan Framework

The key elements of the Great Park TMP are set forth below:

New Hire Orientation: Inform newly hired employees of commuting services available to them.

Public Transportation Pass Sales: Provide a central location for purchase of passes to available transit services (i.e., OCTA buses, Metrolink, Amtrak, etc.).

Vanpool and Carpool Formation Assistance: Perform all of the administrative work necessary to establish van pools and car pools.

On-site Promotions: Hold rideshare promotions at work sites and assist in employer assistance promotions.

Telecommuting/Alternative Work Schedule Consulting: Assist employers in developing and implementing a telecommuting or alternative work schedule program.

Personalized Commute Consulting: Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.

Website: Maintain a website with all of their program information available.

Rideshare Promotions: Conduct high visibility rideshare promotions as a means to advertise its services.

Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.

Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.

3.0 Transportation Management Plan Implementation

As part of the TMP, a process will be established to monitor its effectiveness in reducing peak hour trip generation in the Great Park. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.

- TRAN 2 Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation

4. *Discussion of Checklist and Mitigation Measures*

system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of the FEIR.

- TRAN 3 Prior to issuance of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the project traffic study (Urban Crossroads December 2002) to maintain satisfactory levels of service as defined by the City's General Plan, based on thresholds of significance, performance standards, and methodologies used in the FEIR, Orange County Congestion Management Program, and established in the transportation system/infrastructure fee program described in Mitigation Measure TRAN 2 above.
- TRAN 4 Prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate the cumulative impact of the subject map and all previously approved or concurrently submitted maps. The methodology for the study area, applicable land use and circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved traffic study scope of work. The landowner or subsequent project applicant shall construct, bond for, or enter into a funding agreement for necessary improvements identified in the updated study and/or participate in the City fee program (TRAN 2 above) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of the FEIR. Traffic signals that are on-site or directly related to the Great Park development will be installed as warranted through the mitigation implementation plan process.
- TRAN 5 In conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, that landowner or subsequent project applicant and the City will take the following actions:
1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-tollway ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in the FEIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines.
 2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency.
 3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to recordation of the first final map for each Master Tentative map or

4. *Discussion of Checklist and Mitigation Measures*

equivalent to establish the method and timing of payment of the identified percentage responsibility.

4. The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.

TRAN 6 The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.

TRAN 7 Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a new Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-complete clause or any similar agreement restricting a public agency's authority to construct improvement.

TRAN 8 Following adoption of a land use plan and circulation plan for the Great Park property and before the issuance of any building permits within the base property, the City of Irvine shall enter into a cooperative study with OCTA and other affected jurisdictions to amend the Orange County Master Plan of Arterial Highways (MPAH). Marine Way, Trabuco Road from the SR-133 tollway to College Road, and Y Street should be included on the MPAH.

4.15 UTILITIES AND SERVICE SYSTEMS

4.15.1 Environmental Setting

Potable Water

The OCGP EIR described the potable water system for the project. The IRWD is the jurisdictional agency responsible for plan approval and water service to the project area. Planning Areas 30 and 51 are located within Zone 3 North and Zone 4 of the IRWD water system. The existing on-site distribution system includes a network of distribution system pipelines, six reservoirs, and two pump stations.

Recycled Water

As stated in the OCGP EIR, IRWD is the jurisdictional agency responsible for plan approval and water service for the project area. Recycled water is currently supplied to Planning Areas 30 and 51 via a 12-inch IRWD Zone B pipeline and connecting to an 8-inch former military base pipeline in the southwest corner of the property.

4. *Discussion of Checklist and Mitigation Measures*

Sewer

As stated in the OCGP EIR, IRWD is the jurisdictional agency responsible for plan approval and sewer service for the project area. Planning Areas 30 and 51 are served by a two-branched system with flow, mainly by gravity, from the northeast to the southwest. The system includes a series of pipes ranging from 6 to 15 inches in diameter.

Solid Waste

The OCGP EIR discussed in detail the environmental setting for solid waste for the project. Solid waste at the project site is collected by Waste Management, Inc., and is disposed of at the Frank R. Bowerman Landfill owned by the County of Orange Integrated Waste Management Department (IWMD).

The IWMD's Countywide Integrated Waste Management Plan (CIWMP) was approved in 1996 pursuant to California Integrated Waste Management Board requirement. The CIWMP shows that there is sufficient solid waste disposal capacity in the County for the next 30 years.

Energy and Communications

Southern California Edison (SCE) serves the project via two primary substations. The Southern California Gas Company serves Planning Areas 30 and 51. AT&T is the communications provider for these Planning Areas. Detailed information regarding the environmental setting of dry utilities was included in the OCGP EIR.

4.15.2 Impacts Identified in the OCGP EIR

Potable Water

The OCGP EIR projected the potable water demand to be less than 1.75 million gallons per day (MGD) calculated for the land uses proposed within the project. Since the project does not include any additional intensity or change in the mix of land uses, the demand projection for the project is consistent with the OCGP EIR. As stated in the OCGP EIR, selected portions of the existing potable water facilities are assumed to remain in place and operational through project build-out. The OCGP EIR stated that the existing system will be expanded and integrated into the IRWD system and thus provide a backbone service to all users in the project site. The OCGP EIR assumed a potable water system that would follow the routing of existing and proposed roadways.

Recycled Water

The OCGP EIR stated that on January 27, 2003, the IRWD Board of Directors approved the assessment of water supply for the project. According to the findings of the assessment, IRWD has determined that a sufficient non-potable water supply is available to serve the project. Since the proposed Revised Overlay Plan does not increase the intensity or change the mix of land uses, the total non-potable water supplies will meet the project demand.

The OCGP EIR stated that the implementation of the project would require the expansion of the recycled water transmission lines to serve the project. It was assumed that selected on-site facilities would remain in place and operational through build-out. The OCGP EIR stated that the existing system will be expanded and integrated into the IRWD system and provide a backbone service to all users in the project site. The OCGP EIR assumed a non-potable system that would follow the routing of existing and proposed roadways within the project.

4. Discussion of Checklist and Mitigation Measures

Sewer

The OCGP EIR stated that the IRWD will continue to provide sewer service to the project. IRWD has indicated that it would have sufficient capacity to meet the future demand; however, additional wastewater treatment capacity may need to be purchased by project proponents as specific development projects come forward. The OCGP EIR stated that projected build-out demand for sewer services based on the land uses in the projected were 0.89 million gallons per day (MGD) and the project would require an increase of sewer transmission capacity to serve the project. The proposed sewer system would preserve selected, existing on-site facilities in place and operational through build-out and would expand the system through extension of existing sewer lines. The OCGP EIR stated that additional IRWD maintenance and equipment could be required to operate and maintain the proposed system.

Solid Waste

As stated in OCGP EIR, demolition of existing runways, buildings and structures within PA 51 will generate debris materials that will have to be disposed at local landfills. Green waste will be also generated as a result of ongoing park and landscaping maintenance. In addition to the City requirement for recycling of construction and demolition material to reduce waste, solid waste reduction will also be achieved through compliance with AB 939, which requires that a minimum of 50 percent of the solid waste generated in cities in California be diverted from landfills. Further, SB 1374 requires that all cities implement measures that require diversion of 75 percent of all construction and demolition waste from landfills.

Energy and Communications

The primary demand for electricity, gas, and communications for the project will be generated by the proposed development of land uses within the project. The OCGP EIR analyzed in detail the fuel and energy consumption projected for the project. The analysis and conclusions in the OCGP EIR do not change due to the project since the intensity and types of land uses in the revised plan have not changed from those previously analyzed in the OCGP EIR. The certified OCGP EIR stated that the implementation of the project will require the expansion of existing electrical, gas and communications systems to serve the project. Due to the outdated nature of the existing electricity, gas and communications systems on the project site, the project proposed to replace the existing systems in their entirety.

4.15.3 Impacts Associated with the Revised Overlay Plan

Potable Water

A portion of the routing, (specifically the portion along the “loop road”) is not included in the project, and will require an adjustment to the routing system for the expansion of the potable water network. However, the expansion of the system will generally coincide with the existing and proposed roadways consistent with the OCGP EIR. The OCGP EIR further stated that specific environmental impacts of the proposed project on the existing and planned MWD facilities, as well as specific impacts of constructing new potable water facilities could not be determined at the program level analysis and project-level environmental review at the time that specific development plans have been prepared will be required. The general significant impacts associated with the project’s construction and operation of public facilities has been addressed in the OCGP EIR.

Recycled Water

A portion of the routing, (specifically the portion along the “loop road”) is not included in the proposed project, and will require an adjustment to the routing system for the expansion of the non-potable water network. However, the expansion of the system will generally coincide with the existing and proposed

4. *Discussion of Checklist and Mitigation Measures*

roadways consistent with the OCGP EIR. The OCGP EIR further stated that the specific environmental impacts of constructing the new recycled water facilities could not be determined at the General Plan level analysis as specific site plans and locations have not been prepared. However, the general significant impacts associated with the project's construction and operation of public facilities has been addressed in the OCGP EIR.

Sewer

Since the project proposes the same intensity and mix of land uses, demand projections and proposed system expansion would remain the same. The OCGP EIR further stated that the specific environmental impact of constructing new sewer facilities to serve the project cannot be determined at the program level analysis, as site-specific plans for the installation of the sewer backbone system had not been prepared. However, the general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the sewer system, have been addressed in the OCGP EIR.

Solid Waste

Since the project is expected to generate significant amounts of construction debris due to demolition, the OCGP EIR considered this a potentially significant impact and included a number of mitigation measures to address those impacts. The project will not generate additional solid waste due to demolition of runways and buildings and therefore the OCGP EIR mitigation measures would reduce the project impacts to less than significant levels.

Energy and Communications

The Adopted Overlay Plan had proposed to install the new systems generally along a routing that coincides with the existing and proposed roadway within the project. A portion of the routing, (specifically the portion along the "loop road") is not included in the project and will require an adjustment to the routing system for the expansion of the dry utilities system. However, the expansion of the system will generally coincide with the existing and proposed roadways consistent with the OCGP EIR. The OCGP EIR further stated that the specific impacts of constructing new energy and communication transmission facilities could not be determined at the program level analysis, as site-specific plans for the installation of the energy and communication transmission backbone system have not been prepared. The general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the transmission system, have been addressed in the OCGP EIR.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP EIR. The Revised Overlay Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP EIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP EIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have

4. *Discussion of Checklist and Mitigation Measures*

one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP EIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP EIR.

4.15.4 Mitigation from the OCGP EIR and Applicability to the Revised Overlay Plan

The OCGP EIR determined the mitigation measures identified in other section of the OCGP EIR (5.1-5.13) address the impacts associated with the construction and operation of public facilities. These measures would be applicable to any new construction and operation of facilities for the following types of utilities to serve new growth expected in the project area:

- potable water
- recycled water
- wastewater
- energy and communication transmission facilities

Mitigation Measures SW 1 through SW 5 apply to future demolition and new construction, and would be carried forward through permit approvals for subsequent development projects. The proposed project would neither change these mitigation measures nor their application to future development projects.

SW 1 It is anticipated that much of the solid waste resulting from the demolition, dismantling, or other deconstruction of the aged structures and property, including but not limited to buildings and runways, at El Toro MCAS is contaminated with lead-based paints, asbestos, or other materials that may render it unsuitable for recycling or reuse. At the sole cost and expense of the project applicant, in order to evaluate this condition and determine the feasibility of recycling of solid waste material from the El Toro MCAS site by ordinary means, a technical evaluation by a qualified environmental consultant must be conducted. The technical evaluation shall include sufficient sample testing of all types of solid waste materials to be generated by the project to analyze its composition. A copy of the full technical evaluation and its findings must be submitted to the City of Irvine Community Development Department. The City of Irvine must confirm the adequacy of the technical evaluation prior to authorizing the demolition, dismantling, or deconstruction project to proceed.

If it is determined by the technical evaluation that material is contaminated and prohibited from being recycled by ordinary means, a further evaluation must be conducted to identify and evaluate other feasible methods approved by state law to divert the material from landfills. This may include the delivery of the waste material to other appropriate non-disposal or transformation facilities, such as “waste-to-energy” (WTE) plants.

4. *Discussion of Checklist and Mitigation Measures*

- SW 2 For that solid waste which is determined to be inappropriate for recycling (as that term is defined by California Public Resources Code Section 40180), the project must submit a written plan to the City and implement such plan to ensure that 75% of the material, or the maximum amount feasible as determined by the technical evaluation, is diverted from the landfill through other methods that comply with state statutes and regulations.
- SW3. For that solid waste which the technical study deems to be suitable for recycling, the project applicant must submit a written plan to the City and implement such plan to ensure that solid waste material generated by the demolition, dismantling, or deconstruction project, land use operations and maintenance is collected by a City authorized solid waste hauler or recycling agent, and that a minimum of 75% of the solid waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180. ("Recycling" does not include transformation, as defined in Public Resources Code Section 40201.)
- SW 4 To ensure ongoing compliance with these mitigation measures, the project applicant will be required to submit solid waste tonnage reports to the City of Irvine on City approved forms, accompanied by "weight ticket" receipts from state-certified disposal, nondisposal, or transformation facilities, on a quarterly basis to demonstrate that solid waste diversion has occurred in accordance with these required mitigation measures and in a manner that is consistent with, and not detrimental to, the efforts of the City of Irvine to comply with AB939.
- To assure compliance with applicable statutes related to the disposal of solid waste, it is necessary for the City to require appropriate and effective mitigation measures to limit the disposal and ensure significant recycling of solid waste on-site.
- SW 5 For green waste, the project applicant must submit a written plan to the City and implement such plan to ensure that the green waste material generated by landscape maintenance operations is collected by a City authorized waste hauler or recycling agent, that the maximum feasible amount of that collected green waste is recycled, and that a minimum of 50% of the green waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180.

4.16 DETERMINATION

Based on the information and analysis in this Initial Study/Addendum, and pursuant to Section 15162 of the State CEQA Guidelines, the City has determined that:

1. There are no substantial changes to the project that will require major revisions to the OCGP EIR due to new, significant environmental effects or a substantial increase in the severity of impacts identified in the OCGP EIR;
2. Substantial changes have not occurred in the circumstances under which the project is being undertaken that will require major revisions of the OCGP EIR to disclose new, significant environmental effects or a substantial increase in the severity of the impacts identified in the OCGP EIR; and
3. There is no new information of substantial importance not known at the time the OCGP EIR was certified that shows any of the following:
 - a) The project will have any new significant effects not discussed in the OCGP EIR;

4. Discussion of Checklist and Mitigation Measures

- b) There are impacts that were determined to be significant in the OCGP EIR that will be substantially increased;
- c) There are additional mitigation measures or alternatives to the project that would substantially reduce one or more of the significant effects identified in the OCGP EIR; or
- d) There are additional mitigation measures or alternatives that were rejected by the project proponent that are considerably different from those analyzed in the OCGP EIR that would substantially reduce any significant impact identified in that EIR.

SECTION 1.0

EIR ADDENDUM SUMMARY

1.1 PURPOSE AND SCOPE

This Initial Study/Addendum (Addendum No. 3) augments the environmental review and analysis provided in: (i) the previously certified Final Environmental Impact Report for the Orange County Great Park (OCGP) (State Clearinghouse Number 2002101020); (ii) Addendum to the OCGP Final Environmental Impact Report for the formation of the OCGP Redevelopment Project Area, approved in May 2006 (Addendum No. 1), and (iii) Addendum to the OCGP Final Environmental Impact Report, approved in October 2006 to revise the “Overlay Plan” described in the OCGP Final Environmental Impact Report (Addendum No. 2) (see Figure 1-1). (The Final Environmental Impact Report for the OCGP, Addendum No. 1, and Addendum No. 2 are collectively referred to as the “OCGP FEIR”) The OCGP FEIR and this Addendum serve as the environmental review of a proposal to approve Vesting Tentative Tract Map No. 17008/Master Subdivision Map (VTTM/MSM). The VTTM/MSM covers portions of Planning Areas 30 and 51 in the City of Irvine. This Addendum has been prepared pursuant to the provisions of the California Environmental Quality Act (CEQA), Public Resources Code Section 21000 et seq.; the State CEQA Guidelines, 14 California Code of Regulations Section 15000 et seq.; and the City of Irvine Local Guidelines for Implementing CEQA (Local CEQA Guidelines).

The VTTM/MSM is the “Master Subdivision Map” required to be submitted pursuant to Section 7.1 of the Great Park Development Agreement (Development Agreement), to identify the backbone infrastructure in Planning Areas 30 and 51, including arterials, major thoroughfares and parks, utility rights of way and utility facilities. The VTTM/MSM also delineates the limits of mass grading for the project site that is owned by Heritage Fields El Toro, LLC (Heritage Fields), and a portion of the Orange County Great Park development. The City of Irvine will evaluate the VTTM/MSM application pursuant to the City’s Subdivision Manual and the City’s Subdivision Ordinance, Irvine Municipal Code, § 5-5-103 et seq. . Through that process, the City will determine whether the VTTM/MSM is consistent with applicable general and specific plans. Implementation of the backbone infrastructure installation proposed in the VTTM/MSM will be consistent with the various land uses, densities, and intensities allowed under the adopted General Plan and Zoning. The VTTM/MSM does not introduce new or revised uses beyond what has already been approved and certified in the OCGP FEIR, nor does it alter the intensity or character of the development.

1.2 ENVIRONMENTAL PROCEDURES

In compliance with CEQA, the State CEQA Guidelines and the Local CEQA Guidelines, this Addendum, together with the OCGP FEIR, evaluates the environmental consequences of the VTTM/MSM. The VTTM/MSM depicts greater detail in infrastructure design as previously approved and certified under OCGP FEIR.

Pursuant to Section 21166 of CEQA and Section 15162 of the State CEQA Guidelines, when an EIR has been certified for a project, no subsequent EIR shall be prepared for the project unless the lead agency determines, on the basis of substantial evidence, that one or more of the following conditions are met:

- Substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

- Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, shows any of the following:
 - The project will have one or more significant effects not discussed in the previous EIR or negative declaration.
 - Significant effects previously examined will be substantially more severe than identified in the previous EIR.
 - Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives.
 - Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives.

Section 15164 of the State CEQA Guidelines states that an addendum to an EIR shall be prepared “if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.” This Initial Study/Addendum reviews the changes proposed by the VTTM/MSM and any changes to the existing conditions that have occurred since the certification of the OCGP Final Environmental Impact Report and approval of the first two addenda. It also reviews any new information of substantial importance that was not known and could not have been known with exercise of reasonable diligence at the time that the OCGP FEIR was approved. It further examines whether, as a result of any changes or any new information, a subsequent or supplemental EIR may be required. This examination includes an analysis of the provisions of Section 21166 of CEQA and Section 15162 of the State CEQA Guidelines and their applicability to the proposed project. This Initial Study/Addendum relies on the attached Environmental Analysis (Section 4), which addresses environmental checklist issues on a section-by-section basis.

The City of Irvine Environmental Checklist Form (City of Irvine Environmental Checklist) has been completed by the City and is included in Section 3.0, Environmental Checklist. The Environmental Checklist Form is marked with the findings of the Director of Redevelopment as to the environmental effects of the proposed project in comparison with the findings of the OCGP FEIR. The checklist has been prepared pursuant to Section 15168(c)(4) of the State CEQA Guidelines, which states that “where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.”

Using that approach, the City of Irvine, as the Lead Agency, determined that an addendum to the previously approved OCGP FEIR was the appropriate environmental clearance for the project application.

1.3 PREVIOUS ENVIRONMENTAL DOCUMENTATION

The OCGP Final Environmental Impact Report was originally certified by the City of Irvine in May 2003. The project analyzed in the OCGP FEIR consisted of the following actions: (1) Annexation, General Plan Amendment, Pre-Zoning (prior to annexation), and Zoning of the unincorporated portion of Planning Area 51; (2) Annexation of the unincorporated portion of Planning Area 35 (Irvine Ranch Water District Parcel); (3) General Plan Amendment and Zone Change for Planning Area 30; and (4) Approval of the form of a Development Agreement vesting approval of overlay uses and intensities in consideration for dedication of land for public purposes and for developing and funding certain infrastructure improvements and maintenance of the public uses by the purchaser/developer and subsequent landowners and funding for specific park, roadways, and other circulation facilities and infrastructure. Together, these actions establish the policy and legislative structure to guide the development of the former MCAS El Toro property. Because these actions can be characterized as one large project that is related geographically, and as logical parts in a chain of contemplated actions, the OCGP Final Environmental Impact Report was prepared as a "Program EIR" under State CEQA Guideline Section 15168.

The OCGP Final Environmental Impact Report mitigation measures were provided in the adopted Mitigation Monitoring and Reporting Program (MMRP). The MMRP provides the following information for each mitigation measure:

- Mitigation number and a description of the action
- Timing for implementation
- Approving authority and reviewing agency(s), if any
- Method of compliance

Addendum No. 1 was approved by City of Irvine on May 18, 2006. Addendum 1 addressed the potential for environmental issues associated with the implementation of the OCGP Redevelopment Project Area Plan.

Addendum No. 2 was approved by the City of Irvine on October 24, 2006. The Addendum No. 2 project involved minor adjustments to the boundary between the public and private areas of the OCGP; revisions to zoning code text and figures related to Planning Areas 30 and 51; the creation of a mixed-use zoning category called the Lifelong Learning District (LLD) within Planning Area 51; and minor technical changes to the General Plan, as described in Section 2.3 of Addendum No. 2.

The OCGP Final Environmental Impact Report,, Addendum No. 1, Addendum No. 2, and all of the associated technical documents are on file at the City of Irvine, located at 7000 Trabuco Road, Building 873, Irvine, California 92618. The MMRP for the OCGP Final Environmental Impact Report and addenda are located in Appendix A of this report.

1.4 ENVIRONMENTAL SETTING

The Orange County Great Park (which consists of City of Irvine Planning Areas 30 and 51) is located in the central portion of Orange County, which is approximately 45 miles southeast of Los Angeles. The area is generally bound by the Woodbury residential development to the west, future Portola Springs residential development to the north, Irvine Spectrum to the south, and

the City of Lake Forest to the east. Other nearby local jurisdictions include: the Cities of Laguna Hills, Laguna Niguel, Laguna Woods, Mission Viejo, Aliso Viejo, and Tustin. The project area includes the Irvine Transportation Center, a major multimodal transit center linking Orange County Transportation Authority (OCTA) bus, Metrolink commuter rail, and Amtrak rail services. The Irvine Transportation Center is located adjacent to the Southern California Regional Rail Authority (SCRRA) Metrolink tracks, which bisect the project area and separate Planning Areas 30 and 51. Existing uses within the project site include the California State University, Fullerton; Marine Memorial Golf Course; equestrian facilities; and agricultural and nursery operations. In addition, offices on site are currently occupied by the City of Irvine Redevelopment Department, Great Park Corporation (GPC), and Heritage Fields, LLC. A day care facility is located immediately adjacent to these office uses. Small portions of the existing runways have been removed within the City's Planning Area 51. A few parcels are being leased on an interim basis prior to development of the site.

Ownership of Planning Areas 30 and 51 has changed since certification of the OCGP Final Environmental Impact Report; certain parcels have been transferred to the Federal Aviation Administration; City of Irvine; County of Orange; and a private developer, Heritage Fields, LLC by the Department of Navy (DoN), or parcels have been leased in furtherance of conveyance as detailed in the Addendum No. 2.

SECTION 2.0 PROJECT DESCRIPTION

2.1 PROJECT LOCATION

The Orange County Great Park, encompassing Planning Areas 30 and 51, is located northeast of the freeway junction at Interstate 5 (Santa Ana Freeway) and Interstate 405 (San Diego Freeway), within the City of Irvine. Figure 2-1 depicts the project location in a regional context and Figure 2-2 shows its local context.

Major roadways bordering the project site are Sand Canyon Avenue to the northwest; Portola Parkway and Irvine Boulevard to the north; and Bake Parkway to the northeast. An aerial photograph of the project site and surrounding area is shown on Figure 2-3. As noted, the Irvine Transportation Center is situated adjacent to the Southern California Regional Rail Authority (SCRRA) Metrolink tracks, which traverse the site and separate Planning Areas 30 and 51. Surrounding the site are residential and non-residential uses under construction to the north and west, open space to the northeast, and nonresidential and mixed land uses to the east and southeast within the City of Lake Forest and City of Irvine.

2.2 PROJECT CHARACTERISTICS

2.2.1 PROJECT BACKGROUND

On May 27, 2003, the Irvine City Council certified the OCGP Final Environmental Impact Report and thereafter adopted the General Plan Amendment (GPA), Zone Change (ZC) and development agreement contemplated in the OCGP Final Environmental Impact Report. Under the General Plan and zoning designations studied in the OCGP Final Environmental Impact Report and adopted by the City Council, maximum development intensities were established in the "Overlay Plan." To develop under the "Overlay Plan," the property owners were required to enter into a development agreement, which required the dedication of land and the development or funding of infrastructure improvements in excess of the City's standard requirements and the commitment to long-term maintenance of the public facilities.

In February 2005, Heritage Fields, LLC purchased all four bid parcels making up the development and park portion of the property through a U.S. Department of Navy/General Services Agency online auction process. Subsequent to the land purchase, the GPC and Heritage Fields, LLC developed their respective master design and development processes for the OCGP.

To facilitate additional design options, both the GPC and Heritage Fields, LLC requested and the City initiated amendments to the General Plan (004160079-PGA) and the Zoning Code (00416080-PZC) to reconfigure the boundaries between the two different property owners. In addition, Heritage Fields, LLC also requested the creation of the LLD, along with minor clarifications to the zoning text within Planning Areas 30 and 51.

The City-initiated GPA and ZC (along with Addendum No. 2) were approved by the City Council on October 24, 2006. These changes did not increase the building intensity already approved for Planning Area 30 and Planning Area 51 and did not increase any significant environmental impacts previously identified in the 2003 OCGP FEIR. As noted, the CEQA compliance was established via Addendum No. 2 dated September 2006 and approved October 24, 2006. Addendum No. 2 is on file with the City Redevelopment Agency for review.

On June 28, 2006, and pursuant to Section 7.1. of the Development Agreement, the Applicant, Heritage Fields filed an application for the VTTM/MSM. The OCGP FEIR, together with this Addendum No. 3, is the CEQA compliance document for the proposed VTTM/MSM and associated approvals.

The development analyzed in the OCGP FEIR includes both public park and private development components. The public park component is owned by the City of Irvine and is being developed by the GPC. The private development component is being developed by Heritage Fields.

2.2.2 PROJECT COMPONENTS

This Addendum No. 3 addresses the VTTM/MSM, which will subdivide 3,585 gross acres into 43 numbered lots and 14 lettered lots. The VTTM/MSM does not authorize the construction or development of any trip-generating land uses.

The VTTM/MSM does not alter any land use or associated acreages in the Revised Overlay Plan as identified in the OCGP FEIR, which were most recently adjusted in GPA 004160079-PGA and ZC 00416080-PZC (the "Revised Overlay Plan"), and no new areas are proposed for development.

The VTTM/MSM application was submitted on June 28, 2006, in compliance with Section 7.1 of the Development Agreement by and among the City of Irvine and Heritage Fields. That document states:

- 1) *7.1 Master Subdivision Map. Developer shall be responsible for processing Master Subdivision Map for consideration and approval by the City. Developer shall use the legal descriptions the United States Department of Navy used to convey the Parcels to Developer as a basis for the Master Subdivision Map and shall include on the Master Subdivision Map for the public dedication the arterials, major thoroughfares, and parks shown on the Conceptual Overlay Plan, and all necessary utility rights-of-way and all existing utility facilities including pipes, wires, and appurtenant facilities. Property dedicated to City or City's Designee shall not be subject to future interests, including reversionary, remainder, and executory interests. The City and any applicable City Designee shall cooperate with and assist Developer, as requested by Developer, in its efforts to process and record the Master Subdivision Map. Developer shall exercise reasonable efforts to submit the Master Subdivision Map to the Planning Commission for consideration within 365 days following the Effective Date of this Agreement.*

Consistent with the requirements of Section 7.1 of the Development Agreement, as quoted above, the purposes of the VTTM/MSM are to define the backbone infrastructure, and delineate the limits of rough grading for the infrastructure requirements of the Heritage Fields development and portions of the Orange County Great Park development. The VTTM/MSM also provides boundaries of areas for possible future subdivisions (i.e. "B"-level tentative tract maps) and development, but does not propose or authorize any actual land uses or building intensities.

The VTTM/MSM does not alter the intensity or character of development in Planning Areas 30 and 51. The VTTM/MSM provides additional details of the infrastructure design, the need for

which became apparent during design engineering of the project area. Additional detail is provided related to grading of the project site and infrastructure design.

Backbone Infrastructure

The design of the infrastructure system is depicted on the VTTM/MSM. Utility alignments depicted include:

- Domestic Water Lines
- Sewer Lines
- Storm Drain Lines
- Reclaimed Water Lines
- Street Lights

These utilities and services were anticipated as part of the development and were studied in the OCGP FEIR; however, the specific alignments were not available at that time. The proposed infrastructure was an anticipated part of the development envisioned for Planning Areas 30 and 51, and the proposed alignments do not change the intensity or character of the planned development. Rather, the VTTM/MSM adds a level of detail required for implementation of the project described in the OCGP FEIR in that it shows the proposed preliminary drainage system that would convey storm flows through and from the project site consistent with City of Irvine guidelines. The Master Plan of Drainage, a part of the VTTM/MSM includes supporting hydrologic calculations based on the proposed tributary areas and the drainage system shown on the VTTM/MSM. The Master Plan of Drainage shows consistency of the VTTM/MSM with the Orange County Flood Control Master Plan for San Diego Creek.

Grading

The mass grading for the infrastructure and development on the Heritage Fields property and portions of Planning Areas 30 and 51 is shown on the VTTM/MSM. Grading was an anticipated part of the project and was discussed in the OCGP FEIR; however, a specific grading plan was not available at the time. The mass grading plan included in the VTTM/MSM covers the entire Heritage Fields project area, as well as for the Agua Chinon and the Wildlife Corridor. The grading proposed in the VTTM/MSM does not increase the intensity or character of the grading contemplated or analyzed in the OCGP FEIR. Rather, the VTTM/MSM adds a level of detail required for implementation of the project described in the OCGP FEIR. The approximate raw earthwork quantities for the work envisioned in the VTTM/MSM will be approximately 7,100,000 cubic yards. The earthwork will be balanced on site.

Internal Circulation

The design of the internal street system is depicted on the VTTM/MSM. In a report entitled *City of Irvine Planning Areas 30 and 51, Heritage Fields Master Subdivision Map Internal Circulation Analysis*, dated April 24, 2007 and prepared by Austin-Foust Associates, Inc., the internal circulation system was analyzed (Appendix D). Project intersections were analyzed using intersection capacity utilization (ICU) values to determine the level of service (LOS). The information contained in the report includes site access designations, the type of intersection traffic control measures (i.e., based on traffic signal warrant analyses), intersection approach lane requirements, and recommendations for left-turn and right-turn pocket design features (see Section 4.14, Transportation and Traffic).

2.3 DISCRETIONARY APPROVALS

The VTTM/MSM provides for the backbone infrastructure for the Overlay project as analyzed in the OCGP FEIR. It does not change the intensity or character of the development proposed and approved for the project area. The VTTM/MSM project includes:

1. Mass Grading Plan
2. Design of the backbone infrastructure system

Approval of the VTTM/MSM requires CEQA compliance.

The VTTM/MSM does not authorize the construction or development of any trip-generating land uses.

SECTION 3.0 ENVIRONMENTAL CHECKLIST

The City of Irvine Environmental Information Form and Environmental Checklist Form have been completed by the City and are included on the following pages. The Environmental Checklist Form is marked with the findings of the Redevelopment Department as to the environmental effects of the proposed changes to the project in comparison with the findings of the certified OCGP FEIR.

As explained above, this comparative analysis has been undertaken, pursuant to the provisions of the California Environmental Quality Act, to provide the City with the factual basis for determining whether any changes in the project, any changes in the circumstances under which the project is undertaken, or any new information requires additional environmental review or preparation of a subsequent or supplemental EIR. The basis for each of the findings listed in the attached Environmental Checklist Form is explained in Section 4.0 of the Addendum.

3.1 CITY OF IRVINE INITIAL STUDY AND ENVIRONMENTAL EVALUATION

1. Project Title:

Vesting Tentative Tract Map – VTTM No. 17008, (Master Subdivision Map – Per Orange County Great Park Development Agreement) (Planning Areas 30 and 51) (Heritage Fields, LLC and Great Park Corporation)

2. Lead Agency Name and Address:

City of Irvine
7000 Trabuco Road, Building 873
Irvine, California 92618

3. Contact Person and Phone Number:

David R. Law, AICP, Senior Planner
(949) 724-7459

4. Project Location:

The project area is located north of Interstate 5 (Santa Ana Freeway), east of State Route 133 (Eastern Transportation Corridor), and south of State Route 241 (Foothill Transportation Corridor).

5. Project Sponsor's Name and Address:

Heritage Fields El Toro, LLC
7130 Trabuco Road
Irvine, CA 92618

6. General Plan Designation:

Orange County Great Park (OCGP)

7. Zoning:

1.5 Recreation, 2.2 Low Density Residential, 2.2/1.8 Low Density Residential with Golf Course, 3.2 Transit Oriented Development, 4.3 Vehicle-Related Commercial, 5.4B General Industrial, 6.1 Institutional, 8.1/8.1A Lifelong Learning District.

8. Description of Project:

The project includes a Vesting Tentative Tract Map (VTTM, 17008), which is the Master Subdivision Map as envisioned in and required by Section 7.1 of the Great Park Development Agreement. The VTTM/MSM provides initial detail concerning mass grading, internal circulation, and backbone infrastructure throughout Planning Areas 30 and 51.

9. Surrounding Land Uses and Setting:

The City of Lake Forest and the James A. Musick Branch Jail are located to the southeast; Irvine Spectrum abuts the former base along the eastern and southern boundaries; and existing and developing residential developments are located to the north and west. Further to the south are the residential areas of the Cities of Laguna Woods and Laguna Hills. These latter communities are at higher elevations and could therefore have panoramic views of the site.

The project area is located north of the Santa Ana (I-5) Freeway, east of the Eastern Transportation Corridor (SR-133), and south of the Foothill Transportation Corridor (SR-241). Major roadways bordering the project area include Barranca Parkway to the south, Sand Canyon Avenue to the west, Portola Parkway and Irvine Boulevard to the north, and Alton Parkway to the east.

10. Other Public Agencies Whose Approval Is Required (e.g., permits, financing approval, or participation agreement):

None.

3.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|--|---|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agricultural Resources | <input type="checkbox"/> Air Quality |
| <input type="checkbox"/> Biological Resources | <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Geology / Soils |
| <input type="checkbox"/> Hazards and Hazardous Materials | <input type="checkbox"/> Hydrology / Water Quality | <input type="checkbox"/> Land Use / Planning |
| <input type="checkbox"/> Mineral Resources | <input type="checkbox"/> Noise | <input type="checkbox"/> Population / Housing |
| <input type="checkbox"/> Public Services | <input type="checkbox"/> Recreation | <input type="checkbox"/> Transportation / Traffic |
| <input type="checkbox"/> Utilities / Service Systems | <input type="checkbox"/> Mandatory Findings of Significance | |

3.3 DETERMINATION

On the basis of this initial evaluation:

- ☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.
- ☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.
- ☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.
- ☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.
- ☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

David R. Law, AICP, Senior Planner

Date

3.4 **EVALUATION OF ENVIRONMENTAL IMPACTS**

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration (State CEQA Guidelines section 15063(b)(1)(C)). In this case, a brief discussion should identify the following:
 - a. **Earlier Analyses Used.** Identify and state where they are available for review.
 - b. **Impacts Adequately Addressed.** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c. **Mitigation Measures.** For effects that are “Less Than Significant With Mitigation Incorporated,” describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) **Supporting Information Sources:** A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
- a. the significance criteria or threshold, if any, used to evaluate each question; and
 - b. mitigation measure identified, if any, to reduce the impact to less than significant

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substan- tial Change in Project Requiring Major EIR Revisions	Substan- tial Change in Circum- stances Requiring Major EIR Revisions	New Infor- mation Showing Greater Sig. Effects than Previous EIR	New Infor- mation Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
I. AESTHETICS: Would the project:						
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway or local scenic expressway, scenic highway, or eligible scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in the visible grading of over 5,000 cubic yards on any 20-acre portion of the project site; or visible cut and fill slope over 25 vertical feet?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in the creation of light spillover and glare effects that present a nuisance to residential land uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Result in the substantial alteration of the existing landform of the site or of a unique topographic feature on the site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
II. AGRICULTURAL RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Mode (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:						
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Sig. Effects than Previous EIR	New Information Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
III. AIR QUALITY: Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:						
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
IV. BIOLOGICAL RESOURCES: Would the project:						
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Sig. Effects than Previous EIR	New Information Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
V. CULTURAL RESOURCES: Would the project:						
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5 of the CEQA Guidelines and/or identified on the Qualified Historic Structures list of the Anaheim Colony Historic District Preservation Plan (July 20, 1999)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the CEQA Guidelines?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VI. GEOLOGY AND SOILS: Would the project:						
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:						
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substan- tial Change in Project Requiring Major EIR Revisions	Substan- tial Change in Circum- stances Requiring Major EIR Revisions	New Infor- mation Showing Greater Sig. Effects than Previous EIR	New Infor- mation Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.						
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■
d) Be located on expansive soil, as defined by Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
VII. HAZARDS AND HAZARDOUS MATERIALS: Would the project:						
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
e) For a project located within an airport land use plan, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substan- tial Change in Project Requiring Major EIR Revisions	Substan- tial Change in Circum- stances Requiring Major EIR Revisions	New Infor- mation Showing Greater Sig. Effects than Previous EIR	New Infor- mation Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
f) For a project located within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VIII. HYDROLOGY AND WATER QUALITY: Would the project:						
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on-site or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on-site or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of pollutant runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substan- tial Change in Project Requiring Major EIR Revisions	Substan- tial Change in Circum- stances Requiring Major EIR Revisions	New Infor- mation Showing Greater Sig. Effects than Previous EIR	New Infor- mation Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j) Inundation by seiche or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
IX. LAND USE AND PLANNING: Would the project						
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of any agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
X. MINERAL RESOURCES: Would the project:						
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XI. NOISE: Would the project result in:						
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Sig. Effects than Previous EIR	New Information Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, heliport or helistop, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XII. POPULATION AND HOUSING: Would the project:						
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through the extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XIII. PUBLIC SERVICES: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:						
a) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XIV. RECREATION: Would the project:						
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Sig. Effects than Previous EIR	New Information Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XV. TRANSPORTATION/TRAFFIC: Would the project:						
a) Cause an increase in traffic, which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels or change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in inadequate parking capacity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus stops/routes, bicycle lanes, sidewalks, etc.)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XVI. UTILITIES AND SERVICE SYSTEMS: Would the project:						
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substan- tial Change in Project Requiring Major EIR Revisions	Substan- tial Change in Circum- stances Requiring Major EIR Revisions	New Infor- mation Showing Greater Sig. Effects than Previous EIR	New Infor- mation Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
d) Have sufficient water supplies available to serve the project (including large scale developments as defined by Public Resources Code Section 21151.9 and described in Question No. 20 of the Environmental Checklist) from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Comply with Federal, State, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Result in a need for new systems or supplies, or substantial alterations related to electricity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Result in a need for new systems or supplies, or substantial alterations related to natural gas?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
j) Result in a need for new systems or supplies, or substantial alterations related to telephone service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
k) Result in a need for new systems or supplies, or substantial alterations related to television service/reception?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XVII. MANDATORY FINDINGS OF SIGNIFICANCE						
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substan- tial Change in Project Requiring Major EIR Revisions	Substan- tial Change in Circum- stances Requiring Major EIR Revisions	New Infor- mation Showing Greater Sig. Effects than Previous EIR	New Infor- mation Showing Ability to Reduce Sig. Effects in Previous EIR	Less Than Sig. Impacts/ No Changes or No New Info. Requiring Prep of EIR	No Impact
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	■	<input type="checkbox"/>

SECTION 4.0

DISCUSSION OF CHECKLIST AND MITIGATION MEASURES

This section is intended to provide evidence to substantiate the conclusions set forth in the Environmental Checklist. The section will briefly summarize the OCGP FEIR conclusions and then discuss whether the VTTM/MSM is consistent with the findings contained in the OCGP Final Environmental Impact Report certified in May 2003, and addenda.

4.1 AESTHETICS

4.1.1 ENVIRONMENTAL SETTING

The OCGP FEIR addressed in detail the potential visual impacts associated with the conversion of the former MCAS El Toro from a military air station to primarily open space and recreational uses and civilian residential, retail, commercial, and mixed uses. The OCGP FEIR discussed the project's visual setting associated with its location adjacent to various arterial highways and state and federal highways. None of these roadways is designated as a County or State scenic highway, although Sand Canyon Avenue is designated as a highway with rural/natural character. The City of Irvine General Plan also designates the Santa Ana (I-5) Freeway as an urban character Scenic Highway.

Generally, views of the former military base are from the surrounding highways. From these highways, a variety of land uses, structures and facilities of differing ages, sizes, and architectural styles may be viewed. Though agricultural areas are located adjacent to and within the base, the predominant features are associated with the military use of the base, including runways, aprons, hangars, warehouses, barracks housing, recreational facilities, golf course, single-family housing, offices, and commercial structures, some of which are now vacant and deteriorating.

The City of Lake Forest and the James A. Musick Branch Jail are located to the south and east; Irvine Spectrum abuts the former base along the eastern and southern boundaries; and existing and developing residential developments are located to the north and west. Further to the south are the residential areas of the Cities of Laguna Woods and Laguna Hills. These latter communities are at higher elevations and could therefore have panoramic views of the site.

4.1.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

The OCGP FEIR, specifically Addendum No. 2, discussed the potential aesthetic effects of the development of Planning Areas 30 and 51 under the Revised Overlay Plan and found that future development of these two planning areas would introduce new sources of light within the project area. These sources include street lighting along planned roadways and various forms of exterior lighting, including security lighting, parking lots, educational facilities, institutional and commercial developments, and lighting associated with athletic fields. The OCGP FEIR concluded that significant light impacts could have occurred if proposed light sources were directed into or located near existing or planned residential uses, which are sensitive to light intrusion during nighttime hours, but that, with the mitigation ultimately adopted by the City, these potential impacts would be less than significant. The OCGP FEIR concluded there would be no significant impacts under the other six standards and thresholds.¹

¹ All six thresholds of possible significance in the aesthetics section were listed as being contained in Appendix G to the CEQA Guidelines (Title 14, Cal. Code Reg. §1500 et seq.). While the first, third, and fourth standards were derived from the environmental issues in the Appendix G checklist, they are not actually set forth in the Appendix.

4.1.3 IMPACTS ANALYSIS FOR THE VTTM/MSM

The Aesthetics Section of the OCGP FEIR concludes that grading activities associated with the proposed future development of the project area consistent with the Orange County Great Park land use plan “will not [be] expected to adversely affect existing topography of the site.” This Addendum No. 3 is consistent with the OCGP FEIR project description as slightly modified through addenda.

The VTTM/MSM includes grading activities comparable to those evaluated in the OCGP FEIR—that is, the hillside areas will be preserved as a natural habitat area and the physical topographic condition will be comprised of level areas suitable for development and manmade terrain typical of golf course and park developments, with contoured sloping areas to support the drainage needs of the project analyzed in the OCGP FEIR. Visible grading due to implementation of the project on the flatter areas of the project site below 5,000 cubic yards/20 acres would be below the thresholds of possible significance. The OCGP FEIR notes some areas of the project “may require filling to achieve a flat terrain suitable for development” so that the site will continue to be characterized by “relatively flat or sloping terrain,” and “the proposed developments are expected to maintain the flat topography of the site.” The OCGP FEIR indicates that throughout the project site “no grading related aesthetic impacts on [the site] are anticipated to occur.” Implementation of the VTTM/MSM would likewise result in no significant grading-related aesthetic impacts.

The VTTM/MSM will not create any new or increased impacts as compared to the project analysis contained in the OCGP FEIR due to the site’s current developed, deteriorated condition. The VTTM/MSM retains the commitment to satisfy the mitigation measures of the OCGP FEIR and the addenda related to potential light impacts.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the proposed changes to the project would require a major revision to the certified OCGP FEIR or approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances requiring major changes to the certified OCGP FEIR or approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved which indicate that the project will have one or more significant effects not discussed in the certified OCGP FEIR and/or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. There are no alternatives to the project or additional mitigation measures that would substantially reduce further one or more of the significant aesthetic effects identified in and considered by the certified OCGP FEIR and approved addenda, since all effects were determined to be less than significant with mitigation.

4.1.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified Mitigation Measures A1 and A2 which, when fulfilled, will reduce the aesthetic effects of development under the Revised Overlay Plan to a less-than-significant level. Measures A1 and A2 have been adopted by the City and are applicable to future development of the Revised Overlay Plan.

- A1 Prior to issuance of building permits, lighting plans and signage plans for new development shall be reviewed by the Community Development Department to ensure that minimal light intrusion and spillover into adjacent residential areas occurs.
- A2 Prior to the issuance of building permits, and during the master plan review process for future development in the project area, the Director of Community Development shall ensure that mirrored and highly reflective surfaces are discouraged or, where proposed, shall be accompanied by a design-level glare impact analysis that demonstrates no adverse visual impairment to motorists or other visual nuisance occurs.

The timing of these mitigation measures has been changed from prior to the issuance of grading permits to prior to the issuance of building permits. These measures are typically applied at the issuance of building permits because they are associated with physical development of a site, not the grading of a site.

4.2 AGRICULTURAL RESOURCES

4.2.1 ENVIRONMENTAL SETTING

The OCGP FEIR described the Farmland Mapping and Monitoring Program (FMMP Program) of the California Department of Conservation Division of Land Resources Protection. Under the FMMP Program, classifications of agricultural lands present within a project are as follows:

- **Prime Farmland:** Land which has the best combination of physical and chemical features able to sustain long-term production of agricultural crops. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for production of irrigated supply needed to produce sustained high yields. Land must have been used for production of irrigated crops at some time during the previous two map updates.
- **Farmland of Statewide Importance:** Similar to Prime Farmland, except this land has minor shortcomings such as greater slopes or less ability to store soil moisture than Prime Farmland. This land has minor shortcomings, such as greater slopes or less ability to store soil moisture than Prime Farmland. Land must have been used for production of irrigated crops at some time during the previous two map updates.
- **Unique Farmland:** Lesser quality soils used for the production of the state's leading crops. This land is usually irrigated, but may include non-irrigated orchards or vineyards as found in some climate zones in California. This land is used for the production of specific high economic value crops such as oranges, olives, avocados, rice, grapes, or cut flowers. Land must have been cropped at some time during the two previous map updates.

- **Farmland of Local Importance:** Land of importance to the local agricultural economy as determined by each county's board of supervisors and a local advisory committee.

The OCGP FEIR identified approximately 659 acres of designated Prime Farmland, 70 acres of designated Unique Farmland, and 99 acres of designated Farmland of Statewide Importance. The Orange County Board of Supervisors has not designated any farmland as being of "Local Importance."

City of Irvine Policies and Programs

The City of Irvine General Plan Objective L-10, as amended in 2002 and presented in the OCGP Final Environmental Impact Report, includes the following policies to "encourage the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development: "

Policy (a): Provide for farming opportunities in the community, where feasible and appropriate, through an Agricultural Legacy Program facilitating limited-scale agricultural operations and program on public lands. The program may include components such as edible landscape, metro-farming, heritage farming, model farming, education and community service farming and other farm or farm market programs. Location for implementation of the Agricultural Legacy Program to be considered should, at a minimum, include:

- Designated open space spine network,
- Designated open space areas not subject to the Natural Community Conservation Plan (NCCP), and
- Other appropriate publicly owned lands.

Policy (b): Consider creating a "working model" farm to act as a center for education and enjoyment of all age groups pursuant to the Agricultural Legacy Program in conjunction with the City's planning efforts concerning the reuse of MCAS El Toro, or with the South Coast Research Extension owned by UC Regents.

Policy (c): Permit agricultural use of land which is unsuitable for building because it is within flood plains, or is subject to hazards to public health, safety, and welfare or similar constraints precluding development. Conversion from agricultural use may be allowed where the identified hazard conditions have been eliminated.

Policy (d): Permit agricultural uses, on an interim bases, on land designated for development, and consider agricultural uses as part of the City's planning efforts for the re-use of MCAS El Toro.

Policy (e): Encourage and support federal and state legislation proposed for the purpose of preservation of agricultural lands which are compatible with the City's goals and objectives.

Policy (f): Allow for conversion of interim and permanent agricultural uses to development to provide land for the construction of housing units consistent with the Land Use and Housing Elements, and the development of commercial and industrial buildings consistent with the provision of job opportunities as described in the Land Use Element, where such conversion does not conflict with other L-10 policies.

Policy (g): Pursue the open space policies contained in the Conservation and Open Space Element and address any open space or aesthetic impacts from the conversion of interim and permanent agricultural uses to development as part of the City's existing policies for the

preservation of open space and existing policies for mitigation of views and aesthetic impacts under the policies in the Conservation and Open Space Element.

4.2.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

The OCGP FEIR determined the Revised Overlay Plan would preserve in perpetuity 303 acres² of land for agricultural use, of which 251 acres are classified as Prime Farmland, Unique Farmland, and Farmland of Statewide Importance. The locations of the 303 acres of permanent agricultural land are listed below:

- **Planning Area 30:** 13 acres within Planning Area Zone (PAZ) 26
- **Planning Area 51:** 90 acres within PAZ 4; 200 acres within PAZ 1

The Farmlands Map can be found in the OCGP FEIR as Figure 5.8-1. The Revised Overlay Plan also would result in the permanent loss of 802 acres of designated farmland comprised of 651 acres of Prime Farmland, 63 acres of Unique Farmland, and 88 acres of Farmland of Statewide Importance. This impact was considered significant and unavoidable.

It was determined the Revised Overlay Plan would result in a significant impact associated with the conversion of agricultural land to nonagricultural use. The OCGP FEIR noted the context of agricultural production in Orange County—including development pressures that have contributed to the decrease in agricultural production in the County over time—which suggested that conversion of agricultural land to urban uses would occur with or without the development of the Revised Overlay Plan.

4.2.3 IMPACTS ANALYSIS FOR THE VTTM/MSM

The proposed VTTM/MSM identifies the backbone infrastructure in the project area; defines the areas for future subdivision and development; and delineates the limits of mass grading for the Heritage Fields (including the Wildlife Corridor and Agua Chinon) development. Development in accordance with the VTTM/MSM would be consistent with the various land uses, densities, and intensities allowed under the existing General Plan and Zoning Code. The VTTM/MSM does not propose any reduction in agricultural uses.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda. This Addendum will not will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR or approved addenda.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances that would require major changes to the certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times

² Please note that there is a typographical error within the OCGP FEIR: Table 1-2 on page 1-8 and Table 3-4 on pages 3-12 and 3-13 identify the total agricultural land as 303 acres; however on page 5.8-10 the agricultural use acreage is noted as 307.

the OCGP FEIR was certified and the addenda were approved that indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified and the addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, which the project proponent declines to adopt or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant agricultural effects identified in and considered by the certified OCGP FEIR and approved addenda.

4.2.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

Mitigation Measures AG1 through AG3 have been adopted by the City and will be implemented in conjunction with subsequent development permits. Implementation of the VTTM/MSM would neither change these mitigation measures nor their application to future development projects.

- AG1 In order to encourage agriculture as an interim land use pending development on the project site by warning future residents that they are buying or renting a house adjacent to existing agricultural operators, City of Irvine Standard Discretionary Case Condition B.4 and City of Irvine Subdivision Condition 3.4 regarding disclosure statements shall be amended to include the following for subdivisions proposed adjacent to existing agricultural operations:

Prior to issuance of building permits, the applicant shall submit, and the Director of Community Development shall have approved, a completed occupancy disclosure form for the project. The approved disclosure form, along with its attachments, shall be included as part of the rental/lease agreement and as part of the sales literature for the project. The disclosure statement shall include the following information:

- Continuation of agricultural operations adjacent to the site and their potential effects (spraying of pesticides, noise, dust, odor, etc.) on future residents or tenants.

- AG2 Heritage and community service/educational farming operations shall be encouraged within utility easements and other lands. Heritage farming is defined as small-scale specialty farming operations that can be accommodated in an urban environment. An example would be the Edible Landscape project located adjacent to Harvard Avenue within the Edison right-of-way.

- AG3 Future landowners and the City shall work cooperatively with farmers to minimize conflicts between agricultural operation and adjacent urban uses.

4.3 AIR QUALITY

4.3.1 ENVIRONMENTAL SETTING

The OCGP FEIR described the existing air quality regarding the following regulated pollutants: ozone (O₃), carbon monoxide (CO), suspended particulate matter (PM₁₀), nitrogen oxides (NO_x), sulfur dioxide (SO₂), lead (Pb), volatile organic compounds (VOC), and reactive organic gases (ROG). The South Coast Air Basin (SCAB) is described as a non-attainment area for O₃, CO, and PM₁₀; annual maximum concentrations of O₃, CO, PM₁₀, and SO₂ exceeded both federal and state standards in some or all areas in the SCAB during the reporting period (2000). In contrast, standards for nitrogen dioxide (NO₂), SO₂, and Pb were not exceeded during the reporting period.

The OCGP FEIR also noted the promulgation by the U.S. Environmental Protection Agency (EPA) and California Air Resources Board of separate standards for PM_{2.5} (particulate matter less than 2.5 microns in diameter). The standards are provided in Table 4.3-1 of this document. EPA has identified several counties, including Orange County, as PM_{2.5} non-attainment areas. EPA is in the process of responding to comments on related regulations. The California Air Resources Board adopted the annual standard identified in Table 4.3-2 but has postponed establishing a 24-hour standard for PM_{2.5}. At the local level, the South Coast Air Quality Management District (SCAQMD) is in the process of developing a methodology for calculating PM_{2.5} and PM_{2.5} significance thresholds for the purpose of analyzing local and regional air quality impacts in CEQA documents.

4.3.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

The OCGP FEIR identified significant air quality impacts associated with construction and operation of the Revised Overlay Plan. The construction impact analysis assumed demolition, grading, and new construction would occur in two phases: the first phase would begin in 2007 and end in 2016 and the second phase would begin in 2017 and end in 2025. The emissions associated with demolition of existing structures, including 31.2 million cubic feet of concrete from removal of the runways, site grading, and development would generate construction air emissions above the significance thresholds for ROG, NO_x, and PM₁₀. The OCGP FEIR described the construction air impacts after mitigation as significant and unavoidable. (Refer to OCGP FEIR pp. 5.3-16 through 5.3-20.)

**TABLE 4.3-1
FEDERAL AND STATE STANDARDS^a FOR PM_{2.5}**

Averaging Time	Federal Standards	California Standards ^b
Annual Arithmetic Mean	15 µg/m ³	12 µg/m ³
24-Hour	65 µg/m ³	No Separate Standard
Source: ^a www.epa.gov/pmdesignations/state/California.htm [June 5, 2006]. ^b 17 CFR §70200, Table of Standards.		

The operations-related air quality impacts associated with build-out under the Revised Overlay Plan included emissions associated with energy consumption and vehicular trips. The Urban Emissions (URBEMIS) 2001 model and EMFAC7F (motor vehicle emission factor model) were used in the FEIR to estimate air emissions associated with operation of the project site through the “post 2025” analysis year (i.e., General Plan build-out). The operations air emissions for project area and vehicular mobile sources were estimated at above the significance thresholds for ROG, NO_x, CO, and PM₁₀, are described in the OCGP FEIR as significant after mitigation,

and are an unavoidable consequence of the project (adopted Plan). No other construction- and operations-related significant air quality impacts were identified in the OCGP FEIR. (Refer to OCGP FEIR pp. 5.3-20 through 5.3-58, and 7-19.)

In addition, the OCGP FEIR disclosed the results of the CO “hotspots” analysis, in which levels of CO concentrations were predicted for intersections with a LOS of “D” or higher at AM and PM peak hours using the CALINE 4.0 model and EMFAC7F motor vehicle emission factors. No intersections in the traffic study area were expected to result in one-hour and eight-hour CO concentrations above the state standard of 20 parts per million (ppm) for one-hour concentrations and 9 ppm for eight-hour concentrations. (Refer to OCGP FEIR pp. 5.3-31 through 5.3-53.)

4.3.3 IMPACTS ANALYSIS FOR VTTM/MSM

The air quality analysis in the OCGP FEIR made assumptions regarding the grading for the development of Planning Areas 30 and 51, although a specific grading plan had not been prepared at that point. The assumptions were based on the type and size of development anticipated in the Revised Overlay Plan and used “default” emissions estimates from the URBEMIS 2001 air quality model which are conservative (estimates of emissions from such activity based on empirical data Black and Veatch, 2002 & 2003).

The mass grading for the Heritage Fields property is shown on the VTTM/MSM.³ The grading plan is an anticipated part of the project analyzed in the OCGP FEIR. The intensity, character, and extent of the grading are not being changed. Rather, a level of detail required for project implementation is being added to project plans, permitting more precise calculations of grading and construction activities.

It is proposed that the earthwork will be balanced on site. These volumes are based on initial calculations and are subject to refinement based on actual soil conditions, “district” level planning, final engineering, etc. Detailed grading maps for specific development sites will be included in the maps to process each development and will be subject to CEQA review at that time.

Heidi Rous of PCR Services Corporation prepared an analysis of the emissions for CO, NO_x, PM₁₀, ROG, and SO_x which were assumed and evaluated in the 2003 OCGP FEIR, and the actual grading based on the specific plan now proposed in the VTTM/MSM. The report dated November 15, 2006, was conducted for this Addendum to determine whether the revised grading plan would result in the need to study or change the significance conclusions and analysis for construction emissions. In addition, the emissions inventory was evaluated using URBEMIS 2002, an update of the URBEMIS 2001 model used in the OCGP FEIR. The analysis compares the OCGP FEIR to the emissions anticipated from implementation of the proposed grading plan as depicted in the VTTM/MSM. The results of the analysis are shown in Table 4.3-2 and the analysis is located in Appendix B of this Addendum.

³ Fuscoe Engineering, Inc. prepared the VTTM and the grading plan.

**TABLE 4.3-2
COMPARISON OF DAILY CONSTRUCTION EMISSIONS FOR SITE GRADING**

Emissions Inventory	Emission Totals, lbs./day [tons per day]				
	CO	NO _x	PM ₁₀	VOC	SO _x
Certified EIR	280 [0.14]	840 [0.42]	1440 [0.72]	4660 [2.23]	40 [0.02]
Grading Plan ^a	544 [0.27]	498 [0.25]	451 [0.23]	1169 [0.58]	<1 [0]
SCAQMD Significance Threshold ^b	550 [0.28]	100 [0.05]	150 [0.08]	75 [0.04]	150 [0.08]
Over (Under)	(6)	398	301	1,094	(149)
Significant for Certified FEIR?	No	Yes	Yes	Yes	No
Significant for Proposed Grading Plan?	No	Yes	Yes	Yes	No
^a Compiled using the URBEMIS 2002 emissions inventory model and EPA AP-42 emission factors for PM ₁₀ ^b The FEIR misstated the CEQA Significant Thresholds on Tables 5.3-12 and 5.3-13 for VOC and NO _x as 0.03 tpd, which are the correct thresholds for those pollutants during the operational phase of a project. The significance determination in the FEIR were correctly assessed.					
Source: PCR Services Corporation 2006.					

As expected, the PCR analysis shows that the emissions expected from the actual grading are below those conservative emissions estimated in the OCGP FEIR for all constituents except CO. This is a result of the conservatively high assumptions used in the 2003 model and the significant improvement in construction equipment emissions technology.

As noted in the technical report, the increased numbers shown for CO emissions is a function of updated emissions factors in the current version of URBEMIS 2002, and this increase is not a substantial change in the construction intensity (Black and Veatch 2003). (In effect, the CO emissions will not actually be higher with the currently proposed grading plan; it is simply that the URBEMIS 2002 model was revised to more accurately reflect the full amount of such emissions from developments, which may have been under-reflected in URBEMIS 2001.) Regardless, CO emissions are less than the SCAQMD threshold for significance.

The California Air Resources Board (CARB) has not yet completed a methodology for calculating the 24-hour PM_{2.5}. At the local level, the South Coast Air Quality Management District (SCAQMD) has not yet completed a methodology for calculating PM_{2.5} or PM_{2.5} significance thresholds for the purpose of analyzing local and regional air quality impacts in CEQA documents.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved, indicating that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified and the addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the certified OCGP FEIR and approved addenda.

4.3.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified, and the City has adopted, mitigation measures AQ1 through AQ5, which reduce the air quality effects of construction and operations of development under the adopted Plan. However, as noted above, the OCGP FEIR found that short-term and long-term air quality impacts would remain significant and unavoidable. The measures are applicable to future development under the VTTM/MSM.

- AQ1 Prior to the start of demolition and construction within the project area, adjacent sensitive receptors shall be informed of the planned demolition and construction activities. Measures to avoid significantly impacting these receptors shall be developed and implemented by the project proponent in coordination with these uses. Other applicable mitigation measures such as erection of fences around construction areas; staggered use of equipment near sensitive receptors; diversion of truck trips away from receptors shall be employed as necessary. Compliance with this measure shall be verified by the Director of Community Development.
- AQ2 Prior to the commencement of construction activities required to demolish and/or remove existing DoN structures, including runways, the Director of Community Development shall receive and approve a construction emissions mitigation plan from the chosen demolition contractor. Prior to the issuance of grading permits, the applicant of any future development project shall submit, and the Director of Community Development shall approve a construction emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.
- Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase. Water exposed soils at least twice daily and maintain equipment and vehicle engines in good condition and in proper tune.
 - Wash off trucks leaving the site.
 - Replace ground cover on construction sites when it is determined that the site will be undisturbed for lengthy periods.

- Reduce speeds on unpaved roads to less than 15 miles per hour.
- Halt grading and excavation operations when wind speeds exceed 25 miles per hour.
- Suspend all emission generating activities during smog alerts.
- Use propane- or butane-powered on-site mobile equipment instead of diesel/ gasoline, whenever feasible.
- Properly maintain diesel-powered on-site mobile equipment.
- Sweep streets at the end of the day if substantial visible soil material is carried over to the adjacent streets.
- Use electricity from power poles rather than temporary on-site diesel- or gasoline-powered generators, whenever feasible.
- Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase.
- Use of low-VOC asphalt.
- Cover all trucks hauling dirt, sand, soil or other loose material to and from the site.
- Provide temporary traffic controls (e.g., flag persons) during all phases of construction to ensure minimum disruption of traffic.
- Schedule construction activities that affect traffic flow on adjoining streets to off-peak hours to the extent possible.
- Reroute construction trucks away from congested streets, whenever feasible.
- Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, whenever feasible.

AQ3 Prior to the issuance of building permits for any future development, the applicant shall submit, and Director of Community Development shall have approved, an operation-emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.

- Utilize built-in energy-efficient appliances to reduce energy consumption and emissions.
- Utilize energy-efficient and automated controls for air conditioners and lighting to reduce electricity consumption and associated emissions.

- Install special sunlight-filtering window coatings or double-paned windows to reduce thermal loss, whenever feasible.
- Utilize light-colored roofing materials as opposed to dark roofing materials to conserve electrical energy for air-conditioning.
- Provide shade trees in residential subdivisions as well as public areas, including parks, to reduce building heating and cooling needs, whenever feasible.
- Ensure that whenever feasible, commercial truck traffic is diverted from local roadways to off-peak periods.
- Centralize space heating and cooling for multiple-family dwelling units and commercial space.
- Orient buildings north/south for reducing energy-related combustion emissions.
- Use solar energy, when feasible.
- Use high rating insulation in walls and ceilings.

AQ4 At the time of residential and commercial lease and sales agreements, future sales information on available housing and employment opportunities within the project area shall be provided to employees and residents of the project area, so as to encourage employees to live within the residential developments planned on-site and future residents to find employment nearby.

AQ5 At the time of residential and commercial lease and sales agreements, the applicant shall demonstrate to the satisfaction of the Director of Redevelopment that future employment generating nonresidential development shall include measures to reduce vehicle trips including: the promotion of carpool incentives and alternative work schedules, easy access to public transit systems, trail linkages between uses, low emissions vehicles fleets, and the provision of on-site facilities such as banking and food courts, and bicycle parking facilities, and other transportation demand management measures, as deemed appropriate.

Timing has been added to the mitigation measures above to be able to effectively implement these measures. As modified the timing language includes the following, "At the time of residential and commercial lease and sales agreements, future sales..."

4.4 BIOLOGICAL RESOURCES

4.4.1 ENVIRONMENTAL SETTING

The OCGP FEIR described the biological resources within Planning Areas 30 and 51, including 995 acres of land retained in federal ownership and designated as both "habitat reserve" and a part of the Orange County Central-Coastal Subregion Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP).

The areas outside the habitat reserve were described as: (1) providing minimal native or undisturbed habitat and (2) consisting of agricultural, ornamental, and domestic landscapes.

The OCGP FEIR identified nine vegetative communities within the project site, including Venturan-Diegan sage scrub, southern cactus scrub, chaparral, woodland, riparian scrub, grassland, open water, agriculture, and disturbed or developed areas. Several sensitive plant species and a large number of mature trees were also identified as potentially occurring within the project site. The sensitive plant species potentially occurring in both Planning Areas 30 and 51 include the southern tarplant, Palmer's grapplehook, many-stemmed dudleya, Coulter's Matilija poppy, Catalina mariposa lily, and intermediate mariposa lily. The OCGP FEIR also noted the Coulter's saltbush, Laguna Beach dudleya, San Fernando Valley spineflower, and the Lewis's evening-primrose as having a moderate potential for occurrence. Species with a low potential for occurrence include the Los Angeles sunflower, south coast saltscale, Santa Monica Mountains dudleya, heart-leafed pitcher sage, coast wooly-heads, slender-horned spineflower, Santa Barbara morning glory, tecate cypress, and salt spring checkerbloom.

The OCGP FEIR documented that one sensitive wildlife species, the burrowing owl, was observed outside the habitat reserve at the southwestern end of Planning Areas 30 and 51 along Serrano Creek (Chambers Group, September 7, 1999 site visit). Forty other sensitive wildlife species or species of local concern were identified as having a potential to occur on the site. In addition, the areas outside the habitat reserve, such as the agricultural lands, generally provide suitable foraging habitat for raptor species, including Swainson's hawk.

Lastly, the OCGP FEIR described the Wildlife Corridor Concept Plan that would be incorporated into the eastern portion of the project site (Refer to pp. 5.9-9–5.9-14 of the OCGP FEIR). The Wildlife Corridor planning efforts have been ongoing, and the Orange County Great Park Plan land use concepts accommodated this ongoing planning effort. The guidelines presented in the OCGP FEIR were chiefly concerned with the creation and revegetation of wildlife habitats that would flourish in the proposed areas and that would serve as protective cover for target wildlife species that will presumably utilize the proposed corridor. A preliminary design concept for the creation and/or revegetation of the proposed route has also been prepared which is consistent with the guidelines described below (Draft Irvine Wildlife Corridor Master Plan, November 2002). These terms are defined as they are generally used by restoration professionals in California and by the Society for Ecological Restoration (SER):

- Creation (establishes historical ecosystems on lands that did not previously support that ecosystem or on severely altered sites)
- Revegetation
- Reduce the amount of noise pollution and urban influence
- Remove and restore the unnecessary developed (paved) areas within the corridor right-of-way
- Create a protective habitat along the entire length of the corridor
- Apply minimum height and width requirements based on the specific wildlife species

OCGP FEIR Mitigation Measure BIO3, which continues to apply to Addendum No. 3, ensures that the City of Irvine would continue to work with State and federal agencies to implement the revegetation/restoration plan necessary to create a viable wildlife corridor within the project area. The City has already engaged in this process as is demonstrated through the preparation of the Draft Irvine Wildlife Corridor Master Plan, which is independent of this VTTM/MSM process.

4.4.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

The OCGP FEIR disclosed several significant impacts of the Revised Overlay Plan, including potential impacts on: (1) the southern tarplant, a federal species of concern; (2) the limited

amounts of highly disturbed wetland habitat on the project site; and (3) the wide range of species of trees, many of which are mature specimens.

4.4.3 IMPACTS ANALYSIS FOR VTTM/MSM

The VTTM/MSM does not change or intensify the development approved for the project site. The VTTM/MSM provides additional design detail for development purposes and is being processed in compliance with Section 7.1 of the Great Park Development Agreement. The development area and impacts of grading are consistent with the Revised Overlay Plan; therefore the conclusions drawn in the OCGP FEIR adequately describe the environmental effects of the VTTM/MSM relative to biological resources, as well as the severity of the impacts.

The VTTM/MSM is consistent with the land use plan analyzed in the OCGP FEIR, and no additional areas are proposed for development. Further, the VTTM/MSM includes a wildlife corridor consistent with the guidelines described above in Section 4.4.1 (i.e., creation, revegetation), and are defined as they are generally used by restoration professionals in California and by the SER. The Wildlife Corridor planning efforts have been ongoing, and the Orange County Great Park Plan land use concepts accommodated this ongoing planning effort, as does VTTM/MSM.

OCGP FEIR Mitigation Measure (MM) BIO1 stated that prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl shall be conducted. MM BIO1 also stated that prior to approval of a subdivision map for development within, or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owl, least Bell's vireo, or southwestern willow flycatcher in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement or, if impacts cannot be avoided, then mitigation shall be negotiated through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG). Mitigation Measure BIO1 would continue to apply to the VTTM/MSM (see Mitigation Measure BIO1, below).

The OCGP FEIR also stated that prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan sub-area that contains the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a Wetland Mitigation Plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). For wetlands impacted on-site, replacement, recreation (i.e., within the proposed wildlife corridor), and/or re-vegetation is deemed acceptable by the appropriate jurisdictional agencies. Accordingly, Mitigation Measure BIO2 below would also continue to apply to the VTTM/MSM.

The OCGP FEIR required that several focus surveys be conducted on the El Toro property for sensitive plant and wildlife species prior to development. PCR Services prepared a *Biological Resources Assessment for Lennar Heritage Fields, Orange County, California* in November of 2005 (Appendix E) and an updated assessment was prepared in June of 2006.⁴ This biological resources assessment is in direct compliance with mitigation measures BIO1, requiring a focus survey for the southern tarplant, mountain plover, and burrowing owl, and BIO2 requiring a wetlands delineation to be prepared for all areas within the master plan sub-area that contain the potential for wetland habitat and/or jurisdictional waters.

⁴ This report is available for review at the City of Irvine.

Jurisdictional Wetlands and “Waters of the U.S.”

A Jurisdictional Delineation for the site has been performed (*Investigation of Jurisdictional Wetlands and Waters of the U.S. Lennar Heritage Fields*, June 2006, PCR, Appendix F). The Heritage Fields property supports six intermittent drainage systems and a variety of associated ephemeral tributaries. Five of the drainages have their headwaters in undeveloped areas of the Lomas de Santiago Foothills to the north. San Diego Creek originates in an eastern portion of the watershed that is occupied by substantial residential and commercial development.

Disturbances such as channelization of large stretches of the drainages and dumping of debris and trash into portions of drainages have significantly altered several waterways and obscured many drainage features. Other disturbances on site include vegetation clearing to create roads and structures, agricultural runoff, and invasion by exotic species. Current and historic land uses associated with the establishment of MCAS El Toro (military structures, roads, agriculture, and residential development) have significantly changed the overall drainage patterns within the San Diego watershed. The cumulative impact to each wash or creek has resulted in habitat and water quality impairment within the San Diego Creek watershed.

These impacts include increased sediment and debris transport due to concrete-lined stream channels, increased flow velocities and scouring, increased bank erosion, increases in the presence of non-native plant species, and an overall reduction in the amount and the quality of the riparian habitat within the watershed. Alternatively, the disturbances have increased the amount of jurisdictional areas due to the creation of freshwater marsh habitat resulting from impoundment of stormwater runoff within and adjacent to drainages. In total, the site contains 37,102.1 linear feet of jurisdictional streambed that includes 22.02 acres of U.S. Army Corps of Engineers (USACE) jurisdictional “waters of the U.S.,” of which 1.66 acres meet the three-parameter definition of a jurisdictional wetland. CDFG jurisdictional streambed and associated riparian habitat total 38.61 acres.

Grading of the site would result in the permanent discharge of fill material into a total of 1.66 acres of wetland waters of the U.S., as well as temporary impacts to 5.27 acres of non-wetland waters of the U.S. (see Table 4.4-1, below). Mitigation would be implemented for impacts to jurisdictional waters by a combination of aquatic resource creations, restoration and enhancement activities. For example, an existing reach of the Agua Chinon Wash would be restored and a portion of Serrano Creek located within the proposed Irvine Wildlife Corridor would be restored and enhanced. A natural riparian system, including wetland waters within portions of Agua Chinon Wash south of Irvine Boulevard, would also be created.

Sensitive Biological Resources

There are a number of plant and wildlife species present, or potentially present, within the study area that have received special recognition by federal, State, or local resource conservation agencies and organizations. Their status is principally due to the species' declining or limited populations sizes, usually resulting from habitat loss. Protected sensitive species are identified by either State or federal resource management agencies, or both, as threatened or endangered under provisions of the California and Federal Endangered Species Acts.

Sensitive species that occur or could potentially occur within the study are based on one or more of the following:

- The direct observation of the species within the study area during one of the biological surveys.
- A record reported in the California Natural Diversity Database (CNDDDB).
- The study area is within a known distribution of a species and contains appropriate habitat.

Sensitive Plant Communities

The study area is dominated by highly disturbed habitat types with only small areas of native vegetation. A total of 9.7 acres of southern willow scrub occurs in scattered patches throughout the study area. Southern willow scrub is a high priority inventory community in the CNDDDB. This community is considered sensitive because it has experienced a decline in California and because it has the ability to support a number of sensitive species such as least Bell's vireo and southwestern willow flycatcher.

Sensitive Plant Species

Sensitive plants include those that are either candidates or are currently listed by the CDFG and USFWS and those that are considered sensitive by the California Native Plant Society (CNPS). Several sensitive plant species were reported in the CNDDDB from the surrounding region. In accordance with the mitigation measures of the OCGP FEIR, focused surveys for southern tarplant were conducted on June 3 and June 8, 2005. No specimens were found. The highly disturbed character of the site and reduced presence of habitat capable of supporting sensitive plant species make it highly unlikely that any listed plant species will occur on the site.

Sensitive Wildlife Species

Forty-nine sensitive wildlife species were reported in the CNDDDB as occurring with the USGS 7.5-minute El Toro quadrangle map and the eight surrounding maps. Habitat suitability assessments for these species were conducted concurrently with the site investigation throughout the 2005 fieldwork. The intent of the habitat assessment was to evaluate habitat for its ability to support sensitive species and ascertain which sensitive species are likely to be present within the study area based on expected habitat use, geographic range, and information collected in the vicinity of the study area.

Heritage Fields is not within a proposed or final critical habitat area. Six sensitive wildlife species were observed within the study area during initial field investigations: northern harrier (*Circus cyaneus*), merlin (*Falco columbarius*), Cooper's hawk (*Accipiter cooperii*), California horned lark (*Eremophila alpestris actia*), cactus wren (*Campylorhynchus brunneicapillus*), and loggerhead shrike (*Lanius ludovicianus*). Three of these species (northern harrier, merlin, and Cooper's

hawk) were also observed during wintering bird surveys. In addition, the golden eagle (*Aquila chrysaetos*), burrowing owl (*Athene cunicularia*), and ferruginous hawk (*Buteo regalis*) were observed utilizing the site during these subsequent wintering bird surveys.

Surveys for mountain plover (*Charadrius montanus*), in accordance with the OCGP FEIR mitigation measures, were conducted during the wintering bird surveys. No mountain plover were observed on site during those field investigations.

In a follow-up report⁵ on wintering birds dated October 30, 2006 with surveys conducted between October 2005 and March 2006, PCR Services searched the site for activity. No burrowing owls were seen until February 2006. Although the project site is open, its vegetation becomes dense and over two feet tall in most areas. A single owl occupied a burrow during the late winter but abandoned the area as the vegetation surrounding the burrow became three feet high and very dense. There was no indication that breeding activity had been initiated. Because the habitat became unsuitable as a natural result of not being mowed, PCR Services determined that no mitigation would be required. This survey was performed in compliance with Mitigation Measure BIO1 requiring a focused survey for the burrowing owl prior to the approval of a subdivision map for each project area.

Summary of the Biological Status of the Site

The OCGP FEIR required that focus surveys be conducted on the project site for several sensitive plant and wildlife species prior to specific development plans. The required surveys were carried out during 2005 and 2006. No species of endangered plants or wildlife were recorded on site during these investigations, which were conducted by PCR Services. The sensitive plant community of willow scrub extant on site is heavily disturbed and fragmented. As such, PCR Services did not recommend attempting to preserve any of the remnant stands or streambeds as they are now constituted. It was also determined that the presence of several sensitive species of birds would not impact the development process but would be a part of mitigation designed to avoid disturbance of nesting avian species. PCR Services' findings did not indicate a need to consult formally with the USFWS.

The VTTM/MSM is consistent with the analysis and findings in the OCGP FEIR for biological resources as no additional areas are planned for development beyond those already analyzed and approved and the more specific surveys of these areas did not identify any new or significant information or impacts.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda. This Addendum will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR or approved addenda.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times

⁵ This report is available for review at the City of Irvine

the OCGP FEIR was certified and the addenda were approved that indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or that would result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified and the addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant biological effects identified in and considered by the certified OCGP FEIR and addenda.

4.4.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

Mitigation measures BIO1 through BIO4, since adopted by the City, will be implemented in conjunction with master plan review and subsequent development permits. Implementation of the VTTM/MSM would neither change these mitigation measures nor their application to future development projects.

- BIO1 Prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl shall be conducted. Prior to approval of a subdivision map for development within or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owl, least Bell's vireo, or southwestern willow flycatcher in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement. If impacts cannot be avoided, then mitigation shall be negotiated through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG).
- BIO2 Prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan sub-area that contain the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a wetland mitigation plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). Wetlands impacted on-site replacement, recreation (i.e., within the proposed wildlife corridor), and/or re-vegetation as deemed acceptable by the appropriate jurisdictional agencies.
- BIO3 The City shall continue to work with State and federal agencies during the implementation of the proposed project to implement the re-vegetation/restoration plan for the wildlife corridor. Measures such as sight and sound barriers, including artificial sound walls and natural diversions (e.g., hedges and tree lines) shall be incorporated into corridor design to ensure the

viability of the corridor. The City shall implement the corridor consistent with the design criteria and viability analysis established in the EIR.

- BIO4 Prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height (DBH) greater than six inches and any significant (as determined by a certified arborist selected by the City) plants on the project site, excluding those within the habitat preserve shall be prepared. This inventory shall be prepared by an arborist certified by the International Society of Arboriculture and shall include (but not be limited to) data for each tree such as species, variety, DBH, condition (excellent, good, fair, poor, dead), and any recommendations. All trees in this inventory shall be considered "Significant Trees" under the City of Irvine's Urban Forestry Ordinance (UFO) (Sections 5-7-401 et seq.) and the UFO shall apply to all trees included in this inventory.

4.5 CULTURAL RESOURCES

4.5.1 ENVIRONMENTAL SETTING

Cultural Resources

The discussion of Cultural Resources includes archaeological and historical resources. The OCGP FEIR presented information pertaining to the regional setting of former MCAS El Toro from both a prehistoric and historic perspective. The OCGP FEIR reported the presence of ten prehistoric archaeological sites and eight isolated prehistoric artifacts which have been recorded in the northeastern habitat preserve portions of Planning Area 51 (Planning Area 51). These sites are generally located on the ridges between Borrego Canyon Wash and the Agua Chiñon Wash. There are two prehistoric sites, CA-ORA-551 and CA-ORA-602, and one prehistoric isolate located within a one-half mile radius of Planning Area 30.

The former MCAS El Toro was surveyed to determine whether any of its structures would be eligible for the National Register. Generally, a structure which has achieved significance in the past 50 years is not considered eligible for the National Register unless it is of exceptional importance. The evaluation was expanded to include eligibility under the Legacy Cold War Project (Public Law No. 101-511, § 8120). Portions of Planning Areas 30 and 51 (the former MCAS El Toro) were established during World War II, and no structure earlier than this period is at the former MCAS El Toro. Therefore, structures at the former military base could be considered historic as part of the Cold War Legacy. Surveys conducted by the USACE and the DoN, in conjunction with the base's closure, concluded that there were no structures eligible for designation as Cold War Legacy or for inclusion in the National Register of Historic Places.

Paleontological Resources

The OCGP FEIR reported that a majority of Planning Areas 30 and 51 are located on the Tustin Plain, a coastal alluvial plain. Alluvium from the Late Pleistocene to Holocene Epochs (approximately 2 million to 11,000 years ago) immediately underlies the majority of the project area, including the part occupying the coastal plain and washes in the eastern portion of Planning Area 51. The Pleistocene Alluvium formation is widespread and believed to extend to depths of 1,000 feet in Planning Area 30. A significant deposit of Pleistocene terrestrial vertebrates was recovered during excavation of a flood control basin four miles from Planning Area 30; thus, it is possible that similar beds underlie Planning Area 30 (Refer to OCGP FEIR 5.10-2).

The eastern portion of Planning Area 51 is located in the western foothills of the northern Santa Ana Mountains. The hills and ridges in the eastern part of Planning Area 51 are composed of older, underlying marine and nonmarine rock units of early Oligocene to late Pleistocene era (23 million to 2 million years ago). In order of decreasing geologic age, these latter rock units include the undifferentiated Sespe and Vaqueros Formations, Topanga and Monterey Formations, Oso Member of the Capistrano Formation, Niguel Formation, and Nonmarine Terrace Deposits. Nonmarine Terrace Deposits also underlie the terraces at the southern corner of Planning Area 51. The northwestern corner of Planning Area 51 contains a small portion of the Santa Ana Mountains foothills, which were separated from the main formation by erosion. This small portion is composed of undifferentiated late Cretaceous era (135 million years ago) marine Williams Formation. The rock units underlying portions of Planning Area 51 have previously yielded important fossil remains at recorded fossil sites on and near the site. There are three recorded fossil sites in Planning Area 51. These sites occur in undifferentiated Sespe and Vaqueros Formations and in the Topanga Formation. Fossil types include marine invertebrates and vertebrates, continental vertebrates, land plants, and land mammals. The three recorded fossil sites lie within the proposed habitat preserve portion of Planning Area 51. No development is proposed in this portion of the project area under the proposed land uses. (Refer to OCGP FEIR p. 5.10-1 and Table 5.10-1.)

4.5.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

Cultural Resources

The OCGP FEIR determined that development according to the Revised Overlay Plan would not cause a substantial adverse change in the significance of any historical structure. The consequence of grading activities associated with future development, however, could potentially result in a substantial adverse change in the significance of an archaeological resource. The OCGP FEIR also stated that grading activities could uncover previously unknown human remains, including those interred outside formal cemeteries.

Paleontological Resources

The OCGP FEIR stated that earthmoving operations associated with grading and trenching have the greatest potential to impact buried paleontological resources in the moderately to highly sensitive areas in the coastal plain and washes, northeastern, northwestern, and southern portions of Planning Area 51. The OCGP FEIR considered the potential impact associated with earthmoving operations as a significant impact for which mitigation was necessary.

4.5.3 IMPACTS ANALYSIS FOR VTTM/MSM

Background

The OCGP FEIR included cultural resources investigations as part of CEQA compliance. Although the entire project area was the subject of previous cultural resources investigations as part of the Base Realignment and Closure process, it was determined that an updated survey and report was necessary to supplement the previous work. PCR Services performed an additional Phase I and II cultural resources investigations, the results of which can be found in the *Cultural Resources Update and Review, Heritage Fields/The Great Park, City of Irvine, Orange County, California* report⁶ dated September 2006.

⁶ This report is available for review at the City of Irvine.

Methodology

PCR Services' cultural resources assessment included an updated cultural resources record search through the California Historic Resources Information System, a Native American Sacred Lands record search through the California Native American Heritage Commission, Native American consultation, a pedestrian survey of the project area, archaeological site testing (i.e., excavation), and archaeological site evaluation. The record search and pedestrian survey were initiated in October 2005 and completed in February 2006. The archaeological test excavations and site evaluations were completed in June 2006.

In addition to the updated Cultural Resources investigation, PCR Services assisted the City of Irvine with SB 18 consultation on August 31 and September 13, 2006. The consultation was attended by representatives from five affiliated tribes or tribal groups who responded to the City's request for Native American comments.

Findings

Archaeologists identified a total of four isolated finds (Iso-1 through Iso-4) and five archaeological sites. The archaeological sites include one historic railroad spur (ORA-1658), one historic standpipe (ORA-1659), one historic debris scatter (ORA-1662), and two prehistoric lithic scatters (ORA-1660 and ORA-1661). Five of these cultural resources were tested to determine if subsurface artifacts and/or features were present: Iso-1, Iso-2, Iso-4, ORA-1660, and ORA-1661. Testing did not reveal significant cultural deposits below the ground surface and consequently, these resources are not recommended as eligible for listing in the National Register of Historic Places or the California Register of Historic Resources. Historic research was conducted to determine the significance of the historic archaeological resources ORA-1658 and ORA-1659. While the railroad spur and the standpipe were likely related to the agricultural operations of the historic Irvine Ranch, these resources lack integrity and are not recommended as eligible for listing on the National Register of Historic Places or the California Register of Historic Resources.

Given the geomorphic location of the project area at the base of the Tustin Plain (i.e., coalescing alluvial fans), it is likely there are deeply buried prehistoric cultural deposits. Evidence to support this includes the discovery of two buried prehistoric archaeological sites, ORA-1529 and ORA-1530, during the construction of the Marshburn Retarding Basin in 1999 (located within the project area adjacent to the commercial nursery). Site ORA-1529 was buried at 1.3 meters (m) beneath the ground surface, and site ORA-1530 was buried 10.4 m beneath the ground surface. Charcoal from a hearth feature at site ORA-1530 yielded calibrated radiocarbon ages of 8,545 and 9,215 years before present.

A review of the entire project described in the OCGP FEIR and the results of the investigations were presented to representatives from the five affiliated Native American tribes or tribal groups who responded to the request for comments. Although no specific issues were raised, the tribal representatives expressed concerns that there may be buried cultural resources and that monitoring by Native American Monitors should be conducted during grading and earth-moving operations.

The updated study of the project area determined that there are no known significant archaeological resources located within the proposed OCGP project area. However, as stated above, there is the likelihood of deeply buried prehistoric cultural deposits due to the location of the project area at the base of the Tustin Plain and as a result of the discovery of two buried prehistoric sites, ORA-1529 and ORA-1530. This potential impact would be less than significant as a result of compliance with the mitigation measure CULT1 requiring a detailed archaeological

report to be prepared with Planning Areas 51 and 30 that also requires the provision of recommendations to prevent degradation of archaeological resources. This mitigation measure has been satisfied as said report has already been prepared and submitted to the City. In addition, CULT2 requiring the monitoring of excavation and grading activities associated with future development of Planning Areas 51 and 30 has been replaced with standard condition 2.1. Mitigation measures CULT3 and CULT4 requiring a detailed mitigation program to address archaeological resources discovered during grading and the accidental discovery of any human remains are still applicable to the VTTM/MSM.

Cultural Resources

The VTTM/MSM is consistent with the General Plan and Zoning for Planning Areas 30 and 51. The proposed VTTM/MSM does not include any change in land use or intensification of the project analyzed in the OCGP FEIR. The VTTM/MSM would not open new areas to disturbance nor cause greater disturbance than reported in the OCGP FEIR. The impacts disclosed in the OCGP FEIR adequately described the effects of the VTTM/MSM in that the VTTM/MSM would not cause a substantial adverse change in the significance of any historical structure; the consequence of grading activities associated with future development could potentially result in a substantial adverse change in the significance of an archaeological resource; and grading activities could uncover previously unknown human remains, including those interred outside formal cemeteries. Mitigation measures were developed to reduce any impacts to less-than-significant levels and remain relevant to the adoption of the VTTM/MSM. As such, no impact beyond what was identified in the OCGP FEIR and the addenda is anticipated to occur.

Archaeological Resources

In accordance with the OCGP FEIR, prior to subdivision for development, a detailed archaeological report(s) will be prepared within Planning Areas 51 and 30. This report(s) will specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. All recommendations contained in the report shall be implemented, and compliance with this measure will be verified by the Community Development Department (see Mitigation Measure CULT1, below).

Paleontological Resources

The VTTM/MSM does not include any land use change or intensification. Adoption of the VTTM/MSM would not open new areas to disturbance beyond what was described in the adopted OCGP FEIR and the approved addenda. The paleontological mitigation measure developed for the OCGP FEIR remains applicable to future development under the VTTM/MSM.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda. This Addendum will not will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available that indicates substantial changes in circumstances which would require major changes to the certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved, which indicates that the project will have one or more significant effects not discussed in the OCGP FEIR or that would result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified and the addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant cultural effects identified in and considered by the certified OCGP FEIR and approved addenda.

4.5.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

Cultural Resources

The OCGP FEIR identified mitigation measures CULT1 through CULT4, adopted by the City, which will reduce the effects of development under the adopted Plan to a less-than-significant level. Measures CULT1 through CULT4 are applicable to future development under the VTTM/MSM.

- CULT1 Prior to subdivision for development, a detailed archaeological report(s) shall be prepared within Planning Areas 51 and 30. This report(s) shall specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. Recommendations contained in the report shall be implemented. Compliance with this measure shall be verified by the Community Development Department. This mitigation measure has been satisfied.
- CULT2 Monitoring of excavation and grading activities associated with future development in Planning Areas 51 and 30 shall be conducted by a certified archaeologist in accordance with the report required in Mitigation Measure CULT1. If resources are encountered in the course of ground disturbance, the archaeological monitor shall be empowered to halt grading and to initiate an archaeological testing program. The testing shall include recordation of artifacts, controlled removal of the materials, and an assessment of their importance under CEQA and the City's local guidelines. Compliance with this measure shall be verified by the Community Development Department.
- CULT3 Prior to the issuance of grading permits and/or building permits for any future development in Planning Areas 51 and 30, a detailed mitigation program shall be submitted by the applicant to the City of Irvine to address archaeological

resources discovered during grading. Provisions of the program shall include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be a unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation shall be available. Work may continue on other parts of the construction site while archaeological resource mitigation takes place. The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project includes potentially significant archaeological sites. These include retaining a qualified archaeologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process. Compliance with this measure shall be verified by the Community Development Department.

CULT4 Prior to the issuance of any grading and/or building permits, a mitigation program shall be submitted by the developer to the City of Irvine to address the accidental discovery or recognition of any human remains. The program shall include the following:

There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

- The county coroner must be contacted to determine that no investigation of the cause of death is required, and

If the coroner determines the remains to be Native American:

- The coroner shall contact the Native American Heritage Commission within 24 hours.
- The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased Native American.
- The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for the means of treating or disposing of, with appropriated dignity, the human remains and any associated grave goods, as provided in Public Resources Code Section 5097.98, or
- Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.
 - The Native American Heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission.
 - The descendant identified fails to make a recommendation; or
 - The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the

Native American Heritage commission fails to provide measures acceptable to the landowner.

Compliance with this measure shall be verified by the Community Development Department.

Paleontological Resources

The OCGP FEIR identified that mitigation measure P1, adopted by the City, will reduce the effects of development under the Revised Overlay Plan to a less-than-significant level. Measure P1 is applicable to future development under the VTTM/MSM.

- P1 Prior to issuance of a grading permit for any portion of the project area, a qualified paleontologist shall be retained by the City or designee to carry out an appropriate paleontology investigation of the area proposed for grading. (A qualified paleontologist is defined as an individual with an M.S. or Ph.D. in paleontology or geology who is familiar with paleontological procedures and techniques.) The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant paleontological sites, and paleontological monitoring conditions have not been attached to the previous map approval. These standard conditions include retaining a qualified paleontologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process.

When fossils are discovered, the paleontologist (or paleontological monitor) shall recover them. In most cases, this fossil salvage can be completed in a short period of time. However, some fossil specimens (such as a complete large mammal skeleton) may require an extended salvage period. In these instances the paleontologist (or paleontological monitor) shall be allowed to temporarily direct, divert or halt grading to allow recovery of fossil remains in a timely manner. Because of the potential for the recovery of small fossil remains, such as isolated mammal teeth, it may be necessary in certain instances to set up a screening-washing operation on-site.

Fossil remains collected during the monitoring and salvage portion of the mitigation program shall be cleaned, repaired, sorted, and cataloged. Compliance with this measure shall be verified by the Community Development Department.

4.6 GEOLOGY AND SOILS

4.6.1 ENVIRONMENTAL SETTING

The OCGP FEIR describes the topography of the project site as nearly flat and gently sloping down to the west to southwest with elevations ranging from 450 feet above mean sea level (msl) to 200 feet above msl. Planning Area 30 is located at the southeastern margin of the Tustin Plain with elevations ranging from about 260 to 300 feet above msl. Planning Area 51 includes some slopes of the Santa Ana foothills which each have elevations of about 750 feet above msl. Alluvial soils of six major soil associations consisting predominantly of varying sands, silts, and clayey silty sands are present within Planning Area 51. Soils underlying Planning Area 30 contain clayey loam alluvial material, terrace deposits, and old and unconsolidated recent alluvium of the Myford and Sorrento series.

The OCGP FEIR identified the primary potential seismic hazard in the area as ground motion. Seismic Response Area (SRA) designations are used by the City to assess the geologic and seismic risk associated with potential development. All of Planning Area 30 and a majority of Planning Area 51 are located within SRA-2 (denser soils/deeper groundwater) and are considered suitable for development. The planned development area of Planning Area 51 situated north of Irvine Boulevard is designated SRA-3 (alluvium/shallow bedrock) and is also susceptible to ground motion.

No known active faults crossing or projecting into the project area were identified; however, the project site is located within the seismically active southern California region and there are 2 active faults—the Whittier-Elsinore Fault and the Newport-Inglewood Fault—located within 14 miles of the site.

4.6.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

The OCGP FEIR disclosed the potential for future development of the project area to result in the exposure of people or structures to strong ground shaking in the event of a major earthquake along any one of the active faults in the region. The OCGP FEIR noted that new construction would be required to adhere to current seismic safety building codes which address seismic concerns. Existing buildings within Planning Area 51 do not meet current seismic codes; therefore, the temporary or permanent reuse of the existing buildings and the associated exposure of people or structures to potential substantial adverse effects due to strong seismic-related ground shaking were considered significant impacts.

Because of the documented landslides in the northeastern Santa Ana foothills area of the project site, the OCGP FEIR analysis concluded that the development would result in a significant impact associated with landslides in the affected area of Planning Area 51 east of Irvine Boulevard, where future development of habitable structures could occur under the Revised Overlay Plan.

The OCGP FEIR also concluded future development has the potential to result in soil erosion or the loss of topsoils and risk to life and property with the presence of expansive soils, and that these impacts are considered significant. The VTTM/MSM includes the same land uses and development areas as the Revised Overlay Plan; therefore the conclusions drawn in the OCGP FEIR adequately describe the environmental effects of the VTTM/MSM relative to soils, geologic hazards, and seismic safety, as well as the severity of the impacts.

4.6.3 IMPACTS ANALYSIS FOR VTTM/MSM

This Addendum addresses activity that does not increase the intensity or change the type of development within the OCGP. The VTTM/MSM includes the mass grading plan for the Heritage Fields project area. The detail of project design has been developed in accordance with previous approvals. The grading numbers for the VTTM/MSM are provided in Section 4.3, Air Quality. Mitigation Measure GS4 requires a detailed geotechnical and hydrological report. These reports were prepared as part of the VTTM/MSM submission. The Drainage Master Plan was prepared by Fuscoe Engineers, Inc., dated September 2006 to comply with all applicable State, County, and City of Irvine requirements and establishes surface runoff control measures. The Geotechnical Report prepared by Zeiser Kling Consultants⁷ complies with all applicable State, County, and City of Irvine requirements and establishes the standard engineering practices for soil preparation and erosion-control during project implementation. No additional impacts are created by the project and no additional changes in mitigation are required.

⁷ These documents are on file at the City of Irvine Redevelopment Department.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or any otherwise available information that indicates substantial changes in circumstances which would require major changes to the certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved which indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or that would result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified and the addenda approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant geology and soils effects identified in and considered by the certified OCGP FEIR and approved addenda.

4.6.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified four mitigation measures, since adopted by the City, to reduce the effects of the Revised Overlay Plan on soils, geologic hazards, and seismic safety. All of the mitigation measures are applicable to implementation of the project and would be carried forward to future development of the project site. Implementation of measures GS1 through GS4 (listed below) would reduce project impacts to a less-than-significant level.

- GS1 Prior to issuance of a building permit, the City of Irvine shall require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest Building Codes adopted by the City of Irvine. Compliance with this measure shall be verified by the Community Development Department.
- GS2 Prior to issuance of a building permit, as per existing City policies, geological studies shall be prepared at the time specific development projects are proposed to address site specific geological considerations. The scope of each geological study is based on the underlying geological conditions of the individual site. These reports will provide measures to prevent settlement.

Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing, shall be conducted. The purpose of the subsurface evaluation is to:

- a. Further evaluate the subsurface conditions in the area of the proposed structures.
- b. Provide specific data on potential geologic and geotechnical hazards.
- c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface, and subsurface drainage, temporary and/or subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural section, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

- Seismic Ground Shaking – Measures to prevent risk of loss, injury or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.
- Erosion or Loss of Topsoil – Erosion and sediment control measures shall be implemented as required by the City's Grading and Water Quality ordinances.
- Where Expansive Soils Exist – Measures for the design of foundation, slabs, flatwork and other improvements subject to drainage from expansive soils.

Compliance with this measure shall be verified by the Community Development Department.

GS3 Prior to issuance of building permits for the occupancy of any existing structure at the former MCAS El Toro, or occupancy of any existing structure if a building permit is not issued, a seismic evaluation of the structure including recommendations for seismic improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required seismic improvements shall be submitted to the Chief Building Official for review and approval.

GS4 Prior to issuance of a grading permit, detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specifically address erosion control and surface runoff for both construction and long-term operations on the site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx into the drainage system shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

4.7 HAZARDS AND HAZARDOUS MATERIALS

4.7.1 ENVIRONMENTAL SETTING

Hazardous Materials and Hazardous Wastes

The OCGP FEIR discussed an environmental baseline survey that was conducted for the project area. Information was used from the Base Realignment and Closure Business Plan for Marine Corps Air Station (MCAS) El Toro dated May 2002; the environmental baseline survey (EBS) dated 1995; and an update to the EBS—April 2003 Draft Final EBS. The 2003 EBS identified “76 potential release locations, all of which require further evaluation for potential releases to the environment and subsequent remediation, if required” (Refer to OCGP FEIR p. 5.5-5).

Regarding the Installation Restoration Program (IRP), the OCGP FEIR summarizes the status of each IRP site based on the information available at the time the EIR was prepared. Thirteen (13) IRP sites were identified as requiring “No Further Action,” including sites 4, 6, 7, 9, 10, 13, 14, 15, 19, 20, 21, 22, and 25. The IRP sites identified as “Action Required” included sites 1, 2, 3, anomaly 3, 5, 8, 11, 12, 16, 17, 18 (plume), and 24 (Refer to OCGP FEIR pp. 5.5-6 through 5.5-9).

Of the 404 underground storage tanks (USTs) identified, 357 had been remediated and had received findings of “no further action” at the time the OCGP FEIR was prepared. Of the 39 aboveground storage tanks (ASTs) on the property, 36 had been remediated and received findings of “no further action” (Refer to OCGP FEIR p. 5.5-10).

Evaluation and remediation of previously identified IRP sites within the project site continue with the resulting changes in the condition of the property and was largely anticipated in the OCGP FEIR. Subsequent to certification of the OCGP FEIR, the DoN completed environmental-related findings that support the suitability to transfer real property made available through the Base Realignment and Closure process and to support of the lease of areas not yet suitable for transfer.⁸

The areas suitable for lease encompass locations of concern identified in the 1995 and 2003 EBS and in the OCGP FEIR where future evaluation and/or actions are ongoing or required. These areas were identified as “carve-outs” in the DoN documentation.⁹

Progress relative to conveyance of the carve-outs includes DoN transfer of approximately eight acres of the project site to Heritage Fields and the Great Park Corporation on March 22, 2006. At the time of the initial land sale, these properties (carve-outs) were retained by the DoN in order to complete environmental clean up, and have since been approved by the regulatory agencies for transfer (FOST No. 2). The following sites were included in this transfer:

- **Carve-out parcel II-J** – consists of approximately 0.2 acre situated in the central portion of former MCAS El Toro. It contains one building—Building No. 860—and one location of concern.
- **Carve-out parcel II-Q (portion)** – consists of approximately five acres situated in the eastern portion of the former MCAS El Toro. It is an abandoned jet fuel (JP-5) pipeline.

⁸ Irvine, City of, Redevelopment Agency. 2006 (September) *Orange County Great Park General Plan Amendment and Zone Change* (prepared by The Planning Center). Costa Mesa, CA: The Planning Center.

⁹ Ibid.

- **Carve-out parcel II-S** – consists of approximately 1.3 acres situated in the southeastern portion of former MCAS El Toro. It contains six buildings (347, 377, 447, 448, 566, and 726) and 13 locations of concern.
- **Carve-out parcel II-T** – consists of approximately 0.5 acre situated in the southeastern portion of former MCAS El Toro. It contains one building—Building No. 761—and four locations of concern. The facility was a former aircraft wash rack.
- **Carve-out parcel III-C** – consists of approximately one acre situated in the western portion of the former MCAS El Toro. It contains one building—Building No. 240—and seven locations of concern. This site was a former ordnance storage facility.

Emergency Plans

The OCGP FEIR described the former MCAS El Toro site (Planning Areas 30 and 51) as a potential emergency response staging area because of its capacity for processing and storing large quantities of cargo. The Orange County Emergency Plan, which incorporates the statewide standardized emergency management system (SEMS), guides multijurisdictional response to emergency conditions. No substantial change to the description of the setting regarding emergency plans has occurred that would alter the analysis and conclusions of the OCGP FEIR on emergency plans and response.

Wildland Fires

The OCGP FEIR identified high fire hazard areas within open space; that is, within undeveloped land northeast of and adjacent to Planning Area 51. The City has no construction records of existing buildings and structures extant on the property. No substantial change to the description of the setting relative to wildland fires has occurred that would alter the analysis and conclusions of the OCGP FEIR regarding wildland fires.

4.7.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

Hazardous Materials and Wastes

The OCGP FEIR identified no significant impacts associated with the No Further Action IRP sites, which are listed in Table 4.7-1. Table 4.7-2 identifies each Action Required IRP site and its location relative to the Revised Overlay Plan. The OCGP FEIR disclosed the following environmental consequences of the Revised Overlay Plan as significant impacts:

- Construction activities involving demolition and possible substantial remodeling of existing structures in the project area as the project area develops could result in the disturbance of structures and soils containing asbestos-containing building materials (ACM) and lead-based paint.
- IRP site 24 is located in the 6.1 Institutional and 1.5 Recreation zoning districts. The site may be conveyed with temporary restrictions on use that are not appropriate for transportation facility use. This is considered a significant impact.
- Future uses of IRP site 3 may be potentially constrained by the implementation of institutional controls.

IRP SITE 16 (CRASH CREW PIT NO. 2) IS LOCATED IN THE 1.5 RECREATION ZONING DISTRICT THE SITE MAY BE CONVEYED WITH TEMPORARY RESTRICTIONS ON USE THAT ARE NOT APPROPRIATE FOR RECREATIONAL LAND USES.

Emergency Plans

The OCGP FEIR determined the Revised Overlay Plan would not be expected to interfere with emergency response and evacuation plans on the basis that other sites within Orange County are already designated as emergency staging areas and portions of the OCGP would remain available to non-aviation emergency response equipment. Accordingly, the OCGP FEIR concluded that the Revised Overlay Plan would not result in a significant impact related to emergency response and evacuation plans.

Wildland Fires

The OCGP FEIR concluded that the Habitat Reserve, Wildlife Corridor, and Recreational areas in the northeastern portion of Planning Area 51 would be exposed to the highest level of fire risk from wildland fires under the Revised Overlay Plan, and that reuse of existing buildings require inspection for conformance to fire life safety code requirements. The OCGP FEIR identified the wildland fire impacts as potentially significant.

4.7.3 IMPACTS ANALYSIS FOR VTTM/MSM

Hazardous Materials and Wastes

The proposed adoption of the VTTM/MSM does not change the land use or intensity of the development and would not alter the findings and conclusions previously certified and adopted in the OCGP FEIR. As such, there would be no change to either land uses or development areas from the OCGP FEIR, which adequately describes the environmental effects of the project relative to hazardous materials and wastes for the project site. No new or modified mitigation measures are required.

Emergency Plans

Like the Revised Overlay Plan, the VTTM/MSM would not change the way emergency response and evacuation plans are executed on the site on the basis that other sites within Orange County are already designated emergency staging areas and portions of the OCGP would remain available to non-aviation emergency response equipment. Accordingly, the proposed implementation of the VTTM/MSM would not change the conclusions certified in the OCGP FEIR and approved addenda; the VTTM/MSM would not result in a significant impact related to emergency response and evacuation plans.

Wildland Fires

As previously stated in the OCGP FEIR, the Habitat Reserve, Wildlife Corridor, and Recreational areas in the northeastern portion of Planning Area 51 would be exposed to the highest level of fire risk from wildland fires and reuse of existing buildings would require inspection for conformance to fire life safety code requirements. The VTTM/MSM would not alter the findings and conclusions of the OCGP FEIR regarding wildland fires.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances that would require major changes to the certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved that indicate that the project will

have one or more significant effects not discussed in the previous FEIR and addenda or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP Final Environmental Impact Report was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant hazards and hazardous materials effects identified in and considered by the certified OCGP FEIR and the approved addenda.

4.7.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified six mitigation measures, since adopted by the City, to reduce the effects of the Revised Overlay Plan on public health and safety (specifically, environmental effects associated with hazardous materials and waste, emergency response, and wildland fires) to a less-than-significant level. All of the mitigation measures are applicable to implementation of the VTTM/MSM and would be carried forward to future development of the project site. Measures HH1 through HH6 are listed below:

- HH1
- a. Prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the DoN or its transference shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property, including:
 - The type, location and condition of ACMs
 - The results of any asbestos testing
 - Description of asbestos control measures taken, if any
 - The costs or time necessary to remove existing ACMs
 - The results of any site-specific asbestos inventory updates
 - b. For any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DoN shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements.
 - c. Prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DoN. This requirement can be waived if an architect or project engineer responsible for the construction of the structure or an accredited asbestos inspector signs a

statement that no ACM was specified as a building material, and to the best of their knowledge, no ACMs were used as a building material.

- d. Any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws.
 - e. Any renovation and/or LBP abatement activities on residential units at former MCAS El Toro, shall be conducted in accordance with all applicable federal, state and local regulatory requirements.
- HH2
- a. Prior to transfer, the City shall receive from the DoN, with the concurrence of the appropriate regulatory agencies, a statement that the “Action Required” IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been identified and implemented. The City Irvine will adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 of the General Development Standards, boundaries and acreages are appropriate and shall be established by master plan approval.
 - b. Prior to transfer, if the DoN chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DoN a statement of temporary restrictions on the use of the sites and the release of the sites for restricted use following implementation of adequate remediation of groundwater. The City of Irvine shall adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are appropriate and shall be established by master plan approval.
- HH3
- The Community Development Department, in coordination with the Orange County Fire Authority (OCFA), will be responsible for review of all development plans, which would include evaluation of very high fire severity zones, specified fire protection plans, and any requirements for fuel modification zones. Projects potentially impacted by wildland fire hazards will be subject to OCFA Guidelines for “Development Within and Exclusion from Very High Fire Severity Zones” and “Fuel Modification Plans and Maintenance.” Additionally, all demolition, renovation, and construction activities in the project area will be subject to review by OCFA to ensure adequate fire protection, water flow, emergency access, design features, etc., according to the standards of the Uniform Fire Code and the California Fire Code. Due to the implementation of these standard fire protection procedures, the proposed project is not anticipated to result in significant short- or long-term adverse impacts related to fire hazards.

- HH4 Prior to issuance of occupancy permits of any existing structure at the former MCAS El Toro, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval.
- HH5 Prior to the issuance of a grading permit, the applicant shall prepare and the Director of Community Development shall approve a protocol plan (including but not limited to worker training, health and safety precautions, additional testing requirements, and emergency notification procedures) in the event that unknown hazardous materials are discovered during grading, construction, and/or related development activities. Additionally, said protocol plan will be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities. The applicant and/or property owner that discovers contamination due to past military operations not previously identified by the DoN shall be responsible for notifying the DoN, appropriate regulatory agencies, and the Director of Community Development of the City of Irvine in a timely manner.
- HH6 The City of Irvine shall develop and maintain the location and status, as well as other pertinent information, of all monitoring wells located on the former MCAS El Toro in a geographic information systems database (GIS). The City will review all permit applications on the former air station for monitoring well locations that may be affected by a permit, and require applicants to maintain appropriate access. Access to monitoring wells will be limited to authorized personnel.

4.8 HYDROLOGY AND WATER QUALITY

4.8.1 ENVIRONMENTAL SETTING

The OCGP FEIR described the project site as located within the San Diego Creek watershed, which includes the San Diego Creek, Peters Canyon Channel, and the tributaries to these water courses. The major drainage channels that traverse Planning Area 51 are the Marshburn Channel, Bee Canyon Channel, Agua Chiñon Channel, and Borrego Canyon Channel. Serrano Creek and the Upper San Diego Creek Channel traverse Planning Area 30 in the southern tip of the project site, south of the existing SCRRA Metrolink railroad tracks.

San Diego Creek and Upper Newport Bay are listed as impaired water bodies under Section 303(d) of the Clean Water Act. Accordingly, a Total Maximum Daily Load (TMDL) for pollutants that have impaired these water bodies has been established and was included in the OCGP FEIR. (Refer to OCGP FEIR Table 5.7-2.) Figure 4-1 shows the drainage areas and topography of the project area.

The OCGP FEIR also noted that the County of Orange and the City of Irvine hold a National Pollutant Discharge Elimination System (NPDES) permit for the storm drain systems, and that the State has issued an NPDES general permit relating to construction activities on sites over five acres in the area. Lastly, the flood-control improvements associated with the SR-133 toll road were noted in the OCGP FEIR as having reduced the 100-year flood zone north and west of the property.

4.8.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

The OCGP FEIR identified several significant impacts on hydrology and water quality associated with future development under the Revised Overlay Plan before mitigation. First, grading and excavation activities required for future development could result in the exposure of bare soils to both wind- and water-related erosion and associated significant water quality impacts (specifically, a violation of water quality standards or waste discharge requirements). Compliance with City grading and water quality regulations—including the NPDES discharge permitting requirements and preparation of a Storm Water Pollution Prevention Plan (SWPPP) and a Water Quality Management Plan (WQMP)—are the primary means of controlling the potential impacts of grading and excavation activities. These City requirements, which are described in mitigation measures H/WQ1 and H/WQ2, will reduce the impact to a less-than-significant level.

According to the OCGP FEIR, the existing drainage patterns and stream courses will not be substantially altered by future development under the Revised Overlay Plan. In addition, the potential for inundation is reduced by improvements to upstream flood-control facilities. Without project-related flood-control facilities, the rate or amount of surface runoff due to new development would result in flooding on- and off-site, depending on the nature of the specific development. Although this impact was identified as significant, the effect of increased runoff will be reduced to a less-than-significant level through preparation and implementation of hydraulic studies and recommendations for the specific development and the construction of flood-control improvements commensurate with the specific development (mitigation measure H/WQ3).

- The impact analysis for the adopted Revised Overlay Plan assumed development of the land use patterns created by the zoning designations for Planning Areas 30 and 51 and a backbone storm drain system. The storm drain system took into consideration and included improvements identified in the San Diego Creek Flood Control Master Plan (Refer to OCGP FEIR p. 5.7-16 and Figure 5.7-2).

4.8.3 IMPACTS ANALYSIS FOR VTTM/MSM

The VTTM/MSM is for (1) defining the backbone infrastructure, and (2) delineating the limits of mass grading for the Heritage Fields development and portions of the Orange County Great Park development. It is in compliance with all requirements of the existing General Plan and Zoning Code and does not propose any change to land uses or increase in intensities. Therefore, no substantial changes to hydrology are planned. As such, no changes to development assumptions or mitigation measures as they relate to hydrology and water quality are needed. The impact analysis presented in OCGP FEIR Section 5.7 sufficiently describes the project effects on hydrology and water quality.

The *Master Plan of Drainage, Fuscoe Engineering Dated May 1, 2007*¹⁰ describes post-development conditions; the on-site channels will continue to drain the project site as under existing conditions. Additional backbone storm drain facilities will be designed to accommodate the changes in the land use surface runoff within the Heritage Fields development and portions of the Orange County Great Park development. The post-development hydrology was analyzed per the Orange County Hydrology Manual for a 100-year peak storm design event.

OCGP FEIR Mitigation Measure H/WQ3 states that prior to approval of the first tentative tract or parcel map in the project area, detailed hydrologic and hydraulic analysis shall be conducted.

¹⁰ This report has been submitted to the City of Irvine as a part of the Master Subdivision Map application.

Studies and analyses shall be prepared in accordance with Orange County Flood Control District (OCFCD) methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. In compliance with the mitigation measure, Fuscoe Engineering, Inc. prepared the *Master Plan of Drainage for Heritage Fields Dated May 1, 2007*. The primary focus of the report was to evaluate the proposed drainage concept for the Heritage Fields project with respect to surface water hydrology. The study identified surface water runoff as well as drainage and flood-control improvements for the proposed project. The report also provides a brief discussion of the local hydrologic regime: an overview which ranges from the watershed delineation of the San Diego Creek Watershed to the physical drainage characteristics of Heritage Fields in Orange County.

Conclusion

The Heritage Fields and OCGP developments will utilize both regional drainage facilities and underground storm drain systems for storm water conveyance. Among regional channels, the OCGP will construct two soft-bottom channels, the Agua Chino Riparian Corridor and the Wildlife Corridor (WLC). The Marshburn Channel and Borrego Channel will remain in-place to drain the site as under existing conditions. In addition, the existing Serrano Creek Channel will be restored in-place, serving as an extension of the WLC, and the existing earthen channel of San Diego Creek will be replaced by a box culvert extension. The existing Bee Canyon drainage will be realigned subject to future designs of the OCGP and Heritage Fields. The Heritage Fields portion of the project would utilize a backbone drainage system that primarily drains to the regional facilities. The discharges from the Heritage Fields backbone system to the regional facilities are in accordance with the requirements of the Orange County Hydrology Manual and are consistent with the proposed drainage system analyzed in the OCGP FEIR, including the provision for a wildlife corridor.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances that would require major changes to certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved that indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP Final Environmental Impact Report EIR was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be

feasible would in fact be feasible and would substantially reduce one or more significant effects of the project but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant hydrology and water quality effects identified in and considered by the certified OCGP FEIR and the approved addenda.

4.8.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified four mitigation measures, since adopted by the City, to reduce the effects of the Revised Overlay Plan on hydrology and water quality. All of the mitigation measures are applicable to implementation of the VTTM/MSM and would be carried forward to future development of the project site. Implementation of measures H/WQ1 through H/WQ4 (listed below) would reduce project impacts to a less-than-significant level.

H/WQ1 Prior to issuance of a grading permit, the applicant shall provide evidence that the development of the project area shall comply with City of Irvine adopted Grading and Water Quality Ordinances to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area...and residential construction sites that result in the disturbance of five acres or more...shall be required to develop and implement BMPs...to control erosion and siltation and contaminated runoff from the construction sites." Note: In March 2003 this provision will apply to residential construction sites that result in the disturbance of one acre or more.

The City's standard conditions of approval indicate that a Storm Water Pollution Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.

Additionally, prior to the issuance of a grading permit, project applicant must submit, and the Director of Community Development or designee must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff after the site is occupied. Ongoing operations after construction would be subject to the Countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural, and non-structural measures specified in the Countywide NPDES DAMP Appendix which they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.), and shall reference the location(s) of structural BMPs. Completed with the WQMP (Fusco, June 28, 2006, Revised September 15, 2006).

Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOI) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the Director of Community Development of any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future project are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

H/WQ2 Prior to issuance of a grading permit, evidence (e.g., in the form of a construction management plan) shall be provided that demonstrates that all stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality requirements identified in the Santa Ana Regional Water quality Control Board Basin Plan, including Total Maximum Daily Load (TMDL) Implementation Plan adopted for this watershed. Completed with the SWMP (Fuscoe, September 13, 2006).

H/WQ3 Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrologic and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

H/WQ4 Prior to issuance of a building permit, developers with property located in the newly delineated 100-year floodplain shall be required to construct such improvements as necessary to remove the property from the 100-year floodplain. Additionally, the developer shall prepare a Letter of Map Revision (LOMR) request to have the FIRMs revised to remove the development areas from the 100-year floodplain upon completion of the approved flood control facilities. The LOMR request shall be filed upon completion of design of the flood control improvements to contain or redirect the 100-year flood flows away from the property.

After the improvements are constructed, Record Drawings and a maintenance agreement with, or letter from, a public agency shall be submitted to FEMA to complete the LOMR process.

4.9 LAND USE

4.9.1 ENVIRONMENTAL SETTING

The OCGP FEIR described the existing and former land uses on Planning Areas 30 and 51 and other areas adjoining and surrounding these planning areas. Subsequent to the City's approval of the General Plan Amendment and Zone Change for the Revised Overlay Plan, the DoN initiated an auction process for the sale of the former MCAS El Toro property. To facilitate the transfer, the property was divided and presented to prospective buyers as four distinct parcels. Interested parties were invited to bid on one or more of the parcels. In 2005, Heritage Fields, LLC successfully purchased all four parcels from the DoN (3,671 acres), and entered into a Development Agreement with the City of Irvine on July 12, 2005. The Development Agreement sets forth the terms and conditions of subsequent development and implementation of the Great Park Plan, including dedication in fee of 1,096 acres of the property for development of the Great Park.

4.9.2 EXISTING LAND USES WITHIN PLANNING AREAS 30 AND 51

The current condition of Planning Area 30—generally, the cultivation of agricultural lands—is substantially the same as the OCGP FEIR baseline year. Consistent with a provision in the Zoning Code, there are interim uses that reuse existing buildings on site. These interim uses are currently comprised of administrative offices and are allowed for a maximum of two years. A one year extension may be granted pending the approval of the Director of the Redevelopment Department. Existing leases are ongoing on an interim basis prior to development of the site.

Impacts Identified in the OCGP FEIR

The OCGP FEIR identified no significant impact to established communities. There were no residents living within Planning Areas 30 and 51 at the time the EIR was prepared and there has been no change in this regard; there are no residents living within the project site. The OCGP FEIR analyzed certain amendments to the City's General Plan that were adopted on May 27, 2003, as part of the City's adoption of the Revised Overlay Plan. The adopted Revised Overlay Plan was determined to be consistent with each element of the General Plan, as summarized below.

Land Use Element: The goal of the Land Use Element is to “promote land use patterns that maintain safe residential neighborhoods, bolster economic prosperity, preserve open space, and enhance the overall quality of life in Irvine.” The “OCGP, Orange County Great Park” land use category was created to reflect the types, intensity, and density of uses and activities contemplated in the OCGP and was determined to be consistent with the goal of the Land Use Element.

Circulation Element: The Circulation Element's goal is to “provide a balanced transportation system.” Adoption of the Revised Overlay Plan included the following modifications to the General Plan Circulation Element:

- Policy B-1(c) was changed to include the following provision:

“In conjunction with individual subdivision map level traffic studies for development proposed in Planning Areas 30 and 51, a LOS [level of service] ‘E’ would be considered acceptable for application to intersections impacted in Planning Areas 13, 30, 31, 32, 34, 35, and 39.”

- Figure B-1 (*Master Plan of Arterial Highways*) and Figure B-2 (*Operation Characteristics*) were amended to reflect the alignment of roadways within the OCGP, including:
 - Marine Way is aligned to join the Bake Parkway northbound exit ramp from Interstate 5 and terminate at Sand Canyon Avenue at Interstate 5.
 - Trabuco Road terminates at proposed Meadows Loop Road.
 - Rockfield Boulevard is realigned to terminate at Marine Way.
 - On-site circulation includes a new commuter highway/collector (Y Street [Ridge Valley]).
 - Research Parkway is renamed College Road and modified to extend from Irvine Boulevard to Marine Way.
- Figure B-3 (*Public Transit*) was amended to reflect the alignment of roadways within the OCGP.
- Figure B-4 (*Trails Network*) was amended to reflect the alignment of roadways within the OCGP.

Housing Element: The goal of the Housing Element is to “provide for safe and decent housing for all economic segments of the community.” The Revised Overlay Plan would add up to 3,625 new dwelling units and carry forward all adopted policies and objectives of the Housing Element; specifically, the residential development component would explore opportunities for maintenance of the housing stock and help the City meet its Regional Housing Needs Assessment through year 2025.

Conservation and Open Space Element: The goal of this element is to “maintain and preserve the environmental systems as a major feature in the City.” This goal would be achieved through the implementation of Objectives L-1 through L-12 and corresponding policies. Objective L-10 encourages “the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development.” The adopted Revised Overlay Plan includes 1,096 acres of Great Park recreational land, 290 acres of permanent agricultural land, and 974 acres of Habitat Preserve.

Cultural Resources: The goal of the Cultural Resources Element is to “ensure the proper disposition of historical, archaeological, and paleontological resources to minimize adverse impacts, and to develop an increased understanding and appreciation for the community’s historic and prehistoric heritage, and that of the region.” The OCGP FEIR identified the flatland area of the property as a low paleontological sensitivity zone and the hillside areas north of Irvine Boulevard as a high paleontological sensitivity zone. No objective of this element was amended by the Revised Overlay Plan and all of the objectives and implementing policies were to be implemented as part of the Revised Overlay Plan.

Noise Element: The Noise Element’s goal is to “contribute to a healthy and safe environment by minimizing noise impacts.” The Revised Overlay Plan would not affect the mobile noise, stationary noise, and noise abatement objectives and implementing policies of the Noise Element.

Public Facilities and Services Element: The goal of this element is to “provide a full range of necessary public facilities and services that are convenient to users, economical, reinforce City

and community identity, and reflect the participation of citizens.” The facilities and services described in the Urban Service Plan for the Revised Overlay Plan were formulated through a public participatory process and found to implement the goal and adopted objectives and related policies of this element.

Integrated Waste Management Element: This element seeks to “encourage solid waste reduction and provide for the efficient recycling and disposal of refuse and solid waste material without deteriorating the environment.” The OCGP FEIR discloses that the Revised Overlay Plan would not affect the adopted objectives and implementing policies regarding solid waste, waste, wastewater, and solid waste facility siting requirements; rather, it would provide the opportunity to better respond to the City’s solid waste reduction requirements and other provisions of the element by broadening the range of design options.

Growth Management Element: The goal of the Growth Management Element is to “ensure that growth and development are integrally planned with, and phased concurrently with, the City of Irvine’s ability to provide an adequate circulation system and public facilities.” When the OCGP FEIR was certified, it was disclosed that though the project made changes to the *Master Plan of Arterial Highways*, the project would not change any of the objectives or implementing policies of the Growth Management Element.

Parks and Recreation Element: The goal of the Parks and Recreation Element is to “provide park and recreation opportunities at a level that maximizes available funds and enables residents of all ages to utilize their leisure time in a rewarding, relaxing, and creative manner.” The OCGP FEIR reported that there would be no change to the objectives or implementing policies of this element.

Seismic Element: The goal of the Seismic Element is to “minimize the loss of life, disruption of goods and services, and the destruction of property associated with an earthquake.” Five Seismic Response Area (SRA) designations are used to describe the magnitude and types of potential seismic hazards present within the City, and to provide policy guidance. The OCGP FEIR reported that the majority of the El Toro property was in category SRA-2 and that no objectives or implementing policies would be changed as a result of the project.

Safety Element: The goal of the Safety Element is to “minimize the danger to life and property from man-made and natural hazards, including fire hazards, flood hazards, non-seismic geologic hazards and air hazards.” The OCGP FEIR disclosed the need for fuel modification to mitigate potential wildland fire hazards, and drainage improvements to lessen flood hazards associated with implementation of the Revised Overlay Plan, and concluded no objectives or implementing policies would be changed as a result of the Revised Overlay Plan.

In addendum No. 2, the City confirmed that each of the foregoing conclusions is equally applicable under the Revised Overlay Plan.

4.9.3 IMPACTS ANALYSIS FOR THE VTTM/MSM

The VTTM/MSM is consistent with the land uses approved in the OCGP FEIR. No changes or new impacts will occur.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances that would require major changes to the certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved that indicates that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP Final Environmental Impact Report was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant land use effects identified in and considered by the certified OCGP FEIR and the approved addenda.

4.9.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified no significant land use impact; therefore no mitigation measures were proposed.

4.10 NOISE

4.10.1 ENVIRONMENTAL SETTING

The OCGP FEIR described mobile noise sources from nearby freeways, roadways, rail facilities, and vehicle use at adjacent commercial businesses, light industrial facilities, and agricultural lands as the dominant noise sources in the project area. Stationary sources of noise included temporary and intermittent noise from construction activities and agricultural operations, noise associated with the industrial/business parks located to the east, and the business park and entertainment uses to the south.

The OCGP FEIR presented the results of a noise survey conducted on December 10–12, 2002, in which noise measurements were conducted at nine locations. The Community Noise Equivalent Level (CNEL) sound levels at the surveyed representative residential locations ranged from 58 dBA to 65 dBA (Refer to OCGP FEIR p. 5.4-18, Figure 5.4-6, and Table 5.4-7).¹¹ The audible noise sources included local traffic, distant traffic, birds, aircraft, and human voices, all of which were characterized as typical of suburban areas.

¹¹ California standards for community noise use the CNEL, in which the energy is averaged over a 24-hour day with a 5-decibel penalty from 7:00 PM to 10:00 PM and a 10-decibel penalty from 10:00 PM to 7:00 AM (OCGP FEIR p. 5.4-4). Sound is generated by the propagation of energy in the form of pressure waves, and is characterized by

4.10.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

The OCGP FEIR identified no significant noise effects associated with future development under the Revised Overlay Plan.

The noise assessment considered a worst-case condition of simultaneous demolition and construction activities with the combined sound level of 20 pieces of large mobile equipment operating at a distance of 5,000 feet; 5 concrete breakers operating at a distance of 6,000 feet; and 2 crusher plants operating at a distance of 10,000 feet from the nearest off-project area residential location. The distances represented the closest possible location of the construction equipment to the nearest off-project area residences during a heavy construction period. The nearest off-site residential uses (sensitive noise source) were located approximately 4,000 feet from the property boundary. Under this scenario, the analysis estimated sound levels of approximately 56 dBA at the nearest off-site residential location. (Refer to OCGP FEIR p. 5.4-24 and Table 5.4-8.)

As buildout of the project site was assumed to occur over time (years 2007–2025), construction-related noise impacts on residential areas within the project site were also estimated. Using the same construction equipment assumptions and a distance of 600 feet from the nearest residential area, the combined effect of the equipment was estimated at a sound level of 70 dBA at the nearest on-site residential locations during a heavy construction period. While the City of Irvine Noise Ordinance does not specify a limit on construction noise levels, it stipulates the days and hours during which construction activities may occur and when construction would not be allowed unless a temporary waiver is requested and granted; specifically, construction is allowed Monday through Friday between 7:00 AM and 7:00 PM, and on Saturdays between 9:00 AM and 6:00 PM; no construction is allowed outside those hours, on Sundays, or on federal holidays. (Refer to OCGP FEIR p. 5.4-31.)

4.10.3 IMPACTS ANALYSIS FOR VTTM/MSM

The adoption of the VTTM/MSM will not change or intensify development on site. The worst-case scenario described in the Revised Overlay Plan remains a reasonable assumption for the project; no new information about future demolition and construction has become available. As previously stated, inherent in a mixed-use planning district is the potential for noise-induced conflicts that can be identified and avoided during master plan review. At that stage, the stationary noise sources associated with the on-site equipment, loading/unloading operations, heating/ventilation/air conditioning (HVAC) equipment, and other noise-generating features of the specific use would be evident. Accordingly, appropriate acoustical design features—such as sound insulation, perimeter barrier walls, acoustical equipment enclosures, and operational restrictions—can only be evaluated in the context of a specific project. Grading will occur in the same locations as those analyzed in the OCGP FEIR. As such, the proposed adoption of the VTTM/MSM would not create any changes to the potentially significant noise effects identified in the FEIR. No changes are expected; therefore, no new mitigation measures are required beyond those required by the OCGP FEIR.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

amplitude (sound level) and frequency (pitch). (OCGP FEIR p. 5.4-1.) Sound levels are measured in decibels (dB) and frequency is measured in hertz (Hz). The A-weighted decibel (dBA) is used for analysis and regulatory purposes because it focuses on the range of sound levels and frequencies more discernible by the human ear.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances that would require major changes to certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved which indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP Final Environmental Impact Report was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant noise effects identified in and considered by the certified OCGP FEIR and the approved addenda.

4.10.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified no significant noise impact; therefore no mitigation measures were proposed.

4.11 POPULATION AND HOUSING

4.11.1 ENVIRONMENTAL SETTING

The OCGP FEIR discussed the caretaker status of the base following its closure. At the time the OCGP FEIR was prepared, there was a limited number of military and civilian staff working on the base. Currently, there are no residents living on the base. Consequently, there are 4,380 vacant group quarters units and 1,209 residential dwelling units. The OCGP FEIR examined demographics in the context of the existing and projected population of the Orange County region and the City of Irvine. Population and housing information was developed based on the 2000 United States Bureau of Census population, household, and employment census information. The areas surrounding the former base and the Orange County subregion are considered jobs-rich and housing-poor. The Southern California Association of Governments (SCAG) seeks to encourage housing growth over job growth in the Orange County subregion. The OCGP FEIR reported that the ratio of jobs-to-housing in the area has environmental implications related to transportation and air quality. Thus, a major focus of the regional planning efforts has been to improve the ratio of jobs-to-housing in all affected subregions in order to reduce vehicular trips, costly infrastructure improvements, and the resultant air emissions. Despite attempts, according to SCAG projections, the Orange County subregion's jobs/housing balance will worsen through the year 2025 as the number of jobs surpasses housing gains.

4.11.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

As noted above, the area surrounding the former MCAS El Toro and the Orange County subregion are considered jobs-rich and housing-poor. SCAG seeks to discourage job growth over housing growth in the Orange County subregion. The OCGP FEIR reported that regional projections are dynamic and, as a compilation of local land use projections, reflect changing community views on the location and the types of growth desired. Although implementation of the Revised Overlay Plan would not have exceeded the Orange County Projections -2000 employment projections, its impact on employment was considered significant because the Orange County subregion is anticipated to become increasingly jobs-rich over the next 20 years and the Revised Overlay Plan-related employment would exacerbate the subregional jobs/housing imbalance. The Revised Overlay Plan is expected to result in the provision of 3,625 dwelling units. Based on the city's zoning categories planned for this site, the dwelling units could accommodate up to 9,000 people. This increase in population will not substantially exceed projections contained for the site in OCP-2000. No significant impacts to population and housing were identified (www.scag.ca.gov).

4.11.3 IMPACTS ANALYSIS FOR THE VTTM/MSM

The proposed VTTM/MSM does not change or intensify the projected development within the Heritage Fields development and portions of the Orange County Great Park development. The City of Irvine will evaluate the consistency of the VTTM/MSM with the criteria established in Section 3.6.c of the City's Subdivision Manual and the City's Subdivision Ordinance Irvine Municipal Code, § 5-5-103 *et seq.* in that it has been found to be consistent with applicable general and specific plans. Development in accordance with the VTTM/MSM would be consistent with the various land uses, densities, and intensities allowed under the existing General Plan and zoning as modified under the City-initiated General Plan Amendment and Zoning Code for a Revised Overlay Plan in Planning Areas 30 and 51 delineated above. The VTTM/MSM does not propose new or revised population and housing uses beyond what has already been certified in the OCGP FEIR and approved in the addenda. Therefore, no change in impact is projected.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances that would require major changes to the certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved that indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which

was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP Final Environmental Impact Report was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant population and housing effects identified in and considered by the certified OCGP FEIR and the approved addenda.

4.11.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified a significant impact associated with the jobs/housing ratio, and also stated that no mitigation is available to rectify conflicts between the numerical objectives of regional planning documents including the jobs/housing ratio. This finding remains applicable to the currently proposed adoption of the VTTM/MSM.

4.12 PUBLIC SERVICES

4.12.1 ENVIRONMENTAL SETTING

Law Enforcement

At the time the OCGP FEIR was certified, law enforcement was provided by the Orange County Sheriff through a contract with the Department of the Navy (DoN) in Planning Area 51, and the Irvine Police Department provided law enforcement within Planning Area 30. Subsequent to the annexation of the property, the City of Irvine Police Department assumed law enforcement responsibility within both planning areas. The Irvine Police Department is headquartered at the Irvine Civic Center Complex and also has a satellite facility located in the Irvine Spectrum Entertainment Complex. The OCGP FEIR stated that the current police facilities are adequate to handle the personnel and equipment that are employed and utilized by the department for Planning Area 30. The OCGP FEIR also stated that the Irvine Police Department is researching the possibilities of expanding their facilities, although the specific details of constructing a substation were not known. At the present time, there is a manned Police Department booth at the entrance to Heritage Fields at the Marine Way Gate. Additionally, an office has been opened for Heritage Fields on the base at 7700 Trabuco Road in Building 11.

Fire and Emergency Medical Services

At the time the OCGP FEIR was certified, primary fire protection to Planning Areas 30 and 51 was provided by Orange County Fire Authority (OCFA) under contract to the County of Orange on an interim basis. Subsequent to the annexation of the property, OCFA continued to provide fire protection service to the project area. The OCGP FEIR stated that OCFA is planning two additional fire stations. OCFA also has an agreement in place with the Irvine Company as part of the Northern Sphere Area that should provide adequate service to all areas surrounding the project site.

Parks and Recreation

At the time the OCGP FEIR was certified, the DoN, acting in a caretaker's role, offered public access to a variety of existing recreational facilities including the existing Marine Memorial Golf

Course and equestrian stables. Since there are no residents living in Planning Area 30 and 51, there is no current demand for these facilities on site.

School Services

Planning Areas 30 and 51 are located within the school service boundaries of the Irvine Unified School District (IUSD) and the Saddleback Valley Unified School District (SVUSD). Prior to the closure of the base, an IUSD elementary school with a 600-student capacity was located and operated on the former base property. To accommodate the expected student growth from the project during buildout of the proposed project and prior to final construction of the new elementary school, IUSD may re-open this elementary school and/or assign students residing in the project area to various schools with available capacity.

4.12.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

Law Enforcement

The OCGP FEIR discussed the law enforcement needs of both Planning Areas 30 and 51 and stated that following annexation, the Irvine Police Department would provide law enforcement for the entire project area. The OCGP FEIR also analyzed the number of police officers, police supervisors and support staff, as well as the number of vehicles, equipment, and services. The OCGP FEIR stated that police protection for the park area would be funded through the use of a special park assessment. As stated in the OCGP FEIR, the general impacts associated with construction and operation of public facilities were analyzed in the OCGP FEIR as part of the planned land uses which also included the construction of a new police substation.

Fire and Emergency Medical Services

Subsequent to annexation of the property, Planning Areas 30 and 51 continue to be served by OCFA. The OCGP FEIR stated that there was the likelihood that additional fire services infrastructure would be required to support the proposed project. OCFA had not provided the detailed calculations of the exact extent of new services. The OCGP FEIR stated that the final determination of fire station needs and locations would be made at a future date when more information is known about risk, layout, and types of occupancy. The specific environmental impact of constructing the new fire facilities to serve the project could not be determined at the General Plan level of analysis as specific site plans and locations had not been prepared. However, the general impacts associated with the construction and operation of public facilities were addressed within the OCGP FEIR.

Parks and Recreation

As discussed in detail in OCGP FEIR, the parkland acreage under the project will greatly exceed the existing City of Irvine's standards, and will provide a regional open space amenity for the benefit of Orange County. The OCGP FEIR calculated a total of 45.1 acres of parkland required for the proposed development. A portion of that acreage will be in neighborhood parks, primarily for pools and tot lots, within close proximity of homes.

The OCGP FEIR also discussed the Implementation Agreement regarding the Natural Community Conservation Plan (NCCP) for the Central/Coastal Orange County Sub-region of the Coastal Sage Scrub NCCP (July 1996), and that the Habitat Reserve will be established on approximately 974 acres in the northeastern portion of Planning Area 51. Two drainage corridors and one wildlife corridor were also designated in the project area. The wildlife corridor is located on the southern portion of the project area. The project also included opportunities for

museums, theaters, gardens and other cultural facilities, as well as a sports park, two golf courses, and network of recreational riding and hiking trails throughout the project site. Project-level environmental review, at the time the specific location of new park and recreational facilities is known, and when specific development plans have been prepared, will be required.

School Services

The OCGP FEIR discussed in detail the proposed project, the related student generation, and the required school facilities. Based on an initial analysis, the IUSD estimated the need for one 13-acre K–8 site as well as funding for expansion and modernization of existing middle and high school facilities by project buildout.

4.12.3 IMPACTS ANALYSIS FOR VTTM/MSM

Law Enforcement

The proposed adoption of the VTTM/MSM does not change the intensity or type of land uses on site. The demand on law enforcement is within the envelope of analysis presented in the OCGP FEIR.

Fire and Emergency Medical Services

Since the VTTM/MSM does not change the intensity or type of land uses on site, the demand on fire protection is within the envelope of analysis presented in the previously certified OCGP FEIR and approved addenda.

Parks and Recreation

The VTTM/MSM does not propose changes to the land use intensities and types and maintains all of these facilities and amenities as VTTM/MSM features. Therefore, the VTTM/MSM remains within the envelope analyzed in the previously certified OCGP FEIR and approved addenda.

School Services

Since the VTTM/MSM does not propose changes to the number and type of residential units or to any other land uses on site, the proposed project remains within the envelope analyzed in the previously certified OCGP FEIR and approved addenda.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts. The adoption of the VTTM/MSM would not result in any new significant environmental impact, nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR and approved addenda.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances which would require major changes to the certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was

unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved that indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP Final Environmental Impact Report was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant public services effects identified in and considered by the certified OCGP FEIR and the approved addenda.

4.12.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR determined that the mitigation measures identified in other sections of the OCGP FEIR (Sections 5.1–5.13) addressed the impacts associated with the construction and operation of public facilities. These measures will be applicable to any new construction and operation of facilities for police, fire protection, park and recreation, and education to serve the new growth expected in the northern portion of the City.

4.13 RECREATION

Issues related to Recreation are discussed above under Section 4.12, Public Services and Facilities.

4.14 TRANSPORTATION/TRAFFIC

4.14.1 ENVIRONMENTAL SETTING

The OCGP FEIR described the traffic and circulation conditions of a study area that encompassed 145 existing intersection analysis sites (2007) and an additional 11 future sites (Post-2025) located in the City of Irvine, and portions of 7 adjacent jurisdictions including the Cities of Lake Forest, Mission Viejo, Laguna Hills, Laguna Woods, Aliso Viejo, Laguna Beach, and unincorporated areas of Orange County. The OCGP FEIR used the City of Irvine Traffic Performance Criteria, which establishes level of service (LOS) “A” to “D” as the peak-hour minimum acceptable service level. In its adoption of the Revised Overlay Plan, the City General Plan Policy B-1(C), which identified LOS E as acceptable for application to intersections in Planning Areas 13, 31, 32, 35 and 39, was changed to include the effects of future development in Planning Areas 30 and 51 on the intersections in those Planning Areas. The City’s performance criteria also include a threshold of 0.02 increase—roadway volume-to-capacity (V/C) ratio or the intersection capacity utilization (ICU)—to identify significant impacts and the associated need for improvements at both roadways and intersections.

At the time the OCGP FEIR was prepared, the following 10 study area intersections experienced deficient peak hour traffic operations:

- Culver Drive and Walnut Avenue
- Culver Drive and University Drive
- Jeffrey Road and Alton Parkway
- Jeffrey Road and I-405 Northbound Ramps
- Bake Parkway and Irvine Boulevard
- Bake Parkway and Jeronimo Road
- El Toro Road and Aliso Creek Road
- Los Alisos Boulevard and Jeronimo Road
- Muirlands Boulevard and Los Alisos Boulevard
- Trabuco Road and Alicia Parkway

4.14.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

The OCGP FEIR concluded that the Revised Overlay Plan would cause an increase in traffic which would be substantial in relation to the existing traffic load and capacity of the street system—that is, a substantial increase in either the number of vehicle trips, the V/C ratio on roadways, or congestion at intersections—in the year 2007, year 2025, and post-2025 scenarios (OCGP FEIR page 5.2-66):

Year 2007

- I-5 Freeway at Alton Parkway—southbound off-ramp (AM)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (AM)

Year 2025

- University Drive from the I-405 Freeway to Michelson Drive (AM)
- I-5 Freeway from Sand Canyon Avenue to Jeffrey Road—northbound (PM)
- I-5 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (AM)
- I-405 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (AM)
- I-5 Freeway at Jeffrey Road—southbound on-ramp (AM)
- I-5 Freeway at Sand Canyon Avenue—northbound on-ramp (PM)
- I-5 Freeway at Sand Canyon Avenue—southbound off-ramp (AM)
- I-5 Freeway at Alton Parkway—southbound off-ramp (AM)
- I-5 Freeway at Bake Parkway—southbound off-ramp (AM)
- I-405 Freeway at Sand Canyon Avenue—northbound direct on-ramp (PM)
- I-405 Freeway at Sand Canyon Avenue—southbound off-ramp (AM)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (AM)
- SR-241 Tollway at Lake Forest Drive—southbound off-ramp (AM)
- SR-133 Freeway at Barranca Parkway—northbound direct on-ramp (PM)

Post-2025

- I-5 Freeway from Sand Canyon Avenue to Jeffrey Road—northbound (PM)
- I-5 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (AM)
- I-405 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (AM)
- I-5 Freeway at Jeffrey Road—southbound on-ramp (AM)
- I-5 Freeway at Jeffrey Road—northbound off-ramp (PM)

- I-5 Freeway at Sand Canyon Avenue—northbound on-ramp (PM)
- I-5 Freeway at Sand Canyon Avenue—southbound off-ramp (AM)
- I-5 Freeway at Alton Parkway—southbound off-ramp (AM)
- I-5 Freeway at Bake Parkway—southbound off-ramp (AM)
- I-5 Freeway at El Toro Road—southbound off-ramp (PM)
- I-405 Freeway at Sand Canyon Avenue—northbound direct on-ramp (AM/PM)
- I-405 Freeway at Sand Canyon Avenue—southbound off-ramp (AM)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (AM)

Intersections

For the list of impacted intersections by analysis year, please refer to the following OCGP FEIR tables:

- Table 5.2-12 for year 2007
- Table 5.2-13 for year 2025
- Table 5.2-15 for post 2025

4.14.3 IMPACTS ASSOCIATED WITH THE 2006 GENERAL PLAN AMENDMENT/ZONE CHANGE (2006 GPA/ZC)

The OCGP FEIR established trip thresholds (also known as “trip caps”) for both Planning Areas 30 and 51. The trip cap is based on socioeconomic data average daily trip generation for the Revised Overlay Plan. The traffic impacts of the 2006 GPA/ZC project were analyzed by distributing project-related traffic over existing and future traffic conditions. The three future conditions (year 2010, year 2025 and post-2025) are based on the existing circulation system plus fully funded intersection improvements that were planned to be in place in each future time frame and the land use and development growth that is projected in each future time frame. In each case, project impacts were identified by comparing traffic conditions with and without the 2006 GPA/ZC project.

The circulation system performance criteria applied in the analysis were the criteria approved in the 2003 North Irvine Transportation Model (NITM) Program Nexus Study. The performance criteria were also consistent with the criteria adopted by the jurisdictions that are within the project study area. The criteria include components for arterial roadways, intersections, freeway/tollway ramps, and freeway/tollway mainline segments.

The results of the year 2010, year 2025 and post-2025 analysis indicated that the proposed 2006 GPA/ZC project was not forecast to significantly impact any roadway segment or impact any intersection, freeway/tollway ramp, or any freeway/tollway mainline segment.

4.14.4 IMPACTS ANALYSIS FOR VTTM/MSM

The Traffic Study (refer to Appendix C) for the VTTM/MSM in Planning Areas 30 and 51 was prepared by Austin-Foust Associates, Inc. (dated May 1, 2007) to address the transportation impacts for the project, i.e. backbone infrastructure with no new land use development in an interim year timeframe consistent with the Tentative Tract Map/Tentative Parcel Map (TTM/TPM) Scope of Work of the North Irvine Transportation Mitigation (NITM) Program Ordinance. The Traffic Study analyzed the impacts of the VTTM/MSM application based on year 2010 traffic conditions in the traffic analysis study area.

The proposed project is presented in Figure 4-2 and includes Marine Way from Sand Canyon Avenue to Bake Parkway, Trabuco Road from the SR-133 to "O" Street, and the extension of Rockfield Boulevard to Marine Way as four-lane primary arterials, Ridge Valley (formerly "Y" Street) from Portola Parkway to Irvine Boulevard and "O" Street (formerly College Road) as four-lane secondary arterials, Trabuco Road east of "O" Street, "A" Street, "B" Street, "C" Street and "D" Street as two-lane local road ways. The mid-block lanes are shown in Figure 4-3. It should be noted that the proposed project includes the construction of two lanes on "O" Street between Trabuco Road and Marine Way. The remaining two lanes will be built by the owner of the adjacent property (west side of "O" Street) when that property is developed. The City and the applicant will continue to work with Caltrans concerning the Marine Way intersection with Bake Parkway and I-5 ramps.

An Internal Circulation Analysis (refer to Appendix D) for the VTTM/MSM was prepared by Austin-Foust Associates, Inc. (dated May 1, 2007) to analyze the access and internal circulation for the full build-out of the development of Planning Areas 30 and 51. Access is illustrated in Figure 4-4, which shows the proposed access locations for the Lifelong Learning District, the Park District, and the Transit Oriented Development (TOD) District. Traffic associated with the full build-out of the development of Planning Areas 30 and 51 loads directly onto the surrounding arterial system at several locations. These include access to Irvine Boulevard via Ridge Valley; "O" Street (formerly College Road), "A" Street and "B" Street to Sand Canyon Avenue via Trabuco Road and Marine Way (and indirectly via Irvine Boulevard); and to Alton Parkway, Barranca Parkway, and Bake Parkway Via Marine Way. Access to the SR-133 is provided directly via a planned interchange at Trabuco Road and indirectly via "O" Street to the Irvine Boulevard interchange.

The intersections shown in Figure 4-5 were analyzed using intersection capacity utilization (ICU) values to determine level of service (LOS). The results of this analysis show that all intersections operate at an acceptable level of service under Post-2025 build-out conditions. The intersections were then analyzed for signalization needs. Traffic signal warrants based on peak hour volumes (as adopted by the Federal Highway Administration and Caltrans) were used to determine the need for signalization. The results of this analysis are illustrated in the previously presented Figure 4-4. Traffic signals will be installed at analyzed intersections based on traffic signal warrants.

Recommended on-site traffic-control measures include site access designations, the type of intersection approach lane requirements, and recommendations for left-turn and right-turn pocket design features.

Left-turn and right-turn pocket lengths for project access intersections are based on the City of Irvine's 2007 Transportation Design Procedures. The estimated left-turn storage length requirements for the analyzed intersections and the estimated right-turn pocket lengths are presented in the Internal Circulation Analysis.

Conclusion

The proposed VTTM/MSM will not produce new or substantially worsen significant impacts identified in the OCGP FEIR or addenda. Consistent with the conclusions in the OCGP FEIR, traffic and circulation impacts associated with the project would be considered less than significant as the future development would implement all applicable laws and regulations to reduce impacts on traffic and circulation.

The OCGP FEIR disclosed the traffic analysis assumption that the cumulative impact of the Revised Overlay Plan traffic along with other regional growth at the identified ramp and freeway

locations would be mitigated through a combination of regional programs that are the responsibility of other agencies and, if said programs are not implemented for the cumulative freeway/tollway ramp, impacts would remain significant and unavoidable (OCGP FEIR page 7-19). The VTTM/MSM will not alter this conclusion. Mitigation measures have been developed for the intersection locations identified as being impacted by the OCGP development. These mitigation measures are not considered new; rather, they are fully funded NITM Improvements identified in previous traffic studies and related CEQA documents.

The May 1, 2007 Master Subdivision Map Traffic Study ("Traffic Study") determined that implementation of the project (construction of the backbone infrastructure) would, absent NITM Ordinance compliance, affect the intersections at (i) Jeffrey Road and Alton Parkway and (ii) Lake Forest Drive and Avenida de la Carlota/I-5 southbound ramps, because non-project traffic would be diverted by construction of new roads. Compliance with OCGP FEIR Mitigation Measures and the NITM Ordinance fully addresses these effects. Based on the Traffic Study, the Jeffrey Road/Alton Parkway intersection improvement required by NITM should be advanced to 2010, as permitted under the NITM Ordinance. These Mitigation Measures are not considered new; rather they are fully funded NITM Improvements identified in previous traffic studies and related CEQA documents.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances that would require major changes to the certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved that indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP Final Environmental Impact Report was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant transportation/traffic effects identified in and considered by the certified OCGP FEIR and the approved addenda.

4.14.5 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR identified mitigation measures TRAN1 through TRAN8, since adopted by the City, which, if fulfilled prior to specified development approvals, will eliminate or substantially reduce the traffic and circulation effects of development under the adopted Plan. The measures, with minor clarifying revisions, as footnoted below, are applicable to future development under the project, as modified.

TRAN1¹² Prior to the approval of any final map (other than a financing and conveyance map) within Planning Areas 30 and 51, and prior to issuances of any building permits for permanent improvements within Planning Areas 30 and 51, the landowner or subsequent project applicant shall either (i) apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) ("Spectrumotion") in accordance with Article X of the recorded Declaration of Covenants, Conditions, and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs to reduce traffic, air quality and noise impacts, or (ii) develop and implement a similar transportation management plan containing the elements and meeting the criteria described below as approved by the Director of Public Works:

Transportation Management Plan (TMP)

The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for Planning Areas 30 and 51. This document summarizes the key elements of the TMP.

1.0 Introduction

The purpose of this document is to provide an outline for a comprehensive TMP for Planning Areas 30 and 51 ("Great Park TMP"). This report is not intended to provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.

The applicant may elect to annex Planning Area 51 and a portion of Planning 30 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed restrictions requiring participation in TMA. Membership dues provide the funding for the Association and its program, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.

¹² This mitigation measure has been slightly revised, as compared to the mitigation measure in the OCGP FEIR. The revised language gives the landowner or subsequent applicant the flexibility either to annex into Spectrumotion or to develop a similar transportation management plan, rather than allowing a management plan option only if annexation is not approved. Because the mitigation measures – i.e. annexation into Spectrumotion or development of a transportation management plan – remain the same, this change does not affect analysis of the impacts or the environmental conclusions from the OCGP FEIR.

In the event that the applicant elects not to annex into Spectrumotion, a TMP similar to that provided by Spectrumotion will be developed and implemented. This document sets forth the components of the TMP should it be necessary.

2.0 Transportation Management Plan Framework

The key elements of the Great Park TMP are set forth below:

New Hire Orientation: Inform newly hired employees of commuting services available to them.

Public Transportation Pass Sales: Provide a central location for purchase of passes to available transit services (i.e., OCTA buses, Metrolink, Amtrak, etc.).

Vanpool and Carpool Formation Assistance: Perform all of the administrative work necessary to establish van pools and car pools.

On-site Promotions: Hold rideshare promotions at work sites and assist in employer assistance promotions.

Telecommuting/Alternative Work Schedule Consulting: Assist employers in developing and implementing a telecommuting or alternative work schedule program.

Personalized Commute Consulting: Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.

Website: Maintain a website with all of their program information available.

Rideshare Promotions: Conduct high visibility rideshare promotions as a means to advertise its services.

Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.

Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.

3.0 Transportation Management Plan Implementation

As part of the TMP, a process will be established to monitor its effectiveness in reducing peak hour trip generation in Planning Areas 30 and 51. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.

TRAN2 Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of the FEIR. This mitigation measure has been satisfied.

TRAN3¹³ Prior to issuance of any building permits for permanent improvements within Planning Areas 30 and 51, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the NITM Ordinance.

TRAN4¹⁴ Prior to approval of each Master Tentative Map or Master Plan for numbered lots, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map or Master Plan for numbered lots. The traffic study area shall be the same as the study area utilized in the NITM Nexus Study. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate at a minimum the cumulative impact of the subject map and/or Master Plans and all previously approved or concurrently submitted maps and/or Master Plans. The methodology for the study area, applicable land use and circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved traffic study scope of work. The landowner or subsequent project applicant shall construct or bond for and enter into a funding agreement for necessary improvements identified in the updated traffic study and/or participate in the City fee program (OCGP FEIR Mitigation Measure TRAN2) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of the OCGP FEIR.

Traffic signals that are on-site or directly related to the development in Planning Areas 30 and 51 will be installed as warranted through the mitigation implementation plan process.

With regard to the subdivision maps compliance with the NITM Program and the other traffic conditions of approval shall satisfy the requirements of Mitigation Measure TRAN4.

TRAN5 In conjunction with the preparation of any updated traffic study as required in Mitigation Measure TRAN4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, that

¹³ This mitigation measure has been slightly modified, as compared to the mitigation measure in the OCGP FEIR, to reflect the fact that the NITM program serves as the implementing mechanism for the mitigation measure as originally drafted. Implementation of the requirements of the NITM ordinance satisfies the obligations of this mitigation measure.

¹⁴ Although this mitigation measure originally references “each Master Tentative Map,” it is apparent from the language of the measure that it applies to tentative maps and master plans which propose actual development and hence would generate traffic trips. The VTTM/MSM does not propose or authorize trip-generating development. Traffic studies in compliance with the mitigation measure and the NITM Scope of Work are required for each tentative map for development of any portion of the site. An additional change has been made to the second to last sentence of the mitigation measure – clarifying that the applicant must bond for and/or enter into a funding agreement for necessary improvements if it does not take on the obligation to construct such improvements.

landowner or subsequent project applicant and the City will take the following actions:

1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-tollway ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in the FEIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines.
2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency.
3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to recordation of the first final map for each Master Tentative map or equivalent to establish the method and timing of payment of the identified percentage responsibility.
4. The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.

TRAN6 The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.

TRAN7 Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a new Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-complete clause or any similar agreement restricting a public agency's authority to construct improvement.

TRAN8 Following adoption of a land use plan and circulation plan for Planning Areas 30 and 51 and before the issuance of any building permits within the MCAS El Toro property, the City of Irvine shall enter into a cooperative study with OCTA and other affected jurisdictions to amend the Orange County Master Plan of Arterial Highways (MPAH). Marine Way, Trabuco Road from the SR-133 tollway to College Road, and Y Street should be included on the MPAH.

4.15 UTILITIES AND SERVICE SYSTEMS

4.15.1 ENVIRONMENTAL SETTING

Potable Water

The OCGP FEIR described the potable water system for the project. The Irvine Ranch Water District (IRWD) is the jurisdictional agency responsible for plan approval and water service to the project area. Planning Areas 30 and 51 are located within Zone 3 North and Zone 4 of the IRWD water system. The existing on-site distribution system includes a network of distribution system pipelines, six reservoirs, and two pump stations.

Recycled Water

As stated in the OCGP FEIR, the IRWD is the jurisdictional agency responsible for plan approval and water service for the project area. Recycled water is currently supplied to Planning Areas 30 and 51 via a 12-inch IRWD Zone B pipeline that connects to an 8-inch former military base pipeline in the southwestern corner of the project area.

Sewer

As stated in the OCGP FEIR, the IRWD is the jurisdictional agency responsible for plan approval and sewer service for the project area. Planning Areas 30 and 51 are served by a two-branched system with flow, mainly by gravity, from the northeast to the southwest. The system includes a series of pipes ranging from 6 to 15 inches in diameter.

Solid Waste

The OCGP FEIR discussed, in detail, the environmental setting for solid waste for the project analyzed in the OCGP FEIR. Solid waste at the project site is collected by Waste Management, Inc. and is disposed of at the Frank R. Bowerman Landfill owned by the County of Orange Integrated Waste Management Department (IWMD).

The IWMD's Countywide Integrated Waste Management Plan (CIWMP) was approved in 1996 pursuant to the California Integrated Waste Management Board requirement. The CIWMP shows that there is sufficient solid waste disposal capacity in the County for the next 30 years.

Energy and Communications

Southern California Edison (SCE) serves the project via two primary substations. The Southern California Gas Company serves Planning Areas 30 and 51. AT&T is the communications provider for these Planning Areas. Detailed information regarding the environmental setting of dry utilities was included in Section 5.15 of the OCGP FEIR.

4.15.2 IMPACTS IDENTIFIED IN THE OCGP FEIR

Potable Water

The OCGP FEIR projected the potable water demand to be less than 1.75 million gallons per day (MGD) calculated for the land uses proposed within the project. Since the project does not include any additional intensity or change in the mix of land uses, the demand projection for the project is consistent with the OCGP FEIR. As stated in the OCGP FEIR, selected portions of the existing potable water facilities are assumed to remain in place and operational through project

buildout. The OCGP FEIR stated that the existing system will be expanded and integrated into the IRWD system and thus provide a backbone service to all users on the project site. The OCGP FEIR assumed a potable water system that would follow the routing of existing and proposed roadways.

Recycled Water

The OCGP FEIR stated that on January 27, 2003, the IRWD Board of Directors approved the assessment of water supply for the project. According to the findings of the assessment, the IRWD has determined that a sufficient non-potable water supply is available to serve the project. Since the VTTM/MSM does not increase the intensity or change the mix of land uses, the total non-potable water supplies will meet the project demand.

The OCGP FEIR stated that the implementation of the Revised Overlay Plan would require the expansion of the recycled water transmission lines to serve the project. It was assumed that selected on-site facilities would remain in place and operational through buildout. The OCGP FEIR stated that the existing system will be expanded and integrated into the IRWD system and provide a backbone service to all users in the project site. The OCGP FEIR assumed a non-potable system that would follow the routing of existing and proposed roadways within the area.

Sewer

The OCGP FEIR stated that the IRWD will continue to provide sewer service to the project area. The IRWD has indicated that it would have sufficient capacity to meet the future demand; however, additional wastewater treatment capacity may need to be purchased by project proponents as specific development projects come forward. The OCGP FEIR stated that projected buildout demand for sewer services based on the land uses in the project were 0.89 MGD and that the project would require an increase of sewer transmission capacity to serve the project. The proposed sewer system would preserve selected, existing on-site facilities in place and operational through buildout and would expand the system through extension of existing sewer lines. The OCGP FEIR stated that additional IRWD maintenance and equipment could be required to operate and maintain the proposed system.

Solid Waste

As stated in OCGP FEIR, demolition of existing runways, buildings, and structures within Planning Area 51 will generate debris materials that will have to be disposed of at local landfills. Green waste will also be generated as a result of ongoing park and landscaping maintenance. In addition to the City requirement for recycling of construction and demolition material to reduce waste, solid waste reduction will also be achieved through compliance with AB 939, which requires that a minimum of 50 percent of the solid waste generated in cities in California be diverted from landfills. Further, SB 1374 requires that all cities implement measures that require diversion of 75 percent of all construction and demolition waste from landfills. While the OCGP FEIR identified a potential impact related to solid waste, it concluded that, with the recommended mitigation measures, since adopted by the City, the impact would be less than significant.

Energy and Communications

A greater demand for electricity, gas, and communications will be generated by the proposed development of land uses within the project. The OCGP FEIR analyzed, in detail, the fuel and energy consumption projected for the project area. The certified OCGP FEIR stated that the implementation of the project will require the expansion of existing electrical, gas, and

communications systems to serve the project. Due to the outdated nature of the existing electricity, gas, and communications systems on the project site, the OCGP FEIR proposed to replace the existing systems in their entirety.

4.15.3 IMPACTS ANALYSIS FOR THE VTTM/MSM

Potable Water

The proposed adoption of the VTTM/MSM does not include any additional intensity or change in the mix of land uses; therefore, the demand projection for potable water is consistent with the OCGP FEIR. The OCGP FEIR stated that the specific environmental impact of constructing new water facilities to serve the project cannot be determined at the program level analysis, as site-specific plans for the installation of the sewer backbone system had not been prepared. However, the general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the potable water system, were identified as being addressed in the OCGP FEIR.

Selected portions of the existing potable water facilities are assumed to remain in place and operational through project buildout. The OCGP FEIR stated that the existing system would be expanded and integrated into the IRWD system and would thus provide backbone service to all users on the project site. The OCGP FEIR assumed a potable water system that would follow the routing of existing and proposed roadways. The VTTM/MSM includes the alignment for water lines throughout Heritage Fields. This is an additional project design detail and not a change in the project. No additional mitigation measures or change in any mitigation measure is required.

Recycled Water

The OCGP FEIR stated that on January 27, 2003, the IRWD Board of Directors approved the assessment of water supply for the project area. According to the findings of the assessment, the IRWD has determined that a sufficient non-potable water supply is available to serve the project. The proposed adoption of the VTTM/MSM, does not increase the intensity or change the mix of land uses, and the total non-potable water supplies would meet the project demand. The OCGP FEIR stated that the specific environmental impact of constructing new recycled water facilities to serve the project area cannot be determined at the program level analysis, as site-specific plans for the installation of the recycled water backbone system had not been prepared. However, the general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the recycled water system, were identified as being addressed in the OCGP FEIR.

The OCGP FEIR stated that implementation of the project analyzed in the OCGP FEIR would require the expansion of the recycled water transmission lines to serve the project area. It was assumed that selected on-site facilities would remain in place and operational through buildout. The OCGP FEIR stated that the existing system would be expanded and integrated into the IRWD system and provide a backbone service to all users on the project site. The OCGP FEIR assumed a non-potable system that would follow the routing of existing and proposed roadways within the project.

The VTTM/MSM includes the alignment for the recycled water lines throughout Heritage Fields. This is an additional project design detail and is not a change in the project. As stated in the OCGP FEIR, when the backbone recycled water system is devised, a project-level assessment of impacts would occur. No additional mitigation measure or change in any mitigation measure is required.

Sewer

The adoption of the VTTM/MSM would ensure that any project use of the existing sewer system would be in conformance with all applicable regional and state requirements and the mitigation requirements of the OCGP FEIR.

Since the proposed adoption of the VTTM/MSM does not propose to change the previously adopted intensity and mix of land uses, demand projections and proposed system expansion would remain the same. The OCGP FEIR stated that the specific environmental impact of constructing new sewer facilities to serve the project cannot be determined at the program level, as site-specific plans for the installation of the sewer backbone system had not been prepared. However, the general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the sewer system, were identified as being addressed in the OCGP FEIR.

The VTTM/MSM includes the alignment for the sewer lines throughout Heritage Fields. This is an additional project design detail and did not change the project description. No additional mitigation measures or changes to any mitigation measure is required.

Solid Waste

As stated in OCGP FEIR, demolition of existing runways, buildings, and structures within Planning Area 51 would generate debris materials that would have to be disposed of at local landfills. Green waste would also be generated as a result of ongoing park and landscaping maintenance. The VTTM/MSM has not changed the land uses or intensity; therefore, no change in impact to solid waste is anticipated. No additional mitigation measure or change in any mitigation measure is required.

Energy and Communications

It has been established that the design of the OCGP provides for future passive or natural heating or cooling opportunities within the project site. Specific provision of such opportunities would be covered in subsequent subdivision actions. The primary demand for electricity, gas, and communications for the project will be generated by the proposed development of land uses within the project area. The OCGP FEIR analyzed, in detail, the fuel and energy consumption projected for the VTTM/MSM. The analysis and conclusions in the OCGP FEIR would not change due to the project since the intensity and types of land uses proposed in the VTTM/MSM have not changed from those previously analyzed in the certified OCGP FEIR and approved addenda. The certified OCGP FEIR stated that the implementation of the project would require the expansion of existing electrical, gas, and communications systems to serve the project. Due to the outdated nature of the existing electricity, gas, and communications systems on the project site, the project proposed to replace the existing systems in their entirety.

The VTTM/MSM includes the alignment for the utility lines throughout Heritage Fields. This is an additional project design detail and did not change the project. No additional mitigation measures or change in any mitigation measure is required.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR and approved addenda due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available information that indicates substantial changes in circumstances which would require major changes to certified OCGP FEIR and approved addenda.

No New Information of Substantial Importance Showing Greater Significant Effects Than the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance which was unknown and could not have been known with the exercise of reasonable diligence at the times the OCGP FEIR was certified and the addenda were approved that indicate that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in the Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP Final Environmental Impact Report was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible and would substantially reduce one or more significant effects of the project but the project proponent declines to adopt them or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt them. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant utilities and service systems effects identified in and considered by the certified OCGP FEIR and the approved addenda.

4.15.4 MITIGATION FROM THE OCGP FEIR AND APPLICABILITY TO THE VTTM/MSM

The OCGP FEIR determined the mitigation measures identified in other sections of the OCGP FEIR (5.1–5.13) address the impacts associated with the construction and operation of public facilities. These measures would be applicable to any new construction and operation of facilities for the following types of utilities to serve new growth expected in the project area:

- potable water
- recycled water
- sewer
- energy and communication transmission facilities

Mitigation Measures SW1 through SW5, since adopted by the City, apply to future demolition and new construction and will be carried forward through permit approvals for subsequent development projects. The VTTM/MSM would change neither these mitigation measures nor their application to future development projects.

- SW1 It is anticipated that much of the solid waste resulting from the demolition, dismantling, or other deconstruction of the aged structures and property, including but not limited to buildings and runways, at MCAS El Toro is contaminated with lead-based paints, asbestos, or other materials that may render it unsuitable for recycling or reuse. At the sole cost and expense of the project applicant, in order to evaluate this condition and determine the feasibility of recycling of solid waste material from the MCAS El Toro site by ordinary means, a technical evaluation by a qualified environmental consultant must be

conducted. The technical evaluation shall include sufficient sample testing of all types of solid waste materials to be generated by the project to analyze its composition. A copy of the full technical evaluation and its findings must be submitted to the City of Irvine Community Development Department. The City of Irvine must confirm the adequacy of the technical evaluation prior to authorizing the demolition, dismantling, or deconstruction project to proceed.

If it is determined by the technical evaluation that material is contaminated and prohibited from being recycled by ordinary means, a further evaluation must be conducted to identify and evaluate other feasible methods approved by state law to divert the material from landfills. This may include the delivery of the waste material to other appropriate non-disposal or transformation facilities, such as “waste-to-energy” (WTE) plants.

- SW2 For that solid waste which is determined to be inappropriate for recycling (as that term is defined by California Public Resources Code Section 40180), the project must submit a written plan to the City and implement such plan to ensure that 75% of the material, or the maximum amount feasible as determined by the technical evaluation, is diverted from the landfill through other methods that comply with state statutes and regulations.
- SW3 For that solid waste which the technical study deems to be suitable for recycling, the project applicant must submit a written plan to the City and implement such plan to ensure that solid waste material generated by the demolition, dismantling, or deconstruction project, land use operations and maintenance is collected by a City authorized solid waste hauler or recycling agent, and that a minimum of 75% of the solid waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180. (“Recycling” does not include transformation, as defined in Public Resources Code Section 40201.)
- SW4 To ensure ongoing compliance with these mitigation measures, the project applicant will be required to submit solid waste tonnage reports to the City of Irvine on City approved forms, accompanied by “weight ticket” receipts from state-certified disposal, nondisposal, or transformation facilities, on a quarterly basis to demonstrate that solid waste diversion has occurred in accordance with these required mitigation measures and in a manner that is consistent with, and not detrimental to, the efforts of the City of Irvine to comply with AB939.
- To assure compliance with applicable statutes related to the disposal of solid waste, it is necessary for the City to require appropriate and effective mitigation measures to limit the disposal and ensure significant recycling of solid waste on-site.
- SW5 For green waste, the project applicant must submit a written plan to the City and implement such plan to ensure that the green waste material generated by landscape maintenance operations is collected by a City authorized waste hauler or recycling agent, that the maximum feasible amount of that collected green waste is recycled, and that a minimum of 50% of the green waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180.

4.16 DETERMINATION

Based on the information and analysis in this Initial Study/Addendum, and pursuant to Section 15162 of the State CEQA Guidelines, the City of Irvine has determined the following:

1. There are no substantial changes proposed to the project that will require major revisions to the OCGP FEIR due to new, significant environmental effects or due to a substantial increase in the severity of significant impacts identified in the OCGP FEIR.
2. Substantial changes have not occurred with respect to the circumstances under which the project is being undertaken that will require major revisions of the OCGP FEIR to disclose and analyze new, significant environmental effects or a substantial increase in the severity of the impacts identified in the OCGP FEIR.
3. There is no new information of substantial importance that was not known and would not have been known at the time the OCGP FEIR was certified that shows that:
 - a. The project will have any new significant effects not discussed in the OCGP FEIR.
 - b. There are impacts that were determined to be significant in the OCGP FEIR that will be substantially more severe.
 - c. There are additional mitigation measures or alternatives to the project previously found not to be feasible that would in fact be feasible and would substantially reduce one or more of the significant effects identified in the OCGP FEIR.
 - d. There are additional mitigation measures or alternatives that were rejected by the project proponent that are considerably different from those analyzed in the OCGP FEIR that would substantially reduce any significant impact identified in that FEIR.

1. Addendum Summary

1.1 PURPOSE AND SCOPE

This document is an Addendum (No. 4) to the Orange County Great Park (OCGP) Final Program Environmental Impact Report (State Clearinghouse Number 2002101020) certified by the Irvine City Council via Resolution No. 03-60 on May 27, 2003. This addendum (Addendum No. 4) augments the environmental review and analysis provided in: (i) the previously certified Final Environmental Impact Report for the Orange County Great Park (OCGP) (State Clearinghouse Number 2002101020); (ii) the Addendum to the OCGP Final Environmental Impact Report for the formation of the OCGP Redevelopment Project Area, approved in May 2006 (Addendum No. 1), (iii) the Addendum to the OCGP Final Environmental Impact Report, approved in October 2006 to revise the "Overlay Plan" described in the OCGP Final Environmental Impact Report (Addendum No. 2) and (iv) the Addendum to the OCGP Final Program EIR approved in May 2007 for Vesting Tentative Tract Map 17008, Master Subdivision Map (Addendum No. 3). The Final Environmental Impact Report for the OCGP, Addendum No. 1, Addendum No. 2, and Addendum No. 3 are collectively referred to as the "OCGP FEIR".

This Addendum has been prepared pursuant to the provisions of the California Environmental Quality Act (CEQA), Public Resources Code Sections 21000 et seq., the State CEQA Guidelines, and the City of Irvine Local Guidelines for Implementing CEQA (Local CEQA Guidelines). It contains analyses and other information that, in concert with the OCGP FEIR, serves as the environmental review of the proposed Orange County Great Park Master Plan (OCGP Master Plan) (File No. 00434337 PMP).

The OCGP Master Plan provides a conceptual design of the Orange County Great Park that will include physical improvements and activity nodes varying widely with regard to type, scale and purpose. For example, while some proposed improvements exclusively involve created, re-established and/or enhanced natural habitats, others range from newly constructed civic/institutional buildings to an extensive active recreation-oriented sports complex with a variety of playing fields and courts.

The OCGP Master Plan conceptually identifies each of the aforementioned physical improvements as Park Districts, as noted below.

- | | |
|-----------------------------------|---------------------------------------|
| • <i>Upper Canyon</i> | • <i>Sports Park</i> |
| • <i>Bowling Green</i> | • <i>Cultural Terrace</i> |
| • <i>Great Lawn/Fields</i> | • <i>Lake</i> |
| • <i>Bosque</i> | • <i>Botanical Gardens</i> |
| • <i>Trabuco Entry</i> | • <i>Promenade</i> |
| • <i>Berm Garden</i> | • <i>Orchard Parking</i> |
| • <i>Memorial Site</i> | • <i>The Linear Ramble</i> |
| • <i>Aircraft Museum</i> | • <i>The Agua Chinon</i> |
| • <i>Timeline</i> | • <i>The Wildlife Corridor</i> |

The above Park Districts, attendant vehicular/pedestrian circulation systems, parking facilities, maintenance facilities and other support components comprise approximately 1,145.3 acres and includes approximately 494,000 square feet of primary building facilities, with 15,000 square feet of ancillary uses. A more detailed description of these features is provided in Section 2, *Project Description*.

1. Addendum Summary

1.2 ENVIRONMENTAL PROCEDURES

The OCGP Master Plan is subject to consideration by the Irvine Community Services Commission (as a recommending body) and the Irvine Planning Commission (as the final approval body). As such, the City is the Lead Agency for the OCGP Master Plan and is responsible for its environmental review. Pursuant to CEQA, the State CEQA Guidelines, and the Local CEQA Guidelines, the City's environmental review of the OCGP Master Plan is focused on determining if the project would cause a change in the conclusions of the OCGP FEIR, and/or identify any change in circumstances or new information of substantial importance that would substantially change the conclusions of the OCGP FEIR.

Pursuant to Section 21166 of CEQA and Section 15162 of the State CEQA Guidelines, when an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for the project unless the Lead Agency determines, on the basis of substantial evidence, that one or more of the following conditions are met:

- Substantial changes are proposed in the project which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;
- Substantial changes occur with respect to the circumstances under which the project is undertaken which will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, shows any of the following:
 - 1) The project will have one or more significant effects not discussed in the previous EIR or negative declaration.
 - 2) Significant effects previously examined will be substantially more severe than identified in the previous EIR.
 - 3) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives.
 - 4) Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives.

Section 15164 of the State CEQA Guidelines states that an Addendum to an EIR shall be prepared "if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred." This Addendum (No. 4) addresses changes to the overall OCGP project and changes to the existing conditions that have occurred, and reviews new information of substantial importance that was not known and could not have been known with the exercise of reasonable diligence at the time that the OCGP FEIR was certified. It further examines whether, as a result of any changes or any new information, a subsequent or supplemental EIR may be required. This examination also includes an analysis of the provisions of Section 21166 of CEQA and Section 15162 of the State CEQA Guidelines and their applicability to the proposed project.

1. Addendum Summary

This Addendum (No. 4) has been prepared and organized to track the organization of the City of Irvine Environmental Checklist Form. The completed Environmental Checklist form is provided herein in its entirety as Section 3.0, *Environmental Checklist*. The checklist is marked with the Lead Agency's findings as to the environmental effects of the proposed project in comparison with the findings of the OCGP FEIR. The checklist has been prepared pursuant to Section 15168(c)(4) of CEQA, which states that "where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR." The basis for the City's conclusions is the analysis provided in Section 4, *Discussion of Checklist and Mitigation Measures*, of this document. Using the foregoing approach, the City of Irvine, as the Lead Agency, determined that an Addendum to the previously approved OCGP FEIR was the appropriate environmental clearance for the project application.

1.3 PREVIOUS ENVIRONMENTAL DOCUMENTATION

The Orange County Great Park (OCGP) Final Program EIR

The OCGP Final Program EIR was certified by the City of Irvine in May 2003. The project as analyzed in the OCGP Final Program EIR consisted of the following actions: (1) Annexation, General Plan Amendment, Pre-Zoning (prior to annexation), and Zoning of the unincorporated portion of Planning Area 51; (2) Annexation of the unincorporated portion of Planning Area 35 (Irvine Ranch Water District Parcel); (3) General Plan Amendment and Zone Change for Planning Area 30; and (4) Approval of the form of a Development Agreement vesting approval of overlay uses and intensities in consideration for (i) dedication of land for public purposes, (ii) developing and funding certain infrastructure improvements and maintenance of the public uses, and (iii) funding specific park, roadways, and other circulation facilities and infrastructure. Together, these actions established the policy and legislative structure to guide the development of the former Marine Corps Air Station El Toro (MCAS El Toro) property.

Since certification of the OCGP Final Program EIR, a variety of actions in furtherance of the programmatic project (i.e. OCGP Project) addressed therein have transpired. Those actions and their related environmental reviews under CEQA are summarized below.

Addendum No. 1 to the OCGP Final Program EIR

On May 18, 2006, the City of Irvine approved the Orange County Great Park Redevelopment Plan (OCGPRP). The OCGPRP was based upon a Preliminary Redevelopment Plan previously formulated and adopted by the City of Irvine Planning Commission and Irvine Redevelopment Agency on January 15, 2004 and January 27, 2004, respectively. The OCGPRP set forth a process and framework within which specific development plans would be presented and priorities for specific development projects would be established, and did not present specific plans for any redevelopment, rehabilitation, and/or revitalization activities for any areas within the Orange County Great Park project area. The OCGPRP covers approximately 3,905.6 acres within Planning Areas 30 and 51. The environmental review for the OCGPRP was documented in Addendum No. 1 and was approved by the City of Irvine on May 18, 2006. In overview, Addendum No. 1 concluded that the OCGPRP would not result in any environmental effects not already addressed by the OCGP Final Program EIR.

Addendum No. 2 to the OCGP Final Program EIR

On October 24, 2006, Addendum No. 2 was approved by the City of Irvine for a General Plan Amendment (00416079-PGA) and Zone Change (00416080-PZC) for a Revised Overlay Plan. The General Plan Amendment and Zone Change was comprised of minor adjustments to the boundary between the public and private areas of the OCGP, revisions to text and figures related to Planning Areas 30 and 51, and the creation of a mixed-use zoning category called the Lifelong

1. Addendum Summary

Learning District (LLD) within Planning Area 51. The General Plan Amendment also included minor technical changes to the General Plan. The LLD zoning allows for a combination of residential, commercial, and educational uses that promote and support a mixed-use environment.

The aforementioned General Plan Amendment and Zone Change did not result in any changes to the approved land use intensities or allowable land uses in Planning Areas 30 and 51. Further, Addendum No. 2 did not address any refinements to the land use development program within those Planning Areas on lands under the auspices of the Orange County Great Park Corporation that are collectively identified in this current Addendum (No. 4) as the proposed OCGP Master Plan. In overview, Addendum No. 2 concluded that the aforementioned modifications to the OCGP project would not result in any environmental effects not already adequately addressed in the OCGP Program Final EIR.

Addendum No. 3 to the OCGP Final Program EIR

Addendum No. 3 was approved by the City of Irvine on May 17, 2007. Addendum No. 3 addressed Vesting Tentative Tract Map (VTTM) No. 17008 (Master Subdivision Map). The VTTM subdivided 3,585 gross acres into 44 numbered lots and 13 lettered lots consistent with the minor boundary adjustments in Addendum No. 2. It did not, however, authorize the construction of any trip-generating land uses, nor alter any land use or associated acreages to the approved project identified in the OCGP Final Program EIR, as augmented by Addendum No. 1 and Addendum No. 2. In addition to the subdivision of land, the VTTM: 1) defined the backbone infrastructure; 2) defined boundaries of areas for future subdivision (i.e. "B"-level tentative tract maps) and development; and 3) delineated the limits of rough grading for the infrastructure requirements of Heritage Fields development. In overview, Addendum No. 3 concluded that the VTTM and attendant features would not result in any environmental effects not already adequately addressed in the OCGP Program Final EIR.

The OCGP Final Program EIR and Addendums No. 1, No. 2, and No. 3, as well as all associated technical and other documents comprising the environmental record for the overall OCGP project are on file at the City of Irvine, Community Development Department, 7000 Trabuco Road, Building 873, Irvine, CA 92618.

The OCGP Mitigation Monitoring Program

The OCGP Final Program EIR incorporated mitigation measures that were ultimately provided in a **Mitigation Monitoring Program (MMP)** adopted by the Irvine City Council as part of Resolution No. 03-60. The MMP, included herein as **Appendix A**, provides the following information for each mitigation measure:

- Mitigation number and a description of the action;
- Timing for implementation;
- Approving authority and reviewing agency(s), if any; and
- Method of compliance

Minor clarifying amendments to several mitigation measures were made in connection with the approval of Addendum No. 3. Those amendments are also reflected in the MMP (Appendix A).

1. Addendum Summary

1.4 ENVIRONMENTAL SETTING

The Orange County Great Park (which consists of portions of City of Irvine Planning Areas 30 and 51) is located in the central portion of Orange County, approximately 45 miles southeast of Los Angeles. With the exception of north-south aligned wildlife corridor improvements in Irvine Planning Area 30, the OCGP Master Plan is located entirely within Irvine Planning Area 51. The OCGP Master Plan covers property that is located on the former MCAS El Toro site, and is also surrounded by Heritage Fields El Toro, LLC (Heritage Fields) property, which is roughly bounded by SR-133 to the west, Alton Parkway to the east, I-5 to the south and Irvine Boulevard to the north.

Proximal local jurisdictions include: the Cities of Laguna Hills, Laguna Niguel, Laguna Woods, Mission Viejo, Aliso Viejo, and Tustin. The Irvine Station (formerly known as Irvine Transportation Center), a major multi-modal transit center linking Orange County Transportation Authority (OCTA) bus, Metrolink commuter rail, and Amtrak rail services is located adjacent to the Southern California Regional Rail Authority (SCRRA) Metrolink tracks, which bisect the project area and separate City of Irvine Planning Areas 30 and 51. Existing uses within the project site include a California State University at Fullerton satellite campus, Marine Memorial Golf Course, equestrian facilities, and agricultural and nursery operations.

Consistent with the OCGP FEIR, several interim activities and uses are currently occurring on-site, including short-term use of the land or existing buildings. Small portions of the existing runways have been removed within the City's Planning Area 51. A few parcels are being leased on an interim basis prior to development of the site.

Ownership of Planning Areas 30 and 51 has changed since certification of the OCGP FEIR. Certain parcels have been or will be transferred to the Federal Aviation Administration, designated Homeless Provider organizations, City of Irvine, County of Orange, and Heritage Fields by the Department of Navy (DoN). Other parcels have been leased in furtherance of conveyance (LIFOC) to those entities.

2. *Project Description*

2.1 **PROJECT LOCATION**

The OCGP Master Plan, encompassing portions of Planning Areas 30 and 51, is located northeast of the freeway junction at Interstate 5 (Santa Ana Freeway) and Interstate 405 (San Diego Freeway), within the City of Irvine. **Figure 2-1 (Regional Location Map)** depicts the project location in a regional context and **Figure 2-2 (Local Vicinity Map)** shows its local context. Major existing roadways bordering the project are Sand Canyon Avenue to the northwest, Portola Parkway and Irvine Boulevard to the north, and Bake Parkway to the northeast. As depicted on **Figure 2-3 (Aerial Photograph)**, surrounding the site are residential and nonresidential uses under construction to the north and west, open space to the northeast, and nonresidential and mixed land uses to the east and southeast, within the Cities of Lake Forest and Irvine. Irvine Station is situated adjacent to the SCRRA Metrolink tracks, which traverse the site and separate Planning Areas 30 and 51.

2.2 **PROJECT OBJECTIVES**

With regard to the OCGP Master Plan, the OCGP Final Program EIR identified the following objectives:

- Convert the former MCAS El Toro to a Great Park with regional open space, cultural and recreational facilities.
- Create a wildlife corridor connection through the property that may potentially connect the Cleveland National Forest to the north and the coastal open space preserves to the south.
- Respond positively to private interests by allowing private development of some land while ensuring the implementation of park and open space amenities.

2.3 **PROJECT CHARACTERISTICS**

2.3.1 **Project Background**

On May 27, 2003, the Irvine City Council, via Resolution No. 03-60, certified a Final Program Environmental Impact Report (SCH#2002101020) that addressed and adopted a General Plan Amendment (47782-GA) and Zone Change (47785-ZC) to implement the development of the Orange County Great Park. In order to develop at the maximum intensities allowed in the Overlay Plan shown in the General Plan and zoning, the property owners entered into a development agreement that required the development or funding of infrastructure improvements, the dedication of land for park and City uses, as well as the commitment to long-term maintenance of the public facilities.

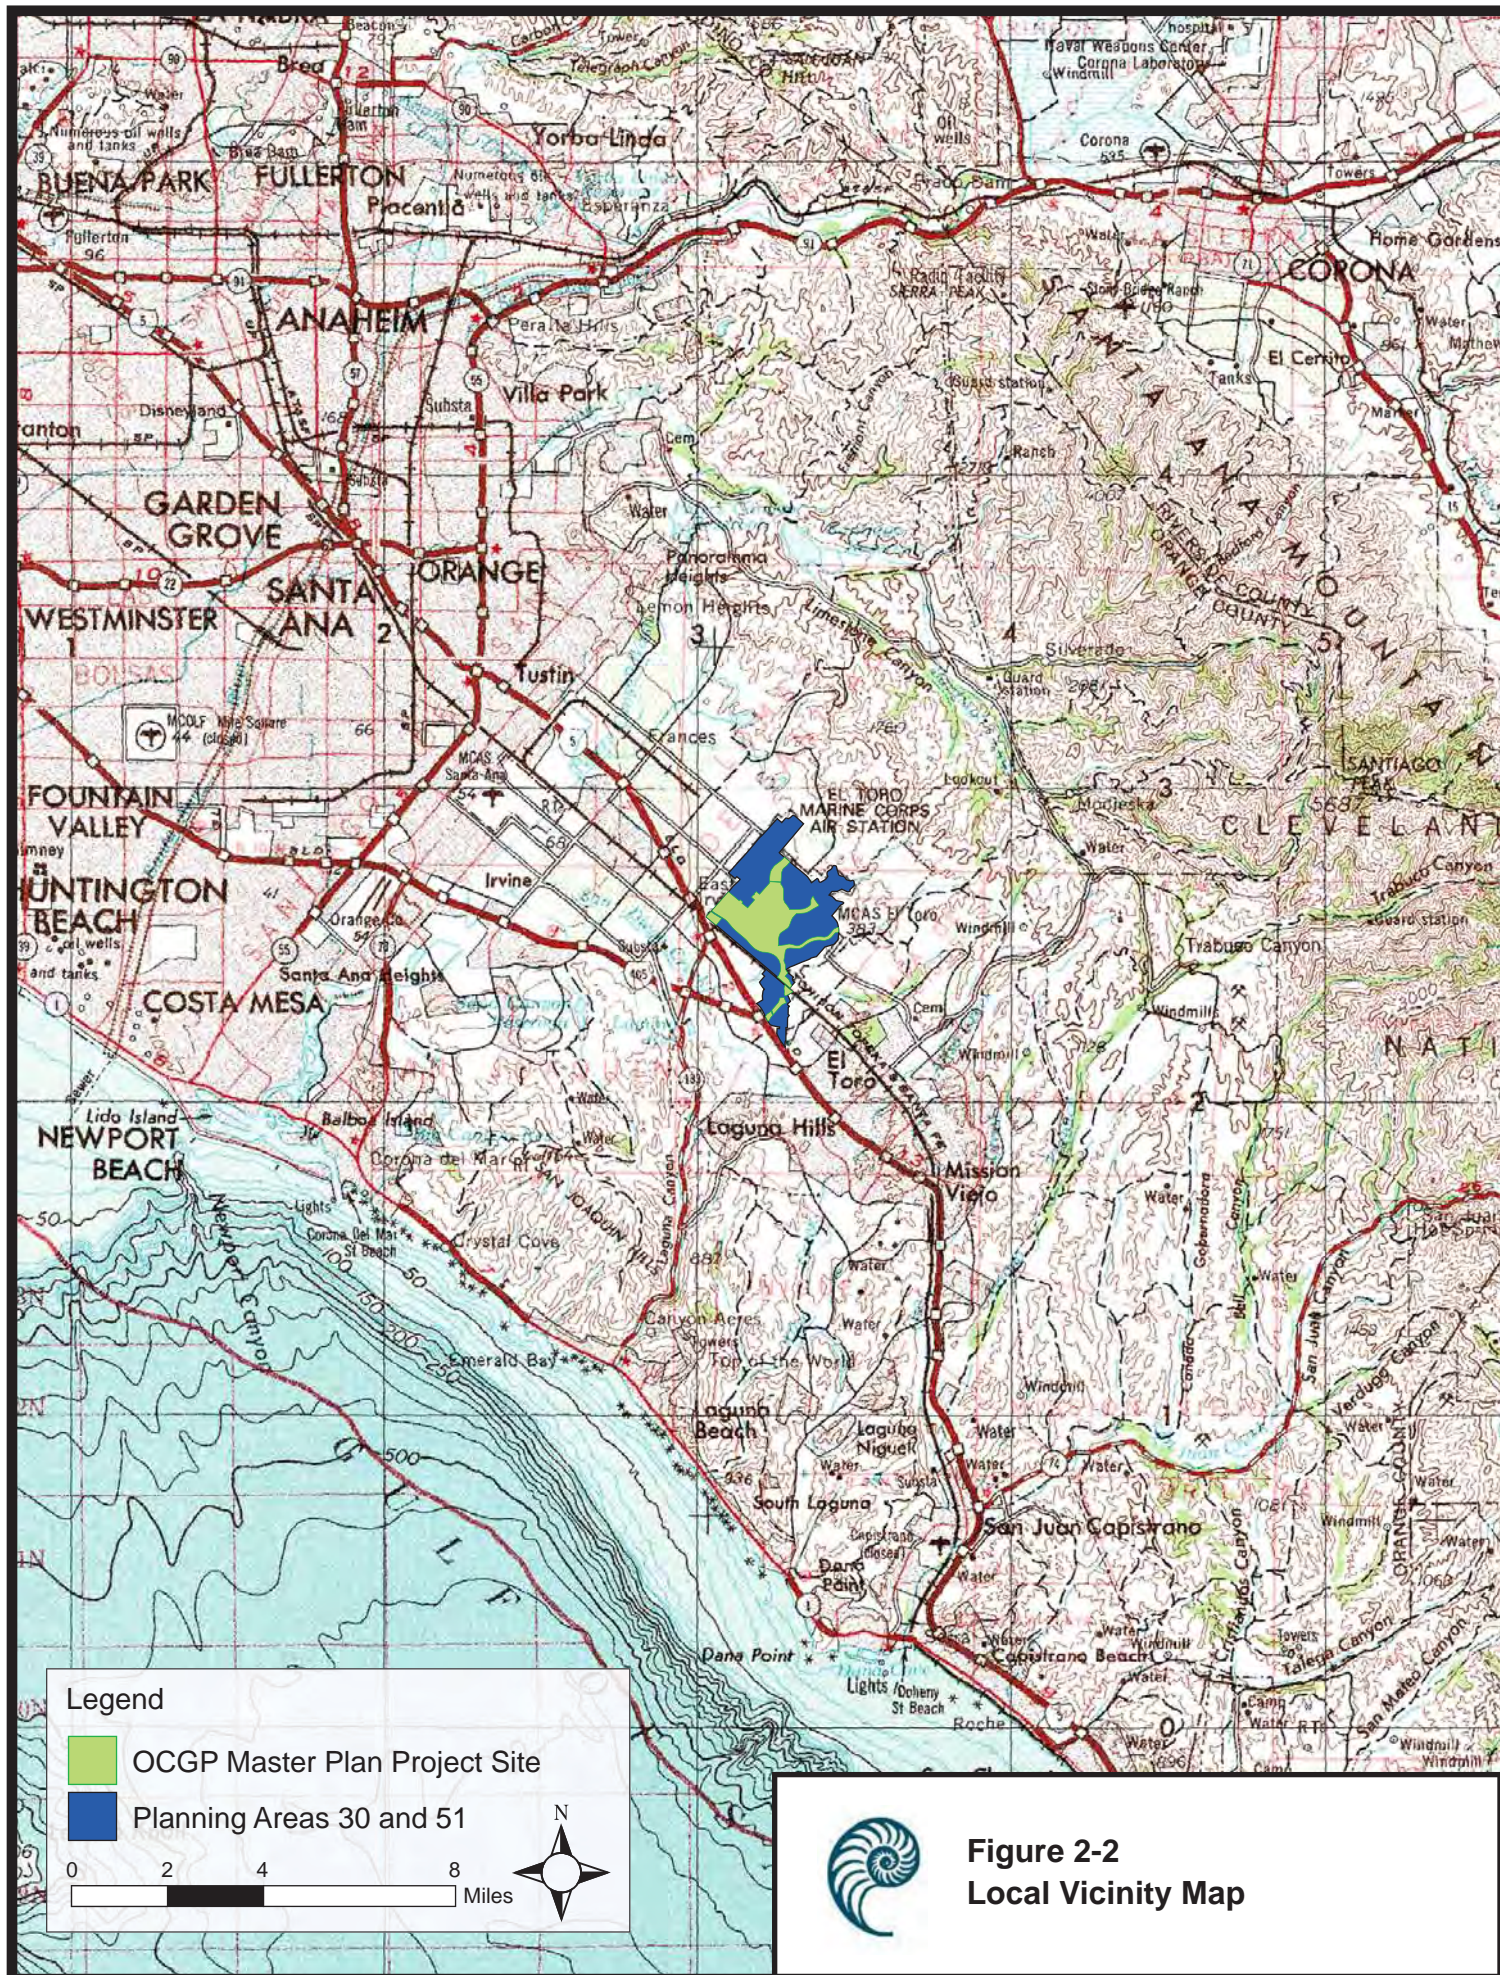

Figure 2-3
Aerial Photograph

2. Project Description

On May 18, 2006, the City of Irvine approved the Orange County Great Park Redevelopment Plan (OCGPRP). The OCGPRP was based upon a Preliminary Redevelopment Plan previously formulated and adopted by the City of Irvine Planning Commission and Irvine Redevelopment Agency on January 15, 2004 and January 27, 2004, respectively. The OCGPRP set forth a process and framework within which specific development plans would be presented and priorities for specific development projects would be established. The OCGPRP did not in and of itself, however, present specific plans for any redevelopment, rehabilitation, and/or revitalization activities for any areas within the Orange County Great Park project area. The OCGPRP pertains to approximately 3,905 acres within Planning Areas 30 and 51. The environmental review for the OCGPRP was memorialized in Addendum No. 1.

In February 2005, Heritage Fields purchased all four bid parcels from the U.S. Department of Navy/General Services Agency through an online auction process. Subsequent to the land purchase, the Orange County Great Park Corporation and Heritage Fields initiated their respective master design and development processes for the OCGP. To facilitate additional design options both the Great Park Corporation and Heritage Fields requested amendments to the General Plan and the Zoning Code to reconfigure district boundaries. In addition, Heritage Fields requested the creation of a new mixed-use zoning district called the "8.1/8.1A Lifelong Learning District" and proposed minor clarifications to the zoning text within Planning Areas 30 and 51. The General Plan Amendment and Zoning Code modifications, which primarily refined the scope of future development on lands owned by Heritage Fields El Toro, LLC, were addressed in Addendum No. 2.

On June 28, 2006, Heritage Fields filed an application to the City of Irvine for approval of Vesting Tentative Tract Map (VTTM) No. 17008 (Master Subdivision Map). The VTTM subdivided 3,585 gross acres into 44 numbered lots and 13 lettered lots. It did not, however, authorize the construction of any trip-generating land uses, nor alter any land use or associated acreages to the approved project identified in the OCGP Final Program EIR, as augmented by Addendum No. 1 and Addendum No. 2. In addition to the subdivision, the VTTM also: 1) defined the backbone infrastructure; 2) defined boundaries of areas for future subdivision (i.e. "B"-level tentative tract maps) and development; and 3) delineated the limits of rough grading for the infrastructure requirements of Heritage Fields development. OCGP Final Program EIR Addendum No. 3 was approved by the Irvine Planning Commission on May 17, 2007.

This OCGP Final Program EIR Addendum (No. 4) addresses refinements to the scope of future development on lands under the auspices of the Orange County Great Park Corporation. As indicated above, development associated with the overall OCGP project will occur entirely within Planning Areas 30 and 51. The development parameters are depicted in tabular form on **Table 2-1 (OCGP Master Plan – Irvine General Plan Land Use Designations, Irvine Zoning Code District Designations, and Development Assumption Breakdown)** on a Planning Area Zone basis.

2.3.2 Project Features

The land area within the boundaries of the proposed OCGP Master Plan totals approximately 1,145.3 acres. The OCGP Master Plan presents a conceptual design for the future build out of the area within its boundaries. It does so for the entirety of its land area on both a Planning Area Zone and Park District basis. Previous Table 2-1 provided tabular data regarding the development parameters for all lands within the Great Park Boundaries on a Planning Area Zone Basis. **Table 2-2 (OCGP Master Plan Park District Land Area Summary)** itemizes the land areas specific to each Park District within the OCGP Master Plan boundary. **Figure 2-5 (OCGP Master Plan – Site Plan)** graphically illustrates the spatial relationships between the various distinctive land use types comprising the OCGP Master Plan. The following discussion describes each of the project Park Districts.

2. Project Description

Table 2-2
OCGP Master Plan Park District Land Area Summary

OCGP Master Plan Park District	Land Area (acres)
• <i>Upper Canyon</i>	151.4
• <i>Bowling Green</i>	34.2
• <i>Great Lawn/Fields</i>	55.4
• <i>Bosque</i>	65.7
• <i>Trabuco Entry</i>	13.1
• <i>Berm Garden</i>	12.4
• <i>Memorial Site</i>	15.2
• <i>Secondary Maintenance</i>	7.1
• <i>Aircraft Museum</i>	23.4
• <i>Timeline</i>	11.5
• <i>Sports Park</i>	158.2
• <i>Cultural Terrace</i>	92.7
• <i>Lake</i>	26.2
• <i>Botanical Gardens</i>	59.0

• <i>Agua Chinon</i>	84.3
• <i>Wildlife Corridor (Upper)</i>	133.0
• <i>Wildlife Corridor (Lower)</i>	45.6
• <i>Primary Maintenance</i>	24.8
<i>TOTAL OCGP Master Plan Acreage</i>	1,145.3

Source: Great Park Design Studio, July 2007

Following are descriptions of each OCGP Master Plan Park District as presented in the OCGP Master Plan dated May 2007.

OCGP Master Plan Park District: Upper Canyon

The Upper Canyon comprises PAZ 20 and essentially mirrors the current onsite Bee Canyon drainage channel. At present, Bee Canyon exists as either a box culvert or an open channel and drains to a double Reinforced Concrete Pipe (RCP) in the vicinity of the Irvine Station. When completed, the Upper Canyon, located in the northwest quadrant of the project site will become its most dominant physical feature. The OCGP Master Plan indicates that it will be a manmade canyon with side-slopes from channel bottom to the crest of berms lining the canyon as high as 60 feet (30 feet below grade and 30 above grade resulting 3,060,000 cubic yards of cut and 1,825,000 cubic yards of fill) and variable in width ranging from approximately 100 feet to more than 500 feet.

The Upper Canyon provides a series of natural environments to hikers and bicyclists. Most of the trails parallel the overall north-south axis of the Upper Canyon. Within the Upper Canyon, pedestrian access from one side to the other (i.e. east-west) is provided by a series of planned

2. Project Description

footbridges. A vehicular bridge crossing the canyon in an east-west alignment, currently identified as "T" Street on the approved Vesting Tentative Tract Map No. 17008, is provided at the approximate midpoint of the Upper Canyon. Vehicular access within the Upper Canyon is limited to maintenance and emergency vehicles. Within the Upper Canyon, one emergency pathway (unpaved) is required; it will be a minimum of 20 feet in width and have a 13.5-foot vertical clear zone. Landscaping within the Upper Canyon will include native plant communities including Coastal Sage Scrub, Oak Walnut Woodland, Riparian, Fresh Water Marsh, Vernal Pools, Wildflower Meadows, and Oak Grassland Savannah supplemented by Palm Grove, Fern Grotto, Coniferous Forest and Tecate Cypress stands. The Upper Canyon will accommodate onsite runoff along a soft bottom channel and drain southerly into a lake adjoining the Cultural Terrace.

OCGP Master Plan Park District: Bowling Green

The Bowling Green Park District is located at the northern portion of the project site and includes a portion of the former MCAS El Toro runway to be preserved onsite. It will include Bocce Courts and open fields for unplanned playing opportunities.

OCGP Master Plan Park District: Great Lawn/Fields

The Great Lawn/Fields Park District will include open field play areas, agricultural fields, and picnic groves. Located between the Bosque and the Upper Canyon, this portion of the OCGP Master Plan will include groves of citrus trees, nut and avocado trees. The Great Lawn will accommodate a variety of passive recreational activities. It will be planted with a drought tolerant, low maintenance turf grass.

OCGP Master Plan Park District: Bosque

The Bosque, located along the western edge of the Great Park, will include pocket parks, children's' play areas, an exercise circuit and meditative spaces. Located in the Bosque is a flowering arboretum defining the edge of the Great Park adjacent to the future Heritage Fields El Toro development to the west. The Bosque will be planted with a blend of native and non-invasive California flowering trees.

OCGP Master Plan Park District: Trabuco Entry

The Trabuco Entry is designed to introduce visitors to the Great Park through its formal landscaping and water features. It will be planted with a large hedge of California Bay around its central plaza. High canopy shade trees will be planted within the plaza and in the background.

OCGP Master Plan Park District: Berm Garden

The Berm Garden is located in the northeast quadrant, where the Timeline crosses the alignment of the preserved runway. It will be landscaped with a motif similar to that associated with the Great Lawn/Fields described earlier.

OCGP Master Plan Park District: Memorial Site

The Memorial Site is located in the southeast quadrant, where the Timeline crosses the alignment of the preserved runway. It will also be landscaped with a motif similar to that associated with the Great Lawn/Fields described earlier.

ACREAGE SUMMARY TABLE

(A)	UPPER CANYON	= 151.4 ac
(B)	BOWLING GREEN	= 34.2 ac
(C)	GREAT LAWN / FIELDS	= 55.4 ac
(D)	BOSQUE	= 65.7 ac
(DI)	BOSQUE OVERLAY	= 35.4 ac
(E)	TRABUCO ENTRY	= 13.1 ac
(F)	BERM GARDEN	= 12.4 ac
(G)	MEMORIAL SITE	= 15.2 ac
(H)	SECONDARY MAINTENANCE	= 7.1 ac
(I)	AIRCRAFT MUSEUM	= 23.4 ac
(J)	TIMELINE	= 11.5 ac
(K)	SPORTS PARK	= 133.3 ac
(L)	CULTURAL TERRACE	= 92.7 ac
(M)	LAKE	= 26.2 ac
(N)	BOTANICAL GARDENS	= 59.0 ac
(O)	PROMENADE	= 21.4 ac
(P)	ORCHARD PARKING	= 82.5 ac
(Q)	LINEAR RAMBLE	= 17.7 ac
(R)	AGUA CHINON	= 84.3 ac
(S)	WILDLIFE CORRIDOR (UPPER)	= 133 ac
(T)	WILDLIFE CORRIDOR (LOWER)	= 45.6 ac
(U)	PRIMARY MAINTENANCE	= 24.8 ac
TOTAL OCGP ACREAGE		= 1,145.3 ac

Site Plan

2. Project Description

OCGP Master Plan Park District: Secondary Maintenance

The Secondary Maintenance facility will be located between the Lower Canyon and Agua Chinon, immediately east of, and adjacent to the Promenade. As the name implies, it will serve as an adjunct to the Primary Maintenance Facility for overall maintenance of the Great Park.

OCGP Master Plan Park District: Aircraft Museum

The Aircraft Museum will be located in close proximity to the Sports Park in the southwest quadrant of the project site and will include a restored existing hangar, and static aircraft displays. The Aircraft Museum complex will be planted with California friendly plant materials and will include a Palm Parade promenade providing a visual pedestrian connection to the Sports Park. Simple formal planting around the hangar will be planted reminiscent of the landscape and plantings that would have been at the base during its most active times.

OCGP Master Plan Park District: Timeline

The Timeline is an east-west oriented linear feature that is perpendicular to the alignment of the preserved runway mentioned previously. It will provide seating, an historical timeline and artifacts, and serve as a backbone access corridor within the project by connecting several Park Districts.

OCGP Master Plan Park District: Sports Park

The Sports Park is located in the southwestern corner of the Great Park and will be comprised of sports fields, sport courts, and, as mentioned under the Aircraft Museum above, a portion of the Palm Parade promenade. Table 2-3 (*OCGP Sports Park Facilities and Components*) identifies the sports amenities to be provided within the Sports Park District of the OCGP Master Plan. In addition to the sports amenities identified below, the Sports Park will also include a Field House, parking areas, and a Plaza/Pedestrian Mall. These aspects of the Sports Park District are discussed elsewhere in this Project Description.

Table 2-3
OCGP Sports Park Facilities and Components

FACILITY TYPE	NUMBER OF COMPONENTS
OPEN SPORTS FIELDS	
<i>Soccer/Overlay</i>	12
<i>Soccer Jr./Overlay</i>	8
BAT AND BALL FIELDS	
<i>Baseball-Little League</i>	4
<i>Softball</i>	5
MIXED SMALL COURTS	
<i>Tennis Courts</i>	12
<i>Frontenis/Handball</i>	2
<i>Basketball</i>	15
ACTION SPORTS AMENITIES	
<i>Skateboard Park</i>	1
<i>Multi-Use Fields</i>	4
OTHER SPORTS-RELATED AMENITIES	
<i>Walking/Jogging Track</i>	1
<i>Children's Play Areas</i>	2
<i>Youth Play Areas</i>	3
<i>Other (Concessions; Lavs; Group Picnic)</i>	5

Source: (OCGP Master Plan – June 2007 Submittal)

2. Project Description

OCGP Master Plan Park District: Cultural Terrace

The Cultural Terrace is situated in the southwest quadrant of the OCGP Master Plan north of the Orchard Parking, east of the Sports Park, west of the Lake and south of the Linear Ramble. It will contain three new structures proposed for civic museum uses and a library that collectively comprise a total of 274,000 square feet. The Cultural Terrace will provide an overview of the Lake to its east and also include space for unplanned outdoor dancing and a food concession offered through the museums. The Cultural Terrace will be landscaped with a mixture of California Native and California Friendly plant materials. Wildflower meadows will be incorporated on berms between the terrace and the Orchard Parking area to its south. Oak Walnut Woodland will be located on berms between the Great Lawn and the Lake. In addition, high canopy flowering shade trees will be located at various locations on the Cultural Terrace to create shaded areas.

OCGP Master Plan Park District: Lake

The Lake is a perennial water feature at the southern terminus of the Upper Canyon and is situated between the Botanical Garden to the east and Cultural Terrace to the west. It is a two-tiered lake with the northern tier having a depth of approximately 16 feet (Elev. 250 ft. to 266 ft.) and the southern tier having a depth of approximately 11 feet (Elev. 230 ft. to 241 ft.) Grading for construction of the Lake will require 1,670,000 cubic yards of cut. The Lake is a water feature that will allow park users the opportunity to use paddleboats and rowboats.

OCGP Master Plan Park District: Botanical Garden

The Botanical Garden is intended to support a diverse landscape and will exhibit a variety of programmed spaces including, but not necessarily limited to: the Southern California Flora Biome, Nature Discovery Zone, Home Garden Zone, Food and Health Zone, Plant Nursery Zone, Transformation Zone, and Events Zone. The visitor's center is anticipated to include accessory uses such as a gift shop, café, and indoor theater.

OCGP Master Plan Park District: Promenade

The Promenade, located at the southern end of the preserved runway between the Botanical Gardens and Agua Chinon, also referred to as the "Promenade of the Senses", has a very linear and focused layout and comprise a plant palette to support the formality of the space and enhance the senses through: smell, sight, sound, taste and touch. The planting will be a mixture of California Native and California Friendly plants and will include high limb canopy trees for shade purposes.

OCGP Master Plan Park District: Orchard Parking

This Great Park main parking facility is located along, and is accessed by, Marine Way along the southern boundary of the Great Park. Fifty-six (56) acres of parking facilities have been interwoven with thirty-seven (37) acres of active citrus orchards to commemorate Orange County's citrus heritage. A shuttle system will provide internal circulation throughout the Great Park connecting the parking lots with various uses on-site.

OCGP Master Plan Park District: Linear Ramble

The Linear Ramble is located between the Cultural Terrace and Timeline. It provides bicycle and pedestrian access and passive recreational opportunities and will be landscaped with a motif similar to that associated with the Great Lawn/Fields described earlier.

2. Project Description

OCGP Master Plan Park District: Agua Chinon

The Agua Chinon, originally a viable drainage course that was subsequently covered over with MCAS-related uses, will be re-established near its original northeast-southwest alignment through the central portion of the Great Park. It will range in width from approximately 250 feet to 450 feet, include multi-use trails for the hiking and cycling public and be landscaped to create new native habitat. The Agua Chinon will have one 15-foot wide service/emergency vehicle pathway along the easterly perimeter. It will also serve as a year-round drainage corridor and will be engineered to minimize flow velocities for water conservation purposes. Natural water channels will be bordered with riparian vegetation. Transitions from wetter to drier areas will include Coastal Sage Scrub and Oak Walnut Woodlands.

OCGP Master Plan Park District: Wildlife Corridor (Upper and Lower Sections)

Along its eastern periphery, the OCGP Master Plan includes a wildlife corridor that will eventually link a 995-acre habitat preserve and the Limestone-Whiting Wilderness Park to the north with the Laguna Coast Wilderness Park to the south. The corridor will be of variable width, but will in no case be less than 330 feet wide. Side slopes will also vary, but will only in limited cases be greater than 3:1. The corridor will for the most part be soft bottom, and has been designed to accommodate natural and manmade runoff from both upstream areas and along Borrego Creek.

In order to discourage human interaction, nearly the entire length of the corridor will have either a fence or landscape barrier constructed on both sides. Details regarding fences and walls will be provided during the park design phase of the project. Where a landscape barrier is located, it will be comprised primarily of a dense thicket of coastal sage mixed with canopy trees. Internally, the corridor will be enhanced with the planting of the following vegetation types: riparian mix blended with grasses and forbs, riparian forest with intermittent marsh type planting, and marsh type that is not fully persistent but more so than vernal pools. A maintenance and emergency road will be constructed along the western perimeter of the corridor adjacent to the fence within the conservation zone.

OCGP Master Plan Park District: Primary Maintenance

The Primary Maintenance facility is located at the southwest corner of the project site south of Marine Way. It will serve as the main maintenance facility and house maintenance equipment and supplies.

Vehicular Access

Vehicular access to the Great Park will be available from various roadways along its periphery including Marine Way to the south, "O" Street and Trabuco Road to the west, and Irvine Boulevard to the north. However, due to the location of on-site visitor oriented amenities, the OCGP Master Plan reflects a design that encourages primary vehicular access to occur from Marine Way. Vehicular access to the Great Park from the east is restricted due primarily to the Wildlife Corridor along the Great Park's eastern periphery that is intended to be free of human access. Figure **2-6 (OCGP Master Plan – Vehicular Access Locations)** highlights the primary points of vehicular access to the Great Park.

2. Project Description

Parking Facilities

The OCGP Master Plan identifies a variety of on-site parking facilities that in aggregate provide a total of 5,505 permanent parking spaces. A parking study prepared by LSA Associates dated July 18, 2007 identified the Zoning requirement for 3,589 parking spaces and a peak (weekend) parking demand of 3,623 parking spaces. The subject study is provided herein as **Appendix B**. The OCGP Master Plan will provide more permanent parking spaces than the peak parking demand requirement identified in the aforementioned study. It is noted that the OCGP Master Plan also identifies a potential to provide additional parking along the preserved runway to accommodate overflow parking for any special event overflow. **Figure 2-7 (OCGP Master Plan – Parking Facility Locations)** identifies the location of all parking areas presently contained within the OCGP Master Plan. Please note that special event overflow parking would be accommodated on the preserved runway and be coordinated with a shuttle system. **Table 2-4 (OCGP Master Plan – Permanent Parking Space Breakdown By Facility Location)** provides a breakdown of the number of OCGP Master Plan parking spaces by location. The location identifiers within Table 2-4 correspond to those presented in Figure 2-7. It is intended that the project parking will incorporate the City's Sustainable Travelway Guidelines such as bio-swales, permeable paving and shade trees.

Table 2-4
OCGP Master Plan –
Permanent Parking Space Breakdown By Facility Location

Parking Facility Identifier*	Parking Facility Name	Number of Parking Spaces Provided
A1	<i>Sports Parking 1</i>	720
A2	<i>Sports Parking 2</i>	207

(F) SPECIAL EVENT OVERFLOW PARKING

* Parking demand prepared by LSA "Orange County Great Park Tip Generation and Parking Demand Analysis." Date: July 2007.

** Parking lot E serves the Upper Canyon from Irvine Blvd. ADA accessible trails, as well as hiking trails will provide access to the Canyon. (See drawing I-110).

*** Overflow parking to be provided by special event supplemental parking on runway, see parking symbol F. Such use would be coordinated with shuttle system. A special event permit, with standard parking operations plan, to be provided in subsequent applications. See Drawing I-112 circulation sections for details.

NOTES:

- ALL PARKING WILL INCORPORATE BIOSWALES, PERVIOUS PAVING, AND SHADE TREES. (CONSISTENT WITH THE GREEN STREET TRAVELWAY GUIDELINES)
- PARKING TREE SPACING INCLUDES PARKING PERIMETER TREES AND 1 TREE FOR EVERY 4 STALLS. LANDSCAPING CONSISTENT WITH CHAPTER 3-15 OF THE ZONING CODE.
- PARKING TO HAVE PERVIOUS OPEN SOIL AREA AT TREES.
- PARKING STALL DIMENSIONS COMPLY WITH CITY STANDARDS PER CHAPTER 4 OF ZONING CODE.
- PERVIOUS PAVING EXAMPLES ARE VEHICULAR RATED CONCRETE PAVERS, TURF BLOCK ETC.
- OPEN PARKING LOT SETBACKS WILL COMPLY WITH SECTION 3-27 OF THE ZONING CODE.
- PRECISE PARKING LOT SHUTTLE STOPS WILL BE DETERMINED WITH SUBSEQUENT APPLICATIONS.
- FOR BUILDING SQUARE FOOTAGE SEE DRAWING I-105 BUILDING SITE PLAN.

2. Project Description

OCGP Master Plan Buildings

Figure 2-8 (OCGP Master Plan – Building Locations) depicts the conceptual locations of buildings planned within the OCGP Master Plan area. As shown, the greatest concentration of buildings will occur in the southwestern portion of the park and are associated primarily with the Sports Park, Aircraft Museum, and the Cultural Terrace. In total, approximately 494,000 square feet of building area is proposed. Of this amount, 10,540 square feet is associated with an existing hangar that is proposed for refurbishment. **Table 2-5 (OCGP Master Plan – Building Square Footage Breakdown)** provides a breakdown of the square footages associated with each OCGP Master Plan building.

Table 2-5
OCGP Master Plan – Building Square Footage Breakdown

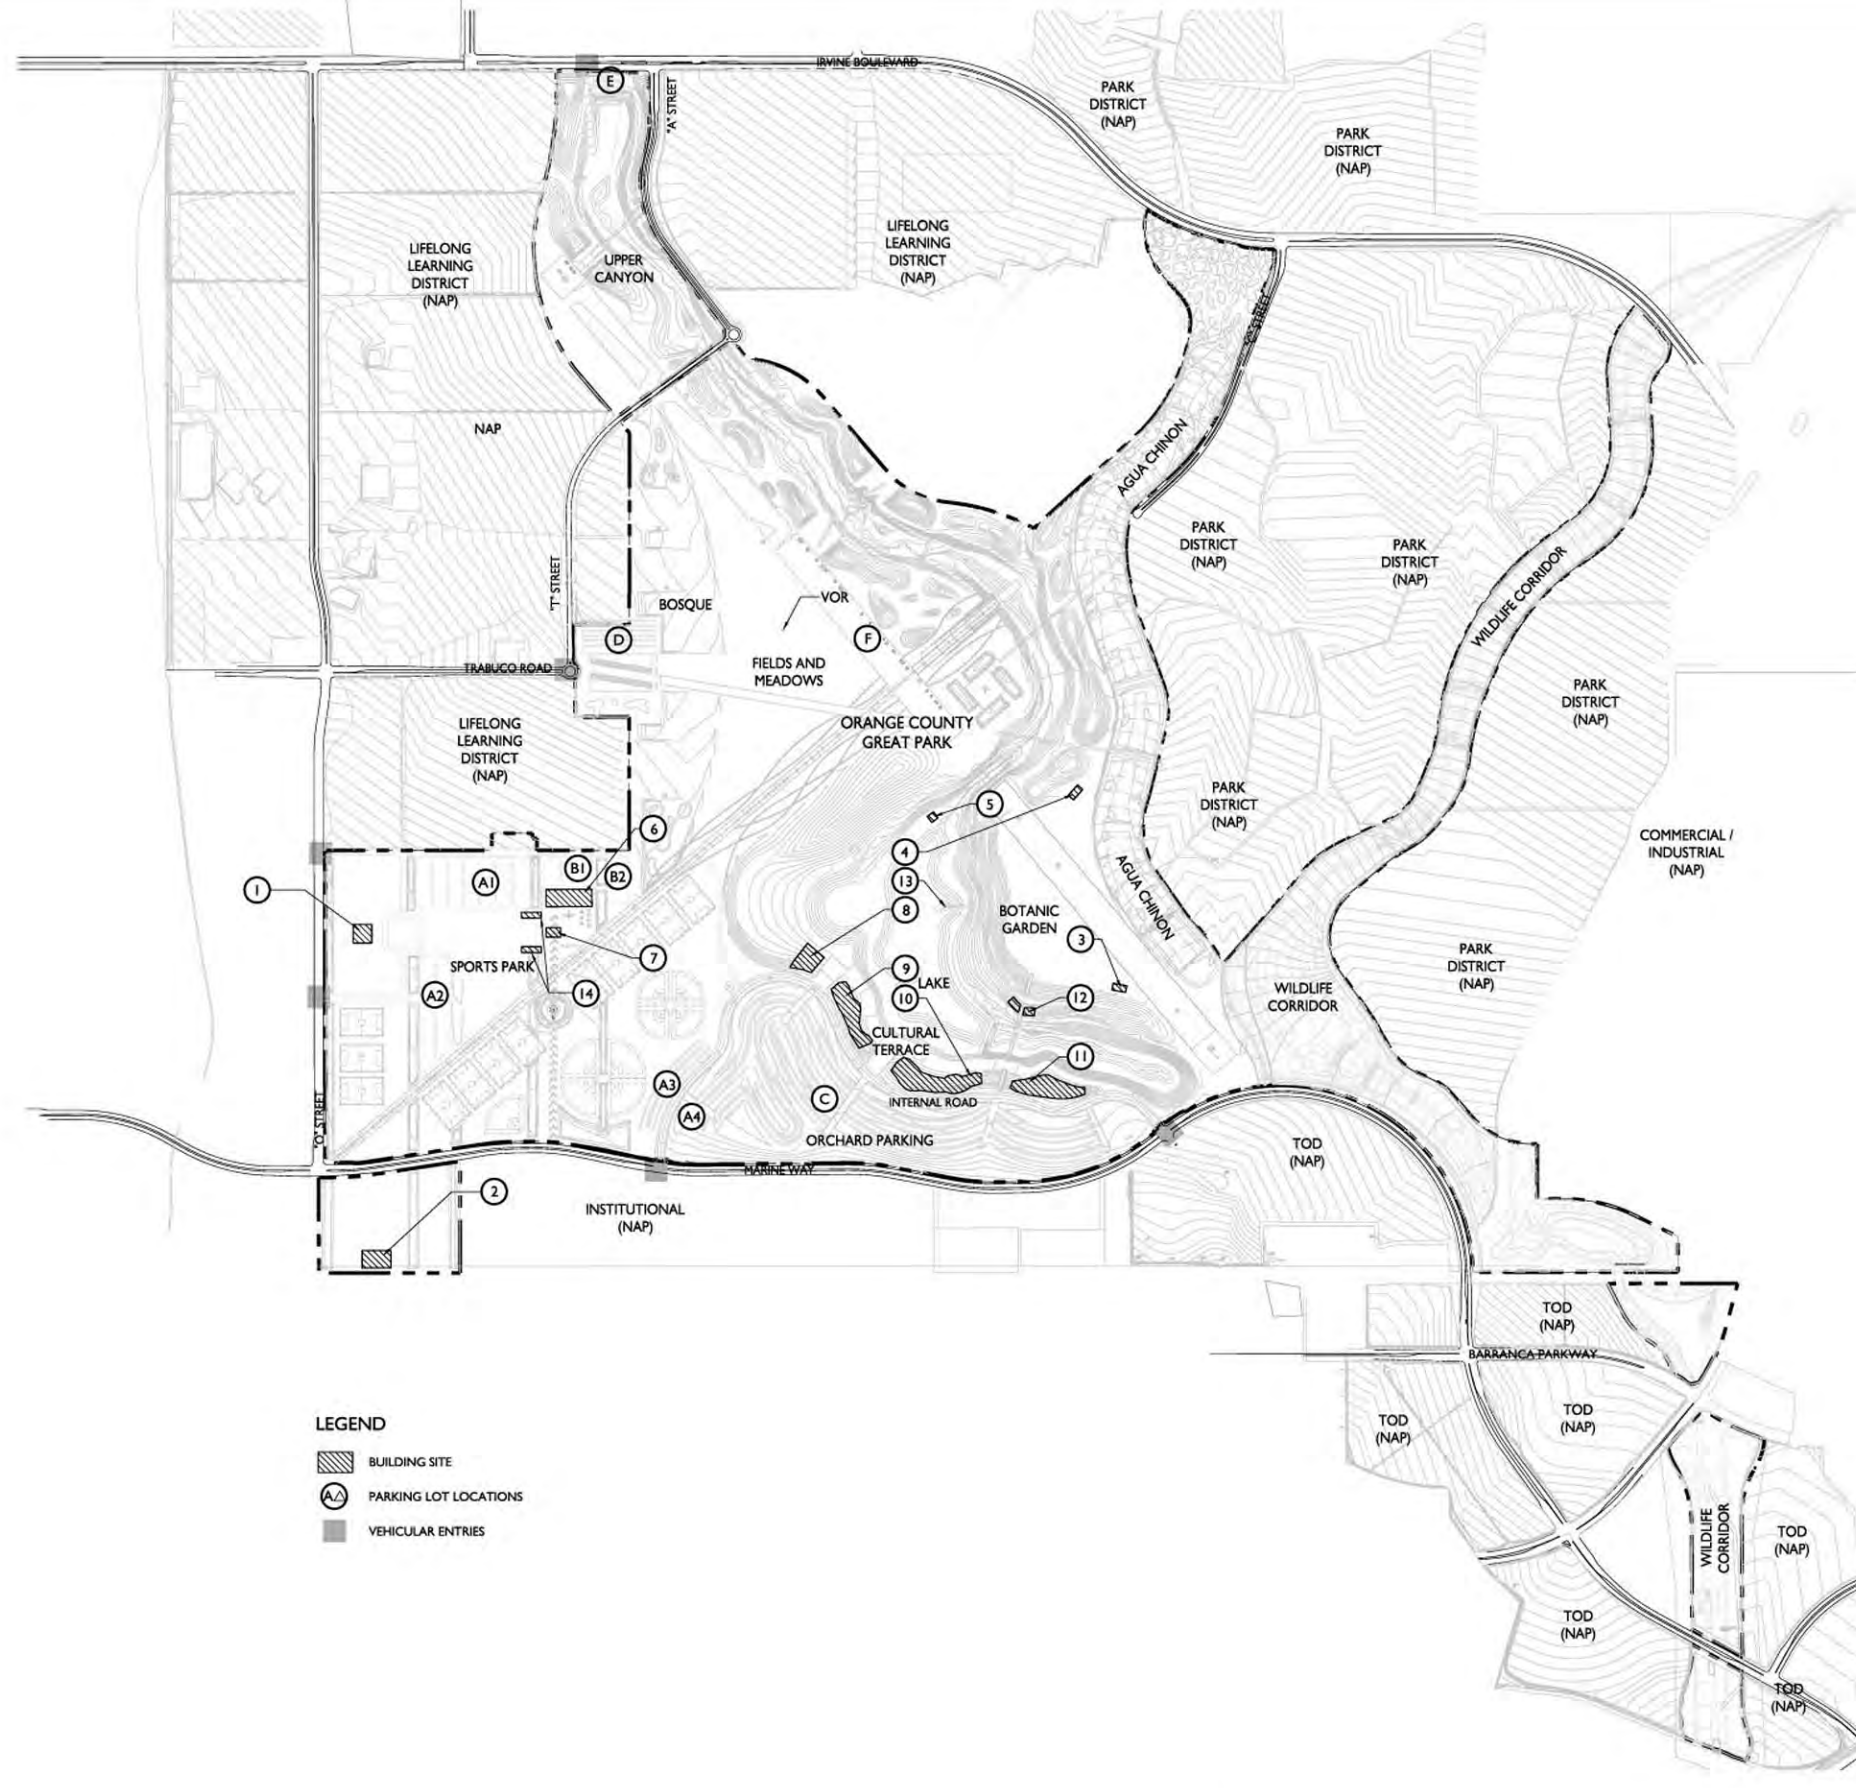

Building Identifier*	Building Type/Function	Building Area (sq. ft.)**
1	Field House	26,000
2	Main Maintenance	37,500
3	Botanic Garden Maintenance	7,200
4	Upper Canyon Maintenance	7,200
5	Pump House	4,400
6	Aircraft Museum (Proposed)	60,000
7	Aircraft Museum (Existing)	10,540
8	Library	39,000
9	Civic Museum 1	81,000
10	Civic Museum 2	108,400
11	Civic Museum 3	85,000
12	Botanic Program	13,900
13	Tea House	800
14	Concession/Accessory Retail Uses	13,060
TOTAL		494,000***

(Source: Great Park Design Studio, June 2007)

*As shown on Figure 2-8

**The total building area proposed is consistent with the allowable square footage identified in the OCGP FEIR. Please refer to previous Table 2-1 in this regard.

***Building square footage for additive uses such as restrooms, concessions are approximately 15,000 square feet.

9	CIVIC / MUSEUM 1 Served by parking lot C	81,000 sq. ft.
10	CIVIC / MUSEUM 2 Served by parking lot C	108,400 sq. ft.
11	CIVIC / MUSEUM 3 Served by parking lot C	85,000 sq. ft.
12	BOTANIC GARDEN BUILDING (includes visitor center, gift shop, cafe, etc.) Served by parking lot C and F (special event supplemental parking)	13,900 sq. ft.
13	TEA HOUSE Served by parking lot C	800 sq. ft.
14	CONCESSIONS / RETAIL AT SPORTS PARK (EXISTING) Served by parking lot A1, A2, B1, B2	13,060 sq. ft.
		TOTAL GREAT PARK 468,000 sq. ft.

TOTAL PROPOSED BUILDING SQ. FT. 494,000 sq. ft.

*Ancillary or additive buildings throughout Great Park (See Drawing ID-100.3 for itemized building sq. ft.)

TOTAL ANCILLARY 15,000 sq. ft.

OCGP SPORTS PARK FACILITIES AND COMPONENTS

FACILITY	OCGP COMPONENTS
OPEN SPORTS FIELDS Soccer (11 Regulation fields, 1 outdoor soccer stadium with 400 seats) Soccer Jr. (Overlaid fields)	12 8
BAT & BALL FIELDS Baseball-Little League Softball	4 5
MIXED SMALL COURTS AREA (not shown) Tennis Courts Frontenis / Handball (27.88 x 42.65 feet) Basketball	12 2 15
BUILDINGS Field House (26,000 sf)	1
ACTION SPORTS PARK (20 acres) Skateboard Park (Approx. 30,000 sq. ft.) Water Park (Approx. 10,000 sq. ft.) Multi-use Fields Plaza/Ped. Mall (375,000 sq. ft.)	1 1 1 4 1 (Not A Part)
OTHER SUPPORT FACILITIES Walking/Jogging Track (over 30 miles of internal primary trail system, approx. 6 miles within the sports district, including distance markers) Children's Play Area Youth Play Area Other (Concessions; Lavs; Group Picnic)	Included 2 3 5
SPORTS PARK MAINTENANCE Served by maintenance facility (2)	1

Building Locations

2. Project Description

Circulation System

Figure 2-9 (OCGP Master Plan – Comprehensive Circulation System) identifies the elements of the circulation system proposed for the OCGP Master Plan. Included are: Proposed Conceptual Park Shuttle Stops, Paved and Unpaved Fire and Emergency Access Routes, Paved and Unpaved Maintenance Access Routes, Equestrian Trails, Paved and Unpaved Bicycle and Pedestrian Trails, Paved and Unpaved Pedestrian Trails, proposed Class II (on-street) Trails, and proposed Class I (off-street) Trails. The trail circulation system proposed within the project boundaries connects to the surrounding Heritage Fields neighborhoods as well as existing regional trails. Class II (on-street) bikeways are located along Sand Canyon Road, Irvine Boulevard, Alton Parkway, and Trabuco Road, which provides access to the OCGP. Existing Class I (off-street) regional bicycle and pedestrian trails requiring connections are located in the vicinity of the OCGP as follows:

- Walnut Trail to the west;
- Venta Spur Trail to the west;
- Modjeska Trail to the north; and
- San Diego Creek Trail to the south.

Infrastructure and Grading

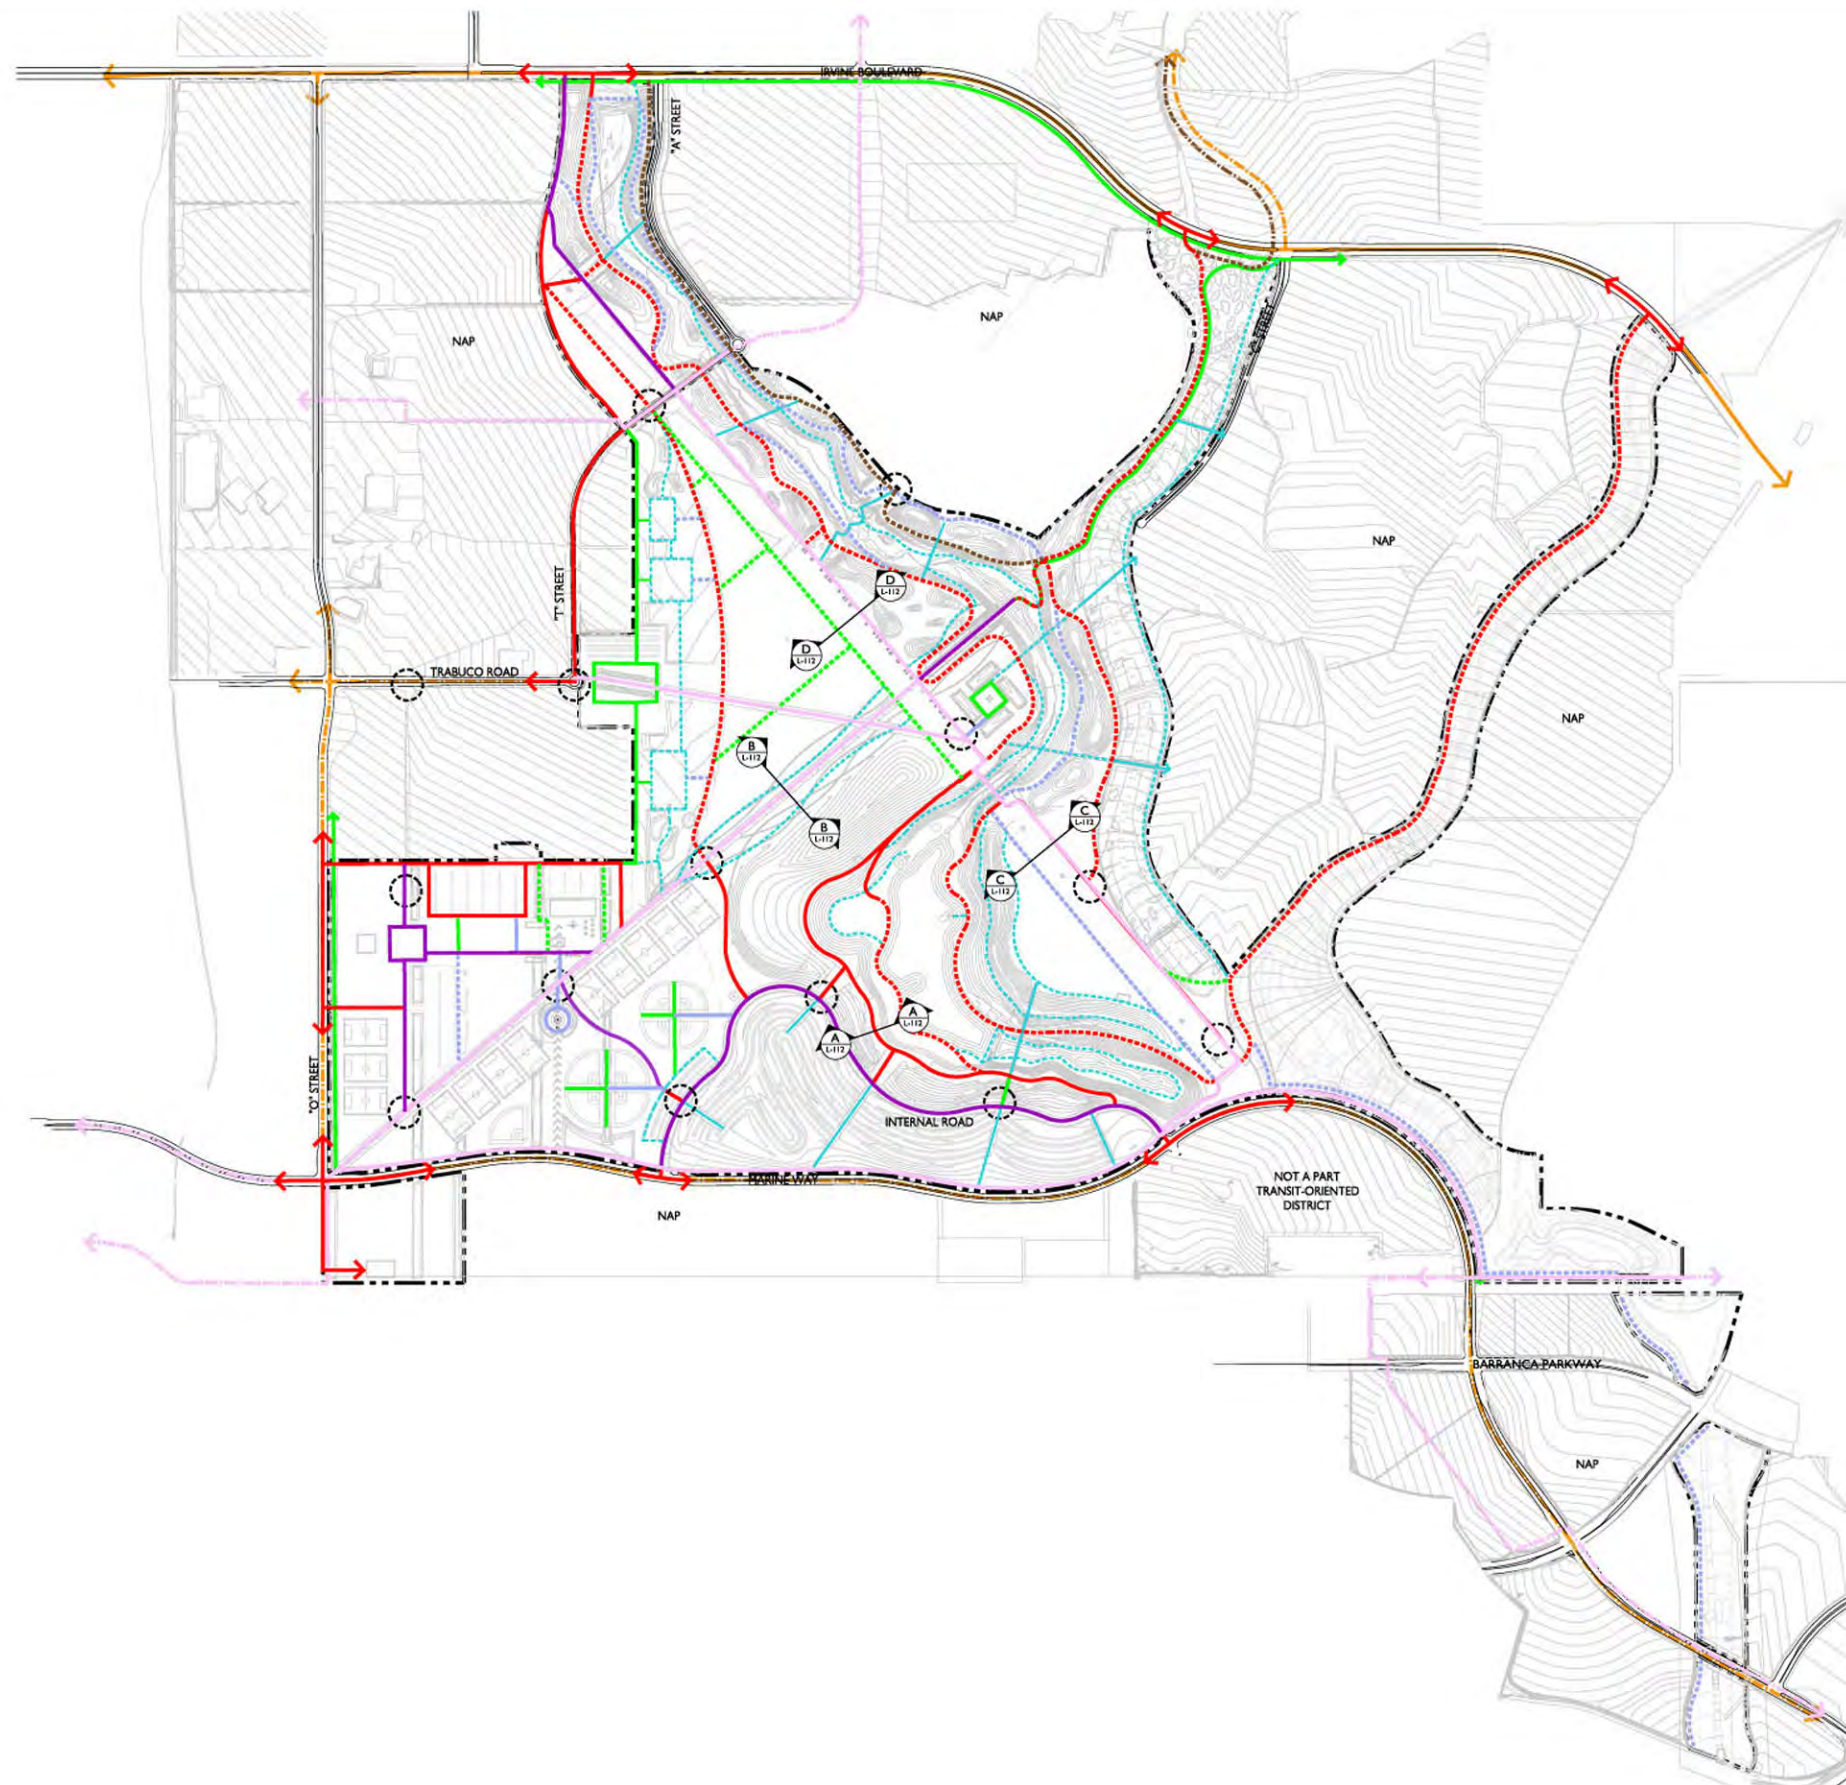

The backbone infrastructure serving the entire property including the Great Park will be constructed by Heritage Fields, El Toro, LLC per the Orange County Great Park Development Agreement. For information regarding the backbone infrastructure components to be constructed, refer to OCGP Final Program EIR Addendum No. 3. With regard to grading, portions of the OCGP Master Plan area will be graded by Heritage Fields, El Toro, LLC. The areas to be graded in this regard are the Agua Chinon and Wildlife Corridor. For information regarding the grading to be undertaken by Heritage Fields, El Toro, LLC, refer to Addendum No. 3. The remainder of the grading within the project site is depicted on **Figure 2-10 (OCGP Master Plan – Grading Plan)**. The volume of grading depicted on Figure 2-10 is an estimated 13.2 million cubic yards and will be balanced on-site.

2.4 DISCRETIONARY APPROVALS

Implementation of the OCGP Master Plan will first require approval of the following discretionary actions by the City of Irvine:

- CEQA related actions and approvals;
- Approval of the OCGP Master Plan (Case No.00434337-PMP);
- Subsequent Master Plan or Park Design applications; and
- Public Facility Review.

The OCGP Final Program EIR (See OCGP FEIR pages 3-29 and 3-30) lists additional discretionary actions to be taken by the City and other public agencies at or as part of the completion of the proposed project.

LEGEND

- PROPOSED CONCEPTUAL PARK SHUTTLE STOPS
- FIRE AND EMERGENCY, MAINTENANCE, BICYCLE AND PEDESTRIAN ACCESS (PAVED)
- FIRE AND EMERGENCY, MAINTENANCE, BICYCLE AND PEDESTRIAN ACCESS (UNPAVED)
 - Decomposed granite
 - Turf block
- MAINTENANCE, BICYCLE AND PEDESTRIAN ACCESS (PAVED)
- MAINTENANCE, BICYCLE AND PEDESTRIAN ACCESS (UNPAVED), MAINTENANCE ONLY IN WILDLIFE CORRIDOR
 - Decomposed granite
 - Turf block
- RIDING AND HIKING ACCESS
 - Decomposed granite
- REGIONAL CLASS I BICYCLE AND PEDESTRIAN TRAIL (WITHIN PARK)
- CLASS I BICYCLE AND PEDESTRIAN TRAIL
- BICYCLE AND PEDESTRIAN ACCESS (PAVED)
- BICYCLE AND PEDESTRIAN ACCESS (UNPAVED)
 - Decomposed granite
 - Turf block
- PEDESTRIAN ACCESS ONLY (PAVED)
- PEDESTRIAN ACCESS ONLY (UNPAVED)
 - Possible material may include decomposed granite, compacted soil, or other material subject to future city approval
- CLASS II ON-STREET BIKE LANE (EXISTING OUTSIDE OF PARK)
- CLASS II ON-STREET BIKE LANE (PROPOSED OUTSIDE OF PARK)
- CLASS I OFF-STREET TRAIL (PROPOSED OUTSIDE OF PARK)
- RIDING AND HIKING TRAIL (PROPOSED OUTSIDE OF PARK)

3. Environmental Checklist

3.1 CITY OF IRVINE INITIAL STUDY AND ENVIRONMENTAL EVALUATION

The City of Irvine Environmental Information and Environmental Checklist Forms have been completed by the City and are included on the pages that follow. The Environmental Checklist Form is marked with the City's findings regarding the environmental effects of the proposed OCGP Master Plan in comparison with the findings of the certified OCGP Final Program EIR and subsequent Addenda. This comparative analysis has been undertaken, pursuant to the provisions of the California Environmental Quality Act, to provide the City, in its capacity as Lead Agency, with the factual basis for determining whether any changes in the project, any changes in the circumstances, or any new information requires additional environmental review. The basis for each of the findings listed in the attached Environmental Checklist is explained in Section 4.0, *Discussion of Checklist and Mitigation Measures*, provided later herein.

1. Project Title:

Orange County Great Park Master Plan – Case No. 00434337-PMP

2. Lead Agency Name and Address:

City of Irvine Community Development Department

7000 Trabuco Road, Building 873

Irvine, California 92618

3. Contact Person and Phone Number:

Diane Vu, Senior Planner

(949) 724-7460

4. Project Location:

The project site is located on the former MCAS El Toro site, and is also surrounded by Heritage Fields El Toro, LLC property, which is roughly bounded by SR-133 to the west, Alton Parkway to the east, I-5 to the south and Irvine Boulevard to the north in Planning Areas 30 and 51.

5. Project Sponsor's Name and Address:

Orange County Great Park Corporation

7000 Trabuco Road, Building 873

Irvine, California 92618

6. General Plan Designation: OCGP (Orange County Great Park)

7. Zoning: 1.5 Recreation, 6.1 Institutional, 1.4 Preservation

3. Environmental Checklist

8. Description of Project:

The proposed project is a Master Plan for the conceptual design of the Orange County Great Park, a 1,145-acre multi-use public park facility located on a portion of the former MCAS El Toro military base encompassing passive and active recreational uses, preservation-oriented, and institutional uses. Please refer to Section 2, *Project Description*, for a more detailed description of the proposed OCGP Master Plan.

9. Surrounding Land Uses and Setting (Briefly describe the project's surroundings):

The proposed project area (which consists of Planning Areas 30 and 51) is located in the central portion of Orange County, approximately 45 miles southeast of Los Angeles. The OCGP Master Plan project site and the Heritage Fields development areas that nearly completely surrounds it, is generally bounded by the Irvine Spectrum to the south, City of Lake Forest to the east, the Woodbury residential community to the west, and the future Portola Springs residential development to the north.

The project area is located north of the Santa Ana (I-5) Freeway, east of the Eastern Transportation Corridor (SR-133), and south of the Foothill Transportation Corridor (SR-241). Major roadways bordering the project area include Barranca Parkway to the south, Sand Canyon Avenue to the west, Portola Parkway and Irvine Boulevard to the north, and Alton Parkway to the East

10. Other Public Agencies Whose Approval Is Required (e.g., permits, financing approval, or participation agreement):

None

3.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|--|---|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agricultural Resources | <input type="checkbox"/> Air Quality |
| <input type="checkbox"/> Biological Resources | <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Geology / Soils |
| <input type="checkbox"/> Hazards and Hazardous Materials | <input type="checkbox"/> Hydrology / Water Quality | <input type="checkbox"/> Land Use / Planning |
| <input type="checkbox"/> Mineral Resources | <input type="checkbox"/> Noise | <input type="checkbox"/> Population / Housing |
| <input type="checkbox"/> Public Services | <input type="checkbox"/> Recreation | <input type="checkbox"/> Transportation / Traffic |
| <input type="checkbox"/> Utilities / Service Systems | <input type="checkbox"/> Mandatory Findings of Significance | |

3.3 DETERMINATION

On the basis of this initial evaluation:

3. Environmental Checklist

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a “potentially significant impact” or “potentially significant unless mitigated” impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Diane Vu, Senior Planner

Date

3. Environmental Checklist

3.4 EVALUATION OF ENVIRONMENTAL IMPACTS

- 1) *A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).*
- 2) *All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.*
- 3) *Once the lead agency has determined that a particular physical impact may occur, then the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.*
- 4) *“Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.*
- 5) *Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an affect has been adequately analyzed in an earlier EIR or negative declaration. Section 1 5063(c) (3)(D). In this case, a brief discussion should identify the following:*
 - a) **Earlier Analysis Used.** *Identify and state where they are available for review.*
 - b) **Impacts Adequately Addressed.** *Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.*
 - c) **Mitigation Measures.** *For effects that are “Less Than Significant With Mitigation Incorporated,” describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.*
- 6) *Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.*
- 7) *Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.*

3. Environmental Checklist

- 8) *This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.*
- 9) *The explanation of each issue should identify:*
- a) the significance criteria or threshold, if any, used to evaluate each question; and
 - b) the mitigation measure identified, if any, to reduce the impact to less than significant.

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
I. AESTHETICS: Would the project:						
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway or local scenic expressway, scenic highway, or eligible scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in the visible grading of over 5,000 cubic yards on any 20-acre portion of the project site; or visible cut and fill slope over 25 vertical feet?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in the creation of light spillover and glare effects that present a nuisance to residential land uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Result in the substantial alteration of the existing landform of the site or of a unique topographic feature on the site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
II. AGRICULTURAL RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Mode (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:						
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
III. AIR QUALITY: Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:						
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
IV. BIOLOGICAL RESOURCES: Would the project:						
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
V. CULTURAL RESOURCES: Would the project:						
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5 of the CEQA Guidelines.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the CEQA Guidelines?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VI. GEOLOGY AND SOILS: Would the project:						
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:						
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
ENVIRONMENTAL ISSUES						
become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?						
d) Be located on expansive soil, as defined by Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VII. HAZARDS AND HAZARDOUS MATERIALS: Would the project:						
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project located within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR

emergency evacuation plan?						
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VIII. HYDROLOGY AND WATER QUALITY: Would the project:						
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on-site or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on-site or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of pollutant runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of levee or dam failure?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j) Inundation by seiche or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
IX. LAND USE AND PLANNING: Would the project						
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of any agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
X. MINERAL RESOURCES: Would the project:						
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
XI. NOISE: Would the project result in:						
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, heliport or helistop, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XII. POPULATION AND HOUSING: Would the project:						
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through the extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
XIII. PUBLIC SERVICES: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:						
a) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XIV. RECREATION: Would the project:						
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XV. TRANSPORTATION/TRAFFIC: Would the project:						
a) Cause an increase in traffic, which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels or change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in inadequate parking capacity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus stops/routes, bicycle lanes, sidewalks, etc.)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XVI. UTILITIES AND SERVICE SYSTEMS: Would the project:						
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Have sufficient water supplies available to serve the project (including large scale developments as defined by Public Resources Code Section 21151.9 and described in Question No. 20 of the Environmental Checklist) from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Comply with Federal, State, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Result in a need for new systems or supplies, or substantial alterations related to electricity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Result in a need for new systems or supplies, or substantial alterations related to natural gas?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
j) Result in a need for new systems or supplies, or substantial alterations related to telephone service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
k) Result in a need for new systems or supplies, or substantial alterations related to television service/reception?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XVII. MANDATORY FINDINGS OF SIGNIFICANCE						
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4. Discussion of Checklist and Mitigation Measures

4.1 AESTHETICS

4.1.1 Environmental Setting

The OCGP FEIR addressed, in detail, the potential visual impacts associated with the development of the former MCAS El Toro. The OCGP FEIR discussed the project's visual setting associated with its location adjacent to various arterial highways and state and federal highways. None of these roadways are designated County or State scenic highways, although Sand Canyon Avenue is designated as a highway with rural/natural character. The City's General Plan also designates the Santa Ana (I-5) Freeway as an urban character Scenic Highway. Generally, views of the former military base are from the surrounding highways. From these highways, a variety of land uses, structures, and facilities of differing ages, sizes, and architectural styles may be viewed. Though agricultural areas are located adjacent to and within the base, the predominant features are associated with the military use of the property, including runways, aprons, hangars, warehouses, barracks housing, recreational facilities, golf course, single-family housing, offices, and commercial structures. The City of Lake Forest and the James A. Musick Branch Jail are located to the east; Irvine Spectrum abuts the former base along the eastern and southern boundaries; and existing and developing residential communities are located to the north and west. Further to the south are the residential communities of the Cities of Laguna Woods and Laguna Hills. These communities are at higher elevations and therefore have panoramic views of the project.

4.1.2 Impacts Identified in the OCGP FEIR

The OCGP FEIR discussed the potential aesthetic effects associated with the development of Planning Areas 30 and 51, under the Overlay Plan, and found that future development of these two planning areas would introduce new sources of light within the project area. These sources include street lighting along planned roadways and various forms of exterior lighting, including security lighting, parking lots, educational facilities, institutional and commercial developments, and lighting associated with athletic fields. The OCGP FEIR concluded that significant light impacts may occur should proposed light sources be directed into or located near existing or planned residential uses, which are sensitive to light intrusion during nighttime hours. The OCGP FEIR further concluded that the proposed mitigation measures for the project would reduce potentially significant light impacts to less than significant levels.

With regard to the other aesthetics-related impact significance thresholds presented in the OCGP FEIR, no other significant or potentially significant aesthetics impacts were identified. These other thresholds primarily concern visual aesthetics impacts and include such evaluative factors as view-shed obstruction or impairment, landform alteration, and the degradation of valued or unique scenic resources or features.

4.1.3 Impacts Associated with the OCGP Master Plan

Overall, exterior light sources associated with the proposed OCGP Master Plan fall into the same categories previously identified in the OCGP FEIR, such as security lighting, parking lot lighting, lighting associated with cultural and institutional structures and/or venues, and athletic field lighting. As such, impacts associated with nighttime illumination attributable specifically to the project would area would be within the scope of that already addressed in the OCGP FEIR. The

4. *Discussion of Checklist and Mitigation Measures*

OCGP Master Plan does identify one potential source of nighttime illumination not previously identified in OCGP FEIR that of illuminated iconic park elements, such as the helium tethered balloon attraction. No other iconic elements were identified. In this regard, it is noted that such lighting is focused on the iconic element and not away from it. It is further noted that lighting of this type would exhibit a degree of luminosity substantially lower than some of the other types already considered in the OCGP FEIR, such as lighting associated with athletic fields. As a consequence, it is concluded that the extent of any impact associated with the illumination of iconic park elements has already been adequately addressed in the OCGP FEIR.

The overall OCGP project evaluated in the OCGP FEIR essentially established the City's land use policies and development controls (i.e. General Plan and Zoning) to which all future development within the overall OCGP boundaries would be subject. The OCGP Master Plan represents the first step toward formalizing a specific development template in accord with those same policies and controls. In doing so, the level of detail regarding attributes of the Great Park's physical development depicted in the proposed OCGP Master Plan is more refined than the programmatic land use plan profiles provided in the OCGP FEIR. This is particularly the case with regard to grading and landform alteration.

As indicated in previous Section 4.1.2, with regard to the non-lighting related significance thresholds presented in the OCGP FEIR, no other significant or potentially significant aesthetics-related impacts were identified. The OCGP FEIR also noted that these other thresholds related primarily to determining impacts on visual quality based upon a variety of measurable factors that either directly or indirectly involves some aspect of construction-related earth movement activities. With regard to the proposed OCGP Master Plan, further discussion of two specific thresholds of this nature is merited. The two significance thresholds are framed in the two questions that follow. The thresholds themselves are highlighted - Will the proposed project: 1) result in the *visible grading of over 5,000 cubic yards on any 20-acre portion of the project site; or visible cut and fill slope over 25 vertical feet*; and 2) result in the *substantial alteration of the existing landform of the site or of a unique topographic feature on the site*?

The OCGP Master Plan indicates that mass grading associated with Great Park development will involve the movement of more than thirteen million cubic yards of earth materials within the Master Plan boundaries, excluding, as previously described in Section 2.3.2, *Project Features*, the Agua Chinon and Wildlife Corridor. Given this, visible grading of more than 5,000 cubic yards of earth materials on any portion of the Great Park is highly likely. The proposed OCGP Master Plan comprises several physical elements that by their nature, create, re-establish or enhance natural environments that will necessitate the creation of numerous cut and fill slopes, many of which will exceed 25 feet in height. The relevant Master Plan elements in the foregoing regards are the Upper Canyon (a planned new manufactured environment), the Agua Chinon (a planned re-established environment), and the Wildlife Corridor (an enhanced habitat environment).

It is noted that, at present, the predominance of land area comprising the OCGP Master Plan is relatively flat with a slight (1.5 to 2.5 percent) west and southwest trending down gradient. Constructing the aforementioned Master Plan features within the Great Park will both incise into, and create undulating berms atop, the project site's relatively flat topographic expression. For example, construction of the Upper Canyon will involve a serpentine linear excavation approximately 30 feet below-grade with both sides of the excavated alignment lined with berms up to 30 feet in height. Overall, the Upper Canyon is designed to be two miles long, up to 60 feet

4. *Discussion of Checklist and Mitigation Measures*

deep, and more than 70 feet wide at its narrowest point before it widens near the southern end to accommodate the Cultural Terrace and adjacent two-tiered 26.2-acre lake.¹

During grading operations, some residents within Portola Springs may have distant views of the project site since they are located at a higher elevation. In addition, travelers on nearby freeways including the I-5, SR-133, and SR-241 will have distant views of the project site. However, during construction, slopes and soil stockpiles will be hydroseeded to control erosion in accordance with the City's Grading Ordinance and NPDES requirements. As a result, slopes and soil stockpiles will be similar in appearance to native grassland and no significant aesthetic impacts are anticipated during construction.

Notwithstanding the foregoing, it would appear that implementation of the proposed OCGP Master Plan will exceed the aforementioned screening thresholds of potential significance. However, due to the nature of and reasons for those exceedances, and due to the fact that the total area of disturbed land (as opposed to the total volume of grading) will not materially differ from that envisioned in the OCGP FEIR, implementation of the project will not result in any significant aesthetic impact. The basis for this conclusion is, among other things, rooted in understanding the context in which the aforementioned thresholds normally apply. Essentially, the foregoing thresholds are employed to evaluate the potential impacts of grading that is done principally for a "utilitarian purpose" such as the construction of homes, office buildings, or shopping centers. In that circumstance, the grading arguably results in a degradation of the existing environment's unique physical characteristics (including, valued natural attributes and topographic variability). In contrast, here the earth movement is not for a "utilitarian purpose"; rather, it is largely designed to create aesthetically pleasing topographic variability where none currently exists. Put another way, the earth movement is in-and-of-itself, the development. Even in its initial stages, when comprised of little more than bare articulated topographic expressions, that development will constitute an aesthetic enhancement over existing conditions. The degree of that aesthetic improvement over existing conditions will only improve as the Master Plan implementation progresses and varied habitat environments and activity nodes for the visiting public, replete with lush vegetation and numerous multi-faceted and variable hard- and soft-scape recreational amenities will come into existence.

Further, it is acknowledged that while the landforms created by project-related grading will be visible to the interested observer, the City concludes that the long-term beneficial aesthetic impacts attributable to OCGP Master Plan implementation more than offset any short-term adverse grading-related aesthetic impacts, especially given the absence of any significant visual resources in the area to be graded. Given the foregoing, the findings of the OCGP FEIR and subsequent addenda regarding aesthetic impacts remains valid when applied to the OCGP Master Plan as currently proposed.

Major FEIR Revisions Not Required. Based on the analysis of the OCGP Master Plan there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the OCGP Master Plan or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

¹ The Master Plan includes a more refined definition of the park project, which includes features such as the Upper Canyon, Lower Canyon, and Lake that will require a substantial amount of grading that was not specifically discussed in the Program EIR. However, as detailed in this Addendum, that more refined project description does not yield adverse aesthetic impacts.

4. *Discussion of Checklist and Mitigation Measures*

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetic effects identified in and considered by the approved OCGP FEIR.

4.14 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR identified two mitigation measures, which, if fulfilled, would reduce the aesthetic effects of development under the Overlay Plan (as revised in Addendum No. 2; the “Revised Overlay Plan”) to a less than significant level.

- A1 Prior to issuance of building permits, lighting plans and signage plans for new development shall be reviewed by the Community Development Department to ensure that minimal light intrusion and spillover into adjacent residential areas occurs.
- A2 Prior to the issuance of building permits, and during the master plan review process for future development in the project area, the Director of Community Development shall ensure that mirrored and highly reflective surfaces are discouraged or, where proposed, shall be accompanied by a design-level glare impact analysis that demonstrates no adverse visual impairment to motorists or other visual nuisance occurs.

The timing of these mitigation measures has been changed from prior to the issuance of grading permits to prior to the issuance of building permits. These measures are typically applied at the issuance of building permits because they are associated with physical development of a site, not the grading of a site.

4. *Discussion of Checklist and Mitigation Measures*

4.2 **AGRICULTURAL RESOURCES**

4.2.1 **Environmental Setting**

The OCGP FEIR described the Farmland Mapping and Monitoring Program (FMMP Program) of the California Department of Conservation Division of Land Resources Protection. Under the FMMP Program, classifications of agricultural lands present within the site are as follows:

- **Prime Farmland:** Land which has the best combination of physical and chemical features able to sustain long-term production of agricultural crops. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for production of irrigated supply needed to produce sustained high yields. Land must have been used for production of irrigated crops at some time during the previous two map updates.
- **Farmland of Statewide Importance:** Similar to Prime Farmland, except this land has minor shortcomings such as greater slopes or less ability to store soil moisture than Prime Farmland. This land has minor shortcomings, such as greater slopes or less ability to store soil moisture than Prime Farmland. Land must have been used for production of irrigated crops at some time during the previous two map updates.
- **Unique Farmland:** Lesser quality soils used for the production of the State's leading crops. This land is usually irrigated, but may include non-irrigated orchards or vineyards as found in some climate zones in California. This land is used for the production of specific high economic value crops such as oranges, olives, avocados, rice, grapes, or cut flowers. Land must have been cropped at some time during the two previous maps updates.
- **Farmland of Local Importance:** Land of importance to the local agricultural economy as determined by each county's board of supervisors and a local advisory committee. **Figure 4-1 (Agricultural Resources)** depicts the farmland classifications within the project site and surrounding area. The OCGP FEIR identifies approximately 659 acres of designated Prime Farmland, 70 acres of designated Unique Farmland, and 99 acres of designated Farmland of Statewide Importance. The Orange County Board of Supervisors has not designated any farmland as being of "Local Importance."

City of Irvine Policies and Programs

The City of Irvine General Plan Objective L-10, as amended in 2002 and presented in the OCGP FEIR, includes the following policies to "encourage the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development":

Policy (a): Provide for farming opportunities in the community, where feasible and appropriate, through an Agricultural Legacy Program facilitating limited-scale agricultural operations and program on public lands. The program may include components such as edible landscape, metro-farming, heritage farming, model farming, education and community service farming and other farm or farm market program. Location for implementation of the Agricultural Legacy Program to be considered should, at a minimum, include:

- designated open space spine network,
- designated open space areas not subject to the Natural Community Conservation Plan (NCCP), and,
- other appropriate publicly-owned lands.

4. *Discussion of Checklist and Mitigation Measures*

Policy (b): Consider creating a “working model” farm to act as a center for education and enjoyment of all age groups pursuant to the Agricultural Legacy Program in conjunction with the City’s planning efforts concerning the reuse of MCAS El Toro, or with the South Coast Research Extension owned by UC Regents.

Policy (c): Permit agricultural use of land which is unsuitable for building because it is within flood plains, or is subject to hazards to public health, safety, and welfare or similar constraints precluding development. Conversion from agricultural use may be allowed where the identified hazard conditions have been eliminated.

Policy (d): Permit agricultural uses, on an interim bases, on land designated for development, and consider agricultural uses as part of the City’s planning efforts for the re-use of MCAS El Toro.

Policy (e): Encourage and support federal and state legislation proposed for the purpose of preservation of agricultural lands which are compatible with the City’s goals and objectives.

Policy (f): Allow for conversion of interim and permanent agricultural uses to development to provide land for the construction of housing units consistent with the Land Use and Housing Elements, and the development of commercial and industrial buildings consistent with the provision of job opportunities as described in the Land Use Element, where such conversion does not conflict with other L-10 policies.

Policy (g): Pursue the open space policies contained in the Conservation and Open Space Element and address any open space or aesthetic impacts from the conversion of interim and permanent agricultural uses to development as part of the City’s existing policies for the preservation of open space and existing policies for mitigation of views and aesthetic impacts under the policies in the Conservation and Open Space Element.

4.2.2 Impacts Identified in the OCGP FEIR

The OCGP FEIR determined that the Revised Overlay Plan would preserve in perpetuity 303 acres² of land for agricultural use, of which 251 acres are classified as Prime Farmland, Unique Farmland, and Farmland of Statewide Importance. The locations of the 303 acres of permanent agricultural land are listed below and the Farmlands Map can be found in the OCGP FEIR as Figure 5.8-1:

- **Planning Area 30:** 13 acres within Planning Analysis Zone (PAZ) 26; and
- **Planning Area 51:** 90 acres within PAZ 4; and 200 acres within PAZ 1.

The Revised Overlay Plan also resulted in the permanent loss of 802 acres of designated farmland comprised of 651 acres of Prime Farmland, 63 acres of Unique Farmland, and 88 acres of Farmland of Statewide Importance. This impact was considered significant and unavoidable.

² Please note that there is a scrivener’s error within the OCGP FEIR: Table 1-2 on page 1-8 and Table 3-4 on pages 3-12 and 3-13 identify the total agricultural land as 303 acres; however on page 5.8-10 the agricultural use acreage is noted as 307.

4. *Discussion of Checklist and Mitigation Measures*

It was determined the Revised Overlay Plan resulted in a significant impact associated with the conversion of agricultural land to nonagricultural use. The OCGP FEIR noted the context of agricultural production in Orange County—including development pressures that have contributed to the decrease in agricultural production in the County over time—which suggested that conversion of agricultural land to urban uses would occur with or without the development of the Overlay Plan.

4.2.3 Impacts Associated with the OCGP Master Plan

The OCGP Master Plan will affect the same proportion of the 802-acres of lost designated farmland as articulated in the OCGP FEIR. Consequently, its contribution to the significance and unavoidability of this impact remains. Concomitantly, the OCGP Master Plan will also account for the same proportion of agricultural land converted to nonagricultural use as articulated in the OCGP FEIR.

While a contributor to the aforementioned significant and unavoidable impacts concerning the loss of designated farmland and the permanent conversion of agricultural lands to other uses, it is noted that the OCGP Master Plan has incorporated a variety of agriculture-oriented features into its current design. These include, but are not limited to: 48.3 acres of planted citrus and avocado groves interspersed throughout the Orchard Parking Park District; California native gardens, and food and health gardens within the Botanical Garden Park District; citrus, nut and avocado orchards within the Great Lawn/Fields Park District, and fruit and nut trees within the Bosque Park District.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the approved OCGP FEIR. The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the approved OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to the OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified and the addenda were approved, indicating that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant effects on agricultural resources identified in and considered by the approved OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

4.2.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

Mitigation measures AG1 - AG3 would be implemented in conjunction with master plan review and subsequent development permits. The project would neither change these mitigation measures nor their application to future developments.

AG1 In order to encourage agriculture as an interim land use pending development on the project site by warning future residents that they are buying or renting a house adjacent to listing agricultural operators, City of Irvine Standard Discretionary Case Condition B.4 and City of Irvine Subdivision Condition 3.4 regarding disclosure statements shall be amended to include the following for subdivisions proposed adjacent to existing agricultural operations:

Prior to issuance of building permits, the applicant shall submit, and the Director of Community Development shall have approved, a completed occupancy disclosure form for the project. The approved disclosure form, along with its attachments, shall be included as part of the rental/lease agreement and as part of the sales literature for the project. The disclosure statement shall include the following information:

- Continuation of agricultural operations adjacent to the site and their potential effects (spraying of pesticides, noise, dust, odor, etc.) on future residents or tenants

AG2 Heritage and community service/educational farming operations shall be encouraged within utility easements and other lands. Heritage farming is defined as small-scale specialty farming operations that can be accommodated in an urban environment. An example would be the Edible Landscape project located adjacent to Harvard Avenue within the Edison right-of-way.

AG3 Future landowners and the City shall work cooperatively with farmers to minimize conflicts between agricultural operation and adjacent urban uses.

4. Discussion of Checklist and Mitigation Measures

4.3 AIR QUALITY

4.3.1 Environmental Setting

The OCGP FEIR described the existing air quality regarding the following regulated pollutants: ozone (O₃), carbon monoxide (CO), suspended particulate matter (PM₁₀), nitrogen oxides (NO_x), sulfur dioxide (SO₂), lead (Pb), volatile organic compounds (VOC), and reactive organic gases (ROG). The South Coast Air Basin (SCAB) is described as a non-attainment area for O₃, CO, and PM₁₀; annual maximum concentrations of O₃, CO, PM₁₀, and SO₂ exceeded both federal and state standards in some or all areas in the SCAB during the reporting period (2000). In contrast, standards for nitrogen dioxide (NO₂), SO₂, and Pb were not exceeded during the reporting period. The OCGP FEIR also noted the pending promulgation by the U.S. Environmental Protection Agency (EPA) and California Air Resources Board of standards for PM_{2.5} (particulate matter less than 2.5 microns in diameter). The standards are provided in **Table 4-1 (Federal and State Standards for PM_{2.5})** below.

Table 4-1
Federal and State Standards¹ for PM_{2.5}

Averaging Time	Federal Standards	California Standards ²
Annual Arithmetic Mean	15 µg/m ³	12 µg/m ³
24-Hour	65 µg/m ³	No Separate Standard
Sources: ¹ www.epa.gov/pmdesignations/state/California.htm [June 5, 2006]. ² 17 CFR §70200, Table of Standards.		

The California Air Resources Board adopted the annual standard identified above but has postponed establishing a 24-hour standard for PM_{2.5}. EPA has identified several counties, including Orange County, as PM_{2.5} non-attainment areas. EPA is in the process of responding to comments on related regulations. At the local level, the South Coast Air Quality Management District (SCAQMD) is in the process of developing a methodology for calculating PM_{2.5} and PM_{2.5} significance thresholds for the purpose of analyzing local and regional air quality impacts in CEQA documents. A draft communication issued in May 2006 by the SCAQMD to its working group indicated that the methodology for calculating PM₁₀ could also be used to calculate PM_{2.5}.

4.3.2 Impacts Identified in the OCGP FEIR

The OCGP FEIR reported that construction and operation of the overall OCGP project pursuant to the development parameters set forth in the adopted Overlay Plan would result in significant impacts on air quality. With regard to construction, the OCGP FEIR indicated that demolition of existing structures, including 31.2 million cubic feet of concrete from removal of the runways, site

4. *Discussion of Checklist and Mitigation Measures*

grading, and development would generate emissions at levels above the significance thresholds for ROG, NO_x, and PM₁₀. The OCGP FEIR described the construction air impacts after mitigation as significant and unavoidable. (Refer to OCGP FEIR pp. 5.3-16 through 5.3-20.)

The operations-related air quality impacts associated with build-out under the adopted Overlay Plan included emissions associated with energy consumption and vehicular trips. The Urban Emissions (URBEMIS) 2001 model and EMFAC7F (motor vehicle emission factor model) were used to estimate air emissions associated with operation of the project site through the analysis year post-2025. The operations air emissions for project area and vehicular mobile sources were estimated at above the significance thresholds for ROG, NO_x, CO, and PM₁₀, and described in the OCGP FEIR as significant after mitigation, and an unavoidable consequence of the project (adopted Plan). No other construction- and operations-related significant air quality impacts were identified in the OCGP FEIR. (Refer to OCGP FEIR pp. 5.3-20 through 5.3-58, and 7-19.)

In addition, the OCGP FEIR disclosed the results of the CO “hotspots” analysis, in which CO concentrations were predicted for intersections with a LOS of “D” or higher at a.m. and p.m. peak hours using the CALINE 4.0 model and EMFAC7F motor vehicle emission factors. No intersections in the traffic study area were expected to result in one-hour and eight-hour CO concentrations above the state standard of 20 parts per million (ppm) for one hour concentrations and 9 ppm for eight hour concentrations (Refer to OCGP FEIR pp. 5.3-31 through 5.3-53).

4.3.3 Impacts Associated with the OCGP Master Plan

Operations Phase

Among the various sources of a project’s operations-phase emissions, those attributable to mobile sources (i.e. vehicular traffic) comprise the largest proportion by far and is a function of both the number and trip length characteristics of vehicle trips directly and indirectly associated with the project under consideration. As discussed in preceding Section 4.3.2, OCGP FEIR estimates of the daily mobile source emission volumes attributable to OCGP project implementation, were based on traffic volumes and average trip lengths associated with build out of the overall OCGP project pursuant to adopted Overlay Plan development parameters. The development parameters for the OCGP project as a whole under the Overlay Plan were provided in OCGP FEIR Table 3-4 beginning at Page 3-12.

In the foregoing regard, previous **Table 2-1** herein identifies the General Plan land use designations, Zoning Districts, attendant Planning Area Zones and acreages, allowable land uses, and the types and quantities of development solely within the OCGP Master Plan portion of the overall OCGP project and is based exclusively on data provided in the aforementioned OCGP FEIR Table 3-4. It is noted that they have remained essentially unchanged since the OCGP Final Program EIR was certified in 2003. Furthermore, a review of the current OCGP Master Plan proposal indicates that all of the land use types and building intensities exhibited are within the scope of the development parameters identified in the subject table.

As a consequence, since future development the OCGP Master Plan portion of the overall OCGP project is consistent with the development parameters that served as the basis for determining the operations phase-related mobile source emissions provided in the OCGP FEIR, the results of the operations phase-related emissions provided in the OCGP FEIR adequately characterize the potential air quality effects of the project and further analysis is neither warranted nor required.

4. Discussion of Checklist and Mitigation Measures

Construction Phase

With regard to OCGP Master Plan construction, more precise and refined information regarding earth movement quantities, locations and anticipated demolition activities and timeframes than what was known and analyzed in the July 2003 OCGP FEIR has become available. As a consequence, PCR Services Corporation prepared a report in which they conducted an analysis to determine whether the projected emissions associated with the more recent, precise and refined information regarding OCGP Master Plan earthmoving activities would be consistent with the emissions inventory assumed in the certified OCGP FEIR and within the envelope of the original air quality impact analysis. The subject report is provided herein as **Appendix C**. The following assumptions regarding OCGP Master Plan area grading (excluding the Agua Chinon and Wildlife Corridor) were provided by Duke Dunn with Gafcon Inc. and employed in the analysis:

- Earthmoving activities to total 13.23 million cubic yards
- Earthmoving activities to start in 2008
- Equipment Mix - 12 scrapers, 3 slope cats, 2 compactors, 1 motor grader, 2 rubber tire dozer, and 2 other pieces of equipment (e.g., water trucks)

The analysis was conducted using SCAQMD's recommended CEQA emissions inventory model URBEMIS. A new version of URBEMIS (URBEMIS 2007 Version 9.2) was released in June 2007 and was used in this analysis in accordance with SCAQMD's most recent recommendations for preparation of air quality analyses. The new version of URBEMIS is considered a major overhaul to URBEMIS 2002. It incorporates the current version of California Air Resources Board's OFFROAD model (OFFROAD 2007) construction equipment emission factors and reflects a better estimate of the population, activity, and emissions estimate of the varied types of off-road equipment. The emissions estimates from the proposed grading equipment mix are provided in **Table 4-2 (Comparison of Daily Construction Emissions for OCGP Construction Activities)**.

Table 4-2

Comparison of Daily Construction Emissions for OCGP Construction Activities

Emissions Inventory	Emission Totals, lbs/day				
	VOC	NO _x	CO	SO _x	PM ₁₀
Certified EIR	4,660 ^b	840	280	40	1,440
OCGP Site Grading	37	343	174	<1	663
SCAQMD Significance Threshold	75	100	550	150	150
Over (Under)	(38)	243	(376)	(149)	513
Significant for Certified FEIR?	Yes	Yes	No	No	Yes
Significant for OCGP Equipment Mix?	No	Yes	No	No	Yes
^a Compiled using the URBEMIS2007 emissions inventory model.					
^b VOC emissions presented in the Certified EIR are for application of architectural coatings. VOC emissions for site grading would result in a slight decrease based on the other pollutant trends.					
Source: PCR Services Corporation, 2007.					

4. *Discussion of Checklist and Mitigation Measures*

As shown in **Table 4-2**, the OCGP equipment mix results in an overall decrease in daily emissions associated with equipment exhaust and fugitive dust PM₁₀, as compared to those levels estimated for the FEIR. The equipment mix identified above could complete the grading associated with the Upper Canyon, Lake, and remaining components of the OCGP Master Plan within 10 months, which is well within the assumptions contained in the OCGP FEIR. No new significant impacts and no substantial increase in the severity of previously identified impacts would occur as a result of implementation of the OCGP equipment mix. Addendum No. 4 does not address other construction activities, such as painting and paving, which resulted in the VOC emissions reported previously in the FEIR.

Concurrent Grading and Demolition Activities

The site grading and demolition will most likely occur in a phased approach, over the course of numerous years. PCR also conducted an analysis to determine whether the construction emissions inventory for a maximum plausible worst case day (consisting of concurrent grading of the OCGP Master Plan along with site grading activities for Heritage Fields, the Agua Chionon, and the wildlife corridor and runway demolition activities) is consistent with the emissions inventory presented in the certified FEIR and is within the envelope of the original air quality impact assessment.

Assumptions were developed and refined consistent with the requirements for the proposed demolition and grading activities. A total of 31.2 million cubic feet of concrete and asphalt would be generated from removal of the runways with an average daily amount of 20,000 cubic feet. The equipment mix would be comprised of: (Source: Duke Dunn with Gafcon Incorporated)

- 4 off-highway trucks, 1 excavator, 1 motor grader, 1 water truck, 1 rubber tired dozer, 2 rubber tired loaders, 2 portable concrete crushing plants, and 2 other pieces of equipment.

The equipment mix and grading assumptions for Heritage Fields (including the wildlife corridor and Agua Chionon) were based on information provided in Addendum No. 3 to the OCGP FEIR (SCH #2002101020). Heritage Fields would require a total of 7.1 million cubic yard (maximum daily 47,000 cubic yards) of earth moving activities. The equipment mix would be comprised of:

- 10 scrapers, 4 compactors, 6 rubber tire dozers, 1 tractor /loader/backhoe, and 3 other pieces of equipment (e.g., water trucks).

The equipment mix and grading assumptions for the OCGP Master Plan that could occur concurrent with demolition activities and grading of Heritage Fields are provided above. The analysis was conducted using SCAQMD's recommended CEQA emissions inventory model URBEMIS 2007 Version 9.2. The emission inventory prepared for Addendum No. 3 used the previous version of URBEMIS (URBEMIS 2002) and was therefore updated using URBEMIS 2007. As discussed above, the new version of URBEMIS is considered a major overhaul to URBEMIS 2002. The details of these calculations are shown in the attachments to this technical memorandum. The emissions from the concurrent construction activities are provided in **Table 4-3 (Comparison of Daily Construction Emissions for Concurrent OCGP Construction Activities)**.

As shown, concurrent grading and demolition activities results in a slight decrease in equipment exhaust emissions and fugitive dust PM₁₀ emissions, as compared to those levels estimated for the FEIR. While CO emissions show an increase, it is a function of updated emission factors in the current version of URBEMIS2007 and not a substantial change in the construction intensity. Regardless, CO emissions are less than the SCAQMD significance threshold and no new significant impacts and no substantial increase in the severity of previously identified impacts would occur as a result of concurrent construction activities. It should be noted that these

4. Discussion of Checklist and Mitigation Measures

emission estimates do not address other construction activities, such as painting and paving, which resulted in the VOC emissions reported previously in the FEIR.

Table 4-3

Comparison of Daily Construction Emissions for Concurrent OCGP Construction Activities

Emissions Inventory	Emission Totals, lbs/day				
	VOC	NO _x	CO	SO _x	PM ₁₀
Certified EIR	4,660 ^b	840	280	40	1,440

Heritage Fields Site Grading	37	332	171	<1	663
Runway Demolition	17	165	66	<1	76
Total	91	839	411	<1	1,402
SCAQMD Significance Threshold	75	100	550	150	150
Over (Under)	16	739	(139)	(149)	1,252
Significant for Certified FEIR?	Yes	Yes	No	No	Yes
Significant for concurrent activities?	Yes	Yes	No	No	Yes

^a Compiled using the URBEMIS2007 emissions inventory model.

^b VOC emissions presented in the Certified EIR are for application of architectural coatings. VOC emissions for site grading would result in a slight decrease based on the other pollutant trends.

Source: PCR Services Corporation, 2007.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the approved OCGP FEIR. The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the approved OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to approved OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was approved, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was approved, indicating that: (1) mitigation measures or alternatives

4. *Discussion of Checklist and Mitigation Measures*

previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant air quality effects identified in and considered by the approved OCGP FEIR and subsequent Addenda.

4.3.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR identified mitigation measures AQ 1 through AQ 5, which reduce the air quality effects of construction and operations of development under the adopted Plan. However, as noted above, the OCGP FEIR found that short-term and long-term air quality impacts would remain significant and unavoidable. The measures are applicable to future development under the project.

AQ1 Prior to the start of demolition and construction within the project area, adjacent sensitive receptors shall be informed of the planned demolition and construction activities. Measures to avoid significantly impacting these receptors shall be developed and implemented by the project proponent in coordination with these uses. Other applicable mitigation measures such as erection of fences around construction areas; staggered use of equipment near sensitive receptors; diversion of truck trips away from receptors; etc.; shall be employed as necessary. Compliance with this measure shall be verified by the Director of Community Development.

AQ2 Prior to the commencement of construction activities required to demolish and/or remove existing DON structure, including, runways, the Director of Community Development shall receive and approve a construction emissions mitigation plan from the chosen demolition contractor. Prior to the issuance of grading permits, the applicant of any future development project shall submit, and the Director of Community Development shall approve a construction emissions mitigation plan. The plans shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.

- Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase.
- Water exposed soils at least twice daily and maintain equipment and vehicle engines in good condition and in proper tune.
- Wash off trucks leaving the site.
- Replace ground cover on construction sites when it is determined that the site will be undisturbed for lengthy periods.
- Reduce speeds on unpaved roads to less than 15 miles per hour.

4. Discussion of Checklist and Mitigation Measures

- Halt all grading and excavation operations when wind speeds exceed 25 miles per hour.
- Suspend all emission generating activities during smog alerts.
- Use propane- or butane-powered on-site mobile equipment instead of diesel/gasoline, whenever feasible.
- Properly maintain diesel-powered on-site mobile equipment.
- Sweep streets at the end of the day if substantial visible soil material is carried over to the adjacent streets.
- Use electricity from power poles rather than temporary on-site diesel- or gasoline-powered generators, whenever feasible.
- Use of low-VOC asphalt.
- Cover all trucks hauling dirt, sand, soil or other loose material to and from the site.
- Provide temporary traffic controls (e.g., flag persons) during all phases of construction to ensure minimum disruption of traffic.
- Schedule construction activities that affect traffic flow on adjoining streets to off-peak hours to the extent possible.
- Reroute construction trucks away from congested streets, whenever feasible.
- Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, whenever feasible.

AQ3 Prior to the issuance of building permits for any future development, the applicant shall submit, and the Director of Community Development shall have approved, an operation-emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.

- Utilize built-in, energy-efficient appliances to reduce energy consumption and emissions.
- Utilize energy-efficient and automated controls for air conditioners and lighting to reduce electricity consumption and associated emissions.
- Install special sunlight-filtering window coatings or double-paned windows to reduce thermal loss, whenever feasible.
- Utilize light-colored roofing materials as opposed to dark roofing materials to conserve electrical energy for air-conditioning.

4. *Discussion of Checklist and Mitigation Measures*

- Provide shade trees in residential subdivisions as well as public areas, including parks, to reduce building heating and cooling needs, whenever feasible.
- Ensure that whenever feasible, commercial truck traffic is diverted from local roadways to off-peak periods.
- Centralize space heating and cooling for multiple-family dwelling units and commercial space.
- Orient buildings north-south for reducing energy-related combustion emissions.
- Use solar energy, when feasible.
- Use high rating insulation in walls and ceilings.

AQ4 At the time of residential and commercial lease and sales agreements, future sales information on available housing and employment opportunities within the project area shall be provided to employees and residents of the project area, so as to encourage employees to live within the residential developments planned on-site and future residents to find employment nearby.

AQ5 At the time of residential and commercial lease and sales agreements, the applicant shall demonstrate to the satisfaction of the Director of Redevelopment that future employment generating nonresidential development shall include measures to reduce vehicle trips including: the promotion of carpool incentives and alternative work schedules, easy access to public transit systems, trail linkages between uses, low emissions vehicles fleets, and the provision of on-site facilities such as banking and food courts, and bicycle parking facilities, and other transportation demand management measures, as deemed appropriate.

Timing has been added to the mitigation measures above to be able to effectively implement these measures. As modified, the timing language includes the following, "At the time of residential and commercial lease and sales agreements, future sales..."

4. *Discussion of Checklist and Mitigation Measures*

4.4 **BIOLOGICAL RESOURCES**

4.4.1 **Environmental Setting**

The OCGP FEIR described the biological resources within Planning Areas 30 and 51, including a 995-acre parcel of land in the easternmost portion of Planning Area 51 retained in federal ownership and designated as both “habitat reserve” and a part of the Orange County Central-Coastal Sub-region Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP). The areas outside the habitat reserve were described as: 1) providing minimal native or undisturbed habitat, and, 2) consisting of agricultural, ornamental, and domestic landscapes.

The OCGP FEIR identified nine vegetative communities within the project site, including Venturan-Diegan sage scrub, southern cactus scrub, chaparral, woodland, riparian scrub, grassland, open water, agriculture, and predominately disturbed or developed areas. Several sensitive plant species and a large number of mature trees also were identified as potentially occurring within the project site. The sensitive plant species potentially occurring in Planning Areas 30 and 51 include the southern tarplant, Palmer’s grapplinghook, many-stemmed dudleya, Coulter’s Matilija poppy, Catalina mariposa lily, and intermediate mariposa lily. The OCGP FEIR also noted the Coulter’s saltbush, Laguna Beach dudleya, San Fernando Valley spineflower, and the Lewis’s evening-primrose as having a moderate potential for occurrence. Species with a low potential for occurrence include the Los Angeles sunflower, south coast saltscale, Santa Monica Mountains dudleya, heart-leafed pitcher sage, coast wooly-heads, slender-horned spineflower, Santa Barbara morning glory, tecate cypress, and salt spring checkerbloom.

The OCGP FEIR documented an observation made of one sensitive wildlife species, a burrowing owl. This individual, observed during the conductance of protocol focus studies for a nearby development proposal, was outside the habitat reserve at the southwest end of Planning Areas 30 and 51 along Serrano Creek. Forty other sensitive wildlife species or species of local concern were identified as having a potential to occur on the site.

The OCGP FEIR also describes Wildlife Corridor Concept Plan that would be incorporated into the eastern portion of the project site (Refer to pp. 5.9-9 through 5.9-14 of the OCGP FEIR) and explains the guidelines pursuant to which the ultimate corridor will be designed and constructed. The subject guidelines are primarily concerned with the creation and re-vegetation of wildlife habitats that would flourish in the proposed areas and serve as protective cover for target wildlife species that will presumably utilize the proposed corridor. A preliminary design concept for the creation and/or re-vegetation of the proposed route has also been prepared which is consistent with the guidelines described below (Draft Irvine Wildlife Corridor Master Plan, November 2002). The draft recommends a series of actions to improve the environmental quality for wildlife:

- Creation (establishes historical ecosystems on lands that did not previously support that ecosystem or on severely altered sites)
- Revegetation
- Reduce the amount of noise pollution and urban influence.
- Remove and restore the unnecessary developed (paved) areas within the corridor right-of-way.
- Create a protective habitat along the entire length of the corridor.
- Apply minimum height/width requirements based on the specific wildlife species.

OCGP FEIR Mitigation Measure BIO3, which continues to apply to Addendum No. 4, ensures that the City of Irvine will continue to work with State and federal agencies to implement the re-

4. *Discussion of Checklist and Mitigation Measures*

vegetation/restoration plan necessary to create a viable wildlife corridor within the project area. The City has already engaged in this process as is demonstrated through the preparation of the Draft Irvine Wildlife Corridor Master Plan, which is independent of this project.

4.4.2 Impacts Identified in the OCGP FEIR

The OCGP FEIR concluded that implementation of the overall OCGP project could result in the occurrence of the following potentially significant effects:

- The southern tar-plant, a federal species of concern, might be adversely affected by project development.
- Although very limited in aerial extent and highly disturbed, there exist isolated riparian habitat remnants that could be adversely impacted by project implementation.

The project site contains a large number of trees, many of them mature, representing a wide range of species. Project implementation may result in damage and destruction to the trees. A significant impact related to conflicts with the City of Irvine's Urban Forestry Ordinance could occur.

4.4.3 Impacts Associated with the OCGP Master Plan

The OCGP Master Plan portion of the overall OCGP project includes essentially the same land uses and encompasses the same land area as depicted in the OCGP FEIR. Therefore, the OCGP FEIR adequately describes the nature and severity of the environmental effects of OCGP Master Plan implementation on biological resources.

OCGP FEIR Mitigation Measure (MM) BIO1 stated that prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl shall be conducted. MM BIO1 also stated that prior to approval of a subdivision map for development within, or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owl, least Bell's vireo, or southwestern willow flycatcher in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement or, if impacts cannot be avoided, then mitigation shall be negotiated through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG). Mitigation Measure BIO1 would continue to apply to this proposed project (see Mitigation Measure BIO1, below).

The OCGP FEIR also stated that prior to approval of a subdivision map for each project area, a jurisdictional wetland delineation shall be performed for all areas within the Master Plan sub-area that contain the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a Wetland Mitigation Plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). For wetlands impacted on-site replacement, recreation (i.e., within the proposed wildlife corridor), and/or re-vegetation is deemed acceptable by the appropriate jurisdictional agencies. Accordingly, Mitigation Measure BIO2 below would also continue to apply to the proposed project.

The OCGP FEIR required that several focus surveys be conducted on Planning Areas 30 and 51 for sensitive plant and wildlife species prior to development. PCR Services prepared a *Biological*

4. *Discussion of Checklist and Mitigation Measures*

Resources Assessment for Lennar Heritage Fields, Orange County, California in November of 2005 and an updated assessment was prepared in June of 2006.³ This biological resources assessment complies with mitigation measures BIO1, requiring a focus survey for the southern tarplant, mountain plover, and burrowing owl, and BIO2 requiring a wetlands delineation to be prepared for all areas within the Master Plan sub-area that contain the potential for wetland habitat and/or jurisdictional waters. The subject study and each of its constituent focus technical studies cover a land area of approximately 3,700 acres and includes the OCGP Master Plan.

Jurisdictional Wetlands and "Waters of the U.S."

A Jurisdictional Delineation for the site has been performed (*Investigation of Jurisdictional Wetlands and Waters of the U.S. Lennar Heritage Fields*, June 2006, PCR). The property supports six intermittent drainage systems and a variety of associated ephemeral tributaries. Five of the drainages have their headwaters in undeveloped areas of the Lomas de Santiago Foothills to the north. San Diego Creek originates in an eastern portion of the watershed that is occupied by substantial residential and commercial development. Disturbances such as channelization of large stretches of the drainages and dumping of debris and trash into portions of drainages have significantly altered several waterways and obscured many drainage features. Other disturbances on site include vegetation clearing to create roads and structures, agricultural runoff, and invasion by exotic species. Current and historic land uses associated with the establishment of MCAS El Toro (military structures, roads, agriculture, and residential development) have significantly changed the overall drainage patterns within the San Diego watershed. The cumulative impact to each wash or creek has resulted in habitat and water quality impairment within the San Diego Creek watershed.

These impacts include increased sediment and debris transport due to concrete-lined stream channels, increased flow velocities and scouring, increased bank erosion, increases in the presence of non-native plant species, and an overall reduction in the amount and the quality of the riparian habitat within the watershed. Alternatively, the disturbances have increased the amount of jurisdictional areas due to the creation of freshwater marsh habitat resulting from impoundment of storm water runoff within and adjacent to drainages. In total, the site contains 31,102.11 linear feet of jurisdictional streambed that includes 22.02 acres of U.S. Army Corps of Engineers (USACE) jurisdictional "Waters of the U.S.," and, of which, 1.66-acres meet the three-parameter definition of a jurisdictional wetland. CDFG jurisdictional streambed and associated riparian habitat total 38.61 acres.

Sensitive Biological Resources

There are a numerous plant and wildlife species present, or potentially present within the study area that have received special recognition by federal, State, or local resource conservation agencies and organizations. Their status is principally due to the species decline or limited population size, usually resulting from habitat loss. Protected sensitive species are those species identified by either State or federal resource management agencies, or both, as threatened or endangered under provisions of the California and Federal Endangered Species Acts, respectively.

³ This report is available for review at the City of Irvine.

4. *Discussion of Checklist and Mitigation Measures*

Sensitive species that occur or could potentially occur within the study area are based on one or more of the following:

- The direct observation of the species within the study area during one of the biological surveys.
- A record reported in the California Natural Diversity Database (CNDDDB).
- The study area is within a known distribution of a species and contains appropriate habitat.

Sensitive Plant Communities

The study area is dominated by highly disturbed habitat types and only small areas of native vegetation exist. A total of 9.7 acres of southern willow scrub occurs in scattered patches throughout the study area. Southern willow scrub is a high priority inventory community in the CNDDDB. This community is considered sensitive because it has experienced a sharp decline in California and because it has the ability to support a number of sensitive bird species such as least Bell's vireo and southwestern willow flycatcher.

Sensitive Plant Species

Sensitive plants include those that are either candidates or are currently listed by the CDFG and USFWS and those that are considered sensitive by the California Native Plant Society (CNPS). Several sensitive plant species were reported in the CNDDDB from the surrounding region. In accordance with the mitigation measures of the OCGP FEIR, focused surveys for southern tarplant were conducted on June 3 and June 8, 2005. No specimens were found. The highly disturbed character of the site and reduced presence of habitat capable of supporting sensitive plant species make it highly unlikely that any listed plant species will occur on the site.

Sensitive Wildlife Species

Forty-nine sensitive wildlife species were reported in the CNDDDB as occurring with the USGS 7.5-minute El Toro quadrangle map and the eight surrounding maps. Habitat suitability assessments for these species were conducted concurrently with the site investigation throughout the 2005 fieldwork. The intent of the habitat assessment was to evaluate habitat for its ability to support sensitive species and ascertain which sensitive species are likely to be present within the study area based on expected habitat use, geographic range, and information collected in the vicinity of the study area.

The OCGP Master Plan is not within a proposed or final critical habitat area. Six sensitive wildlife species were observed within the study area during initial field investigations: northern harrier (*Circus cyaneus*), merlin (*Falco columbarius*), Cooper's hawk (*Accipiter cooperii*), California horned lark (*Eremophila alpestris actia*), cactus wren (*Campylorhynchus brunneicapillus*), and loggerhead shrike (*Lanius ludovicianus*). Three of these species (northern harrier, merlin, and Cooper's hawk) were also observed during wintering bird surveys. In addition, the golden eagle (*Aquila chrysaetos*), burrowing owl (*Athene cunicularia*), and ferruginous hawk (*Buteo regalis*) were observed utilizing the site during these subsequent wintering bird surveys. Surveys for mountain plover (*Charadrius montanus*), in accordance with the OCGP FEIR mitigation measures, were conducted during the wintering bird surveys as a part of Addendum No. 3. No mountain plover were observed on site during those field investigations.

4. Discussion of Checklist and Mitigation Measures

In a follow-up report⁴ on wintering birds dated October 30, 2006 with surveys conducted between October 2005 and March 2006, PCR Services searched the site for activity. No burrowing owls were seen until February 2006. Although the project site is open, its vegetation becomes dense and over two feet tall in most areas. A single owl occupied a burrow during the late winter but abandoned the area as the vegetation surrounding the burrow became three feet high and very dense. There was no indication that breeding activity had been initiated. Because the habitat became unsuitable as a natural result of not being mowed, PCR Services determined that no mitigation would be required.

Summary of the Biological Status of the Site

The OCGP FEIR required that focus surveys be conducted on the project site for several sensitive plant and wildlife species prior to development. The required surveys were carried out during 2005 and 2006. No species of endangered plants or wildlife were recorded on site during these investigations, which were conducted by PCR Services. The sensitive plant community of willow scrub extant on site is heavily disturbed and fragmented. As such, PCR Services did not recommend attempting to preserve any of the remnant stands or streambeds as they are now constituted. It was also determined that the presence of several sensitive species would be addressed through mitigation designed to avoid disturbance of nesting avian species. PCR Services' findings did not indicate a need to consult formally with the USFWS.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The Revised Overlay Plan, of which the OCGP Master Plan is a part, will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures

⁴ This report is available for review at the City of Irvine

4. *Discussion of Checklist and Mitigation Measures*

or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant biological effects identified in and considered by the certified OCGP FEIR.

4.4.4 ***Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan***

- BIO1** Prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl, shall be conducted. Prior to approval of a subdivision map for development within, or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owl, least Bell's vireo, or southwestern willow flycatcher in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement, or if impacts cannot be avoided, then mitigation shall be negotiated through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG).
- BIO2** Prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan sub-area that contain the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a wetland mitigation plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). Wetlands impacted on-site shall be mitigated through on-site or off-site replacement, re-creation (i.e. within the proposed wildlife corridor), and/or re-vegetation as deemed acceptable by the appropriate jurisdictional agencies.
- BIO3** The City shall continue to work with State and federal agencies during the implementation of the proposed project to implement the re-vegetation/restoration plan for the wildlife corridor. Measures such as sight and sound barriers, including artificial sound walls and natural diversions (e.g. hedges and tree lines) shall be incorporated into corridor design to ensure the viability of the corridor. The City shall implement the corridor consistent with the design criteria and viability analysis established in the Final Program FEIR.
- BIO4** Prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height (DBH) greater than six inches and any significant (as determined by a certified arborist selected by the City) plants on the project site, excluding those within the habitat preserve shall be prepared. This inventory shall be prepared by an arborist certified by the International Society of Arboriculture and shall include (but not be limited to) data for each tree such as species, variety, DBH, condition (excellent, good, fair, poor, dead), and any recommendations. All trees in this inventory shall be considered "Significant Trees" under the City of Irvine's Urban Forestry Ordinance (UFO) (Section 5-7-401 et al) and the UFO shall apply to all trees included in this inventory.

4. *Discussion of Checklist and Mitigation Measures*

4.5 **CULTURAL RESOURCES**

4.5.1 **Environmental Setting**

Archaeological and Historical Resources

The discussion of Cultural Resources in the OCGP FEIR includes both archaeological and historical resources. The OCGP FEIR presents information pertaining to the regional setting of former MCAS El Toro from both a prehistoric and historic perspective. The OCGP FEIR reported the presence of ten prehistoric archaeological sites and that eight isolated prehistoric artifacts had been recorded in the northeastern habitat preserve portions of Planning Area 51 (PA 51). These sites are generally located on the ridges between Borrego Canyon Wash and the Agua Chion Wash.

The former MCAS El Toro was surveyed to determine whether any of the structures would be eligible for the National Register of Historic Places. Generally, any structure having achieved significance only during the last 50 years is not considered eligible for the National Register unless it is of exceptional importance. The evaluation was expanded to include eligibility under the Legacy Cold War Project (Public Law No. 101-511, § 8120). Portions of Planning Areas 30 and 51 (the former MCAS El Toro) were established during WWII, and no structure earlier than this period is at the former MCAS El Toro. Therefore, structures at the former military base would be classified as being part of the Cold War Legacy. Surveys conducted by the US Army Corps of Engineers and the Department of the Navy in conjunction with the base's closure concluded there were no structures eligible for designation as Cold War Legacy or for inclusion in the National Register of Historic Places.

Paleontological Resources

The OCGP FEIR reported that a majority of Planning Areas 30 and 51 is located on the Tustin Plain, a coastal alluvial plain. Alluvium from the Late Pleistocene to Holocene Epochs (approximately 2 million to 11,000 years ago) immediately underlies the majority of the project area, including the part occupying the coastal plain and washes in the eastern portion of Planning Area 51. The Pleistocene Alluvium formation is widespread and believed to extend to depths of 1,000 feet in Planning Area 30. A significant deposit of Pleistocene terrestrial vertebrates was recovered during excavation of a flood control basin four miles from PA 30; thus, it is possible that similar beds underlie Planning Area 30 (Refer to OCGP FEIR 5.10-2).

The eastern portion of PA 51 is located in the western foothills of the northern Santa Ana Mountains. The hills and ridges in the eastern part of Planning Area 51 are composed of older, underlying marine and non-marine rock units of early Oligocene to late Pleistocene (23 million to 2 million years ago). In order of decreasing geologic age, these latter rock units include the undifferentiated Sespe and Vaqueros Formations, Topanga, and Monterey Formations, Oso Member of the Capistrano Formation, Niguel Formation, and Non-marine Terrace Deposits. Non-marine Terrace Deposits also underlie the terraces at the south corner of Planning Area 51.

The northwestern corner of Planning Area 51 contains a small portion of the Santa Ana Mountains foothills, which were separated from the main formation by erosion. This small portion is composed of undifferentiated late Cretaceous (135 million years ago) marine Williams Formation. The rock units underlying portions of Planning Area have previously yielded important fossil remains at recorded fossil sites on and near the site.

4. Discussion of Checklist and Mitigation Measures

There are three recorded fossil sites in Planning Area 51. These sites occur in undifferentiated Sespe and Vaqueros Formations and in the Topanga Formation. Fossil types include marine invertebrates and vertebrates, continental vertebrates, land plants, and land mammals and lie within the proposed habitat preserve portion of Planning Area 51 (Refer to OCGP FEIR p. 5.10-1 and Table 5.10-1).

4.5.2 Impacts Identified in the OCGP FEIR

Archaeological and Historical Resources

The OCGP FEIR determined that development according to the Overlay Plan would not cause a substantial adverse change in the significance of any historical structure. The consequence of grading activities associated with future development, however, could potentially result in a substantial adverse change in the significance of an archaeological resource. The OCGP FEIR also stated that grading activities could uncover previously unknown human remains, including those interred outside formal cemeteries.

Paleontological Resources

The OCGP FEIR stated that earthmoving operations associated with grading and trenching have the greatest potential to impact buried paleontological resources in the moderately to highly sensitive areas in the coastal plain and washes, northeast, northwest and southern portions of Planning Area 51. The OCGP FEIR considered the potential impact associated with earthmoving operations as a significant impact for which mitigation was necessary.

4.5.3 Impacts Associated with the OCGP Master Plan

Archaeological and Historical Resources

The OCGP Master Plan reflects a development program that is consistent with the General Plan Land Use and Zoning designations for Planning Areas 30 and 51. Further, the extent of earth movement activities required to facilitate development of the Great Park, as depicted in the OCGP Master Plan, is projected to be essentially the same as that assessed and presented in the OCGP FEIR. Given the foregoing, the discussion of impacts on archaeological and historical resources attributable to the Great Park portion of the overall OCGP Project disclosed in the OCGP FEIR remains valid. As with project's component of the Revised Overlay Plan in the OCGP FEIR, the OCGP Master Plan as currently proposed would still not cause a substantial adverse change in the significance of any historical structure, but grading associated with future development could still potentially result in a substantial adverse change in the significance of an archaeological resource, or uncover previously unknown human remains. As such, the cultural resources mitigation measures developed for the OCGP FEIR remain applicable to, and sufficient to mitigate impacts of, future development pursuant to the OCGP Master Plan.

Paleontological Resources

The OCGP Master Plan reflects a development program that is consistent with the General Plan Land Use and Zoning designations for Planning Areas 30 and 51. Further, the extent of earth movement activities required to facilitate development of the Great Park, as depicted in the OCGP Master Plan, is projected to be essentially the same as that assessed and presented in the OCGP FEIR. Given the foregoing, the discussion of potential impacts on paleontological resources attributable to the Great Park portion of the overall OCGP Project disclosed in the OCGP FEIR remains valid. As such, the paleontological mitigation measure developed for the

4. *Discussion of Checklist and Mitigation Measures*

OCGP FEIR remains applicable to, and sufficient to mitigate impacts of, future development pursuant to the OCGP Master Plan.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant cultural and/or paleontological resources effects identified in and considered by the certified OCGP FEIR.

4.5.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

Archaeological and Historical Resources

CULT1 Prior to subdivision for development, a detailed archaeological report(s) shall be prepared for areas within Planning Areas 51 and 30. This report(s) shall specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. Recommendations contained in the report shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

CULT2 Monitoring of excavation and grading activities associated with future development in Planning Areas 51 and 30 shall be conducted by a certified archaeologist in accordance with the report required in Mitigation Measure Cult-1 above. If resources are encountered in the course of ground disturbance, the archaeological monitor shall be empowered to halt grading and to initiate an

4. *Discussion of Checklist and Mitigation Measures*

archaeological testing program. The testing shall include recordation of artifacts, controlled removal of the materials, and an assessment of their importance under CEQA and the City's local guidelines. Compliance with this measure shall be verified by the Community Development Department.

CULT3 Prior to the issuance of grading permits and/or building permits for any future development in Planning Areas 51 and 30 a detailed mitigation measure program shall be submitted by the applicant, to the City of Irvine, to address archaeological resources discovered during grading. Provisions of the program shall include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be a unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation shall be available. Work may continue on other parts of the construction site while archaeological resource mitigation takes place. The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant archaeological sites. These include retaining a qualified archaeologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process. Compliance with this measure shall be verified by the Community Development Department.

CULT4 Prior to the issuance of any grading and/or building permits, the developer shall submit a mitigation program to the City of Irvine to address the accidental discovery or recognition of any human remains. The program shall include the following:

There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

- *The county coroner must be contacted to determine that no investigation of the cause of death is required, and*

If the coroner determines the remains to be Native American:

- *The coroner shall contact the Native American Heritage Commission within 24 hours.*

- *The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased Native American.*

- *The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriated dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or*

- *Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.*

- *The Native American Heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a*

4. *Discussion of Checklist and Mitigation Measures*

recommendation within 24 hours after being notified by the commission.

- *The descendant identified fails to make a recommendation; or*
- *The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner.*

Compliance with the above measure shall be verified by the Community Development Department.

Paleontological Resources

- P1** Prior to the issuance of a grading permit for any portion of the project area, a qualified paleontologist shall be retained by the City, or designee, to carry out an appropriate paleontological investigation of the area proposed for grading. (A qualified paleontologist is defined as an individual with an M.S. or Ph.D. in paleontology or geology who is familiar with paleontological procedures and techniques.) The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant paleontological sites, and paleontological monitoring conditions have not been attached to the previous map approval. These standard conditions include retaining a qualified paleontologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process.

When fossils are discovered, the paleontologist (or paleontological monitor) shall recover them. In most cases, this fossil salvage can be completed in a short period of time. However, some fossils specimens (such as a complete large mammal skeleton) may require an extended salvage period. In these instances the paleontologist (or paleontological monitor) shall be allowed to temporarily direct, divert or halt grading to allow recovery of fossil remains in a timely manner. Because of the potential for the recovery of small fossil remains, such as isolated mammal teeth, it may be necessary in certain instances to set up a screen-washing operation on-site.

Fossil remains collected during the monitoring and salvage portion of the mitigation program shall be cleaned, repaired, sorted, and cataloged. Compliance with this measure shall be verified by the Community Development Department.

4. Discussion of Checklist and Mitigation Measures

4.6 GEOLOGY AND SOILS

4.6.1 Environmental Setting

The OCGP FEIR describes the topography of the project site as nearly flat and gently sloping down to the west to southwest with elevations ranging from 450 feet above mean sea level (MSL) to 200 feet above MSL. Planning Area 30 is located at the southeast margin of the Tustin plain with elevations ranging from about 260 to 300 feet above MSL. Planning Area 51 includes some slopes of the Santa Ana foothills that reach elevations of about 750 feet above MSL. Alluvial soils of six major soil associations consisting of predominantly of varying sands, silts, and clayey silty sands are present within Planning Area 51. Soils underlying Planning Area 30 contain clayey loam alluvial material, terrace deposits, and old and unconsolidated recent alluvium of the Myford and Sorrento series.

The OCGP FEIR identified the primary potential seismic hazard in the area as ground motion. Seismic Response Areas (SRA) designations are used by the City to assess the geologic and seismic risk associated with potential development. All of Planning Area 30 and a majority of Planning Area 51 are located within SRA-2 (denser soils/deeper groundwater) and are considered suitable for development. The planned development area of Planning Area 51 situated north of Irvine Boulevard is designated SRA-3 (alluvium/shallow bedrock) and also susceptible to ground motion.

No known active faults crossing or projecting into the project area were identified; however, the project site is located within the seismically active Southern California region and there are two active faults—Whittier- Elsinore Fault and Newport-Inglewood Fault—located within 14 miles of the site.

4.6.2 Impacts Identified in the OCGP FEIR

The OCGP FEIR disclosed the potential for future development of the project area to result in the exposure of people or structures to strong ground shaking in the event of a major earthquake along any one of the active faults in the region. The OCGP FEIR noted new construction would be required to adhere to current seismic safety building codes which address seismic concerns. Existing buildings within Planning Area 51 do not meet current seismic codes; therefore, the temporary or permanent reuse of the existing buildings and the associated exposure of people or structures to potential substantial adverse effects due to strong seismic-related ground shaking were considered a significant impact.

Because of documented landslides in the northeastern Santa Ana foothills area of the project site, the OCGP FEIR analysis concluded the project would result in a significant impact associated with landslides in the affected area of Planning Area 51 east of Irvine Boulevard, where future development of habitable structures could occur under the Revised Overlay Plan. The OCGP FEIR also concluded future development had the potential to result in soil erosion, loss of topsoil, and risks to life and property due to the presence of expansive soils; and that these impacts are considered significant. With regard to the OCGP Master Plan, the OCGP FEIR essentially includes the same land uses and development areas as under the Revised Overlay Plan; therefore the conclusions drawn in the OCGP FEIR adequately describe the environmental effects of the proposed project relative to soils, geologic hazards, and seismic safety, as well as the severity of the impacts.

4. *Discussion of Checklist and Mitigation Measures*

4.6.3 ***Impacts Associated with the OCGP Master Plan***

The OCGP Master Plan essentially includes the same land uses and development areas assumed under the Revised Overlay Plan; therefore the conclusions drawn in the OCGP FEIR adequately describe the environmental effects of the proposed project relative to soils, geologic hazards, and seismic safety, as well as the severity of the impacts.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The proposed OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant geology and soils-related effects identified in and considered by the certified OCGP FEIR.

4.6.4 ***Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan***

The OCGP FEIR identified four mitigation measures to reduce the effects of the Revised Overlay Plan on soils, geologic hazards and seismic safety. All of the mitigation measures are applicable to implementation of the project and would be carried forward to future development of the project site. Implementation of measures GS1 through GS4 (listed below) would reduce Project impacts to a level less than significant.

- GS1** Prior to issuance of a building permit, the City of Irvine shall require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest Building Codes adopted by the City of Irvine. Compliance with this measure shall be verified by the Community Development Department.

4. Discussion of Checklist and Mitigation Measures

GS2 Prior to issuance of a building permit, as per existing City policies, geotechnical studies shall be prepared at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.

1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing, shall be conducted. The purpose of the subsurface evaluation is to:

- a. Further evaluate the subsurface conditions in the area of the proposed structures.
- b. Provide specific data on potential geologic and geotechnical hazards.
- c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface, and subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural sections, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

- Seismic Ground Shaking - Measures to prevent risk of loss, injury or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.
- Erosion or Loss of Topsoil – Erosion and sediment control measures shall be implemented as required by the City's Grading and Water Quality ordinances.
- Where Expansive Soils Exist – Measures for the design of foundations, slabs, flatwork and other improvements subject to drainage from expansive soils. Compliance with this measure shall be verified by the Community Development Department.

GS3 Prior to issuance of building permits for the occupancy of any existing structure at the former MCAS El Toro, or occupancy of any existing structure if a building permit is not issued, a seismic evaluation of the structure including recommendations for seismic improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required seismic improvements shall be submitted to the Chief Building Official for review and approval.

GS4 Prior to issuance of a grading permit, detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specifically address erosion control and surface runoff for both

4. Discussion of Checklist and Mitigation Measures

construction and long-term operations on the site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx into the drainage system shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

4. *Discussion of Checklist and Mitigation Measures*

4.7 HAZARDS AND HAZARDOUS MATERIALS

4.7.1 Environmental Setting

Hazardous Materials and Hazardous Wastes

The OCGP FEIR discussed an environmental baseline survey that was conducted for the project area. Information was used from the Base Realignment and Closure Business Plan for Marine Corps Air Station (MCAS) El Toro dated May 2002; the environmental baseline survey (EBS) dated 1995; and an update to the EBS—April 2003 Draft Final EBS. The 2003 EBS identified “76 potential release locations, all of which require further evaluation for potential releases to the environment and subsequent remediation, if required” (Refer to OCGP FEIR p. 5.5-5).

Regarding the Installation Restoration Program (IRP), the OCGP FEIR summarizes the status of each IRP site based on the information available at the time the FEIR was prepared. Thirteen (13) IRP sites were identified as requiring “No Further Action,” including sites 4, 6, 7, 9, 10, 13, 14, 15, 19, 20, 21, 22 and 25. The IRP sites identified as “Action Required” included sites 1, 2, 3, anomaly 3, 5, 8, 11, 12, 16, 17, 18 (plume), and 24 (Refer to OCGP FEIR pp. 5.5-6 thru 5.5-9).

Of the 404 underground storage tanks (USTs) identified, 357 had been remediated and received findings of “no further action” at the time the OCGP FEIR was prepared. Of the 39 aboveground storage tanks (ASTs) on the property, 36 had been remediated and received findings of “no further action” (Refer to OCGP FEIR p. 5.5-10).

Evaluation and remediation of previously identified IRP sites within the project site continues with the resulting changes in the condition of the property largely anticipated in the OCGP FEIR. The IRP sites are depicted in **Figure 4-2 (OCGP Master Plan – Active Installation Restoration Program (IRP) Site Locations)**. Subsequent to certification of the OCGP FEIR, the DoN completed environmental related findings that support the suitability to transfer real property made available through the Base Realignment and Closure process and to support the lease of areas not yet suitable for transfer.⁵

The areas suitable for lease encompass locations of concern identified in the 1995 and 2003 EBS, and in the OCGP FEIR, where future evaluation and/or actions are ongoing or required. These areas were identified as “carve-outs” in the DoN documentation.⁶ Progress relative to conveyance of the carve-outs includes DoN transfer of approximately eight acres of the project site to Heritage Fields and the Great Park Corporation on March 22, 2006. At the time of the initial land sale, these properties (carve-outs) were retained by the DoN in order to complete environmental clean up, and have since been approved by the regulatory agencies for transfer (FOST #2). The following sites were included in the transfer:

⁵ U.S. Department of the Navy, 2004, Final Finding of Suitability to Transfer, Parcel IV and Portions of Parcels I, II, and III, Former Marine Corps Air Station, El Toro, California, July 2004; Final Finding of Suitability to Lease for Carve-outs Within Parcels I, II, and III, Former Marine Corps Air Station, El Toro, California, July 2004.

⁶ U.S. Department of the Navy, 2004a. Final Finding of Suitability to Lease for Carve-outs within Parcels I, II, and III, Former Marine Corps Air Station, El Toro, California, July 2004.

**Figure 4-2
Installation Restoration Program
(IRP) Locations**

4. *Discussion of Checklist and Mitigation Measures*

- **Carve-out Parcel II-J** – consists of approximately 0.2 acre situated in the central portion of former MCAS El Toro. It contains one building—Building No. 860—and one location of concern.
- **Carve-out Parcel II-Q (portion)** – consists of approximately five acres situated in the eastern portion of the former MCAS El Toro. It is an abandoned jet fuel (JP-5) pipeline.
- **Carve-out Parcel II-S** – consists of approximately 1.3 acres situated in the southeastern portion of former MCAS El Toro. It contains six buildings (347, 377, 447, 448, 566, and 726) and 13 locations of concern.
- **Carve-out Parcel II-T** – consists of approximately 0.5 acre situated in the southeastern portion of former MCAS El Toro. It contains one building—Building No. 761—and four locations of concern. The facility was a former aircraft wash rack.
- **Carve-out Parcel III-C** – consists of approximately one acre situated in the western portion of the former MCAS El Toro. It contains one building—Building No. 240—and seven locations of concern. This site was a former ordnance storage facility.

Emergency Plans

The OCGP FEIR described the former MCAS El Toro site (Planning Areas 30 and 51) as a potential emergency response staging area because of its capacity for processing and storing large quantities of cargo. The Orange County Emergency Plan, which incorporates the state-wide standardized emergency management system (SEMS), guides multi-jurisdictional response to emergency conditions. No substantial change to the description of the setting regarding emergency plans has occurred that would alter the analysis and conclusions of the OCGP FEIR on emergency plans and response.

Wild Land Fires

The OCGP FEIR identified high fire hazard areas within open space, undeveloped land northeast of and adjacent to Planning Area 51. The City has no construction records of existing buildings and structures extant on the property. No substantial change to the description of the setting relative to wild land fires has occurred that would alter the analysis and conclusions of the OCGP FEIR regarding wild land fires.

4.7.2 Impacts Identified in the OCGP FEIR

Hazardous Materials and Wastes

The OCGP FEIR identified no significant impacts associated with the No Further Action IRP sites, which are listed in **Table 4-4 (No Further Action IRP Sites Numbers, IRP Designations and Zoning)**. **Table 4-5 (Action Required IRP Sites and Zoning)** identifies each Action Required IRP site and its location relative to the adopted Overlay Plan.

4. *Discussion of Checklist and Mitigation Measures*

Table 4-4

**No Further Action IRP Sites Numbers,
IRP Designations and Zoning**

IRP Site	IRP Designation	Revised Overlay Plan Zoning District
4	Ferrocene Spill Area	8.1 LLD
6	Drop Tank Drainage Area No. 1	2.2 Low-Density Residential with 1.8 Golf Course Overlay
9	Crash Crew Pit No. 1	1.5 Recreation
10	Petroleum Disposal Area	1.5 Recreation
13	Oil Change Area	1.5 Recreation
15	Suspended Fuel Tanks	1.5 Recreation
19	Air Craft Expeditionary Refueling	2.2 Low-Density Residential with 1.8 Golf Course Overlay
20	Hobby Shop	8.1 LLD
21	Materials Management Group	6.1 Institutional
22	Tactical Air Fuel Dispensing System	1.5 Recreation

Table 4-5

Action Required IRP Sites and Zoning

IRP Site	IRP Designation	Revised Overlay Plan Zoning District
1	EOD Range	1.4 Preservation
2	Magazine Road Landfill	1.4 Preservation
3	Original Landfill	8.1 LLD
5	Perimeter Road Landfill	1.5 Recreation
7	Drop Tank Drainage Area No. 2	1.5 Recreation
8	DRMO Storage Yard	6.1 Institutional/ 3.2 Transit Oriented Development
11	Transformer Storage Area	1.5 Recreation
12	Sludge Drying Beds	6.1 Institutional
14	Battery Acid Disposal Area	1.5 Recreation
16	Crash Crew Pit No. 2	1.5 Recreation
17	Communications Station Landfill	1.4 Preservation
24	VOC Source Area	6.1 Institutional/ 1.5 Recreation/ 3.2 Transit Oriented Development

The OCGP FEIR disclosed the following environmental consequences of the Overlay Plan as significant impacts:

4. Discussion of Checklist and Mitigation Measures

-
- Construction activities involving demolition and possible substantial remodeling of existing structures in the project area as the project area develops could result in the disturbance of structures and soils containing asbestos-containing building materials (ACM) and lead-based paint.
 - IRP site 24 is located in zoning districts categorized as 3.2 Transit Oriented Development, 6.1 Institutional and 1.5 Recreation. The site may be conveyed with temporary restrictions on use that are not appropriate for transportation facility use. This is considered a significant impact.
 - Future uses of IRP site 3 may be potentially constrained by the implementation of institutional controls.
 - IRP site 16 (Crash Crew Pit No. 2) is located in zoning district designation 1.5 Recreation. The site may be conveyed with temporary restrictions on use that are not appropriate for recreational land uses.

Emergency Plans

The OCGP FEIR determined the Overlay Plan would not be expected to interfere with emergency response and evacuation plans on the basis that other sites within Orange County are already designated emergency staging areas and portions of the OCGP would remain available to non-aviation emergency response equipment. Accordingly, the OCGP FEIR concluded the adopted Overlay Plan would not result in a significant impact related to emergency response and evacuation plans.

Wild Land Fires

The OCGP FEIR concluded the Habitat Reserve, Wildlife Corridor, and recreational areas in the northeastern portion of Planning Area 51 would be exposed to the highest level of fire risk from wild land fires under the Overlay Plan, and that reuse of existing buildings requires inspection for conformance to fire life safety code requirements. The OCGP FEIR identified the wild land fire impacts as potentially significant.

4.7.3 Impacts Associated with the OCGP Master Plan

Hazardous Materials and Wastes

Previous **Table 4-4** listed each No Further Action IRP site, its designation, and its zoning designation relative to the site, and **Table 4-5** listed each Action Required IRP site with similar information. **Figure 4-2** depicts the general location of Action Required IRP sites. In July 2004, two reports were completed under the auspices of the DoN for the property. The Finding of Suitability to Transfer (FOST) documented the environmental condition of the property and the appropriateness of its conveyance. The FOST concluded that 2,798 acres are suitable for transfer by deed for residential purposes and that the parcels can be used with acceptable risk to human health and the environment, and without interference with the environmental restoration process (refer to FOST, Ch. 8). The companion report, the Finding of Suitability for Lease (FOSL) documents the suitability for lease of 41 carve-out areas totaling approximately 921 acres (refer to the FOSL p. 2-2). The carve-outs are locations within the Property where the potential or known release or disposal of hazardous substances or petroleum products has occurred. Based on the information provided in the FOSL, carve-outs have been deemed suitable for lease subject to specified conditions, notifications, and restrictions set forth in the FOSL and the terms of the

4. Discussion of Checklist and Mitigation Measures

leases. Use of these sites has been determined by the DoN to be appropriate, subject to use restrictions in the leases, with acceptable risk to human health and the environment and without interference with the environmental restoration process. The carve-out parcels remain in U.S. Department of Defense ownership. Overall, the proposed project would not change the OCGP FEIR conclusions; with mitigation measures HH1, HH2, HH5, and HH6, the project would result in less than significant impacts related to hazardous materials and wastes. No new or modified mitigations measures are required.

Emergency Plans

Like the Overlay Plan, the proposed implementation of the OCGP Master Plan would not be expected to interfere with emergency response and evacuation plans on the base since other sites within Orange County are already designated emergency staging areas and portions of the OCGP would remain available to emergency response equipment. Accordingly, the proposed OCGP Master Plan would not change the OCGP FEIR conclusions; the project would not result in a significant impact related to emergency response and evacuation plans.

Wild Land Fires

Under the OCGP Master Plan the Habitat Reserve, Wildlife Corridor, and recreational areas in the northeastern portion of Planning Area 51 would be exposed to the highest level of fire risk from wild land fires would require inspection for conformance to fire life safety code requirements. As the potential significant wild land fire impacts of the OCGP Master Plan are similar to those disclosed in the OCGP FEIR, the OCGP Master Plan would not substantially change the findings and conclusions of the OCGP FEIR regarding wild land fires.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant

4. *Discussion of Checklist and Mitigation Measures*

effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant hazards/hazardous waste-related effects identified in and considered by the certified OCGP FEIR.

4.7.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR identified six mitigation measures to reduce the effects of the Revised Overlay Plan on public health and safety. Specifically, environmental effects associated with hazardous materials and waste, emergency response, and wild land fires to a level less than significant. All of the mitigation measures are applicable to implementation of the proposed project and would be carried forward to future development of the project site. Measures HH1 through HH6 are listed below:

- HH1**
- a. Prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the DON or its transference shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property, including:
 - The type, location and condition of ACMs,
 - The results of any asbestos testing
 - Description of asbestos control measures taken, if any
 - The costs or time necessary to remove existing ACMs
 - The results of any site-specific asbestos inventory updates
 - b. For any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DON shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements.
 - c. Prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DON. This requirement can be waived if an architect or project engineer responsible for the construction of the structure or an accredited asbestos inspector signs a statement that no ACM was specified as a building material, and to the best of their knowledge, no ACMs were used as a building material.
 - d. Any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws.
 - e. Any renovation and/or LBP abatement activities on residential units a former MCAS El Toro, shall be conducted in accordance with all applicable federal, state and local regulatory requirements.

4. Discussion of Checklist and Mitigation Measures

-
- HH2** a. Prior to transfer, the City of Irvine shall receive from the DON, with the concurrence of the appropriate regulatory agencies, a statement that the "Action Required" IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been identified and implemented. The City of Irvine will adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.
- b. Prior to transfer, if the DON chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DON a statement of temporary restrictions on the use of the sites and the release of the sites for unrestricted use following implementation of adequate remediation of groundwater. The City of Irvine shall adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Section 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.
- HH3** The Community Development Department, in coordination with the Orange County Fire Authority (OCFA), will be responsible for review of all development plans, which would include evaluation of very high fire severity zones, special fire protection plans, and any requirements for fuel modification zones. Project potentially impacted by wildland fire hazards will be subject to OCFA Guidelines for "Development Within and Exclusion from Very High Fire Severity Zones" and "Fuel Modification Plans and Maintenance." Additionally, all demolition, renovation, and construction activities in the project area will be subject to review by OCFA to ensure adequate fire protection, water flow, emergency access, design features, etc., according to the standards of the Uniform Fire Code and the California Fire Code. Due to the implementation of these standard fire protection procedures, the proposed project is not anticipated to result in significant short- or long-term adverse impacts related to fire hazards.
- HH4** Prior to issuance of occupancy permits of any existing structure at the former MCAS El Toro, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval.
- HH5** Prior to the issuance of a grading permit, the applicant shall prepare and the Director of Community Development shall approve a protocol plan (including but not limited to worker training, health and safety precautions, additional testing requirements, and emergency notification procedures) in the event of unknown

4. Discussion of Checklist and Mitigation Measures

hazardous materials are discovered during grading, construction, and/or related development activities. Additionally, said protocol plan will be revised should the discovery of previously unknown hazardous materials be made during any of the aforementioned development activities. The applicant and/or property owner that discovers contamination due to past military operations not previously identified by the DON shall be responsible for notifying the DON, appropriate regulatory agencies, and the Director of Community Development of the City of Irvine in a timely manner.

- HH6** The City of Irvine shall develop and maintain the location and status, as well as other pertinent information, of all monitoring wells located on the former MCAS El Toro on a GIS database. The City will review all permit applications on the former air station for monitoring well locations that may be affected by a permit, and require applicants to maintain appropriate access. Access to monitoring wells will be limited to authorized personnel.

4. *Discussion of Checklist and Mitigation Measures*

4.8 **HYDROLOGY AND WATER QUALITY**

4.8.1 **Environmental Setting**

The OCGP FEIR describes the project site as located within the San Diego Creek watershed, which includes the San Diego Creek, Peters Canyon Channel, and the tributaries to these water courses. The major drainage channels that traverse the site (Planning Area 51) are the Marshburn Channel, Bee Canyon Channel, Agua Chinon Channel, and Borrego Canyon Channel. Serrano Creek and Upper San Diego Creek Channel traverse Planning Area 30 in the southern tip of the project site, south of the existing SCRRA Metrolink railroad tracks.

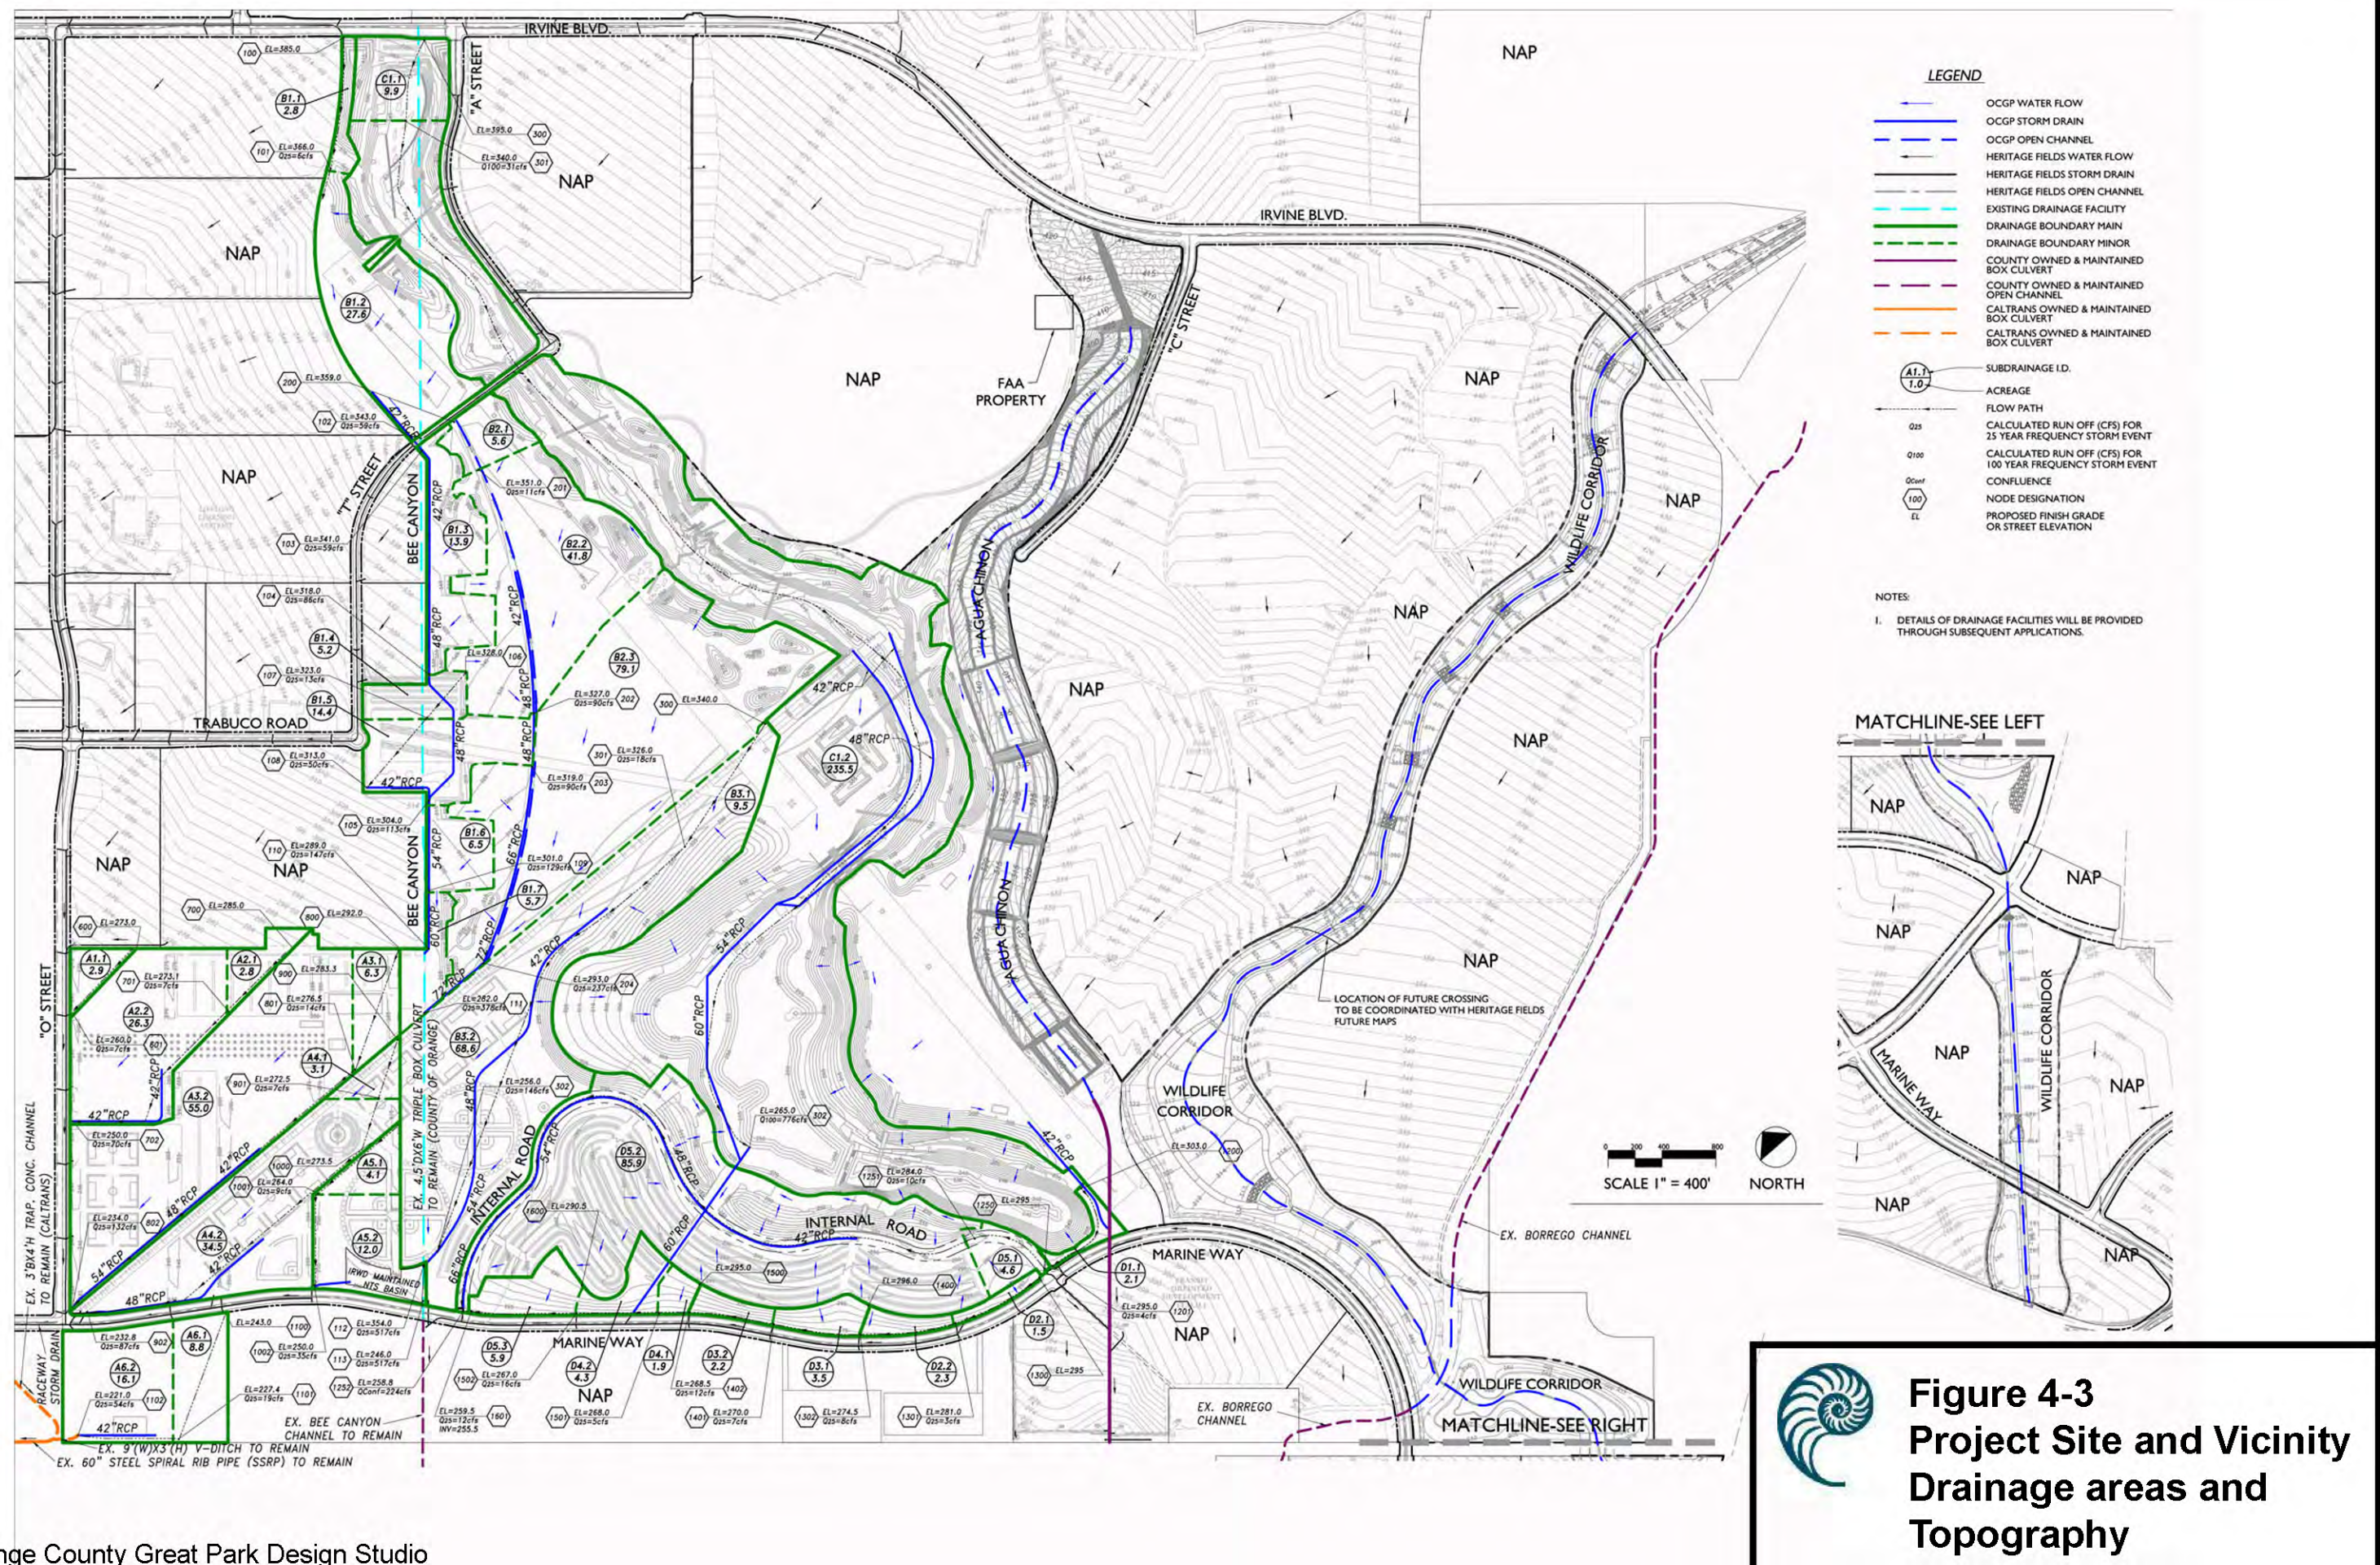

San Diego Creek and Upper Newport Bay are listed as impaired water bodies under Section 303(d) of the Clean Water Act. Accordingly, Total Maximum Daily Loads (TMDL) for pollutants that have impaired these water bodies have been established and included in the OCGP FEIR (Refer to OCGP FEIR Table 5.7-2). **Figure 4-3 (OCGP Master Plan – Project Site and Vicinity Drainage Areas and Topography)** below shows the drainage areas and topography of the project area.

The OCGP FEIR also notes the County of Orange and the City of Irvine hold a National Pollution Discharge Elimination System (NPDES) permit for the storm drain systems, and that the State has issued a NPDES general permit relating to construction activities on sites over five acres in the area. Lastly, the flood control improvements associated with the Eastern Transportation Corridor (SR-133) were noted in the OCGP FEIR as having reduced the 100-year flood zone north and west of the property.

4.8.2 **Impacts Identified in the OCGP FEIR**

The OCGP FEIR identified several significant impacts on hydrology and water quality associated with future development before mitigation. First, grading and excavation activities required for future development could result in the exposure of bare soils to both wind- and water-related erosion and associated significant water quality impacts. Specifically, a violation of water quality standards or waste discharge requirements. Compliance with City grading and water quality regulations—including the NPDES discharge permitting requirements and preparation of a Storm Water Pollution Prevention Plan (SWPPP) and a Water Quality Management Plan (WQMP)—are the primary means of controlling the potential impacts of grading and excavation activities. These requirements, which are described in mitigation measures H/WQ 1 and H/WQ 2, would reduce the impact to a level less than significant.

According to the OCGP FEIR, the existing drainage patterns and stream courses would not be substantially altered by future development under the Revised Overlay Plan. In addition, the potential for inundation will be reduced by improvements to upstream flood control facilities. Without project-related flood control facilities, the rate or amount of surface runoff due to new development would result in flooding on- and off-site, depending on the nature of the specific development. Although this impact was identified as significant, the effect of increased runoff would be reduced to a less than significant level through preparation and implementation of hydraulic studies and recommendations for the specific development and the construction of flood control improvements commensurate with the specific development (mitigation measure H/WQ 3).

4. *Discussion of Checklist and Mitigation Measures*

The impact analysis for the Revised Overlay Plan assumed development of the land use patterns created by the zoning for Planning Areas 30 and 51 and a backbone storm drain system. The storm drain system took into consideration and included improvements identified in the San Diego Creek Flood Control Master Plan (Refer to OCGP FEIR p. 5.7-16 and Figure 5.7-2). The drainage plan for Planning Areas 30 and 51 included the following improvements to the major drainage, as described in the OCGP FEIR:

Marshburn Channel—The existing Marshburn Channel and detention basin would remain substantially the same. Future improvements to serve future development would include an extension of the existing 66-inch pipeline departing the main channel to capture runoff from the westerly most portion of the Property. Although no off-site improvements are necessary to serve the Property, other development projects are expected to improve the Marshburn Channel system.

Bee Canyon Channel—Downstream (south) of Irvine Boulevard, the existing concrete box culverts and open channels would be demolished and replaced with the drainage corridor cross-section and supporting internal culvert crossings and storm drain laterals. The drainage corridor would extend a distance of about 10,200 linear feet. The existing open channel across the future county property will be upgraded and will join the existing open channel at the northerly SCRRA R/W.

Agua Chinon Channel—The drainage channel upstream of Irvine Boulevard would remain substantially unchanged. Select removal and replacement of the existing concrete box culvert and open channels with a corridor drainage cross-section and supporting culvert crossings and storm drain laterals would occur downstream of Irvine Boulevard. The corridor drainage cross-section would be approximately 8,000 feet in length. The new drainage corridor would reconnect to the existing Agua Chinon Channel in the vicinity of the SCRRA railroad tracks. Downstream from its crossing of the tracks, the channel would convey stormwater in a buried reinforced concrete box measuring 12 feet wide by 10 feet high.

Borrego Channel, Wildlife Corridor and Serrano Creek—Under the Revised Overlay Plan low flows from the natural wash upstream and east of Irvine Boulevard would be rerouted from the existing wash and into a new Wildlife Corridor that would be created downstream and west of Irvine Boulevard. A structure would be constructed to convey the flow toward and through the existing Magazine Road tunnel below Irvine Boulevard and to the new Wildlife Corridor. The existing Magazine Road tunnel may require upgrading to accommodate the additional flow from Borrego Channel. The rerouted flows would travel through the new Wildlife Corridor that would traverse the Property in a location generally parallel to the Borrego Channel. At a point near the SCRRA railroad tracks, the Wildlife Corridor once again intersects the Borrego Channel where the rerouted flow would be returned to the Borrego Channel and then under the railroad tracks. The Corridor would continue uncovered to permit wildlife movement into the existing Serrano Creek Channel as the Corridor proceeds to the Property line east of the I-5 Freeway. From its intersection with the Wildlife Corridor, the Borrego Channel would continue west as an at-grade open channel then as a buried box culvert channel under the railroad tracks and in a southwesterly direction, beyond the Property line at Barranca Parkway.

4. *Discussion of Checklist and Mitigation Measures*

San Diego Creek—The existing segment of this creek within Planning Area 30 is an unimproved earthen channel that would be replaced with 1,000 feet of buried reinforced concrete box measuring double 12 feet wide by 6 feet high.

While relatively conceptually defined in the 2003 OCGP FEIR, the foregoing area-wide drainage and flood control facility system has since been undergoing increasingly more definitive design engineering refinement. The latest formal expression of these system enhancements is memorialized in the following document: Fuscoe Engineering, Inc., *Orange County Great Park Master Plan of Drainage*, dated April 25, 2007. The subject document merely refines the drainage control system components described just above, focuses primarily on off-site facilities and issues, is on file with the City, and available for inspection at the Irvine Community Development Department during normal business hours.

4.8.3 *Impacts Associated with the OCGP Master Plan*

The OCGP Master Plan proposes a development program consistent with those allowed under the Revised Overlay Plan; therefore, no change in the development assumptions as they pertain to hydrology and water quality would be necessary. Accordingly, the impact analysis presented in OCGP FEIR Section 5.7 adequately describes the project effects on hydrology and water quality. However, just as the area-wide and off-site drainage and flood control system facility components have undergone continued design engineering refinement, so has been the concurrent refinement of on-site drainage and flood control systems. For the OCGP Master Plan, the formal expression of such facilities are generally referred to in the MP planning packet, but objectively articulated in the following document: Fuscoe Engineering, Inc., *Orange County Great Park – Hydrology/Hydraulic Report*, dated June 12, 2007. This document too is on file with the City, and available for inspection at the Irvine Community Development Department during normal business hours.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR. The off-site Bee Canyon drainage north of Irvine Boulevard has been diverted to the Marshburn Basin and will not run onto the Great Park. On-site drainage that would have been collected by the Bee Canyon system will be conveyed across the property in the same manner as before, within a park feature called the Bee Creek Bosque.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously

4. *Discussion of Checklist and Mitigation Measures*

found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant effects on hydrology and/or water quality identified in and considered by the certified OCGP FEIR.

4.8.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR identified four mitigation measures to reduce effects on hydrology and water quality. All of the mitigation measures are applicable to implementation of the project and would be carried forward to future development of the project site. Implementation of measures H/WQ 1 through H/WQ 4 (listed below) would reduce project impacts to a less than significant level:

H/WQ1 Prior to issuance of a grading permit, the applicant shall provide evidence that the development of the project area shall comply with City of Irvine adopted Grading and Water Quality Ordinances to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area . . . and residential construction sites that result in the disturbance of five acres or more . . . shall be required to develop and implement BMPs . . . to control erosion and siltation and contaminated runoff from the construction sites." Note: In March 2003 this provision will apply to residential construction sites that result in the disturbance of one acre or more.

The City's standard conditions of approval indicate that a Storm Water Pollution Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as de-silting basins and construction site chemical control management measures.

Additionally, prior to the issuance of a grading permit, project applicants must submit, and the Director of Community Development or designee must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff after the site is occupied. Ongoing operations after construction would be subject to the Countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural, and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.), and shall reference the location(s) of structural BMPs.

4. Discussion of Checklist and Mitigation Measures

Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the Director of Community Development for any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

H/WQ2 Prior to issuance of a grading permit, evidence (e.g., in the form of a construction management plan) shall be provided that demonstrates that all storm-water runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality requirements identified in the Santa Ana Regional Water Quality Control Board Basin Plan, including Total Maximum Daily Load (TDML) Implementation Plan adopted for this watershed.

H/WQ3 Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrology studies and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

H/WQ4 Prior to issuance of a building permit, developers with property located in the newly delineated 100-year floodplain shall be required to construct such improvements as necessary to remove the property from the 100-year floodplain. Additionally, the developer shall prepare a Letter of Map Revision (LOMR) request to have the FIRMs revised to remove the development areas from the 100-year floodplain upon completion of the approved flood control facilities. The LOMR request shall be filed upon completion of design of the flood control improvements to contain or redirect the 100-year flood flows away from the property.

After the improvements are constructed, Record Drawings and a maintenance agreement with, or letter from, a public agency shall be submitted to FEMA to complete the LOMR process

4. *Discussion of Checklist and Mitigation Measures*

4.9 **LAND USE**

4.9.1 **Environmental Setting**

The OCGP FEIR described the existing and former land uses in Planning Areas 30 and 51, and other areas adjoining and surrounding these planning areas. Subsequent to the City's approval of the General Plan Amendment and Zone Change for the Overlay Plan, the DoN initiated an auction process for the sale of the former MCAS El Toro property. To facilitate the transfer, the property was divided into and presented to prospective buyers as four distinct parcels. Interested parties were invited to bid on one or more of the parcels.

In 2005, Heritage Fields, El Toro, LLC successfully purchased all four parcels from the DoN (3,671 acres), and entered into a Development Agreement with the City of Irvine on July 12, 2005. The Development Agreement sets forth the terms and conditions of subsequent development and implementation of the Great Park, including the dedication in fee of 1,096 acres of the property for development of the Great Park Master Plan.

The condition of Planning Area 30—generally, cultivated agricultural lands—is substantially the same as the OCGP FEIR baseline year. Consistent with a provision in the Zoning Code, there are interim uses that reuse existing buildings on-site in Planning Area 51. These interim uses are currently comprised of administrative offices and are allowed a maximum of two years on-site without a conditional use permit. The City of Irvine, the Orange County Great Park Corporation, Heritage Fields, El Toro, LLC, California State University, Fullerton, The Great Park Design Studio, and a day care facility have established temporary operations within existing buildings. A few parcels have been leased and operating on an interim basis.

4.9.2 **Impacts Identified in the OCGP FEIR**

The OCGP FEIR identified no significant impact to established communities. There were no residents living within Planning Areas 30 and 51 at the time the FEIR was prepared and there has been no change in this regard; there are no residents living within the project site. The OCGP FEIR analyzed certain amendments to the City's General Plan that were adopted on May 27, 2003, as part of the City's adoption of the Overlay Plan. The adopted Overlay Plan was determined to be consistent with each element of the General Plan, as summarized below:

Land Use Element: The goal of the Land Use Element is to “promote land use patterns that maintain safe residential neighborhoods, bolster economic prosperity, preserve open space, and enhance the overall quality of life in Irvine.” Creation of the “OCGP, Orange County Great Park” land use category to reflect the types, intensity, and density of uses and activities contemplated in the OCGP was determined to be consistent with the goal of the Land Use Element.

Circulation Element: The Circulation Element's goal is to “provide a balanced transportation system.” Adoption of the Overlay Plan included the following modifications to the General Plan Circulation Element:

- Policy B-1(c) was changed to include the following provision:

“In conjunction with individual subdivision map level traffic studies for development proposed in Planning Areas 30 and 51, a LOS [level of service] ‘E’ would be considered acceptable for application to intersections impacted in Planning Areas 13, 30, 31, 32, 34, 35, and 39.”

4. *Discussion of Checklist and Mitigation Measures*

- Figure B-1 (Master Plan of Arterial Highways) and Figure B-2 (Operation Characteristics) were amended to reflect the alignment of roadways within the OCGP, including:
 - Marine Way is aligned to join the Bake Parkway north bound exit ramp from Interstate 5 and terminate at Sand Canyon Avenue at Interstate 5.
 - Trabuco Road terminates at the Trabuco Entry Park District.
 - Rockfield Boulevard is realigned to terminate at Marine Way.
 - On-site circulation includes a new commuter highway/collector (Y Street [Ridge Valley]).
 - Research Parkway is renamed College Road and modified to extend from Irvine Boulevard to Marine Way.
- Figure B-3 (Public Transit) was amended to reflect the alignment of roadways within the OCGP.
- Figure B-4 (Trails Network) was amended to reflect the alignment of roadways within the OCGP.

Housing Element: The goal of the Housing Element is to “provide for safe and decent housing for all economic segments of the community.” The Overlay Plan would add up to 3,625 new dwelling units and carry forward all adopted policies and objectives of the Housing Element; specifically, the residential development component would explore opportunities for addition to the housing stock to help the City meet its Regional Housing Needs Assessment through year 2025.

Conservation and Open Space Element: The goal of this element is to “maintain and preserve the environmental systems as a major feature in the City.” This goal would be achieved through the implementation of objectives L-1 through L-12 and corresponding policies. Objective L-10 encourages “the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development.” The Overlay Plan includes 1,096 acres of Great Park recreational land, 290 acres of permanent agricultural land, and 974 acres of Habitat Preserve.

Cultural Resources: The goal of the Cultural Resources Element is to “ensure the proper disposition of historical, archaeological, and paleontological resources to minimize adverse impacts, and to develop an increased understanding and appreciation for the community’s historic and prehistoric heritage, and that of the region.” The OCGP FEIR identified the flatland area of the property as a low paleontological sensitivity zone and the hillside areas north of Irvine Boulevard as a high paleontological sensitivity zone. No objective of this element was amended by the adopted Overlay Plan and all of the objectives and implementing policies were to be implemented as part of the adopted Overlay Plan.

Noise Element: The Noise Element’s goal is to “contribute to a healthy and safe environment by minimizing noise impacts. The adopted Overlay Plan would not affect the mobile noise, stationary noise, and noise abatement objectives and implementing policies of the Noise Element.

4. *Discussion of Checklist and Mitigation Measures*

Public Facilities and Services Element: The goal of this element is to “provide a full range of necessary public facilities and services that are convenient to users, economical, reinforce City and community identity, and reflect the participation of citizens.” The facilities and services described in the Urban Service Plan for the adopted Overlay Plan were formulated through a public participatory process and found to implement the goal and adopted objectives and related policies of this element.

Integrated Waste Management Element: This element seeks to “encourage solid waste reduction and provide for the efficient recycling and disposal of refuse and solid waste material without deteriorating the environment.” The OCGP FEIR disclosed that the Overlay Plan would not affect the adopted objectives and implementing policies regarding solid waste, waste, wastewater, and solid waste facility siting requirements; rather, it would provide the opportunity to better respond to the City’s solid waste reduction requirements and other provisions of the element by broadening the range of design options.

Growth Management Element: The goal of the Growth Management Element is to “ensure that growth and development are integrally planned with, and phased concurrently with, the City of Irvine’s ability to provide an adequate circulation system and public facilities.” When the OCGP FEIR was certified it was disclosed that though the project made changes to the Master Plan of Arterial Highways, the project would not change any of the objectives or implementing policies of the Growth Management Element.

Parks and Recreation Element: The goal of the Parks and Recreation Element is to “provide park and recreation opportunities at a level that maximizes available funds and enables residents of all ages to utilize their leisure time in rewarding, relaxing, and creative manner.” The OCGP FEIR reported there would be no change to the objectives or implementing policies of this element.

Seismic Element: The goal of the Seismic Element is to “minimize the loss of life, disruption of goods and services, and the destruction of property associated with an earthquake.” Five Seismic Response Area (SRA) designations are used to describe the magnitude and types of potential seismic hazards present within the City, and to provide policy guidance. The OCGP FEIR reported that the majority of the El Toro property was in category SRA-2 and that no objectives or implementing policies would be changed as a result of the project.

Safety Element: The goal of the Safety Element is to “minimize the danger to life and property from man made and natural hazards, including fire hazards, flood hazards, non-seismic geologic hazards and air hazards.” The OCGP FEIR disclosed the need for fuel modification to mitigate potential wild land fire hazards and drainage improvements to lessen flood hazards associated with implementation of the adopted Overlay Plan, and concluded no objectives or implementing policies would be changed as a result of the adopted Overlay Plan.

4.9.3 **Impacts Associated with the OCGP Master Plan**

The following analysis discusses the proposed project in consideration of each General Plan element.

4. Discussion of Checklist and Mitigation Measures

Land Use Element:

The City's Land Use Element designates the project site as Orange County Great Park. This land use category is defined as the development of regionally significant conservation and open space, parks and recreation, educational facilities, and other public-oriented land uses, integrated with privately developed multi-use, residential, commercial, and industrial properties, at the former Marine Corp Air Station El Toro site. The OCGP Master Plan implements the core open space component of this definition by providing habitat restoration, conservation and open space areas, parks and recreational amenities, and other public oriented land uses consistent with the intent of Measure W, adopted by the citizens of Orange County in March 2002. In addition, the OCGP Master Plan conceptually identifies the design for museums and other institutional uses on-site.

Circulation Element:

The goal of the Circulation Element—"to provide a balanced transportation system"—could be accomplished through various circulation alignments equal to or better than the internal roadway alignments shown on the referenced maps. The project would not substantially alter the planned network of arterials and connections to roadways in the surrounding area; nor would they materially change riding and hiking trails and trail linkages; pedestrian and bicycle circulation; and transit, air transportation, and telecommunication opportunities. The OCGP Master Plan will implement a series of paved and unpaved pedestrian and bicycle trail connecting the surrounding communities to the park. As required per the City's General Plan, the OCGP Master Plan will provide regional connections to existing Class I (off-street) regional bicycle and pedestrian trails located in the vicinity of the OCGP as follows:

- Walnut Trail to the west and east;
- Venta Spur Trail to the west;
- Modjeska Trail to the north; and
- San Diego Trail to the south.

Housing Element:

The goal of the Housing Element is to "provide for safe and decent housing for all economic segments of the community." Development of the overall Orange County Great Park project (including Heritage Fields Development) will provide for 3,625 new dwelling units and carry forward all adopted policies and objectives of the Housing Element; specifically, the residential development component would explore opportunities for addition to the housing stock to help the City meet its Regional Housing Needs Assessment through year 2025. By contrast, the OCGP Master Plan portion of the overall OCGP project includes no housing and when considered in that context alone, is unlikely to significantly be affected by, significantly affect the City's Housing Element.

Conservation and Open Space Element:

The protection afforded City-reserved and state-designated farmlands would remain in full force and effect. The zoning stipulations within Section 9-51-3 (Statistical Analysis) include two footnotes as a safety net, each with the following text: An additional 173 acres of Exclusive Agriculture shall be located in Planning Area 51. (Refer to section 9-51-3, footnotes * and **.) In addition to the foregoing, OCGP Master Plan represents the major and primary feature of the overall OCGP project in that its approximately 1,096 acres of recreational land, 290 acres of permanent agricultural land, and 974 acres of Habitat Preserve encompasses perhaps the best

4. Discussion of Checklist and Mitigation Measures

opportunity to conserve and facilitate open space-related public pursuits at this scale in Orange County for the foreseeable future.

Cultural Resources:

The project would not affect the adopted goals, objectives, and policies of this element. Subsequent development would be required to comply with its requirements and to implement mitigation measures found in the OCGP FEIR. With implementation of OCGP FEIR measures P1 and CULT 1 through CULT 4, the impacts of new development on paleontological and cultural resources would be less than significant. Furthermore, the proper disposition of such resources, if any are encountered prior to or during construction would be ensured; and through the information recovered, the community's understanding and appreciation for its historic and prehistoric heritage will have been enhanced.

Noise Element:

The project would not affect the goal of this element—"to contribute to a healthy and safe environment by minimizing noise impacts"—or the mobile noise, stationary noise, and noise abatement objectives and implementing policies of the element. The OCGP MP would further ensure noise sensitive land uses could be arranged within the project site to lessen exposure to noise-generating uses and activities.

Public Facilities and Services Element:

The project would not affect facilities and services described in the Urban Service Plan for the Overlay Plan. As no substantive change in the Urban Service Plan is necessary, and that plan was a principal means of demonstrating consistency with the Public Facilities and Services Element, the project also is consistent with this element of the General Plan. Additionally, subsequent development would be required to implement the element's objectives and policies to ensure that a full range of necessary public facilities and services that are convenient to users are provided in conjunction with new development.

Integrated Waste Management Element:

The project would not affect the adopted objectives and implementing policies regarding solid waste, waste, wastewater, and solid waste facility siting requirements; rather, it would provide the opportunity to better respond to the City's solid waste reduction requirements and other provisions of the element by broadening the range of design options. This element seeks to "encourage solid waste reduction and provide for the efficient recycling and disposal of refuse and solid waste material without deteriorating the environment. In this regard, implementation of the OCGP Master Plan will include a focused commitment on solid waste reduction and recycling. For example, Master Plan implementation will entail the removal of more than 600 acres of hard pavement and the dismantling of more than 120 buildings. All pavements will be recycled at a recycling center located adjacent to the Great Park. Gravels and cobbles will be reused for infiltration media and roadbed support. Large leaves of concrete will be stacked for retaining walls and waterfalls, as well as laid down for trails steps as Toro Tiles. Organic building materials (drywall and wood) will be used as soil amendment while reusable components (redwood beams) would be used in new construction. In the foregoing regard, the OCGP Master Plan fully complies with the provisions of the City's Integrated Waste Management Element.

4. *Discussion of Checklist and Mitigation Measures*

Growth Management Element:

The goal of the Growth Management Element is to “ensure that growth and development are integrally planned, and concurrently phased with, the City of Irvine’s ability to provide an adequate circulation system and public facilities.” When the OCGP FEIR was certified, it disclosed that though the project made changes to the Master Plan of Arterial Highways, the project would not change any of the objectives or implementing policies of the Growth Management Element. The project likewise would not alter any of the objectives or implementing policies because it would remain consistent with the development phasing already assumed as a part of the overall development plan.

Parks and Recreation Element:

The goal of the Parks and Recreation Element is to “provide park and recreation opportunities at a level that maximizes available funds and enables residents of all ages to utilize their leisure time in rewarding, relaxing, and creative manner.” The proposed project accentuates the General Plan goal by enhancing the park and recreation opportunities for residents of all ages. Implementation of the OCGP MP will allow for a variety of amenities ranging from passive to active recreational uses.

Seismic Element:

The goal of the Seismic Element is to “minimize the loss of life, disruption of goods and services, and the destruction of property associated with an earthquake.” Five Seismic Response Area (SRA) designations are used to describe the magnitude and types of potential seismic hazards present within the City, and provide policy guidance. The OCGP FEIR reported that the majority of the El Toro property was in category SRA-2. The OCGP FEIR reported that no objectives or implementing policies would be changed as a result of the project. Likewise, this current proposal would not alter that finding/conclusion because all project development remains within the previously established project boundaries.

Safety Element:

The goal of the Safety Element is to “minimize the danger to life and property from man made and natural hazards, including fire hazards, flood hazards, non-seismic geologic hazards, and air hazards.” The OCGP FEIR disclosed the need for fuel modification to mitigate potential wild land fire hazards and drainage improvements to lessen flood hazards associated with implementation of the project, and concluded no objectives or implementing policies would be changed as a result of the Overlay Plan. The project does not contain elements that would alter the findings, conclusions and mitigation measures because all project development remains within the previously established project boundaries.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The proposed project will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. In that the OCGP FEIR did not identify any significant land use impacts there is no need for further alternatives to the project or the imposition of mitigation measure requirements.

4.9.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR identified no significant land use impact; therefore no mitigation measures were proposed.

4. Discussion of Checklist and Mitigation Measures

4.10 NOISE

4.10.1 Environmental Setting

The OCGP FEIR described mobile noise sources from nearby freeways, roadways, rail facilities, and vehicle use at adjacent commercial businesses, light industrial facilities, and agricultural lands as the dominant noise source in the project area. Stationary noise sources included temporary and intermittent noise from construction activities and agricultural operations, noise associated with the industrial/business parks located to the east and the business park and entertainment uses to the south.

The OCGP FEIR presents the results of a noise survey conducted on December 10–12, 2002, in which noise measurements were conducted at nine locations. The Community Noise Equivalent Level (CNEL) sound levels at the four surveyed representative residential locations ranged from 58 dBA to 65 dBA (Refer to OCGP FEIR p. 5.4-18, Figure 5.4-6, and Table 5.4-7).⁷ The audible noise sources included local traffic, distant traffic, birds, aircraft, and human voices, all of which were characterized as typical of suburban areas.

4.10.2 Impacts Identified in the OCGP FEIR

The OCGP FEIR concluded that development of the Overlay Plan would not result in any significant noise effects. The noise assessment considered a worst-case condition of simultaneous demolition and construction activities with the combined sound level of 20 pieces of large mobile equipment operating at a distance of 5,000 feet, five concrete breakers operating at a distance of 6,000 feet, and two crusher plants operating at a distance of 10,000 feet from the nearest off-project area residential location. The distances represented the closest possible location of the construction equipment to the nearest off-project area residences during a heavy construction period. The nearest off-site residential uses (sensitive noise source) were located approximately 4,000 feet from the property boundary. Under this scenario, the analysis estimated sound levels of approximately 56 dBA at the nearest off-site residential location (Refer to OCGP FEIR p. 5.4-24 and Table 5.4-8).

As build-out of the project site was assumed to occur over time (years 2007–2025), construction-related noise impacts on residential areas within the project site were also estimated. Using the same construction equipment assumptions and a distance of 600 feet from the nearest residential area, the combined effect of the equipment was estimated at a sound level of 70 dBA at the nearest on-site residential locations during a heavy construction period. While the City of Irvine Noise Ordinance does not specify a limit on construction noise levels, it stipulates the days and hours during which construction activities may occur and when construction would not be allowed unless a temporary waiver is requested and granted; specifically, construction is allowed Monday through Friday between 7:00 a.m. and 7:00 p.m., and on Saturdays between 9:00 a.m. and 6:00 p.m.; no construction is allowed outside those hours, on Sundays, or on federal holidays (Refer to OCGP FEIR p. 5.4-31).

4.10.3 Impacts Associated with the OCGP Master Plan

As discussed previously in Section 1.3 of this document, the proposed project addressed in the 2003 OCGP FEIR included an Overlay Plan that was ultimately adopted. The adopted Overlay Plan was subsequently modified and the environmental effects of this “Revised Overlay Plan” evaluated in a September 2006 GPA/ZC Addendum to the OCGP FEIR.

4. *Discussion of Checklist and Mitigation Measures*

The OCGP FEIR noise assessment considered a worst-case condition of simultaneous demolition and construction activities. The worst-case assumptions described for the adopted Overlay Plan remain reasonable assumptions for the project; no new information about future demolition and construction has become available that would increase the number of pieces of equipment to be operated simultaneously. The OCGP FEIR noise analysis estimated the combined sound level of the following activities as measured from the nearest off-project area residential location:

- 20 pieces of large mobile equipment operating at a distance of 5,000 feet;
- concrete breakers operating at a distance of 6,000 feet; and
- 2 crusher plants operating at a distance of 10,000 feet.

The residential dwelling units that have been constructed since certification of the OCGP FEIR are located along the west side of Sand Canyon Avenue in the Woodbury residential development. The residences that front Sand Canyon Avenue are located approximately 1,500 feet from the project site's northwest property line. This distance (1,500 feet) is greater than the distance analyzed for future on-site residential areas (600 feet). The noise analysis for construction impacts to on-site residential areas used the same equipment and activity assumptions, and a distance of 600 feet from the nearest on-site residential area. The results of the analysis estimated construction sound levels at 70 dBA. At a distance of 1,200 feet from the noise source (conservatively assumed to be the project site's northwest property line), which generally represents a doubling of distance, the sound pressure level would be about 6 dB lower than the construction sound levels of 70 dBA estimated for the nearest on-site residential receptor when the noise is located a distance of 600 feet from the residential receptor.⁷ Accordingly, the project's construction-related noise effects on the nearest off-site residential receptor is not expected to be more severe than the noise impacts disclosed in the OCGP FEIR.

Compliance with the City's Municipal Code⁸ would reduce construction-related noise impacts on residential areas (off-site and on-site), including the dwelling units that front Sand Canyon Avenue in the Woodbury residential development. In addition, because the project would not substantially change the traffic volumes and circulation patterns in the study area from that assumed in the OCGP Program EIR, the operations-related noise impacts from mobile noise sources disclosed in the OCGP FEIR adequately describe the potential noise effects the project's mobile noise sources. Overall, the noise effects associated with construction and operation of future development under the project would be similar to the impacts disclosed in the OCGP FEIR for the adopted Overlay Plan. Accordingly, no significant noise effects are anticipated with implementation of the project.

⁷ Sound intensity decreases in proportion with the square of the distance from the source. Generally, sound level for a point source will decrease by 6 dBA for each doubling of distance from the source. (Refer to U.S. Department of Transportation, 1995. *Highway Traffic Noise Analysis and Abatement Policy and Guidance*, Federal Highway Administration, June, p. 4.)

⁸ The City of Irvine Municipal Code, Sections 6-8-201 et seq. (Noise) provides regulations to control unnecessary, excessive, and annoying noise. Section 6-8-204 identifies noise zones (uses) and corresponding noise standards for interior and exterior areas. Section 6-8-205 identifies the days and hours during which construction activities may occur and when construction would not be allowed unless a temporary waiver is requested and granted. Construction is allowed Monday through Friday between 7:00 A.M. and 7:00 P.M., and on Saturdays between 9:00 A.M. and 6:00 P.M.; no construction is allowed outside those hours or on Sundays or federal holidays unless approved by the Chief Building Official. Other requirements refer to the California Building Standards related to noise and specific uses such as hotels, dormitories, long-term care facilities, and multi-family housing; and California Occupational Safety and Health Administration noise exposure limits.

4. *Discussion of Checklist and Mitigation Measures*

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the OCGP Master Plan as currently defined would require a major change to the certified OCGP FEIR. The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. Since no significant noise impacts were identified, no further discussion in this regard is warranted.

4.10.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR identified no significant noise impact; therefore no mitigation measures were proposed.

4. Discussion of Checklist and Mitigation Measures

4.11 POPULATION AND HOUSING

4.11.1 Environmental Setting

The OCGP FEIR discussed the caretaker status of the base following its closure. At the time the OCGP FEIR was prepared there was a limited number of military and civilian staff working on the base. There are no residents living on the base. Consequently, there are 4,380 vacant group quarters units and 1,209 residential dwelling units. The OCGP FEIR examined demographics in the context of the existing and projected population of the Orange County region and the City of Irvine. Population and housing information was developed based on the 2000 United States Bureau of Census population, household, and employment census information. The areas surrounding the former base and the Orange County sub-region are considered jobs-rich and housing-poor. The Southern California Association of Governments (SCAG) seeks to encourage housing growth over job growth in the Orange County sub-region. The OCGP FEIR reported that the ratio of jobs to housing in the area has environmental implications related to transportation and air quality. Thus, a major focus of the regional planning efforts has been to improve the ratio of jobs to housing in all affected sub-regions in order to reduce vehicular trips, costly infrastructure improvements, and resultant air emissions. Despite attempts, according to SCAG projections, the Orange County sub-region's jobs/housing balance will worsen through the year 2025 as the number of jobs surpasses housing.

4.11.2 Impacts identified in the OCGP FEIR

As noted above, the area surrounding the former MCAS El Toro and the Orange County sub-region are considered jobs-rich and housing-poor. SCAG seeks to encourage job growth over housing growth in the Orange County sub-region. The OCGP FEIR reported that regional projections are dynamic and as a compilation of local land use projections, reflect changing community views on the location and the types of growth desired. Although implementation of the adopted Overlay Plan would not have exceeded the Orange County Preferred-2000 employment projections, its impact on employment was considered significant because the Orange County sub-region is anticipated to become increasingly jobs-rich over the next 20 years and the Overlay Plan-related employment would exacerbate the sub-regional jobs/housing imbalance. No significant impact on population and housing were identified (www.scag.ca.gov).

4.11.3 Impacts Associated with the OCGP Master Plan

The OCGP Master Plan would not alter the population, housing, and employment information contained in the OCGP FEIR. The project would not introduce new levels of development that would improve the ratio of jobs to housing beyond that already considered by the OCGP FEIR. In that the Great Park itself will be absent any new residential dwelling units, implementation of the master plan would be expected to have almost no impact on either population or housing, except on an indirect basis.

The impacts of the proposed OCGP Master Plan on population, housing and employment would be the same as under the OCGP FEIR, less than significant for population and housing, and significant and unavoidable for employment.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant population/housing/employment-related effects identified in and considered by the certified OCGP FEIR.

4.11.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR identified a significant impact associated with the jobs/housing ratio. The OCGP FEIR also stated that no mitigation is available to rectify conflicts between the numerical objectives of regional planning documents including the jobs/housing ratio.

4. Discussion of Checklist and Mitigation Measures

4.12 PUBLIC SERVICES

4.12.1 Environmental Setting

Law Enforcement

At the time of the certification of the OCGP FEIR, the Orange County Sheriff provided law enforcement through a contract with the Department of the Navy (DoN) in Planning Area 51 and the Irvine Police Department provided law enforcement within Planning Area 30. Subsequent to the annexation of the property, law enforcement responsibility within both planning areas has been assumed by the Irvine Police Department. The Irvine Police Department is headquartered at the Irvine Civic Center Complex and also has a satellite facility located in the Irvine Spectrum Entertainment Complex. The OCGP FEIR stated that the current police facilities are adequate to handle the personnel and equipment that are employed and utilized by the department for Planning Area 30. The OCGP FEIR also stated that the Irvine Police Department is discussing expansion of facilities, although the specific details of constructing a substation were not known. At the present time, there is a manned Police Department Booth at the entrance to Heritage Fields at the Marine Way Gate.

Fire and Emergency Medical Services

At the time of the certification of the OCGP FEIR, Planning Areas 30 and 51 were provided fire protection by the Orange County Fire Authority (OCFA) under contract to the County of Orange on an interim basis. Subsequent to the annexation of the property, OCFA has continued to provide fire protection service to the project area. The OCGP FEIR stated that OCFA is planning two additional fire stations in the general vicinity to serve Planning Areas 30 and 51.

Parks and Recreation

Regional Recreational Facilities

The County of Orange currently owns and operates approximately 37,000 acres of parkland and open space, including regional and wilderness parks, nature preserves and recreational trails, historic sites, and harbors and beaches. William R. Mason Regional Park is located within five miles of the OCGP. In addition, there are several regional bicycle and pedestrian trails located within the vicinity of the site as described below.

The Orange County Transportation Authority adopted a Strategic Bikeways Plan in 2001, which contains a comprehensive blueprint of the existing bikeways network with Orange County, and proposed new facilities that would complete the bikeway network.

Several bikeways are identified within the vicinity of the OCGP. Class II (on-street) bikeways are located along Sand Canyon Road, Irvine Boulevard, Alton Parkway, and Trabuco Road, which provides access to the OCGP.

Existing Class I (off-street) regional bicycle and pedestrian trails requiring connections are located in the vicinity of the OCGP as follows:

- Walnut Trail to the west;
- Venta Spur Trail to the west;
- Modjeska Trail to the north; and
- San Diego Creek Trail to the south.

4. Discussion of Checklist and Mitigation Measures

Existing Parks and Recreational Opportunities

The site presently contains no parks, trails, bike lanes or other recreation facilities that are open to the public. However, many public facilities are located within five miles of the OCGP including neighborhood and community parks, recreational trails, and open space.

There are approximately 506 acres of neighborhood and community parks and recreational trails in the City of Irvine's public park system, including one aquatic complex containing three competition size pools. William R. Mason Regional Park, a County of Orange facility, and numerous private parks and recreation facilities are also available throughout Irvine that provide additional recreational opportunities for the City's residents.

The City of Irvine, through its Conservation and Open Space Element has established an open space program comprehensively aggregating open space, adjoining other regional open space, promoting conservation and passive recreational opportunities (e.g. Bommer Canyon, Shady Canyon and Limestone Canyon).

At the time of the certification of the OCGP FEIR, the DoN, acting in a caretaker's role, offered public access to a variety of existing recreational facilities including the existing Marine Memorial Golf Course and equestrian stables. Currently, these facilities remain closed and are under demolition and preparation for future development.

City of Irvine Park Standards and Current Inventory of Parks and Recreation Facilities

The City of Irvine has adopted a standard of providing a total of five acres of parks per each 1,000 residents. This standard is applied to new residential developments and is generally met with three acres of neighborhood parkland and two acres of community parkland. Through the acquisition of parkland by dedication and purchase, the City develops park sites in accordance with the following standards:

- Public neighborhood parks – minimum of four acres in size, excluding greenbelts off-street trails and school grounds. May provide joint use with elementary schools. Primary uses include passive open space, active play areas, and picnic area, and playing fields.
- Private neighborhood parks – minimum one-third (1/3) contiguous acres in size excluding greenbelts, trails, windows, setbacks or other development features, such as swimming pools, spas, clubhouses and tennis courts. Primary uses include swimming pools, spas, club houses, and tennis courts.
- Community parks – Generally a minimum of 20 acres in size, excluding greenbelts, trails and school grounds. May provide joint use with secondary schools. Will be designed to serve more than one planning area and provide a variety of uses such as swimming pools, athletic fields, community/recreation centers, cultural centers, picnic areas and gardens.

Specific park locations, sizes and improvement requirements for new residential projects are determined in conjunction with tentative subdivision map applications. Unless otherwise specified in a recorded development agreement for the project, parkland requirements are met by dedication of the amount of land dictated by the 5 acres per 1,000 persons standard, by payment of fees in-lieu of the land, by construction of park facilities, or by a combination of any of these methods. Private neighborhood park sites can also be used to satisfy the parkland standard, however, such sites must meet size and design standards specified in the City's Subdivision Ordinance in order to receive credit toward fulfilling the parkland requirement.

4. Discussion of Checklist and Mitigation Measures

School Services

Planning Areas 30 and 51 are within the school service boundaries of the Irvine Unified School District (IUSD) and the Saddleback Valley Unified School District (SVUSD). A 600-student capacity elementary school was operated by IUSD on the former base property prior to the closure of the base.

4.12.2 Impacts Identified in the OCGP FEIR

Law Enforcement

The OCGP FEIR discussed the law enforcement needs of both Planning Areas 30 and 51 and stated that following annexation the Irvine Police Department would provide law enforcement for the entire project area. The OCGP FEIR also analyzed the number of police officers, police supervisors and support staff, as well as the number of vehicles, equipment, and services. The OCGP FEIR stated that police protection for the park area would be funded through the use of a special park assessment. As stated in the OCGP FEIR, the general impacts associated with construction and operation of public facilities were analyzed in the OCGP FEIR as part of the planned land uses which also included the dedication of 5 acres from Heritage Fields to the City for a Police substation.

Fire and Emergency Medical Services

Subsequent to annexation of the property, Planning Areas 30 and 51 continue to be served by OCFA. The OCGP FEIR stated that there is likelihood that additional fire services infrastructure will be required to support the proposed project. OCFA had not provided the detailed calculations of the exact extent of new services. The OCGP FEIR stated that the final determination of fire station needs and locations would be made at a future date when more information is known about risk, layouts and types of occupancy. The specific environmental impact of constructing the new facilities to serve the project could not be determined at the General Plan level of analysis as specific site plans and locations have not been prepared. However, the general impacts associated with the construction and operation of public facilities has been addressed within the OCGP FEIR.

Parks and Recreation

As discussed in detail in the OCGP FEIR, the parkland acreage under the project will greatly exceed the existing City of Irvine's standards, providing a regional open space amenity for the benefit of all Orange County. The OCGP FEIR calculated a total of 45.1 acres of parkland requirement for the proposed Heritage Fields portion of the overall OCGP development. The community park requirement for the future Heritage Fields development has been addressed through the Development Agreement between the City and Heritage Fields (Recorded on July 12, 2005). Conveyance of the OCGP to the City satisfied any requirement imposed on the developer for the dedication or development of community parks as required by the City's General Plan and Municipal Ordinance. The neighborhood park requirements for the future Heritage Fields development will be met within the Heritage Fields development, outside the OCGP. Details of specific park locations, ownership, sizes, and improvements will be presented to the Community Services Commission as a part of the Park Plan for the new residential developments. In that the OCGP Master Plan does not create a demand for parks and recreation but is itself a park and recreation amenity no impacts upon parks and recreation attributable to the OCGP Master Plan are anticipated. This is consistent with the findings of the OCGP FEIR.

4. *Discussion of Checklist and Mitigation Measures*

The OCGP FEIR also discussed the Implementation Agreement regarding the Natural Community Conservation Plan (NCCP) for the Central/Coastal Orange County Sub-region of the Coastal Sage Scrub NCCP (July 1996), and the Habitat Reserve will be established on approximately 974 acres in the northeastern portion of Planning Area 51. It is noted that that acreage was not sold by the Navy, but rather transferred to the Federal Aviation Administration (FAA). The FAA has an agreement with the Department of the Interior (DOI) for the maintenance of extant gnatcatcher habitat. There are two designated drainage corridors and one wildlife corridor in the site area. The OCGP also includes opportunities for museums, theaters, gardens and other cultural facilities, as well as a sports park, and a network of recreational riding and hiking trails throughout the site.

School Services

Since the project does not propose change to the number and type of residential units or to any of the other land uses, the proposed project remains within the impact envelope analyzed in the OCGP FEIR.

4.12.3 Impacts Associated with the OCGP Master Plan

Law Enforcement

The project does not change the intensity or type of the land uses and therefore, the demand on law enforcement is within the envelope of analysis presented in the OCGP FEIR.

Fire and Emergency Medical Services

Since the project does not change the intensity or type of land uses, the demand on fire protection is within the envelope of analysis presented in the OCGP FEIR.

Parks and Recreation

The project does not propose changes to the land use intensities and types and maintains all of these facilities and amenities as project features. Therefore, the project remains within the envelope analyzed in the OCGP FEIR.

School Services

Since the project does not propose change to the number and type of residential units or to any of the other land uses, the proposed project remains within the envelope analyzed in the previously certified OCGP FEIR.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The OCGP Master Plan will not result any new significant environmental impacts nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to the certified OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the OCGP FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP FEIR was certified and addenda were approved, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the OCGP FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant public services-related effects identified in and considered by the certified OCGP FEIR.

4.12.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR determined the mitigation measures identified in other sections of the OCGP FEIR (Sections 5.1-5.3) address the impacts associated with the construction and operation of public facilities. These measures would be applicable to any new construction and operation of facilities for police, fire protection, park and recreation, and education to serve new growth expected in the northern portion of the city.

4. Discussion of Checklist and Mitigation Measures

4.13 RECREATION

4.13.1 Environmental Setting

Issues related to Recreation are discussed above under Section 4.12, *Public Services and Facilities*.

4.13.2 Impacts Identified in the OCGP FEIR

Issues related to Recreation are discussed above under Section 4.12, *Public Services and Facilities*.

4.13.3 Impacts Associated with the OCGP Master Plan

Issues related to Recreation are discussed above under Section 4.12, *Public Services and Facilities*.

4.13.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

Issues related to Recreation are discussed above under Section 4.12, *Public Services and Facilities*.

4. *Discussion of Checklist and Mitigation Measures*

4.14 **TRANSPORTATION/TRAFFIC**

4.14.1 **Environmental Setting**

The OCGP FEIR describes the traffic and circulation conditions of a study area that encompassed 145 existing intersections (2007) and an additional 11 future intersections (Post 2025) located in the City of Irvine, and portions of seven adjacent jurisdictions including the cities of Lake Forest, Mission Viejo, Laguna Hills, Laguna Woods, Aliso Viejo, Laguna Beach, and unincorporated areas of Orange County. **Figure 4-4 (OCGP FEIR – Traffic Impact Study Area)** depicts the study area covered by the traffic study contained in the OCGP FEIR.

The OCGP FEIR used the City of Irvine Traffic Performance Criteria, which establishes level of service (LOS) “A” to “D” as the peak-hour minimum acceptable service level. In its adoption of the Overlay Plan, the City General Plan Policy B-1(C), which identified LOS E as acceptable for application to intersections in Planning Areas 13, 31, 32, 34, 35 and 39, was changed to include the effects of future development in Planning Areas 30 and 51 on the intersections in those Planning Areas.

The City’s performance criteria also include a standard of 0.02—roadway volume to capacity (V/C) ratio or the intersection capacity utilization (ICU)—to identify significant project impacts and associated need for improvements at both roadways and intersections. At the time the OCGP FEIR was prepared the following 10 study area intersections experienced deficient peak hour traffic operations:

- Culver Drive and Walnut Avenue
- Culver Drive and University Drive
- Jeffrey Road and Alton Parkway
- Jeffrey Road and I-405 Northbound Ramps
- Bake Parkway and Irvine Boulevard
- Bake Parkway and Jeronimo Road
- El Toro Road and Aliso Creek Road
- Los Alisos Boulevard and Los Alisos Boulevard
- Muirlands Boulevard and Los Alisos Boulevard
- Trabuco Road and Alicia Parkway

4.14.2 **Impacts Identified in the OCGP FEIR**

The OCGP FEIR assessed the traffic impacts of two development scenarios for the overall OCGP project – the Base Plan and the Overlay Plan. Both Plans included the future development of lands currently comprising the proposed OCGP Master Plan. Amongst the two Plans, the Overlay Plan comprised the more intensive level of development. The OCGP FEIR estimated that at full build out and thereafter (Year 2025 and Post 2025), the Overlay Plan would generate approximately 148,811 average daily trips (ADT). The OCGP FEIR went on to conclude that this volume of daily traffic would be substantial in relation to the existing traffic load and capacity of the street system both before, at, or subsequent to full build out. More specifically, the OCGP FEIR determined that the following area intersections would be significantly impacted by Overlay Plan implementation under Year 2007, 2025, and post-2025 conditions:

4. *Discussion of Checklist and Mitigation Measures*

Year 2007

- I-5 Freeway at Alton Parkway—southbound off-ramp (A.M.)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (A.M.)

Year 2025

- University Drive from the I-405 Freeway to Michelson Drive (A.M.)
- I-5 Freeway from Sand Canyon Avenue to Jeffrey Road—northbound (P.M.)
- I-5 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-405 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-5 Freeway at Jeffrey Road—southbound on-ramp (A.M.)
- I-5 Freeway at Sand Canyon Avenue—northbound on-ramp (P.M.)
- I-5 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-5 Freeway at Alton Parkway—southbound off-ramp (A.M.)
- I-5 Freeway at Bake Parkway—southbound off-ramp (A.M.)
- I-405 Freeway at Sand Canyon Avenue—northbound direct on-ramp (P.M.)
- I-405 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (A.M.)
- SR-241 Tollway at Lake Forest Drive—southbound off-ramp (A.M.)
- SR-133 Freeway at Barranca Parkway—northbound direct on-ramp (P.M.)

Post-2025

- I-5 Freeway from Sand Canyon Avenue to Jeffrey Road—northbound (P.M.)
- I-5 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-405 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-5 Freeway at Jeffrey Road—southbound on-ramp (A.M.)
- I-5 Freeway at Jeffrey Road—northbound off-ramp (P.M.)
- I-5 Freeway at Sand Canyon Avenue—northbound on-ramp (P.M.)
- I-5 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-5 Freeway at Alton Parkway—southbound off-ramp (A.M.)
- I-5 Freeway at Bake Parkway—southbound off-ramp (A.M.)
- I-5 Freeway at El Toro Road—southbound off-ramp (P.M.)
- I-405 Freeway at Sand Canyon Avenue—northbound direct on-ramp (A.M./P.M.)
- I-405 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (A.M.)

For details regarding the degree of impact associated with the above list of impacted intersections by analysis year, please refer to the following OCGP FEIR tables:

- Table 5.2-12 for year 2007
- Table 5.2-13 for year 2025
- Table 5.2-15 for post 2025

The Overlay Plan was ultimately adopted as the template for the future development of the overall OCGP project. However, the Overlay Plan was subsequently modified and the

4. Discussion of Checklist and Mitigation Measures

environmental effects of the “Revised Overlay Plan” were evaluated in OCGP FEIR Addendum No. 2. The Revised Overlay Plan called for boundary adjustments between Heritage Fields and City of Irvine properties involving a total of 90 acres in Planning Area 51. Other limited revisions and clarifications to the Zoning Ordinance included the creation of a mixed-use category to reallocate land uses within the established maximum building intensities for certain portions of Planning Areas 30 and 51. As a consequence, OCGP FEIR Addendum No. 2 included an updated traffic study prepared by Austin-Foust Associates, Inc., dated September 2006. The subject study is available for inspection at the Irvine Redevelopment Department during normal business hours.

The purpose of the updated traffic study was to determine the impacts of the Revised Overlay Plan in relation to the impacts presented for the adopted Overlay Plan in the 2003 OCGP FEIR. The OCGP Master Plan development assumptions were also included in the updated Austin-Foust traffic study. In essence, the updated assessment concluded that only an insignificant difference would exist between the impacts of the adopted Overlay Plan and those of the Revised Overlay Plan on the area circulation system. Given this, it appears reasonable to conclude that the proportion of overall OCGP project-related traffic-related impacts directly attributable to the OCGP Master Plan would also be similar. As such it is concluded that the findings of the traffic study update prepared for the Revised Overlay Plan adequately address the impacts of OCGP Implementation on traffic and circulation.

As also discussed previously in Section 1.3 of this document, subsequent to the City’s approval of the “Revised Overlay Plan” that was the subject of Addendum No.2, Heritage Fields El Toro, LLC. (Heritage Fields) filed an application to the City of Irvine for approval of Vesting Tentative Tract Map (VTTM) No. 17008. The VTTM was approved by the City of Irvine on May 17, 2007. The subject VTTM included all lands under the auspices of Heritage Fields El Toro, LLC, and the Orange County Great Park Corporation and as a result, also the OCGP Master Plan. The environmental effects associated with approval of the VTTM were addressed in OCGP FEIR Addendum No. 3. Included in OCGP FEIR Addendum No. 3 was a Traffic Study prepared by Austin-Foust Associates, Inc. (dated May 1, 2007) that addressed the transportation impacts of constructing the backbone circulation infrastructure for the overall OCGP project with no new land use development, and in an interim year timeframe consistent with the TTM scope of work of the North Irvine Transportation Mitigation (NITM) Program Ordinance. The Traffic Study analyzed the impacts of the Master Subdivision Map (MSM) application based on year 2010 traffic conditions in the traffic analysis study area. The subject study is available for inspection at the Irvine Redevelopment Department during normal business hours.

The backbone circulation system includes Marine Way from Sand Canyon Avenue to Bake Parkway, Trabuco Road from the SR-133 to “O” Street, and the extension of Rockfield Boulevard to Marine Way as four-lane primary arterials, Ridge Valley (formerly “Y” Street) from Portola Parkway to Irvine Boulevard and “O” Street (formerly College Road) as four-lane secondary arterials, Trabuco Road east of “O” Street, “A” Street, “B” Street, “C” Street and “D” Street as two-lane local road ways. It should be noted that the backbone system improvements also includes the construction of “O” Street between Trabuco Road and Marine Way to its half width (two lanes) The remaining two lanes will be built by the owner of the adjacent property (west side of “O” Street) when that property is developed.

In addition, OCGP FEIR Addendum No.3 included an Internal Circulation Analysis prepared by Austin-Faust Associates, Inc. (dated May 1, 2007) that analyzed the access and internal circulation for the overall OCGP, including the OCGP Master Plan. This study is also available for inspection at the Irvine Redevelopment Department during normal business hours.

4. Discussion of Checklist and Mitigation Measures

Primary access is provided to Irvine Boulevard via Ridge Valley; “O” Street (formerly College Road), “A” Street and “B” Street to Sand Canyon Avenue via Trabuco Road and Marine Way (and indirectly via Irvine Boulevard); and to Alton Parkway, Barranca Parkway, and Bake Parkway Via Marine Way. Project access to the SR-133 is provided directly via a planned interchange at Trabuco Road and indirectly via “O” Street to the Irvine Boulevard interchange.

The study employed Intersection Capacity Utilization (ICU) values to determine levels of service (LOS). The results of this analysis show that all intersections operate at an acceptable level of service under Post-2025 build out conditions. The intersections were then analyzed for signalization needs. Traffic signal warrants based on peak hour volumes (as adopted by the Federal Highway Administration and Caltrans) were used to determine the need for signalization. Based this analysis, traffic signals should be installed at all of the analyzed intersections.

Recommended on-site traffic-control measures include one-way stop signs, signals, and roundabouts. Left-turn pocket lengths for project access intersections with exclusive left-turn lanes were estimated using the County of Orange Environmental Management Agency (EMA) Highway Design Manual. The estimated left-turn storage length requirements for the analyzed intersections were based on peak hour volumes.

Right-turn lanes will be provided for select project access locations on site where additional intersection capacity is needed. The length of the right-turn lane is a function of the adjacent through-traffic queue and LOS at the intersection. A minimum length of 250 feet plus a 120-foot transition will be provided at these locations. Right-turn deceleration lanes are provided along the periphery of the project site and along major roadways within the project site where higher speeds prevail (i.e., Irvine Boulevard, Trabuco Road, and on Marine Way with the exception of locations within the TOD District). The right-turn deceleration lane will be a minimum of 150 feet with a 120-foot transition, in order to provide a safe transition from the through lane to the right-turn lane.

4.14.3 Impacts Associated with the OCGP Master Plan

As discussed above, the updated traffic study addressing the Revised Overlay Plan adequately covers the range of potential impacts of the OCGP Master Plan on the area circulation system. The same conclusion can be drawn with regard to the backbone circulation infrastructure and internal circulation studies described above as they pertain to the OCGP Master Plan. Since the proposed land uses within the OCGP Master Plan are consistent with those analyzed in the OCGP FEIR and the updated traffic study for the Revised Overlay Plan, no additional traffic analysis is necessary and no new significant impacts related to traffic are anticipated.

Special Issues

Pedestrian and Bicycle Circulation

The project area is planned to provide a system of private and public sidewalks and pathways to accommodate the recreational and transportation needs of the residents. These facilities will provide access to nearby recreational facilities, schools, public amenities, commercial centers, bus stops, and provide for an alternative mode of transportation for the area residents. Bicycle lanes will be provided along all public arterials in accordance with the City’s standards and the General Plan. These facilities in addition to a system of internal pathways within each project area will serve the needs of recreational and experienced cyclists. The planned trails also provide an alternative mode of transportation for those wishing to ride their bicycle to work, shopping, school, and other destinations.

4. Discussion of Checklist and Mitigation Measures

Class I off-street trails for pedestrian and bicycle use, will be located in the project site. Bicycle lanes will be provided along the arterials surrounding the development. The pedestrian and trail linkages will allow users to connect to the City's existing trail system and expanded trail network being developed to the north as part of Planning Area 6 and to the west as part of Planning Area 1 and Planning Area 9, as well as the future Orange County Great Park.

A detailed analysis of traffic control measures, including traffic signals, stop-sign control and pedestrian crossings, will be performed with the associated development's map level traffic study, Master Plan and street improvement plan reviews, and in coordination with the City Traffic Engineer, when specific project details are available. Appropriate traffic control measures will be in accordance with City Standards and implemented in the design of the development with the approval of the street improvement plans. Through the implementation of the on-street and off-street trails, and a system of public and private sidewalks within the project area, the goals of the City's General Plan (Objectives B-3 and B-4) for providing alternative modes of transportation and recreational amenities would be met by future development under the proposed project.

Public Transit

The Traffic Study indicates that public sidewalks and pedestrian/bike paths will be provided throughout the Heritage Fields and Great Park developments to allow for access to future transit facilities. The detailed analysis of these needs will occur during the subsequent map level/subdivision map and street improvement plan approval process. In addition, the details of bus stops and future routes serving this area will be coordinated with the Orange County Transportation Authority during the future map level/subdivision map approval process.

The Irvine Transportation Center is adjacent to the Transit Oriented Development (TOD) district of the project area and provides access to the Metrolink commuter rail and Amtrak rail services using the Southern California Regional Rail Authority tracks that bisect the TOD district. Development of Planning Area 30 will include a 20-acre Remote Airport Terminal (also referred to as a "fly-away center"); 53,500 square feet of transit-related building facilities; and 675 parking spaces to encourage and support public transit use.

Congestion Management Program (CMP) Checklist

CMP legislation requires that the CMP Agency monitor the implementation of the Orange County CMP, including CMP land use coordination component requirements. The goal of the CMP is to ensure that certain key intersections within the CMP Highway System (CMPHS) are operating at acceptable levels. The CMP has been developed to monitor impacts on CMPHS intersections. The CMP Monitoring Checklist for the Land Use Coordination Component can be found in Appendix D of the Traffic Study.

There are 18 intersection locations within the study area that are monitored as part of the CMP. The results summarized in the CMP Checklist in Appendix D of the Traffic Study indicate that each of the CMP intersections in the study area is forecast to operate at level of service (LOS) "E" or better, which is within the CMP performance standard for CMP intersections, based on an analysis of short-term (year 2010 in this case assuming 20 percent of project build-out compared with no build conditions, i.e., no development within PA 30 and PA 51) traffic conditions that is required by the CMP. These results demonstrate that the proposed project would not result in any adverse CMP intersection impacts.

4. *Discussion of Checklist and Mitigation Measures*

Circulation Phasing Report Intersections

There are 11 intersection locations in the study area that are identified as impacted 2002 Circulation Phasing Report intersections. Table 7-1 of the Traffic Study presents the 2010 ICU results for these locations (assuming 20 percent of project build-out compared with no build conditions, i.e., no development within PA 30 and PA 51). It should be noted that the intersection locations within each category are presented according to priority for the need of addressing the intersection's impacts. The results show that no location within the study area is adversely impacted by the GPA/ZC project under 2010 conditions.

Conclusion

The project would not produce new or substantially increase the severity of significant impacts previously identified in the OCGP FEIR. Consistent with the conclusions in the OCGP FEIR, traffic and circulation impacts associated with the project would be less than significant as the future development would implement all applicable laws and regulations to reduce impacts on traffic and circulation.

The OCGP FEIR also disclosed the traffic analysis assumption that the cumulative impact of the adopted Overlay Plan traffic along with other regional growth at the identified ramp and freeway locations would be mitigated through a combination of regional programs that are the responsibility of other agencies, and if said programs are not implemented the cumulative freeway/toll-way ramp impacts would remain significant and unavoidable (OCGP FEIR page 7-19). The project would not alter this conclusion.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the features of the proposed OCGP Master Plan require a major change to the certified OCGP FEIR. The proposed OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise or reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant

4. *Discussion of Checklist and Mitigation Measures*

effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant transportation/circulation-related effects identified in and considered by the certified OCGP FEIR.

4.14.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR identified mitigation measures TRAN 1 through TRAN 8, which, if fulfilled prior to specified development approvals, would eliminate or substantially reduce the traffic and circulation effects of development under the adopted Plan. The measures are applicable to future development under the project.

Locations experiencing peak hour deficiencies and significantly impacted by the project have been evaluated to determine what improvements are necessary to provide acceptable levels of service in accordance with City of Irvine and adjacent jurisdiction standards. Project mitigation in the form of (1) constructing new on-site arterial highways, (2) constructing new off-site roadway improvements, and (3) participating on a fair share basis to needed off-site freeway/toll-way ramp improvements, have all been determined as part of the traffic analysis. The traffic impact study has presented a multi-phase analysis of the potential traffic related impacts that would be anticipated to occur under the Orange County Great Park proposed network and land use concepts. The following identifies the measures needed to mitigate the impacts that have been identified. As the planning process for the project proceeds, and the land use plan becomes more defined and refined, additional analyses will be required to determine the cost, assign responsibility and refine the phasing of mitigation measures.

TRAN⁹ Prior to the approval of any final map (other than a financing and conveyance map) within Planning Areas 30 and 51, and prior to issuances of any building permits for permanent improvements within Planning Areas 30 and 51, the landowner or subsequent project applicant shall either (i) apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) ("Spectrumotion") in accordance with Article X of the recorded Declaration of Covenants, Conditions, and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs to reduce traffic, air quality and noise impacts, or (ii) develop and implement a similar transportation management plan containing the elements and meeting the criteria described below as approved by the Director of Public Works:

Transportation Management Plan (TMP)

The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for Planning Areas 30 and 51. This document summarizes the key elements of the TMP.

1.0 Introduction

The purpose of this document is to provide an outline for a comprehensive TMP for Planning Areas 30 and 51 ("Great Park TMP"). This report is not intended to

⁹This mitigation measure has been slightly revised, as compared to the mitigation measure in the OCGP FEIR. The revised language gives the landowner or subsequent applicant the flexibility either to annex into Spectrumotion or to develop a similar transportation management plan, rather than allowing a management plan option only if annexation is not approved. Because the mitigation measures – i.e. annexation into Spectrumotion or development of a transportation management plan – remain the same, this change does not affect analysis of the impacts or the environmental conclusions from the OCGP FEIR.

4. *Discussion of Checklist and Mitigation Measures*

provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.

The applicant may elect to annex Planning Area 51 and a portion of Planning 30 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed restrictions requiring participation in TMA. Membership dues provide the funding for the Association and its program, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.

In the event that the applicant elects not to annex into Spectrumotion, a TMP similar to that provided by Spectrumotion will be developed and implemented. This document sets forth the components of the TMP should it be necessary.

2.0 Transportation Management Plan Framework

The key elements of the Great Park TMP are set forth below:

New Hire Orientation: Inform newly hired employees of commuting services available to them.

Public Transportation Pass Sales: Provide a central location for purchase of passes to available transit services (i.e., OCTA buses, Metrolink, Amtrak, etc.).

Vanpool and Carpool Formation Assistance: Perform all of the administrative work necessary to establish van pools and car pools.

On-site Promotions: Hold rideshare promotions at work sites and assist in employer assistance promotions.

Telecommuting/Alternative Work Schedule Consulting: Assist employers in developing and implementing a telecommuting or alternative work schedule program.

Personalized Commute Consulting: Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.

Website: Maintain a website with all of their program information available.

Rideshare Promotions: Conduct high visibility rideshare promotions as a means to advertise its services.

Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.

Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.

4. *Discussion of Checklist and Mitigation Measures*

3.0 **Transportation Management Plan Implementation**

As part of the TMP, a process will be established to monitor its effectiveness in reducing peak hour trip generation in Planning Areas 30 and 51. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.

- TRAN2 Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of the certified Final OCGP Program FEIR.
- TRAN3¹⁰ Prior to issuance of any building permits for permanent improvements within Planning Areas 30 and 51, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the NITM Ordinance.
- TRAN4¹¹ Prior to approval of each Master Tentative Map or Master Plan for numbered lots, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map or Master Plan for numbered lots. The traffic study area shall be the same as the study area utilized in the NITM Nexus Study. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate at a minimum the cumulative impact of the subject map and/or Master Plans and all previously approved or concurrently submitted maps and/or Master Plans. The methodology for the study area, applicable land use and circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved traffic study scope of work. The landowner or subsequent project applicant shall construct or bond for and enter into a funding agreement for necessary improvements identified in the updated traffic study and/or participate in the City fee program (OCGP FEIR Mitigation Measure TRAN2) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of the OCGP FEIR.

Traffic signals that are on-site or directly related to the development in Planning Areas 30 and 51 will be installed as warranted through the mitigation implementation plan process.

¹⁰ This mitigation measure has been slightly modified, as compared to the mitigation measure in the OCGP FEIR, to reflect the fact that the NITM program serves as the implementing mechanism for the mitigation measure as originally drafted. Implementation of the requirements of the NITM ordinance satisfies the obligations of this mitigation measure.

¹¹ Although this mitigation measure originally references "each Master Tentative Map," it is apparent from the language of the measure that it applies to tentative maps and master plans which propose actual development and hence would generate traffic trips. The VTTM/MSM does not propose or authorize trip-generating development. Traffic studies in compliance with the mitigation measure and the NITM Scope of Work are required for each tentative map for development of any portion of the site. An additional change has been made to the second to last sentence of the mitigation measure – clarifying that the applicant must bond for and/or enter into a funding agreement for necessary improvements if it does not take on the obligation to construct such improvements.

4. Discussion of Checklist and Mitigation Measures

With regard to the subdivision maps compliance with the NITM Program and the other traffic conditions of approval shall satisfy the requirements of Mitigation Measure TRAN4.

TRAN5 In conjunction with the preparation of any updated traffic study as required in Mitigation Measure TRAN4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/toll-way ramp locations in conjunctions with fulfilling its regional role, the landowner or subsequent project applicant and the City will take the following actions:

1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-toll-way ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in this FEIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines.
2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency.
3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to recordation of the first final map for each Master Tentative Map or equivalent to establish the method and timing of payment of the identified percentage responsibility.
4. The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.

TRAN6 The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 of the Final OCGP FEIR show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.

TRAN7 Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval, proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation

4. *Discussion of Checklist and Mitigation Measures*

Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-compete clause or any similar agreement restricting a public agency's authority to construct improvement.

TRAN8 Following adoption of a land use plan and circulation plan for Planning Areas 30 and 51 and before the issuance of any building permits within the MCAS El Toro property, the City of Irvine shall enter into a cooperative study with OCTA and other affected jurisdictions to amend the Orange County Master Plan of Arterial Highways (MPAH). Marine Way, Trabuco Road from the SR-133 tollway to College Road, and Y Street should be included on the MPAH.

4. Discussion of Checklist and Mitigation Measures

4.15 UTILITIES AND SERVICE SYSTEMS

4.15.1 Environmental Setting

Potable Water

The OCGP FEIR described the potable water system for the project. The IRWD is the jurisdictional agency responsible for plan approval and providing water service to the project area. Planning Areas 30 and 51 are located within Zone 3 North and Zone 4 of the IRWD water system. The existing on-site distribution system includes a network of distribution system pipelines, six reservoirs, and two pump stations.

Recycled Water

As stated in the OCGP FEIR, IRWD is the jurisdictional agency responsible for plan approval and providing water service for the project area. Recycled water is currently supplied to Planning Areas 30 and 51 via a 12-inch IRWD Zone B pipeline and connecting to an 8-inch former military base pipeline in the southwest corner of the property.

Sewer

As stated in the OCGP FEIR, IRWD is the jurisdictional agency responsible for plan approval and sewer service for the project area. Planning Areas 30 and 51 are served by a two-branched system with flow, mainly by gravity, from the northeast to the southwest. The system includes a series of pipes ranging from 6 to 15 inches in diameter.

Solid Waste

The OCGP FEIR discussed in detail the environmental setting for solid waste for the project. Solid waste at the project site is collected by Waste Management, Inc., and is disposed of at the Frank R. Bowerman Landfill owned by the County of Orange Integrated Waste Management Department (IWMD). The IWMD's Countywide Integrated Waste Management Plan (CIWMP) was approved in 1996 pursuant to California Integrated Waste Management Board requirement. The CIWMP shows that there is sufficient solid waste disposal capacity in the County for the next 30 years.

Energy and Communications

Southern California Edison (SCE) serves the project via two primary substations. The Southern California Gas Company serves Planning Areas 30 and 51. AT&T is the communications provider for these Planning Areas. Detailed information regarding the environmental setting of dry utilities was included in the OCGP FEIR.

4.15.2 Impacts Identified in the OCGP FEIR

Potable Water

The OCGP FEIR projected the potable water demand to be less than 1.75 million gallons per day (MGD) calculated for the land uses proposed within the project. Since the project does not include any additional intensity or change in the mix of land uses, the demand projection for the project is consistent with the OCGP FEIR. As stated in the OCGP FEIR, selected portions of the existing potable water facilities are assumed to remain in place and operational through project

4. Discussion of Checklist and Mitigation Measures

build-out. The OCGP FEIR stated that the existing system will be expanded and integrated into the IRWD system and thus provide a backbone service to all users in the project site. The OCGP FEIR assumed a potable water system that would follow the routing of existing and proposed roadways.

Recycled Water

The OCGP FEIR stated that on January 27, 2003, the IRWD Board of Directors approved the assessment of water supply for the project. According to the findings of the assessment, IRWD has determined that a sufficient non-potable water supply is available to serve the project. Since the OCGP Master Plan does not increase the intensity or change the mix of land uses, the total non-potable water supplies will meet the project demand.

The OCGP FEIR stated that the implementation of the project would require the expansion of the recycled water transmission lines to serve the project. It was assumed that selected on site facilities would remain in place and operational through build-out. The OCGP FEIR stated that the existing system will be expanded and integrated into the IRWD system and provide a backbone service to all users in the project site. The OCGP FEIR assumed a non-potable system that would follow the routing of existing and proposed roadways within the project.

Sewer

The OCGP FEIR stated the IRWD will continue to provide sewer service to the project. IRWD has indicated that it would have sufficient capacity to meet the future demand; however, additional wastewater treatment capacity may need to be purchased by project proponents as specific development projects come forward. The OCGP FEIR stated that projected build out demand for sewer services based on the land uses in the projected area were .89 million gallons per day (MGD) and the project would require an increase of sewer transmission capacity to serve the project. The proposed sewer system would preserve selected, existing on site facilities in place and operational through build-out and would expand the system through extension of existing sewer lines. The OCGP FEIR stated that additional IRWD maintenance and equipment could be required to operate and maintain the proposed system.

Solid Waste

As stated in the OCGP FEIR, demolition of existing runways, buildings and structures within Planning Area 51 will generate debris materials that will require disposal at local landfills. Green waste will be also generated as a result of ongoing park and landscaping maintenance. In addition to the City requirement for recycling of construction and demolition material to reduce waste, solid waste reduction will also be achieved through compliance with AB 939, which requires that a minimum of 50 percent of the solid waste generated in cities in California be diverted from landfills. Further, SB 1374 requires that all cities implement measures that require diversion of 75 percent of all construction and demolition waste from landfills.

Energy and Communications

The Overlay Plan has proposed to install the new systems generally along a routing that coincides with the existing and proposed roadway within the project. A portion of the routing, (specifically the portion along the "loop road") is not included in the project and will require an adjustment to the routing system for the expansion of the dry utilities system. However, the expansion of the system will generally coincide with the existing and proposed roadways consistent with the OCGP FEIR. The OCGP FEIR further stated that the specific impacts of

4. Discussion of Checklist and Mitigation Measures

constructing new energy and communication transmission facilities could not be determined at the program level analysis, as site-specific plans for the installation of the energy and communication transmission backbone system have not been prepared. The general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the transmission system, were addressed in the OCGP FEIR.

4.15.3 Impacts Associated with the OCGP Master Plan

Potable Water

A portion of the routing, (specifically the portion along the "loop road") is not included in the project, and will require an adjustment to the routing system for the expansion of the potable water network. However, the expansion of the system will generally coincide with the existing and proposed roadways consistent with the OCGP FEIR. The OCGP FEIR further stated that specific environmental impacts of the proposed project on the existing and planned MWD facilities, as well as specific impacts of constructing new potable water facilities could not be determined at the program level analysis and project-level environmental review at the time that specific development plans have been prepared will be required. The general significant impacts associated with the project's construction and operation of public facilities has been addressed in the OCGP FEIR.

Recycled Water

A portion of the routing, (specifically the portion along the "loop road") is not included in the proposed project, and will require an adjustment to the routing system for the expansion of the non-potable water network. However, the expansion of the system will generally coincide with the existing and proposed roadways consistent with the OCGP FEIR. The OCGP FEIR further stated that the specific environmental impacts of constructing the new recycled water facilities could not be determined at the General Plan level analysis as specific site plans and locations have not been prepared. However, the general significant impacts associated with the project's construction and operation of public facilities has been addressed in the OCGP FEIR.

Sewer

Since the project proposes the same intensity and mix of land uses, demand projections and proposed system expansion would remain the same. The OCGP FEIR further stated that the specific environmental impact of constructing new sewer facilities to serve the project cannot be determined at the program level analysis, as site-specific plans for the installation of the sewer backbone system had not been prepared. However, the general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the sewer system, was addressed in the OCGP FEIR.

Solid Waste

Since the project is expected to generate significant amounts of construction debris due to demolition, the OCGP FEIR considered this a potentially significant impact and included a number of mitigation measures to address those impacts. The project will not generate additional solid waste due to demolition of runways and buildings and therefore the OCGP FEIR mitigation measures would reduce the project impacts to less than significant levels.

4. *Discussion of Checklist and Mitigation Measures*

Energy and Communications

The Overlay Plan had proposed to install the new systems generally along a routing that coincides with the existing and proposed roadway within the project. A portion of the routing, (specifically the portion along the “loop road”) is not included in the project and will require an adjustment to the routing system for the expansion of the dry utilities system. However, the expansion of the system will generally coincide with the existing and proposed roadways consistent with the OCGP FEIR. The OCGP FEIR further stated that the specific impacts of constructing new energy and communication transmission facilities could not be determined at the program level analysis, as site-specific plans for the installation of the energy and communication transmission backbone system have not been prepared. The general significant impacts associated with the construction and operation of public facilities, including the project’s construction and operation of the transmission system, were addressed in the OCGP FEIR.

Major FEIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The OCGP Master Plan will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major FEIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous FEIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous FEIR. This Environmental Evaluation has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous FEIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant utilities/service systems-related effects identified in and considered by the certified OCGP FEIR.

4.15.4 Mitigation from the OCGP FEIR and Applicability to the OCGP Master Plan

The OCGP FEIR determined the mitigation measures identified in other sections of the OCGP FEIR (5.1-5.13) address the impacts associated with the construction and operation of public facilities. These measures would be applicable to any new construction and operation of facilities for the following types of utilities to serve new growth expected in the project area:

4. Discussion of Checklist and Mitigation Measures

-
- potable water
 - recycled water
 - wastewater
 - energy and communication transmission facilities

Mitigation Measures SW1 through SW5 apply to future demolition and new construction, and would be carried forward through permit approvals for subsequent development projects. The proposed project would neither change these mitigation measures nor their application to future developments.

SW1 It is anticipated that much of the solid waste resulting from the demolition, dismantling, or other deconstruction of the aged structures and property, including but not limited to buildings and runways, at El Toro MCAS is contaminated with lead-based paints, asbestos, or other materials that may render it unsuitable for recycling or reuse. At the sole cost and expense of the project applicant, in order to evaluate this condition and determine the feasibility of recycling of solid waste material from the El Toro MCAS site by ordinary means, technical evaluation and its findings must be submitted to the City of Irvine Community Development Department. The City of Irvine must confirm the adequacy of the technical evaluation prior to authorizing the demolition, dismantling, or deconstruction project to proceed.

If it is determined by the technical evaluation that material is contaminated and prohibited from being recycled by ordinary means, a further evaluation must be conducted to identify and evaluate other feasible methods approved by state law to divert the material from landfills. This may include the delivery of the waste material to other appropriate non-disposal or transformation facilities, such as “waste-to-energy” (WTE) plants.

SW2 For that solid waste which is determined to be inappropriate for recycling (as that term is defined by California Public Resources Code Section 40180), the project must submit a written plan to the City and implement such plan to ensure that 75% of the material, or the maximum amount feasible as determined by the technical evaluation, is diverted from the landfill through other methods that comply with state statutes and regulations.

SW3 For that solid waste which the technical study deems to be suitable for recycling, the project applicant must submit a written plan to the City and implement such plan to ensure that solid waste material generated by the demolition, dismantling, or deconstruction project, recycling agent, and that a minimum of 75% of the solid waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180. (“Recycling” does not include transformation, as defined in Public Resources Code Section 40201.)

SW4 To ensure ongoing compliance with these mitigation measures, the project applicant will be required to submit solid waste tonnage reports to the City of Irvine on City approved forms, accompanied by “weigh ticket” receipts from state-certified disposal, non-disposal, or transformation facilities, on a quarterly basis to demonstrate that solid waste diversion has occurred in accordance with these

4. Discussion of Checklist and Mitigation Measures

required mitigation measures and in a manner that is consistent with, and not detrimental to, the efforts of the City of Irvine to comply with AB939.

To assure compliance with applicable statutes related to the disposal of solid waste, it is necessary for the City to require appropriate and effective mitigation measures to limit the disposal and ensure significant recycling of solid waste on-site.

- SW5** For green waste, the project applicant must submit a written plan to the city and implement such plan to ensure that the green waste material generated by landscape maintenance operations is collected by a City authorized waste hauler or recycling agent, that the maximum feasible amount of that collected green waste is recycled, and that a minimum of 50% of the green waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180.

**ORANGE COUNTY GREAT PARK
FINAL EIR
CITY OF IRVINE
MITIGATION MONITORING AND REPORTING PROGRAM CHECKLIST**

1.0 INTRODUCTION

Section 21081.6 to the State of California Public Resources Code requires a lead or responsible agency that approves or carries out a project where an environmental impact report (EIR) has identified significant environmental effects to adopt a “reporting or monitoring program for adopted or required changes to mitigate or avoid significant environmental effects.” The City of Irvine is the lead agency for the Great Park Plan EIR, and therefore is responsible for implementation of the mitigation monitoring program. An EIR has been prepared for this project which addresses potential environmental impacts and, where appropriate, recommends measures to mitigate these impacts. As such, a mitigation reporting or monitoring program is required to ensure that adopted mitigation measures are implemented.

The project is located in the center of Orange County and includes land within the City of Irvine as well as unincorporated area. The project area encompasses approximately 4,701 acres, or 7.5 square miles. The total area proposed for annexation is 4,287 acres.

The project area is bounded by the City of Lake Forest to the south and southeast, the City of Irvine to the west and southwest, and the County of Orange to the north. The former MCAS El Toro is generally located north of the Santa Ana (I-5) Freeway, east of the Eastern Transportation Corridor (SR-133), and south of the Foothill Transportation Corridor (SR-241). Major roadways bordering the project area include Barranca Parkway to the south, Sand Canyon Avenue to the west, Portola Parkway and Irvine Boulevard to the north, and Alton Parkway to the east. The James A. Musick Jail Facility is located on a 105-acre site northwest of existing Bake Parkway and east of the future extension of Alton Parkway. The northern boundary of the Musick Jail abuts the former MCAS El Toro. Existing buildings of the Irvine Spectrum abut the Musick Jail site to the west/southwest. An eight-acre parcel west of the Musick Jail contains the IRWD East Irvine Pumping Station, Zone III 5-million gallon potable water reservoir, and a 7-million gallon potable water reservoir.

The project consists of the following actions: 1) Annexation, General Plan Amendment, Pre-Zoning (prior to annexation), and Zoning of the unincorporated portion of Planning Area 51; 2) Annexation of the unincorporated portion of Planning Area 35 (the Irvine Ranch Water District Parcel); 3) General Plan Amendment and Zone Change for Planning Area 30 with is presently in the City of Irvine; and, 4) Approval in the form of a Development Agreement vesting approval of higher intensity overlay uses in consideration of dedication of land for public purposes and for funding certain infrastructure improvements and maintenance of the public uses by the

purchaser/developer and subsequent landowners and funds for specified park, roadways, and other circulation facilities and infrastructure. The proposed project also includes the dedication of approximately 21 acres to be used for the Jeffrey Pine Open Space Spine (JOSS). The JOSS acreage will serve as a connector to the regional open space system and will provide recreational opportunities in the Northern Sphere.

2.0 PROGRAM MANAGEMENT

The mitigation monitoring and reporting program (MMRP) for the Great Park Plan will be in place through all phases of project approval. Enforcement of the MMRP will be the responsibility of a Project Manager (PM) at the City of Irvine.

2.1 Roles and Responsibilities: Project Manager

The role is assigned by the Community Development Director. The PM assigned to the proposed project will supervise the MMRP during design, construction, and operation of the project and is responsible for the overall management of the MMRP. The PM is thoroughly familiar with the project and qualified to determine if an adopted measure is being properly implemented. The PM oversees the MMRP and reviews the Reporting and Implementation (R&I) Forms to ensure they are filled out correctly and proper action is being taken on each measure. The PM and/or an assignee will also be responsible for the filling and updating of the R&I Forms during all phases of the project. The PM will determine the need for a measure to be modified and ensure the use of a mitigation specialist if technical expertise beyond the PM's is required. If it is found that an adopted mitigation measure is not being properly implemented, the PM will require corrective actions to ensure adequate implementation. The responsibilities of the PM include the following:

1. An MMRP Reporting Form will be prepared for each potential significant impact and its corresponding mitigation, as identified in the list of significant impacts and mitigation measures attached hereto.
2. Appropriate specialists will be retained, as needed, to monitor specific mitigation activities and provide appropriate written approvals to the PM.
3. The PM and/or an assignee will approve, by signature and date, the completion of each action item that was identified on the MMRP Reporting Form.
4. All MMRP Reporting Forms for an impact issue requiring no further monitoring will be signed off as completed by the PM and/or an assignee at the bottom of the MMRP Reporting Form.

5. Unanticipated circumstances may arise requiring the refinement or addition of mitigation measures. The PM is responsible for approving any such refinements or additions. An MMRP Reporting Form will be completed by the PM and/or an assignee. The completed form will be provided to the appropriate design, construction, or operational personnel.

In the foregoing regard, it is noted that in OCGP FEIR Addendum No.3 dated April 2007, several mitigation measures were modified with regard to their timing in order to more effectively implement them. Mitigation measures in this regard are identified with an asterisk (*).

6. The PM has the authority to stop the work of construction contractors if compliance with any aspects of the MMRP is not occurring after written notification has been issued. The PM also has authority to hold certificates of occupancies if compliance with a mitigation measure attached herein is not occurring. The PM also has authority to hold the issuance of a building permit until all mitigation measures are implemented. Should the applicant/contractor disagree with the findings and actions of the PM, an appeal to the Community Development Director can be submitted.

2.2 General Procedures

MMRP Program Definitions

The MMRP consists of key program elements. The elements are summarized below.

MMRP Files

Files are established to document and retain records of the MMO. The file organization is established by the PM according to mitigation measures and project phases.

R&I Forms

R&I Forms are designed to record the monitoring activity in a consistent manner with appropriate approvals. The R&I Forms are placed in the MMRP files.

Environmental Compliance Verification

At the completion of construction contracts that are part of the overall development of the project, a verification of environmental compliance is executed by the PM. The verification concludes the construction monitoring process for the contract.

Mitigation Monitoring and Reporting Program Procedures

The policies and procedures for the MMRP described herein are intended to provide focused, yet flexible guidelines for monitoring the implementation of the mitigation measures discussed in the final EIR. The Mitigation Monitoring and Reporting Checklist lists each mitigation measure, the method of verification for each mitigation measure, and the party responsible for monitoring efforts. The Mitigation Monitoring and Reporting

Checklist also provides the PM a verification of compliance for each mitigation measure during each applicable phase of the project. An R&I form is prepared for each potential significant impact and its corresponding mitigation measure. After each measure is verified for compliance, no further action is required for the specific phase. The PM shall initial and date the measure on Mitigation Monitoring and Reporting Checklist.

Disposition of Monitoring Forms

All actions and completed R&I Forms are kept in the MMRP file with the City of Irvine during the pre-design, design, construction, and operational phases of the project. Reports will be available from the city upon request at the following address:

City of Irvine (Lead Agency)
Community Development Department
One Civic Center Plaza
Irvine, California 92623-9575

MITIGATION MONITORING AND REPORTING PROGRAM

ORANGE COUNTY GREAT PARK

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
5.1 LAND USE (Base Plan and Overlay Plan)					
	No mitigation measures are required.				
5.2 TRAFFIC/CIRCULATION (Base Plan and Overlay Plan)					
TRAN1	<p>Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) ("Spectrumotion") in accordance with Article X of the recorded Declaration of Covenants, Conditions and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs. The primary purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described below:</p> <p>Transportation Management Plan (TMP)</p> <p>The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for the Great Park Project. This document summarizes the key elements of the TMP.</p>	<p>Requires submittal of annexation plans by project applicant in accordance with the Irvine Spectrum TMA. Failure to obtain approval of such plans requires project applicant to develop and implement a TMP as described in TRAN1.</p>	<p>Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property.</p>	<p>Director of Community Development or designee.</p>	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>1.0 Introduction</p> <p>The purpose of this document is to provide an outline for a comprehensive TMP for the Great Park. This report is not intended to provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.</p> <p>It is the intent to annex Planning Area 51 and a portion of Planning Area 35 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo-commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed restrictions requiring participation in the TMA. Membership dues provide the funding for the Association and its programs, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.</p> <p>In the event that annexation of PAs 51 and 35 into Spectrumotion is not approved, a TMP similar to that provided by Spectrumotion will be implemented. This document sets forth the components of the TMP should it be necessary.</p> <p>2.0 Transportation Management Plan Framework</p> <p>The key elements of the Great Park TMP are set forth below:</p> <p>New Hire Orientation: Inform newly hired employees of commuting services available to them.</p>				

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>Public Transportation Pass Sales: Provide a central location for purchase of passes to available transit services ((i.e., OCTA buses, Metrolink, Amtrak, etc.).</p> <p>Vanpool and Carpool Formation Assistance: Perform all of the administrative work necessary to establish van pools and car pools.</p> <p>On-site Promotions: Hold rideshare promotions at work sites and assist in employer assistance promotions.</p> <p>Telecommuting/Alternative Work Schedule Consulting: Assist employers in developing and implementing a telecommuting or alternative work schedule program.</p> <p>Personalized Commute Consulting: Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.</p> <p>Website: Maintain a website with all of their program information available.</p> <p>Rideshare Promotions: Conduct high visibility rideshare promotions as a means to advertise its services.</p> <p>Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.</p> <p>Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.</p>				

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	3.0 Transportation Management Plan Implementation As part of the TMP, a process will be established to monitor its effectiveness in reducing peak hour trip generation in the Great Park. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.				
TRAN2	Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of this EIR.	Requires contractual agreement between the City of Irvine and project applicant to fund improvement listed in the EIR.	Prior to the issuance of the first building permit.	Director of Community Development or designee.	
TRAN3	Prior to issuance of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the project traffic study (Urban Crossroads, December 2002) to maintain satisfactory levels of service as defined by the City's General Plan, based on thresholds of significance, performance standards, and methodologies used in this EIR, Orange County Congestion Management Program, and established in the transportation system/infrastructure fee program described in Mitigation Measure Tran 2 above.	Requires contractual agreement between the City of Irvine and project applicant to fund improvement listed in the EIR.	Prior to issuance of any building permits for permanent improvements in the project area.	Director of Community Development or designee.	
TRAN4	Prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate the cumulative impact of the subject map and all previously approved or concurrently submitted maps. The methodology for the study area, applicable land use and	Requires the separate submission of updated traffic study developed in accordance with City of Irvine Traffic Study Guidelines.	Prior to the approval of each Master Tentative Map or equivalent document.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved traffic study scope of work. The landowner or subsequent project applicant shall construct, bond for, or enter into a funding agreement for necessary improvements identified in the updated traffic study and/or participate in the City fee program (Tran 2 above) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of this EIR.</p> <p>Traffic signals that are on-site or directly related to the Great Park development will be installed as warranted through the mitigation implementation plan process.</p>				
TRAN5	<p>In conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/tollway ramp locations in conjunctions with fulfilling its regional role, the landowner or subsequent project applicant and the City will take the following actions:</p> <ol style="list-style-type: none"> 1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-tollway ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in this EIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines. 2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency. 	Requires the separate submission of updated traffic study developed in accordance with City of Irvine Traffic Study Guidelines.	Prior to the approval of each Master Tentative Map or equivalent document.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to recordation of the first final map for each Master Tentative Map or equivalent to establish the method and timing of payment of the identified percentage responsibility.</p> <p>The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.</p>				
TRAN6	The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.	Requires the separate submission of updated traffic study developed in accordance with City of Irvine Traffic Study Guidelines. May require additional documentation and/or submission to other jurisdictions, depending on location of proposed improvement.	Prior to the approval of each Master Tentative Map or equivalent document.	Director of Community Development or designee.	
TRAN7	Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval, proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall	Requires the development and submission of a Project Study Report, a New Connection Request, and a	Prior to the approval of each Master Tentative Map or equivalent document.	Director of Community Development for submission to Caltrans and potentially effected TCA's.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	prepare a Project Study Report, a New Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-compete clause or any similar agreement restricting a public agency's authority to construct improvement.	Detailed Traffic Revenue Study by the City of Irvine.			
TRAN8	Following adoption of a land use plan and circulation plan for the Great Park property and before the issuance of any building permits within the base property, the City of Irvine shall enter into a cooperative study with OCTA and other affected jurisdiction to amend the Orange County Master Plan of Arterial Highways. Marine Way, Trabuco Road from the SR-133 tollway to College Road, and Y Street should be included on the MPAH.	Requires cooperate study and subsequent amendment to Orange County Master Plan of Arterial Highways.	Following adoption of a land use plan and circulation plan for the project site and before the issuance of any building permits.	Director of Community Development, OCTA, and other affected jurisdictions.	
5.3 AIR QUALITY (Base Plan and Overlay Plan)					
AQ1	Prior to the start of demolition and construction within the project area, adjacent sensitive receptors shall be informed of the planned demolition and construction activities. Measures to avoid significantly impacting these receptors shall be developed and implemented by the project proponent in coordination with these uses. Other applicable mitigation measures such as erection of fences around construction areas; staggered use of equipment near sensitive receptors; diversion of truck trips away from receptors; etc.; shall be employed as necessary. Compliance with this measure shall be verified by the Director of Community Development.	Requires written notification to potentially affected sensitive receptors (residents and landowners).	Prior to the start of demolition and construction within the project area.	Director of Community Development or designee.	
AQ2	Prior to the commencement of construction activities required to demolish and/or remove existing DON infrastructure, including runways, the Director of Community Development shall receive and approve a construction emissions mitigation plan from the chosen demolition contractor. Prior to the issuance of grading permits, the applicant of any future	Requires the development, submission, and approval of a construction emissions mitigation	Prior to the start of demolition and construction within the project area.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>development project shall submit, and the Director of Community Development shall approve a construction emissions mitigation plan. The plans shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.</p> <p>X Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase.</p> <p>X Water exposed soils at least twice daily and maintain equipment and vehicle engines in good condition and in proper tune.</p> <p>X Wash off trucks leaving the site.</p> <p>X Replace ground cover on construction sites when it is determined that the site will be undisturbed for lengthy periods.</p> <p>X Reduce speeds on unpaved roads to less than 15 miles per hour.</p> <p>X Halt all grading and excavation operations when wind speeds exceed 25 miles per hour.</p> <p>X Suspend all emission generating activities during smog alerts.</p> <p>X Use propane- or butane-powered on-site mobile equipment instead of diesel/gasoline, whenever feasible.</p> <p>X Properly maintain diesel-powered on-site mobile equipment.</p> <p>X Sweep streets at the end of the day if substantial visible soil material is carried over to the adjacent streets.</p> <p>X Use electricity from power poles rather than temporary on-site diesel- or gasoline-powered generators, whenever feasible.</p> <p>X Use of low-VOC asphalt.</p> <p>X Cover all trucks hauling dirt, sand, soil or other loose</p>	plan by project applicant.			

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>material to and from the site.</p> <p>X Provide temporary traffic controls (e.g., flag persons) during all phases of construction to ensure minimum disruption of traffic.</p> <p>X Schedule construction activities that affect traffic flow on adjoining streets to off-peak hours to the extent possible.</p> <p>X Reroute construction trucks away from congested streets, whenever feasible.</p> <p>X Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, whenever feasible.</p>				
AQ3	<p>Prior to the issuance of building permits for any future development, the applicant shall submit, and the Director of Community Development shall have approved, an operation-emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.</p> <p>X Utilize built-in energy-efficient appliances to reduce energy consumption and emissions.</p> <p>X Utilize energy-efficient and automated controls for air conditioners and lighting to reduce electricity consumption and associated emissions.</p> <p>X Install special sunlight-filtering window coatings or double-paned windows to reduce thermal loss, whenever feasible.</p> <p>X Utilize light-colored roofing materials as opposed to dark roofing materials to conserve electrical energy for air-conditioning.</p> <p>X Provide shade trees in residential subdivisions as well as public areas, including parks, to reduce building heating and cooling needs, whenever feasible.</p> <p>X Ensure that whenever feasible, commercial truck traffic is diverted from local roadways to off-peak periods.</p> <p>X Centralize space heating and cooling for multiple-family dwelling units and commercial space.</p>	Requires the development, submission, and approval of an operation-emissions mitigation plan by project applicant.	Prior to the issuance of building permits within the project area.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	X Orient buildings north/south for reducing energy-related combustion emissions. X Use solar energy, when feasible. X Use high rating insulation in walls and ceilings.				
AQ4*	At the time of residential and commercial lease and sales agreements, future sales information on available housing and employment opportunities within the project area shall be provided to employees and residents of the project area, so as to encourage employees to live within the residential developments planned on-site and future residents to find employment nearby.	Requires written notification to employees and residents within the project area.	On-going (at the time of residential and commercial lease and sales agreements).	Director of Community Development or designee.	
AQ5	Future employment generating non-residential development shall include measures to reduce vehicle trips including carpool incentives, easy access to public transit systems, trail linkages between uses, low-emissions vehicle fleets, and the provision of on-site facilities such as banking and food courts, and bicycle parking facilities, and other transportation demand management measures, as deemed appropriate.	Requires submission of potential measures to reduce vehicle trips, as identified in AQ5.	On-going (prior, during and upon completion of development of the project area).	Director of Community Development or designee.	
5.4 NOISE (Base Plan and Overlay Plan)					
	No mitigation measures are required.				
5.5 PUBLIC HEALTH AND SAFETY (Base Plan and Overlay Plan)					
HH1	a. Prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the DON or its transference shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property, including: X The type, location and condition of ACMs X The results of any asbestos testing X Description of asbestos control measures taken, if any X The costs or time necessary to remove existing ACMs	Requires submission of Record of Decision (ROD) or similar applicable federal/state documentation to verify information provided to the City of Irvine by the DON.	Prior to the conveyance of the former MCAS El Toro property; prior to the occupation of existing structures on the former MCAS El Toro property.	Manager of Building and Safety; Director of Community Development.

	<p>X The results of any site-specific asbestos inventory updates</p> <p>b. For any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DON shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements.</p> <p>c. Prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DON. This requirement can be waived if an architect or project engineer responsible for the construction of the structure or an accredited asbestos inspector signs a statement that no ACM was specified as a building material, and to the best of their knowledge, no ACMs were used as a building material.</p> <p>d. Any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws.</p> <p>e. Any renovation and/or LBP abatement activities on residential units at former MCAS El Toro shall be conducted in accordance with all applicable federal, state and local regulatory requirements.</p>				
HH2	<p>a. Prior to transfer, the City of Irvine shall receive from the DON, with the concurrence of the appropriate regulatory agencies, a statement that the "Action Required" IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been</p>	Requires submission of Record of Decision (ROD) or similar applicable	Prior to the conveyance of the former MCAS El Toro property; prior to the use of	Manager of Building and Safety; Director of Community Development; City

	<p>identified and implemented. The City of Irvine will adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.</p> <p>b. Prior to transfer, if the DON chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DON a statement of temporary restrictions on the use of the sites and the release of the sites for unrestricted use following implementation of adequate remediation of groundwater. The City of Irvine shall adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.</p>	federal/state documentation to verify information provided to the City of Irvine by the DON.	Locations of Concern on the former MCAS El Toro property.	Council.	
HH3	The Community Development Department, in coordination with the Orange County Fire Authority (OCFA), will be responsible for review of all development plans, which would include	Requires submission of development plans	Prior to the approval of development	Manager of Building and Safety ; Orange	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	evaluation of very high fire severity zones, special fire protection plans, and any requirements for fuel modification zones. Projects potentially impacted by wildland fire hazards will be subject to OCFA Guidelines for “Development Within and Exclusion from Very High Fire Severity Zones” and “Fuel Modification Plans and Maintenance.” Additionally, all demolition, renovation, and construction activities in the project area will be subject to review by OCFA to ensure adequate fire protection, water flow, emergency access, design features, etc., according to the standards of the Uniform Fire Code and the California Fire Code. Due to the implementation of these standard fire protection procedures, the proposed project is not anticipated to result in significant short- or long-term adverse impacts related to fire hazards.	by potential project applicants for review and approval.	plans.	County Fire Authority.	
HH4	Prior to issuance of occupancy permits of any existing structure at the former MCAS El Toro, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval.	Requires submission of development plans for existing structures for review and approval of required improvements.	Prior to the occupation of existing structures located on the former MCAS El Toro property.	Manager of Building and Safety; Orange County Fire Authority.	
HH5	Prior to the issuance of a grading permit, the applicant shall prepare and the Director of Community Development shall approve a protocol plan (including but not limited to worker training, health and safety precautions, additional testing requirements, and emergency notification procedures) in the event of unknown hazardous materials are discovered during grading, construction, and/or related development activities. Additionally, said protocol plan will be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities. The applicant and/or property owner that discovers contamination due to past military operations not previously identified by the DON shall be responsible for notifying the DON, appropriate regulatory agencies, and the Director of Community Development of the City of Irvine in a timely	Requires the development, submission, and approval of a protocol plan by the potential project applicant.	On-going (prior to the issuance of a grading permit within the project area; in the event of the discovery of unknown hazardous materials).	Director of Community Development or designee; the DON.

	manner. Additionally, said protocol plan shall be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities.				
HH6	The City of Irvine shall develop and maintain the location and status, as well as other pertinent information, of all monitoring wells located on the former MCAS El Toro in a geographic information systems database (GIS). The City will review all permit applications on the former air station for well locations that may be affected by a permit, and require applicants to maintain appropriate access. Access to wells will be limited to authorized personnel.	Requires the development and maintenance of a GIS database by the City of Irvine.	On-going (prior to the issuance of grading permits; during construction activities).	Department of Public Works.	
4.6 GEOLOGY AND SEISMICITY (Base Plan and Overlay Plan)					
GS1	Prior to issuance of a building permit, the City of Irvine shall require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest Building Codes adopted by the City of Irvine. Compliance with this measure shall be verified by the Community Development Department.	Requires potential project applicant to address seismic design provisions in geotechnical reports per adopted Building Codes.	Prior to the issuance of a building permit.	Director of Community Development.	
GS2	<p>Prior to issuance of a building permit, as per existing City policies, geotechnical studies shall be prepared at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.</p> <p>1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing, shall be conducted. The purpose of the subsurface evaluation is to:</p> <p>a. Further evaluate the subsurface conditions in the</p>	Requires potential project applicant to prepare geotechnical studies in support of specific development plans. Safety.	
GS4	Prior to issuance of a grading permit, detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specifically address erosion control and surface runoff for both construction and long-term operations on the site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx into the drainage system shall be implemented. Compliance with this measure shall be verified by the Community Development Department.	Requires potential project applicant to develop and submit geotechnical and hydrology reports in accordance with adopted local/state/federal regulations.	Prior to the issuance of a grading permit.	Director of Community Development.	
5.7 Hydrology/Water Quality (Base Plan and Overlay Plan)					
H/WQ1	<p>Prior to issuance of a grading permit, the applicant shall provide evidence that the development of the project area shall comply with City of Irvine adopted Grading and Water Quality Ordinances to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area . . . and residential construction sites that result in the disturbance of five acres or more . . . shall be required to develop and implement BMPs . . . to control erosion and siltation and contaminated runoff from the construction sites." Note: In March 2003 this provision will apply to residential construction sites that result in the disturbance of one acre or more.</p> <p>The City's standard conditions of approval indicate that a</p>	<p>Potential project applicant must show compliance with City of Irvine Grading and Water Quality Ordinances via approval of a NPDES permit, SWPPP, and WQMP.</p> <p>Notices of Intent (NOIs) for coverage of potential projects under the General Construction Activity Storm Water Runoff Permit must be submitted to the</p>	Prior to the issuance of a grading permit. NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>Storm Water Pollution Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.</p> <p>Additionally, prior to the issuance of a grading permit, project applicants must submit, and the Director of Community Development or designee must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff after the site is occupied. Ongoing operations after construction would be subject to the Countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural, and non-structural measures specified in the Countywide NPDES DAMP Appendix which details implementation of BMPs whenever they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, leasee, etc.), and shall reference the location(s) of structural BMPs.</p> <p>Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOIs) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the Director of Community Development for any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES Permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.</p> <p>The Mitigation Measures will be implemented in accordance</p>	State Water Resources Control Board.			

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.				
H/WQ2	Prior to issuance of a grading permit, evidence (e.g., in the form of a construction management plan) shall be provided that demonstrates that all stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality requirements identified in the Santa Ana Regional Water Quality Control Board Basin Plan, including Total Maximum Daily Load (TDML) Implementation Plan adopted for this watershed.	Submission of a construction management plan required by the potential project applicant.	Prior to the issuance of a grading permit.	Director of Community Development; City Engineer; State/Regional Water Quality Control Boards.	
H/WQ3	Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrology studies and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.	Requires the submission of a hydrology study and hydraulic analysis by the potential project applicant.	Prior to the approval of the first tentative tract or parcel map in the project area.	Director of Community Development; City Engineer.	
H/WQ4	Prior to issuance of a building permit, developers with property located in the newly delineated 100-year floodplain shall be required to construct such improvements as necessary to remove the property from the 100-year floodplain. Additionally, the developer shall prepare a Letter of Map Revision (LOMR) request to have the FIRMs revised to remove the development areas from the 100-year floodplain upon completion of the approved flood control facilities. The LOMR request shall be	Requires the development, review, and approval of a Letter of Map Revision; physical improvement of property located in	Prior to the issuance of a building permit.	Director of Community Development; City Engineer.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>filed upon completion of design of the flood control improvements to contain or redirect the 100-year flood flows away from the property.</p> <p>After the improvements are constructed, Record Drawings and a maintenance agreement with, or letter from, a public agency shall be submitted to FEMA to complete the LOMR process.</p>	100-year floodplain by project applicant.			
5.8 AGRICULTURAL RESOURCES (Base Plan and Overlay Plan)					
AG1	<p>In order to encourage agriculture as an interim land use pending development on the project site by warning future residents that they are buying or renting a house adjacent to existing agricultural operations, City Of Irvine Standard Discretionary Case Condition B.4 and City Of Irvine Standard Subdivision Condition 3.4 regarding disclosure statements shall be amended to include the following for subdivisions proposed adjacent to existing agricultural operations:</p> <p>Prior to issuance of building permits, the applicant shall submit, and the Director of Community Development shall have approved, a completed occupancy disclosure form for the project. The approved disclosure form, along with its attachments, shall be included as part of the rental/lease agreement and as part of the sales literature for the project. The disclosure statement shall include the following information:</p> <p>X Continuation of agricultural operations adjacent to the site and their potential effects (spraying of pesticides, noise, dust, odor, etc.) on future residents or tenants.</p>	Project applicant shall complete and receive approval for an occupancy disclosure form per the standards stated in Mitigation Measure AG1.	Prior to the issuance of a building permit.	Director of Community Development.	
AG2	Heritage and community service/educational farming operations shall be encouraged within utility easements and other lands. Heritage farming is defined as small-scale specialty farming operations that can be accommodated in an urban environment. An example would be the Edible Landscape project located adjacent to Harvard Avenue within the Edison right-of-way.	May require development of a cooperative agreement.	On-going (prior to and during development of the project area).	Director of Community Development.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
AG3	Future landowners and the City shall work cooperatively with farmers to minimize conflicts between agricultural operations and adjacent urban uses.	May require development of a cooperative agreement.	On-going (prior to and during development of the project area).	Director of Community Development.	
5.9 BIOLOGICAL RESOURCES (Base Plan and Overlay Plan)					
BIO1	Prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl shall be conducted. Prior to approval of a subdivision map for development within, or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owls, least Bell's vireo, or southwestern willow flycatcher in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement, or if impacts cannot be avoided, then mitigation shall be negotiated through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG).	Requires the development and submission of focused biological surveys for resources indicated in BIO1.	Prior to the approval of a subdivision map.	Director of Community Development; US Fish and Wildlife Service; California Department of Fish and Game.	
BIO2	Prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan subarea that contain the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a wetland mitigation plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). Wetlands impacted on-site shall be mitigated through on-site or off-site replacement, re-creation (i.e. within the proposed wildlife corridor), and/or revegetation as deemed acceptable by the appropriate jurisdictional agencies.	Requires the development and submission of wetland survey for potential wetland resources.	Prior to the approval of a subdivision map.	Director of Community Development; US Army Corps of Engineers; US Fish and Wildlife Service; California Department of Fish and Game.	
BIO3	The City shall continue to work with State and federal agencies during the implementation of the proposed project to implement the revegetation/restoration plan for the wildlife	May require development of a revegetation and/or	On-going (prior to and during development of	Director of Community Development; US	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	corridor. Measures such as sight and sound barriers, including artificial sound walls and natural diversions (e.g. hedges and tree lines) shall be incorporated into corridor design to ensure the viability of the corridor. The City shall implement the corridor consistent with the design criteria and viability analysis established in the EIR.	restoration plan for the identified wildlife corridor.	the project area).	Fish and Wildlife Service; California Department of Fish and Game.	
BIO4	Prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height (DBH) greater than six inches and any significant (as determined by a certified arborist selected by the City) plants on the project site, excluding those within the habitat preserve shall be prepared. This inventory shall be prepared by an arborist certified by the International Society of Arboriculture and shall include (but not be limited to) data for each tree such as species, variety, DBH, condition (excellent, good, fair, poor, dead), and any recommendations. All trees in this inventory shall be considered "Significant Trees" under the City of Irvine's Urban Forestry Ordinance (UFO) (Section 5-7-401 et al) and the UFO shall apply to all trees included in this inventory.	Requires the development and submission of a tree inventory per the regulations outlined in the City of Irvine Urban Forestry Ordinance.	Prior to the issuance of a grading permit.	Director of Community Development; International Society of Arboriculture.	
5.10 PALEONTOLOGICAL RESOURCES (Base Plan and Overlay Plan)					
P1	Prior to issuance of a grading permit for any portion of the project area, a qualified paleontologist shall be retained by the City or designee to carry out an appropriate paleontology investigation of the area proposed for grading. (A qualified paleontologist is defined as an individual with an M.S. or Ph.D. in paleontology or geology who is familiar with paleontological procedures and techniques.) The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant paleontological sites, and paleontological monitoring conditions have not been attached to the previous map approval. These standard conditions include retaining a qualified paleontologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process.	Submittal of resource recovery and disposition plans to the Community Development Department; qualified paleontologists' attendance at pre-grading conference(s) and field observation.	Prior to issuance of a grading permit and during site grading.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>When fossils are discovered, the paleontologist (or paleontological monitor) shall recover them. In most cases, this fossil salvage can be completed in a short period of time. However, some fossils specimens (such as a complete large mammal skeleton) may require an extended salvage period. In these instances the paleontologist (or paleontological monitor) shall be allowed to temporarily direct, divert or halt grading to allow recovery of fossil remains in a timely manner. Because of the potential for the recovery of small fossil remains, such as isolated mammal teeth, it may be necessary in certain instances to set up a screen-washing operation on-site.</p> <p>Fossil remains collected during the monitoring and salvage portion of the mitigation program shall be cleaned, repaired, sorted, and cataloged. Compliance with this measure shall be verified by the Community Development Department.</p>				
5.11 CULTURAL RESOURCES (Base Plan and Overlay Plan)					
CULT1	<p>Prior to subdivision for development, a detailed archaeological report(s) shall be prepared within PAs 51 and 30. This report(s) shall specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. Recommendations contained in the report shall be implemented. Compliance with this measure shall be verified by the Community Development Department.</p>	<p>Requires development and submission of an archaeological resources report for PAs 51 and 30 by project applicant.</p>	<p>Prior to the issuance of subdivision maps.</p>	<p>Director of Community Development or designee.</p>	
CULT2	<p>Monitoring of excavation and grading activities associated with future development in PAs 51 and 30 shall be conducted by a certified archaeologist in accordance with the report required in Mitigation Measure Cult1. If resources are encountered in the course of ground disturbance, the archaeological monitor shall be empowered to halt grading and to initiate an archaeological testing program. The testing shall include recordation of</p>	<p>Requires field inspection and monitoring by qualified archaeologist implementing recommendations</p>	<p>Field inspection and monitoring required during grading activities.</p>	<p>Director of Community Development or designee.</p>	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	artifacts, controlled removal of the materials, and an assessment of their importance under CEQA and the City's local guidelines. Compliance with this measure shall be verified by the Community Development Department.	outlined in the report noted above.			
CULT3	Prior to the issuance of grading permits and/or building permits for any future development in PAs 51 and 30, a detailed mitigation program shall be submitted by the applicant to the City of Irvine to address archaeological resources discovered during grading. Provisions of the program shall include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be a unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation shall be available. Work may continue on other parts of the construction site while archaeological resource mitigation takes place. The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant archaeological sites. These include retaining a qualified archaeologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process. Compliance with this measure shall be verified by the Community Development Department.	Requires the development and submission of an archaeological mitigation program by project applicant.	Prior to the issuance of grading permits and/or building permits in PAs 51 and 30.	Director of Community Development or designee.	
CULT4	<p>Prior to the issuance of any grading and/or building permits, a mitigation program shall be submitted by the developer to the City of Irvine to address the accidental discovery or recognition of any human remains. The program shall include the following:</p> <p>X There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:</p> <p>The county coroner must be contacted to determine that no investigation of the cause of death is required, and</p>	Requires the development and submission of an archaeological mitigation program by project applicant.	Prior to the issuance of grading permits and/or building permits.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>If the coroner determines the remains to be Native American:</p> <p>X The coroner shall contact the Native American Heritage Commission within 24 hours.</p> <p>X The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased Native American.</p> <p>X The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for means of treating or disposing of, with appropriated dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or</p> <p>X Where the following conditions occur, the landowner or his authorized representative shall reburial the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.</p> <ul style="list-style-type: none"> • The Native American Heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission. • The descendant identified fails to make a recommendation; or • The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage Commission fails to provide measures acceptable to the landowner. <p>Compliance with this measure shall be verified by the Community Development Department.</p>				

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
5.12 AESTHETICS (Base Plan and Overlay Plan)					
A1*	Prior to issuance of building permits, lighting plans and signage plans for new development shall be reviewed by the Community Development Department to ensure that minimal light intrusion and spillover into adjacent residential areas occurs.	Requires review of site specific plans for light intrusion and spillover by City of Irvine.	Prior to the issuance of building permits, lighting plans, and/or signing plans.	Director of Community Development or designee.	
A2*	Prior to the issuance of building permits, and during the master plan review process for future development in the project area, the Director of Community Development shall ensure that mirrored and highly reflective surfaces are discouraged or, where proposed, shall be accompanied by a design-level glare impact analysis that demonstrates no adverse visual impairment to motorists or other visual nuisance occurs.	Discourages use of mirrored or reflective surfaces in proposed development; designs to be reviewed by the City of Irvine.	On-going (prior to the issuance of building permits; during master plan review).	Director of Community Development or designee.	
5.13 POPULATION AND HOUSING (Base Plan and Overlay Plan)					
	No mitigation measures are available.				
5.14 PUBLIC SERVICES AND FACILITIES (Base Plan and Overlay Plan)					
	Mitigation Measures identified in other sections of this EIR (Section 5.1 – 5.13) address the impacts associated with the construction and operation of new public services and facilities (including law enforcement, fire and emergency medical services, parks and recreation, and school services). Refer to the individual sections mentioned above for a discussion on specific mitigation monitoring and reporting programs.				
5.15 UTILITIES (Base Plan and Overlay Plan)					
	Mitigation Measures identified in other sections of this EIR (Section 5.1 – 5.13) address the impacts associated with the construction and operation of new utilities (including potable water, recycled water, and sewer). Refer to the individual sections mentioned above for a discussion on specific mitigation monitoring and reporting programs. Mitigation Measures pertaining to solid waste are described below.				
SW1	It is anticipated that much of the solid waste resulting from the demolition, dismantling, or other deconstruction of the aged structures and property, including but not limited to buildings and runways, at El Toro MCAS, is contaminated with lead based paints, asbestos, or other materials that may render it unsuitable for recycling or reuse. At the sole cost and expense	Requires the development and submission of a technical evaluation by the project applicant to	Prior to the issuance of grading permits.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	<p>of the project applicant, in order to evaluate this condition and determine the feasibility of recycling of solid waste material from the MCAS El Toro site by ordinary means, a technical evaluation by a qualified environmental consultant must be conducted. The technical evaluation shall include sufficient sample testing of all types of solid waste materials to be generated by the project to analyze its composition. A copy of the full technical evaluation and its findings must be submitted to the City of Irvine Community Development Department. The City of Irvine must confirm the adequacy of the technical evaluation prior to authorizing the demolition, dismantling, or deconstruction project to proceed.</p> <p>If it is determined by the technical evaluation that the material is contaminated and prohibited from being recycled by ordinary means, a further evaluation must be conducted to identify and evaluate other feasible methods approved by state law to divert the material from landfills. This may include the delivery of the waste material to other appropriate non-disposal or transformation facilities, such as "waste-to-energy" (WTE) plants.</p>	determine the composition of solid waste materials generated during the development of the project area.			
SW2	For that solid waste which is determined to be inappropriate for recycling (as that term is defined by California Public Resources Code Section 40180), the project applicant must submit a written plan to the City and implement such plan to ensure that 75 percent of the material, or the maximum amount feasible as determined by the technical evaluation, is diverted from the landfill through other methods that comply with state statutes and regulations.	Requires the project applicant to submit written plans to the City of Irvine to ensure recycling maximum feasible levels of solid waste material is recycled.	Prior to the issuance of grading permits.	Director of Community Development or designee.	
SW3	For that solid waste which the technical study deems to be suitable for recycling, the project applicant must submit a written plan to the City and implement such plan to ensure that solid waste material generated by the demolition, dismantling, or deconstruction project, land use operations and maintenance is collected by a City authorized solid waste hauler or recycling agent, and that a minimum of 75% of the	Requires the project applicant to submit written plans to the City of Irvine to ensure recycling maximum feasible levels of solid waste	Prior to the issuance of grading permits.	Director of Community Development or designee.	

NO.	MITIGATION MEASURE	METHOD OF VERIFICATION	TIMING OF VERIFICATION	RESPONSIBLE PERSON	DATE OF COMPLETION/ INITIALS
	solid waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180. ("Recycling" does not include transformation, as defined in Public Resources Code Section 40201.)	material is recycled.			
SW4	<p>To ensure ongoing compliance with these mitigation measures, the project applicant will be required to submit solid waste tonnage reports to the City of Irvine on City approved forms, accompanied by "weight ticket" receipts from state-certified disposal, nondisposal, or transformation facilities, on a quarterly basis to demonstrate that solid waste diversion has occurred in accordance with these required mitigation measures and in a manner that is consistent with, and not detrimental to, the efforts of the City of Irvine to comply with AB939.</p> <p>To assure compliance with applicable statutes related to the disposal of solid waste, it is necessary for the City to require appropriate and effective mitigation measures to limit the disposal and ensure significant recycling of solid waste on-site.</p>	Requires the project applicant to submit quarterly solid waste tonnage reports to the City of Irvine in order to demonstrate solid waste diversion has occurred.	Prior to the issuance of grading permits.	Director of Community Development or designee.	
SW5	For green waste, the project applicant must submit a written plan to the City and implement such plan to ensure that the green waste material generated by landscape maintenance operations is collected by a City authorized waste hauler or recycling agent, that the maximum feasible amount of that collected green waste is recycled, and that a minimum of 50 percent of the green waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180.	Requires the project applicant to submit a written plan to the City of Irvine to ensure recycling of the maximum feasible amount of green waste material (minimum of 50 percent) by qualified agent.	Prior to the issuance of grading permits.	Director of Community Development or designee.

ORANGE COUNTY GREAT PARK

TRIP GENERATION AND PARKING ANALYSIS

INTRODUCTION

The Great Park is being created as a multi-destination facility that will include a wide variety of educational and recreational opportunities, including sports fields, museums, gardens, wildlife habitat and many other uses. The Great Park will be a total visitor experience with many attractions. As such, visitors will park once and attend multiple events or activities. A high frequency park circulator shuttle system will be available to take visitors from the parking areas to their destination, from one destination to another, or to just provide visitors with a relaxed tour of the park allowing them to get on and off the shuttle wherever their interests may take them. The shuttle system will also provide a link between transit services.

This document is a preliminary summary of trip and parking generation estimated from the current Great Park conceptual design and will be refined and updated as the design moves to a more detailed plan. This document includes summary trip and parking generation for both weekday and weekend days, as well as an estimation of parking demand by time of day. The tables and assumptions used therein are described in the following sections.

For the purposes of the trip and parking generation calculations, the Great Park was divided into three general areas or uses:

- **Sports Area:** includes the sports fields, action sports park, racquet courts, field house and the military museum.
- **Cultural Terrace Area:** includes the remaining museums, library, botanical gardens and conservatory, cultural terrace/lake area, and the time line.
- **Trabuco Entry/Other Park Uses:** includes the great lawn, Bosque, pocket parks, upper canyon, and agua chinon.

The calculations in this document make assumptions as to the operating hours of the various uses found in the Great Park. Those assumptions are shown in the Assumed Operating Hours table below. The "Core Operating Hours" columns indicate the anticipated operating hours or, for uses without traditional operating hours, the anticipated core operating time period in which most of the use's activity will occur in. The "Peak Period" columns indicate the time period in which the assumed peak demand at that use occurs for both the weekday and weekend.

Assumed Operating Hours

Activities	Weekday		Weekend	
	Core Operating Hours*	Peak Period**	Core Operating Hours*	Peak Period**
Field Sports/Baseball/Softball	3:00 pm to 7:00 pm	5:00 pm to 7:00 pm	9:00 am to 10:00 pm	9:00 am to 7:00 pm
Action Sports Park	3:00 pm to 8:00 pm	5:00 pm to 8:00 pm	9:00 am to 10:00 pm	9:00 am to 7:00 pm
Open Raquet Courts	11:00 am to 8:00 pm	6:00 pm to 8:00 pm	9:00 am to 10:00 pm	10:00 am to 5:00 pm
Field House	5:00 pm to 9:00 pm	6:00 pm to 8:00 pm	9:00 am to 8:00 pm	10:00 am to 5:00 pm
Balloon Ride	9:00 am to 6:00 pm	10:00 am to 4:00 pm	9:00 am to 6:00 pm	10:00 am to 4:00 pm
Museums	9:00 am to 6:00 pm	1:00 pm to 4:00 pm	9:00 am to 6:00 pm	10:00 am to 4:00 pm
Library	9:00 am to 6:00 pm	1:00 pm to 4:00 pm	9:00 am to 5:00 pm	10:00 am to 4:00 pm
Botanical Garden and Conservatory	9:00 am to 6:00 pm	1:00 pm to 4:00 pm	9:00 am to 6:00 pm	10:00 am to 4:00 pm
Cultural Terrace/Lake/Time Line	9:00 am to 8:00 pm	10:00 am to 4:00 pm	9:00 am to 8:00 pm	10:00 am to 4:00 pm
Great Lawn/Bosque	9:00 am to 8:00 pm	10:00 am to 4:00 pm	9:00 am to 8:00 pm	10:00 am to 4:00 pm
Upper Canyon/Agua Chinon	9:00 am to 8:00 pm	10:00 am to 4:00 pm	9:00 am to 8:00 pm	10:00 am to 4:00 pm
Pocket Parks	9:00 am to 8:00 pm	10:00 am to 4:00 pm	9:00 am to 8:00 pm	10:00 am to 4:00 pm

* While there is assumed to be some activity and parking demand outside of these hours, these are the general core operating hours assumed for the use.

** The assumed duration/time of the peak parking demand.

There are very few parks in operation that are of the magnitude proposed for the Great Park. The most comparable facility is Balboa Park in San Diego. Balboa Park encompasses almost 1,200 acres and includes the San Diego Zoo, 15 major museums, more than eight gardens, performing arts theatres, as well as traditional park picnic, sports, and recreational opportunities. Since Balboa Park is the most comparable facility to the Great Park, data from that park is used where appropriate, especially from a visitor survey performed as part of the *Balboa Park Land Use, Circulation and Parking Study* issued in February, 2004. Data from that survey is only used for respondents or visitors that did not visit the San Diego Zoo, since that use in Balboa Park is such a large attractor in and of itself and the Great Park does not include such a use. When data from Balboa Park is used in the calculations, it is identified and described below.

This analysis found that 2,639 parking spaces would be necessary to accommodate the park visitors on a weekday and 3,623 spaces would be required on a weekend. The conceptual Great Park design includes regular day-to-day parking for 5,505 vehicles. This supply of parking will be more than sufficient to accommodate the parking demand for the entire park at any given time on a typical weekday or weekend.

This analysis also found that the daily trip generation of the park would be 12,792 trips on a typical weekday and 18,387 trips on a typical weekend. Both of these are below the 19,083 trips calculated in the EIR.

Tables 1 and 2 include detailed note sections at the bottom of the tables that identify and describe the assumptions used in the calculations. The notes sections are divided into four sections, to correspond with different sets of columns used in the tables. Those note sections are:

- **Size Source Notes:** labeled "a" through "h", these notes identify the source of the land use size information.
- **Trip Generation Notes:** labeled "i" through "ll", these notes identify the source and/or assumptions used in calculating the daily trip generation rates for the land uses.
- **Minimum Parking Requirements Notes:** labeled "m" through "ix", these notes identify the appropriate use used to calculate the minimum parking requirements per Section 4-3-4 of the Irvine Zoning Ordinance. In cases where no corresponding use is available in the Zoning Ordinance, the note indicates the source of the parking generation rate.

- **Peak Parking Demand Analysis Notes:** labeled “A” through “K”, these notes identify the source and/or assumptions used in calculating the peak parking demand for the land uses.

TABLE 1: GREAT PARK WEEKDAY TRIP GENERATION AND PARKING ANALYSIS

Table 1 provides an estimate of typical weekday daily auto trip generation and parking demand for each of the uses within the Great Park. The uses are grouped by the general areas of the park, including the Sports area, Cultural Terrace area and Trabuco Entry/Other Park Uses area. The table provides information on trip generation, minimum parking requirements and expected peak parking demand. Detailed notes are included below the table that provide sources for the size, trip generation and parking generation values.

Activity/Use Information

The first set of columns in the table describe and provide a size for each use. The size is based on the preliminary design drawing plan. Several ancillary or passive uses (such as Concessions and Ancillary Buildings/Uses) are included in the tables as separate line items. Those uses are identified as such in the footnotes. Ancillary uses are those that support activities within the Great Park and do not generate trips, such as maintenance facilities, bike storage, restrooms, concessions, and ancillary retail uses. These uses are included in the overall traffic generation for the primary use for which they are associated with. Trips from the maintenance area south of Marine Way and other maintenance areas are accounted for in the Great Park trip generation primary uses.

Trip Generation

The next several columns provide daily auto trip generation data, including a trip generation rate, the number of activities or sites that are visited, an estimate for alternative mode usage, and the resulting daily trip generation for each use.

Daily Auto Trip Generation Rate/Trip Generation Source

The Daily Auto Trip Generation Rate column data is based primarily on Institute of Transportation Engineers (ITE) trip generation rates, where available. The notes section of the table provides more detailed information and/or specific uses that were used where the actual Great Park use was not available. Uses with notable variations from ITE rates are:

- **Sports Fields.** Upon discussions with and research on sports parks that specialize in field sports and tournament play, the ITE trip generation rate of 71.33 trips per day was considered to be low. With 35 vehicles per game estimated (15 players on two teams plus officials, coaches, etc) and two trips per vehicle (one arriving and one departing), the ITE rate would only allow for one game per day per field. For weekday events, it was determined that two games per day (in the late afternoon/early evening) would be likely, resulting in a trip generation rate of 140 trips per field per day.
- **Balloon Ride.** There is no ITE trip rate available for this unique attraction/ride. The trip generation rate is based on the *Orange County Great Park Balloon Ride Traffic and Parking Study* dated February 15, 2007. This study estimated 120 visitors per hour for the ride and an auto occupancy of 3 persons per vehicle, resulting in an average of 40 visitors per hour. If the ride

operates at 10 hours per day, the resulting number of trips would be 800 trips per day, assuming the worst case scenario of constant and maximum use throughout the day.

- **Museums.** There is no ITE trip rate available for museums, so the daily trip generation rate for this use was based on detailed calculations utilizing museum attendance and visitor survey data from Balboa Park. Those calculations are shown in Table 6 and described in detail in that section in this document.
- **Botanical Gardens.** There is no ITE trip rate available for botanical gardens, so the trip generation rate for this use was based on parking demand at similar facilities (Descanso Botanical Gardens in the Los Angeles area and the Santa Barbara Botanical Gardens) combined with an average visitor stay of 1.2 hours. The 1.2 hour visitor stay is based on the visitor survey found in *Balboa Park Land Use, Circulation and Parking Study*. More detailed data on the Botanical Garden calculations can be found in Table 7 and the accompanying section in this document.
- **Concessions and Ancillary Buildings/Uses.** These uses support other uses within the Great Park and are not primary generators of traffic. Since "Museums" is the primary source for which these uses support, the same trip generation rates as museums was used for these ancillary uses. The concessions area also serves the Sports area, and the trip generation rate for the concessions use is also consistent with the average trip generation rate per unit area for the Sports area as a whole.

Daily Auto Trip Generation

This column is the application of the daily trip generation rate to the size of the use to calculate the number of daily trips generated before alternative mode use and multiple destination visits are considered.

Number of Sites Visited

The number of sites visited column is used to account for the fact that visitors will likely park once for their entire visit to the Great Park while visiting multiple uses or activities. According to the Balboa Park visitor survey performed as part of the *Balboa Park Land Use, Circulation and Parking Study*, non-zoo visitors visited between 2.6 and 2.9 different sites or attractions during their visit to the park. A conservative estimate of 2.5 sites or attractions visited was made for the Great Park for the non-sports uses. It is assumed that sports visitors primarily come to one event (their particular game or sporting event).

Effective Auto Trip Generation

This column factors the number of daily trips generated by a use by the number of sites visited. This accounts for the fact that visitors will arrive at the park and depart only once, even though they may visit multiple sites while at the park.

Percent Alternative modes

The percent alternative mode column represents an estimate made for transit and other alternative mode use (such as walking or bicycling) for each land use. Based on the Balboa Park survey data, approximately 20% of visitors arrived by a mode other than an automobile, including transit, walking, bicycling, tour bus, being dropped off or other modes. Approximately 12% of visitors arrived by transit, walked, bicycled, or were dropped off. Given this data, the regional draw and close proximity to the Irvine Station and a direct connection with the Station through the Great Park's shuttle system, 10% was

assumed as a conservative estimate for alternative mode use for all non-sports uses. It is assumed that participants of the sports uses will all arrive by personal vehicle.

Net Auto Trips

The net auto trips column identifies the resulting number of daily auto trips that can be expected for each use. This value takes into account alternative mode use and multiple destination or activity visits per visit to the Great Park.

Minimum Parking Requirements per Section 4-3-4 of Irvine Zoning Ordinance

The minimum parking requirements set of columns present the rate closest to actual use per the City of Irvine minimum parking requirements for comparison. Minimum parking requirements for the various uses were used from the City of Irvine Zoning Ordinance, where available. In some cases, minimum parking requirements were not available from the City Zoning Ordinance. In those cases, a similar use found in the Zoning Ordinance is used, or an alternative source is used (as in the case of the museums). The source of the minimum parking requirement for each use is identified at the bottom of the table in the notes section.

There are some differences in the amount of parking required, some greater and some lesser, between the Irvine requirements and the peak demand calculated through this effort. This is because the type of trip and parking activity for the Great Park is unique and cannot be captured easily in a typical city parking code. As an example, the City of Irvine Zoning Ordinance minimum requirement of 15 parking spaces per sports field was deemed too low when considering 15 players per team, plus coaches, referees, etc. Therefore, 35 peak parking spaces per sports field was assumed.

Peak Parking Demand Analysis

The final set of columns shows the peak parking demand rate, source and resulting peak demand. The parking calculations in this and the remaining tables are based on peak parking and time of day parking distributions for each individual use. However, a visitor will only park once and visit multiple uses or activities in the park using the shuttle system. Even though the vehicle does not move, parking demand is calculated for each of the individual uses separately. The total parking demand for the Great Park will still be the sum of the demand of the individual uses at any given time; the parking demand is not dependent on the number of sites visited by each visitor.

Peak Parking Rate/Parking Generation Source

These columns show the peak parking rate for each use and the source of that information. Parking rates for the sports uses are primarily derived from work performed by Griffin Structures, Inc. on a program needs assessment and further refinement of that data. Griffin Structures, Inc. estimated a total of 2,100 spaces required for the Sports area (not including the Military Museum and Balloon Ride), and that approximate total is maintained.

However, some variations from the Griffin study are made for individual sports uses based on more appropriate data. For example, based on discussions with and research on sports parks that specialize in field sports and tournament play, it was determined that attendance for each game arrives in approximately 35 vehicles (15 players on two teams plus officials, coaches, etc). Parking calculations for the museum uses are based on data from Balboa Park and are shown in Table 6 and described in detail in that section in this document.

Peak Parking Demand

The Peak Parking Demand column is calculated by applying the peak parking rate to the size of the use regardless of the time of day that the peak occurs. This is calculated before accounting for any alternative mode use.

Percent Alternative Modes

The percent alternative mode column represents an estimate made for transit and other alternative mode use (such as walking or bicycling) for each land use. Based on the Balboa Park survey data, approximately 20% of visitors arrived by a mode other than an automobile, including transit, walking, bicycling, tour bus, being dropped off or other modes. Approximately 12% of visitors arrived by transit, walked, bicycled, or were dropped off. Given this data, the regional draw and close proximity to the Irvine Station and a direct connection with the Station through the Great Park's shuttle system, 10% was assumed as a conservative estimate for alternative mode use for all non-sports uses. It is assumed that participants of the sports uses will all arrive by personal vehicle.

Net Peak Parking

The net peak parking column identifies the peak parking demand for each individual use, taking into account expected alternative mode use.

Net Peak Parking for Area

This column shows the parking demand for each individual use at the time when each of the general areas of the park is at its peak. For each area of the park (Sports Area, Cultural Terrace Area, and Trabuco Entry/Other Park Uses), the time at which the peak occurs is shown at the bottom of each area. The total peak parking by area is the sum of the parking demand of each of the uses at the time when the peak for that entire area occurs. The peak time will differ between areas. The data in this column is derived from information in Table 3, which includes more detailed information for weekday peak parking by time of day.

Net Peak Parking for Great Park

This column shows the parking demand for individual uses and subtotals for each area when the parking peak for the entire park occurs. The time period listed in this column is when total parking demand for the entire park is at its highest.

Approximate Acres of Parking

This column estimates the land area of parking that would be required to meet the Net Peak Parking demand for each use. This assumes 350 square feet of land area for each parking space, or approximately 125 parking spaces per acre.

TABLE 2: GREAT PARK WEEKEND TRIP GENERATION AND PARKING ANALYSIS

Table 2 provides the same information as Table 1, but instead of showing it for the typical weekday, Table 2 shows the trip generation and parking demand for a typical weekend. For the most part, all of the trip generation and parking generation rates and assumptions are the same as for the weekday data shown

in Table 1. However, the time of day distribution is different and results in different peak parking requirements by area and for the park as a whole.

Trip Generation

Where ITE publishes a trip generation rate for Saturday or Sunday, the higher of those two rates was used in calculating the weekend number of trips. Sports fields and the Botanic Garden also used different trip rates for the weekend. It is expected that more sports field activity will take place on the weekend than the weekday, resulting in a higher number of trips. A daily trip generation rate of 210 vehicles per field per day was used to reflect this increased activity. The Botanic Garden trip generation also varies for the weekend, and those calculations are explained in more detail in Table 7 and the accompanying section of this document.

Minimum Parking Requirements per Section 4-3-4 of Irvine Zoning Ordinance

The values in these columns are the same as those found in the weekday data (Table 1).

Peak Parking Demand Analysis per

The parking generation rates for the various uses are the same for the weekend as for the weekday (Table 1). The parking demand by time of day distribution is different for the weekend, so the values and times in the Net Peak Parking by Area and Net Peak Parking for Great Park columns will differ between the weekday and weekend. Details of the weekend peak parking by time of day for each use can be found in Table 4.

TABLE 3: GREAT PARK WEEKDAY TRIP GENERATION AND PARKING ANALYSIS BY TIME OF DAY

Table 3 provides detailed time of day parking distribution for the typical weekday. This table provides more detailed data in support of the peak parking by time of day information found in Table 1. This table also includes a chart that graphically shows the estimated parking demand by time of day.

Parking Generation

The Use and Parking Generation areas of the table present summary information of the parking calculations. The data shown in these columns correlates to the parking generation information found in Table 1.

Peak Parking Rate/Peak Parking Demand/Percent Alternative Modes/Net Peak Parking

These columns are carried over from Table 1 and show the peak parking rate for each use as well as alternative mode use assumptions and net peak parking for each use.

Net Peak Parking for Area

This column shows the parking demand for each individual use at the time when each of the general areas of the park is at its peak. For each area of the park (Sports Area, Cultural Terrace Area, and Trabuco Entry/Other Park Uses), the time at which the peak for that area occurs is shown at the bottom of each area.

The total peak parking by area is the sum of the parking demand of each of the uses at the time when the peak for the whole area occurs. The peak time will differ between areas. This column is based on the time of day distribution found in the Weekday Parking Generation by Time of Day columns to the right. The time period(s) at which the peak parking demand occurs for each area is shown in bold. The Net Peak Parking for Area data is also shown in Table 1 for summary purposes.

Net Peak Parking for Great Park

This column shows the parking demand for individual uses and subtotals for each area when the parking peak for the entire park occurs. The time period listed in this column is when total parking demand for the entire park is at its highest. This column is based on the time of day distribution found in the Weekday Parking Generation by Time of Day columns to the right. The time period listed for each general area correlates to the peak parking demand experienced at the Park, and is highlighted in the Weekday Parking Generation by Time of Day columns to the right. The Net Peak Parking for Great Park data is also shown in Table 1 for summary purposes.

Approximate Acres of Parking

This column estimates the land area of parking that would be required to meet the Net Peak Parking demand for each use. This assumes 350 square feet of land area for each parking space, or approximately 125 parking spaces per acre.

Weekday Parking Generation by Time of Day

This area of the table includes columns for each hour of the day during which park activities are expected to take place. Each column represents an estimate of parking demand for each use for that particular hour of the day. The sports area assumes fairly low activity through much of the day which rises in the after school late afternoon hours into early evening hours. For other park uses, an increase of activity is expected throughout the morning leading to a peak in the early to mid afternoon. The highlighted column corresponds to the peak parking demand expected for the park as a whole and the bold columns correspond to the peak parking demand for individual areas.

Weekend Parking Demand Chart

The Weekend Parking Demand chart at the bottom of the page shows the parking demand expected for each general area for each hour of the day in graphic form. Dashed lines are shown to illustrate the available number of day-to-day parking spaces within the Great Park.

TABLE 4: GREAT PARK WEEKEND TRIP GENERATION AND PARKING ANALYSIS

Table 4 provides the same information as Table 3, but instead of showing it for the typical weekday, Table 4 shows the parking demand by time of day for a typical weekend day. This table provides more detailed data in support of the peak parking by time of day information found in Table 2. This table also includes a chart that graphically shows the estimated parking demand by time of day.

Parking Generation

The Use and Parking Generation areas of the table present summary information of the parking calculations. The data shown in these columns correlates to the parking generation information found in Table 2.

Peak Parking Rate/Peak Parking Demand/Percent Alternative Modes/Net Peak Parking

These columns are carried over from Table 2 and show the peak parking rate for each use as well as alternative mode use assumptions and net peak parking for each use.

Net Peak Parking for Area

This column shows the parking demand for each individual use at the time when each of the general areas of the park is at its peak. For each area of the park (Sports Area, Cultural Terrace Area, and Trabuco Entry/Other Park Uses), the time at which the peak occurs is shown at the bottom of each area. The total peak parking by area is the sum of the parking demand of each of the uses at the time when the peak for the whole area occurs. The peak time will differ between areas. This column is based on the time of day distribution found in the Weekend Parking Generation by Time of Day columns to the right. The time period listed for each general area correlates to the peak parking demand subtotal for that area found in the Weekend Parking Generation by Time of Day columns. The Net Peak Parking for Area data is also shown in Table 2 for summary purposes.

Net Peak Parking for Great Park

This column shows the parking demand for individual uses and subtotals for each area when the parking peak for the entire park occurs. The time period listed in this column is when total parking demand for the entire park is at its highest. This column is based on the time of day distribution found in the Weekend Parking Generation by Time of Day columns to the right. The time period listed for each general area correlates to the peak parking demand experienced at the Park. The Net Peak Parking for Great Park data is also shown in Table 2 for summary purposes.

Approximate Acres of Parking

This column estimates the land area of parking that would be required to meet the Net Peak Parking demand for each use. This assumes 350 square feet of land area for each parking space, or approximately 125 parking spaces per acre.

Weekend Parking Generation by Time of Day

This area of the table includes columns for each hour of the day during which park activities are expected to take place. Each column represents an estimate of parking demand for each use for that particular hour of the day. For all of the areas a fairly constant activity level is assumed throughout the day and then tailing off in the evening. The highlighted columns corresponds to the peak parking demand expected for the park as a whole.

Weekend Parking Demand Chart

The Weekend Parking Demand chart at the bottom of the page shows the parking demand expected for each general area for each hour of the day in graphic form. Dashed lines are shown to illustrate the

available number of day-to-day parking spaces within the Great Park, as well as the total number of spaces available.

TABLE 5: GREAT PARK EIR TRIP GENERATION

This table provides the trip generation data included in the Great Park Environmental Impact Report (EIR) for comparison purposes. This table identifies the allowable trip budget for the Great Park. The allowable daily trip budget for the Great Park is 19,083 trips. It is estimated that the Great Park will generate approximately 12,792 daily trips on a typical weekday and approximately 18,387 daily trips on a typical weekend day.

TABLE 6: MUSEUM TRIP AND PARKING CALCULATIONS

This table is provided as further information and more detailed calculations as to how the trip and parking generation rates for the museum uses were derived. The table is based on data collected from Balboa Park in San Diego. Detailed attendance and building size data was collected for four museums in Balboa Park in San Diego including the Aerospace Museum, Museum of Art, Natural History Museum, and the Reuben H. Fleet Science Center. The Total column combines the data for all four museums to arrive at either a total or weighted average, depending on the line of data.

Attendance/Building Size

Average daily attendance for the peak month of each museum is shown in the first line. Daily attendance figures were available for the San Diego Natural History Museum and based on several years worth of data for that museum, the peak day of visitor attendance was found to be 50% greater than the average daily attendance of the peak month. This factor was then applied to each of the four museums' peak month average daily attendance to arrive at a typical peak day attendance figure for each museum. This represents a reasonable worst case scenario for parking demand. The building size is also shown for each of the museums. The Aerospace Museum is a ring shaped building with the center atrium area open to the outside which contains additional aircraft displays. For the purposes of these calculations, the center outdoor area is included in the building size value to more accurately reflect the actual display space of the museum.

Trip Generation

Trip generation was calculated for the museums based on attendance data, data from the Balboa Park visitor survey, and general assumptions.

Visitor Trip Generation

To calculate the number of daily vehicle trips made by visitors, an average vehicle occupancy rate was applied to the attendance data. The 3.0 persons per vehicle value used for the Great Park is based on the Balboa Park visitor survey which found that non-zoo visitors had an average vehicle occupancy of between 2.92 and 3.06 persons per vehicle. By dividing the typical peak attendance value from above by the average vehicle occupancy, the number of vehicles that those visitors arrived in was estimated. Multiplying that number by two equates to the number of daily vehicle trips represented by the visitors. The Daily Trips per 1000 square feet (visitors) then calculates a trip generation rate for the visitors based on building size.

Employee Trip Generation

This section seeks to estimate the number of daily vehicle trips for employees of the museums. The number of employees is calculated by multiplying the building size in thousands of square feet from the top section by an average employment intensity of 2.0 employees per thousand square feet. This is a typical value on the lower end of the commercial/office employment intensity spectrum and is a conservative estimate for estimating the number of employees of a museum use. A vehicle occupancy rate of 1.2 persons per vehicle for all employees is assumed to account for carpooling. The number of employees is then divided by this occupancy rate to arrive at the number of vehicles represented by those employees. Daily trips per 1,000 square feet (employees) then shows a daily trip generation rate based on building size.

Total Trips per 1000 Square Feet

This is calculated by adding the visitor and employee trip generation rates together to arrive at a daily trip generation rate for the museums.

Parking Generation

Building on the trip generation calculations, peak parking demand was also estimated for the museums.

Visitors

The number of vehicles represented by museum visitors is carried over from the above visitor trip generation calculations based on typical peak attendance of the divided by the average visitor vehicle occupancy. The turnover factor is used to estimate the number of times, on average, that each parking space turns over in the course of a day. It is the result of the effective full attendance hours divided by the average time spent at each activity. The average time spent at each activity is based on the results of the Balboa Park visitor survey which found that, on average, the non-zoo visitor spent about 3.2 hours visiting 2.75 activities, or about 1.2 hours per activity. The effective full attendance hours represents the time, on average, that each parking space will be fully occupied per day. It is based on the expected time of day parking distribution and estimated operating hours of the museum. It is assumed that the museum parking is fully occupied for five hours and 50% occupied for four hours (as it would be if it were to ramp up to full capacity in two hours, be at full capacity for five hours and ramp down in two hours), it would have an effective full attendance hours value of 7.0. So, if on average, each parking space is fully occupied for 7.0 hours and each vehicle spends 1.2 hours in a space, then each space would turn over 5.8 times. The peak parking demand is estimated by dividing the estimated daily number of vehicles by the turnover factor, which can then be converted to a visitor peak parking rate by dividing by the building size.

Employees

The employee parking generation is calculated in a similar manner as the visitor parking generation calculations. The number of vehicles is carried over from the employee vehicle calculations from above based on employees per 1000 square feet of building size and the estimated vehicle occupancy. The parking space turnover factor is assumed to be one, as it is assumed that the employees will arrive in the morning, stay all day and then leave at the end of the day. Peak parking demand is calculated by dividing the number of vehicles by the turnover factor, which can then be converted to an employee peak parking rate by dividing by the building size.

TABLE 7: BOTANIC GARDEN TRIP AND PARKING RATE CALCULATIONS

This table is provided as further information and more detailed calculations as to how the trip and parking generation rates for the botanical garden use was derived. The parking generation calculations are based on the parking supply available at two comparable botanic gardens: Descanso Botanical Gardens in La Canada Flintridge, CA and Santa Barbara Botanical Gardens in Santa Barbara, CA. The trip generation rate calculations are based on the parking generation by time of day for the Great Park Botanical Gardens and are estimates prior to considering alternative mode use and number of sites visited.

Parking Generation Calculations

The parking generation for the Great Park Botanical Garden is based on the parking supply available at two comparable facilities: Descanso Botanical Gardens and Santa Barbara Botanical Gardens. The available parking supply at these two gardens was estimated based on the number of acres of available parking. A value of one space per 350 square feet (or approximately 125 spaces per acre) was assumed to convert from acres to spaces. The parking generation rates were then calculated based on the estimated number of spaces and the total size of the gardens. A weighted average peak parking generation rate was also calculated for the gardens. This weighted average rate of 4.0 spaces per acre was used to calculate the parking demand at the Great Park Botanical Garden.

Great Park Botanic Garden Estimated Peak Parking

The 4.0 spaces per acre value calculated above was applied to the 59.0 acre size of the Great Park Botanic Garden to arrive at 236 parking spaces necessary for the Great Park Botanic Garden. This value is before any adjustments to account for alternative mode use or visits to multiple sites or uses are made.

Great Park Botanic Garden Estimated Parking by Time of Day

This section utilizes the weekday and weekend time of day parking demand calculations found in Tables 3 and 4 to estimate the number of trips by time of day and the total daily trips that can be expected from the Great Park Botanic Garden. This section is based on parking generation before making adjustments for expected alternative mode use. Since the time of day distributions found in Tables 3 (weekday) and 4 (weekend) show the time of day distributions after adjusting for alternative mode use, those distributions are factored up for use in this table.

To estimate the hourly entering and exiting vehicles, an average length of stay of 1.2 hours was assumed. This average time is based on the results of the Balboa Park visitor survey which found that, on average, the non-zoo visitor spent about 3.2 hours visiting 2.75 activities, or about 1.2 hours per activity. The number of exiting vehicles was calculated using this average stay of 1.2 hours and the number of entering vehicles was calculated based on the estimated parking demand and the number of exiting vehicles.

The total trips for the weekday and weekend were calculated by summing the estimated entering and exiting trips throughout the day. A trip generation rate based on the anticipated size of the Great Park Botanic Gardens is calculated by dividing the total number of trips for both weekday and weekend by the size of the Great Park Botanic Garden.

Table 4
Great Park Weekend Trip Generation and Parking Analysis by Time of Day

Use	Size/Units	Peak Parking Demand	Percent Alternative Modes	Parking Generation	Net Peak Parking by Area	Net Peak Parking for Great Park	Approx Acres of Parking***
Sports Area							
Field Sports (Soccer)	12 each	35,000	40%	4,200	4,200	4,200	3.4

January 15, 2007

* Parking space turnover is calculated by dividing the Effective Full Attendance Hours by the average time spent at each activity. For example, if the museum is open for nine hours and the parking lot is fully occupied the whole time, the Effective Full Attendance Hours would be nine hours. Since the average time spent at each museum is approximately 1.2 hours, we could expect each parking space to turn over 7.5 times per day given those parameters. Using the more reasonable 7 hours for Effective Full Attendance Hours and the same 1.2 hours per activity visit, the turnover factor would be 5.8.

** The Average time spent at each activity is based on a visitor survey as part of the Balboa Park Land Use, Circulation and Parking Study (February, 2004).

*** Effective Full Attendance Hours is an estimate of the effective time that each parking space will be fully occupied per day. For example, if the museum is open for nine hours and the parking lot is fully occupied for 5 hours and 50% occupied for 4 hours, then the Effective Full Attendance Hours will be 7 hours. If the parking lot is fully occupied for all nine hours, the Effective Full Attendance Hours would be 9 hours. The 7 hours used here is estimated to reflect a fully occupied parking lot in the middle of the day, with ramps up and down to that capacity at the beginning and end of the day.

APPENDIX C

**TECHNICAL MEMORANDUM (AIR QUALITY) -
EVALUATION OF REGIONAL CONSTRUCTION IMPACTS
FROM THE ORANGE COUNTY GREAT PARK,
JULY 12, 2007,
PCR SERVICES CORPORATION**

Memorandum

TO: Robert Verlaan, Chambers Group
Glen Worthington, OCGP
FROM: Heidi Rous, CPP *Heidi Rous*

DATE: July 12, 2007

RE: EVALUATION OF REGIONAL CONSTRUCTION IMPACTS FROM THE ORANGE COUNTY GREAT PARK

FINDINGS OF THE FEIR

The Final Environmental Impact Report (FEIR) for the Orange County Great Park (OCGP) identified significant air quality impacts associated with construction of the project. The construction impact analysis assumed demolition, grading, and new construction would occur in two phases: the first phase would begin in 2007 and end in 2016 and the second phase would begin in 2017 and end in 2025. The emissions associated with demolition of existing structures, including 31.2 million cubic feet of concrete from removal of the runways, site grading, and development would generate construction air emissions, on a worst case day, that exceed the South Coast Air Quality Management District (SCAQMD) recommended regional significance thresholds. The OCGP FEIR described the construction air impacts after mitigation as significant and unavoidable. As shown in Table 1, regional oxides of nitrogen (NO_x), particulate matter 10 microns or less in diameter (PM₁₀), and volatile organic compounds (VOC, previously called reactive organic gases, or ROG) were estimated to exceed SCAQMD thresholds. However, carbon monoxide (CO) and oxides of sulfur (SO_x) emissions were reported below the SCAQMD recommended significance threshold, (please refer to OCGP FEIR pages 5.3-16 through 5.3-20). Grading was an anticipated part of the project and was discussed in the OCGP FEIR; however, a grading plan was not available at that time. Accordingly, general or "default" assumptions were used in the air quality analysis, based on the type and size of anticipated development.

CONSTRUCTION ASSESSMENT

Orange County Great Park

In support of Addendum No. 4, PCR conducted an analysis to determine whether the construction emissions inventory for the OCGP proposed grading equipment mix is consistent with the emissions inventory assumed in the certified FEIR and is within the envelope of the original air quality analysis. Assumptions were developed (by Fuscoe Engineering and others) and refined consistent with the requirements for the proposed grading of the Orange County Great Park (OCGP) site, excluding the portions known as Heritage Fields, the Agua Chino and the wildlife corridor:

- Earthmoving activities to start in 2008
- Earthmoving activities to total 13.23 million cubic yards

Memorandum

RE: EVALUATION OF REGIONAL CONSTRUCTION IMPACTS FROM
THE ORANGE COUNTY GREAT PARK

- Equipment Mix - 12 scrapers, 3 slope cats, 2 compactors, 1 motor grader, 2 rubber tire dozer, and 2 other pieces of equipment (e.g., water trucks)

The analysis was conducted using SCAQMD's recommended CEQA emissions inventory model URBEMIS. A new version of URBEMIS (URBEMIS 2007 Version 9.2) was released in June 2007 and was used in this analysis. The new version of URBEMIS is considered a major overhaul to URBEMIS 2002. It incorporates the current version of California Air Resources Board's OFFROAD model (OFFROAD 2007) construction equipment emission factors and reflects a better estimate of the population, activity, and emissions estimate of the varied types of off-road equipment. The emissions estimates from the proposed grading equipment mix are provided in Table 1.

As shown in Table 1, the OCGP equipment mix results in an overall decrease in equipment exhaust emissions and fugitive dust PM_{10} emissions, as compared to those levels estimated for the FEIR. No new significant impacts and no substantial increase in the severity of previously identified impacts would occur as a result of implementation of the OCGP equipment mix. It should be noted that Addendum #4 does not address construction activities, such as painting and paving, which resulted in the VOC emissions reported previously in the FEIR.

Table 1

COMPARISON OF DAILY CONSTRUCTION EMISSIONS FOR OCGP CONSTRUCTION ACTIVITIES^a

Emissions Inventory	Emission Totals, lbs/day				
	VOC	NO _x	CO	SO _x	PM ₁₀
Certified EIR	4,660 ^b	840	280	40	1,440
OCGP Site Grading	37	343	174	<1	663
SCAQMD Significance Threshold	75	100	550	150	150
Over (Under)	(38)	243	(376)	(149)	513
Significant for Certified FEIR?	Yes	Yes	No	No	Yes
Significant for OCGP Equipment Mix?	No	Yes	No	No	Yes

^a Compiled using the URBEMIS2007 emissions inventory model.

^b VOC emissions presented in the Certified EIR are for application of architectural coatings. VOC emissions for site grading would result in a slight decrease based on the other pollutant trends.

Memorandum

RE: EVALUATION OF REGIONAL CONSTRUCTION IMPACTS FROM
THE ORANGE COUNTY GREAT PARK

Concurrent Activities

The site grading and demolition will most likely occur in a phased approach, over the course of numerous years. PCR also conducted an analysis to determine whether the construction emissions inventory for a maximum plausible day (consisting of concurrent grading of the OCGP along with site grading activities for Heritage Fields, the Agua Chinon, and the wildlife corridor and runway demolition activities) is consistent with the emissions inventory presented in the certified FEIR and is within the envelope of the original air quality impact assessment.

Assumptions were developed and refined consistent with the requirements for the proposed demolition and grading activities. The equipment mix for runway demolition and crushing activities was provided by Mark Waxle of RMC on July 10, 2007. A total of 31.2 million cubic feet of concrete and asphalt would be generated from removal of the runways with an average daily amount of 20,000 cubic feet. The equipment mix would be comprised of:

- o 4 off-highway trucks, 1 excavator, 1 motor grader, 1 water truck, 1 rubber tired dozer, 2 rubber tired loaders, 2 portable concrete crushing plants, and 2 other pieces of equipment.

The equipment mix and grading assumptions for Heritage Fields (including the wildlife corridor and Agua Chinon) were based on information provided in Addendum No. 3 to the OCGP FEIR (SCH #2002101020). Heritage Fields would require a total of 7.1 million cubic yard (maximum daily 47,000 cubic yards) of earth moving activities. The equipment mix would be comprised of:

- o 10 scrapers, 4 compactors, 6 rubber tire dozers, 1 tractor /loader/backhoe, and 3 other pieces of equipment (e.g., water trucks).

The analysis was conducted using SCAQMD's recommended CEQA emissions inventory model URBEMIS 2007 Version 9.2. The emission inventory prepared for Addendum No. 3 used the previous version of URBEMIS (URBEMIS 2002) and was therefore updated using URBEMIS 2007. As discussed above, the new version of URBEMIS is considered a major overhaul to URBEMIS 2002. The details of these calculations are shown in the attachments to this technical memorandum. The emissions from the concurrent construction activities are provided in Table 2.

Memorandum

RE: EVALUATION OF REGIONAL CONSTRUCTION IMPACTS FROM
THE ORANGE COUNTY GREAT PARK

Table 2

COMPARISON OF DAILY CONSTRUCTION EMISSIONS FOR CONCURRENT OCGP CONSTRUCTION
ACTIVITIES^a

Emissions Inventory	Emission Totals, lbs/day				
	VOC	NO _x	CO	SO _x	PM ₁₀
Certified EIR	4,660 ^b	840	280	40	1,440
OCGP Site Grading	37	343	174	<1	663
Heritage Fields Site Grading	37	332	171	<1	663
Runway Demolition	17	165	66	<1	76
Total	91	839	411	<1	1,402
SCAQMD Significance Threshold	75	100	550	150	150
Over (Under)	16	739	(139)	(149)	1,252
Significant for Certified FEIR?	Yes	Yes	No	No	Yes
Significant for concurrent activities?	Yes	Yes	No	No	Yes

^a Compiled using the URBEMIS2007 emissions inventory model.

^b VOC emissions presented in the Certified EIR are for application of architectural coatings. VOC emissions for site grading would result in a slight decrease based on the other pollutant trends.

Source: PCR Services Corporation, 2007.

As shown in Table 2, concurrent construction activities results in a slight decrease in equipment exhaust emissions and fugitive dust PM₁₀ emissions, as compared to those levels estimated for the FEIR. While CO emissions show an increase, it is a function of updated emission factors in the current version of URBEMIS2007 and not a substantial change in the construction intensity. Regardless, CO emissions are less than the SCAQMD significance threshold and no new significant impacts and no substantial increase in the severity of previously identified impacts would occur as a result of concurrent construction activities. It should be noted that these emission estimates do not address construction activities, such as painting and paving, which resulted in the VOC emissions reported previously in the FEIR.

OCGP: Concurrent URBEMIS2007 Summary

Construction Activity	Assumptions	Outputs (lbs per day) 2008 only

1. EIR Addendum Summary

1.1 PURPOSE AND SCOPE

This Initial Study/Addendum provides the basis for an addendum to the previously certified Final Environmental Impact Report (State Clearinghouse Number 2002101020) for the Orange County Great Park (OCGP) and serves as the environmental review of a proposal to initiate various General Plan and Zoning Amendments related to the OCGP, including:

- General Plan Amendment (00468566-PGA) and Zone Change (00468567-PZC) to amend appropriate figures in the General Plan to reflect the Bake Parkway/Marine Way intersection relocation and the Rockfield Boulevard reconfiguration in the southern portion of Planning Area 30.
- General Plan Amendment (00470036-PGA), Zone Change (00470039-PZC), and Amended Development Agreement (00470035-PDA) to provide for the following: 1) reduce the number of required golf course holes within the Orange County Great Park from 45 to 18; 2) removal of the requirement for 173 acres of Agricultural Preserve in the Lifelong Learning District; and 3) other minor changes to the General Plan and Zoning Code text, tables, and figures. The Development Agreement Amendment also addresses the following core issues: (1) vest Heritage Fields' rights to develop under the General Plan and Zoning Code, as amended in the manner described above; (2) revise the funding mechanism for the Great Park maintenance; (3) shift the CFD cost overruns from the City to Heritage Fields; (4) transfer 131 acres of land from Heritage Fields to the City of Irvine; (5) establish the location of the police facility; (6) confirm runway demolition and recycling protocols; and (7) reiterate the role of the Master Implementation Agreement in the establishment of the backbone infrastructure phasing. Please refer to Section 2.2.2, Project Components and Appendix A, Proposed General Plan and Zoning Code Text, Table, and Figure Changes, for a more detailed description of the proposed actions and changes.

The requested actions do not permit any new residences or other changes to approved intensities. This Addendum has been prepared pursuant to the provisions of the California Environmental Quality Act (CEQA), Public Resources Code Sections 21000 et seq., the State CEQA Guidelines, and the City of Irvine Local Guidelines for Implementing CEQA (Local CEQA Guidelines).

1.2 ENVIRONMENTAL PROCEDURES

Pursuant to CEQA, the State CEQA Guidelines, and the City of Irvine CEQA Guidelines, the City's review of the proposed Initial Study/Addendum focuses on the proposed General Plan Amendments and Zone Changes and the Development Agreement Amendment to determine if the project would cause a change in the conclusions of the Orange County Great Park Final Environmental Impact Report (OCGP FEIR), and any change in circumstances or new information of substantial importance that would substantially change the conclusions of the OCGP EIR. This Addendum only relates to the proposed changes to the project as described in Section 1.1.

Pursuant to Section 21166 of CEQA and Section 15162 of the State CEQA Guidelines, when an EIR has been certified or a negative declaration adopted for a project, no subsequent EIR shall be prepared for the project unless the lead agency determines, on the basis of substantial evidence, that one or more of the following conditions are met:

- Substantial changes are proposed in the project that will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects;

1. EIR Addendum Summary

- Substantial changes occur with respect to the circumstances under which the project is undertaken that will require major revisions of the previous EIR due to the involvement of new significant environmental effects or a substantial increase in the severity of previously identified significant effects; or
- New information of substantial importance, which was not known and could not have been known with the exercise of reasonable diligence at the time the previous EIR was certified as complete, suggests any of the following:
 - 1) The project would have one or more significant effects not discussed in the previous EIR or negative declaration.
 - 2) Significant effects previously examined would be substantially more severe than identified in the previous EIR.
 - 3) Mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives.
 - 4) Mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives.

Section 15164 of the State CEQA Guidelines states that an Addendum to an EIR shall be prepared “if some changes or additions are necessary, but none of the conditions described in Section 15162 calling for preparation of a subsequent EIR have occurred.” This Initial Study/Addendum reviews the changes proposed by the project and any changes to the existing conditions that have occurred since the OCGP FEIR was certified. It also reviews any new information of substantial importance that was not known and could not have been known with exercise of reasonable diligence at the time that the OCGP FEIR was certified. It further examines whether, as a result of any changes or any new information, a subsequent or supplemental EIR may be required. This examination includes an analysis of the provisions of Section 21166 of CEQA and Section 15162 of the State CEQA Guidelines and their applicability to the proposed project. This Initial Study/Addendum relies on the attached Environmental Analysis, which addresses environmental checklist issues on a section-by-section basis.

The City of Irvine Environmental Checklist Form has been completed by the City and included in Section 3, *Environmental Checklist*. The Environmental Checklist Form is marked with the findings of the Community Development Director as to the environmental effects of the proposed project in comparison with the findings of the OCGP FEIR certified in 2003. The checklist has been prepared pursuant to Section 15168(c)(4) of CEQA, which states that “where the subsequent activities involve site specific operations, the agency should use a written checklist or similar device to document the evaluation of the site and the activity to determine whether the environmental effects of the operation were covered in the program EIR.”

Using that approach, the City of Irvine, the Lead Agency, determined that an Addendum to the previously approved OCGP FEIR is the appropriate environmental clearance for the project application.

1.3 PREVIOUS ENVIRONMENTAL DOCUMENTATION

The OCGP FEIR was certified by the City of Irvine in May 2003. The project analyzed in the OCGP Program EIR consisted of the following actions: 1) Annexation, General Plan Amendment, Pre-Zoning (prior to annexation), and Zoning of the unincorporated portion of Planning Area 51; 2) Annexation of the unincorporated portion of Planning Area 35 (Irvine Ranch Water District Parcel); 3) General Plan Amendment and Zone Change for Planning Area 30; and 4) Approval of the form of a Development Agreement vesting approval of overlay uses and intensities in consideration for dedication of land for public purposes and for developing and funding certain infrastructure improvements and maintenance of the public uses by the purchaser/developer and subsequent landowners and funding for specific park, roadways, and other circulation facilities and infrastructure. Together, these actions establish the policy and legislative structure to guide the development of the former MCAS El Toro property.

The OCGP FEIR mitigation measures are provided in the adopted Mitigation Monitoring and Reporting Program included in Appendix C. The table includes:

- Mitigation number and a description of the action;
- Timing for implementation;
- Approving authority and reviewing agency(s), if any; and
- Method of compliance

Addendum No. 1, approved by City on May 18, 2006, addressed the potential for environmental issues associated with the implementation of the OCGP Redevelopment Project Area Plan.

Addendum No. 2 was approved by the City Council on October 24, 2006. It analyzed the potential for environmental issues associated with minor adjustments to the boundary between the public and private areas of the OCGP; revisions to Zoning Code text and figures related to Planning Areas 30 and 51; the creation of a mixed-use zoning category called the Lifelong Learning District (LLD) within Planning Area 51; and minor technical changes to the General Plan, as described in Section 2.3 of the Addendum No. 2.

Addendum No. 3, approved by the City Planning Commission on May 17, 2007, addressed the potential for environmental issues associated with a proposal to approve the Master Subdivision Map (Vesting Tentative Tract Map No. 17008), submitted pursuant to Section 7.1 of the "Original Development Agreement" (defined below), to identify the backbone infrastructure in the Overlay Plan project area, to define the areas for potential future subdivision and development and to delineate the limits of rough grading for the development on approximately 2,157 acres (Great Park Neighborhoods development) of the approximately 3,705 acres that Heritage Fields purchased from the United States Department of the Navy (DON).

Addendum No. 4 was approved by the City Planning Commission on September 27, 2007. It analyzed the Orange County Great Park Master Plan, which provides a conceptual design for the future buildout of the 1,145-acre multiuse OCGP development.

The OCGP FEIR, Addendum No. 1, Addendum No. 2, Addendum No. 3, Addendum No. 4, and all of the associated technical documents are on file at the City of Irvine, Community Development Department, at 13825 "B", Irvine, California 92618.

1.4 ENVIRONMENTAL SETTING

The Orange County Great Park (which consists of City of Irvine Planning Areas 30 and 51) is in the central portion of Orange County, approximately 45 miles southeast of Los Angeles. The project area is generally

1. EIR Addendum Summary

bounded by the Woodbury residential development to the west, future Portola Springs residential development to the north, Irvine Spectrum to the south, and the City of Lake Forest to the east. Other nearby local jurisdictions include the Cities of Laguna Hills, Laguna Niguel, Laguna Woods, Mission Viejo, Aliso Viejo, and Tustin. Specifically, the proposed Lifelong Learning District consists of Planning Area Zones (PAZ) 1, 5, 6, 7, 8, 9, 11, 17a and 17b, which are in the northwest portion of Planning Area 51.

The Irvine Station, a major multimodal transit center linking Orange County Transportation Authority (OCTA) bus, Metrolink commuter rail, and Amtrak rail services, is adjacent to the Southern California Regional Rail Authority (SCRRA) Metrolink tracks, which bisect the project area and separate Planning Areas 30 and 51. The existing facilities within the project site include California State University, Fullerton; Marine Memorial Golf Course; equestrian facilities; and agricultural and nursery operations. The OCGP FEIR also describes interim activities that might occur on the site, including short-term use of the land or existing buildings on-site. Currently, there are offices occupied by the City of Irvine Community Development Department, Great Park Corporation (GPC), and Heritage Fields. Other tenants include Second Harvest Food Bank, Families Forward, Orange County Great Park Balloon Preview Park, and Tierra Verde Industries. A day-care facility is immediately adjacent to these office uses. Finally, a small portion of the existing runway has been removed within the southern portion of PA 51.

Ownership of Planning Areas 30 and 51 has changed since certification of the OCGP FEIR, including certain parcels that have been transferred to the Federal Aviation Administration, City of Irvine, County of Orange, and Heritage Fields by the DON or leased in furtherance of conveyance.

2.1 PROJECT LOCATION

The Orange County Great Park, encompassing Planning Areas 30 and 51, is northeast of the freeway junction at Interstate 5 (I-5) and Interstate 405 (I-405), within the City of Irvine. Figure 2-1 depicts the project location in a regional context and Figure 2-2 shows its local context.

Major roadways bordering the project are Sand Canyon Avenue to the northwest, Portola Parkway and Irvine Boulevard to the north, and Bake Parkway to the northeast. An aerial photograph of the project site and surrounding area is shown on Figure 2-3. The Irvine Station is adjacent to the SCRRA Metrolink tracks, which traverse the site and separate Planning Areas 30 and 51. Surrounding the site are residential and nonresidential uses under construction to the north and west, open space to the northeast, and nonresidential and mixed land uses to the east and southeast within the City of Lake Forest and City of Irvine.

2.2 PROJECT CHARACTERISTICS

2.2.1 Project Background

On May 27, 2003, the City Council certified a Final Environmental Impact Report and adopted a general plan amendment and zone change to implement the development of the Orange County Great Park. In order to develop at the maximum intensities allowed in the Overlay Plan shown in the General Plan and Zoning Code, the property owners entered into a development agreement, which required the dedication of land and the development or funding of infrastructure improvements in excess of the City's standard requirements, and the commitment to long-term maintenance of the public facilities.

In July 2005, Heritage Fields, LLC, (Heritage Fields) purchased all four bid parcels through a US Department of Navy/General Services Agency online auction process. Subsequent to the land purchase, the Great Park Corporation and Heritage Fields initiated their respective master design and development processes for the OCGP. To facilitate additional design options, both the Great Park Corporation and Heritage Fields requested and the City initiated an amendment to the General Plan and the Zoning Code to reconfigure the boundaries between the two properties. In addition, Heritage Fields has requested the creation of a new mixed-use zoning district called the 8.1/8.1A Lifelong Learning District. They also proposed minor clarifications to the zoning text within Planning Areas 30 and 51. These revisions to the Overlay Plan were analyzed in Addendum No. 2 dated September 2006, and were approved as the Revised Overlay Plan (Overlay Plan) by the City Council on October 24, 2006. These changes did not increase the building intensity already approved for the Site, and did not increase any significant environmental impacts previously identified in the 2003 OCGP FEIR. Addendum No. 2 was also approved on October 24, 2006, and is on file with the City Community Development Department for review.

On June 28, 2006, and pursuant to Section 7.1 of the Development Agreement, Heritage Fields El Toro, LLC, (Heritage Fields) filed an application for the Master Subdivision Map (Vesting Tentative Tract Map No. 17008) for the Overlay Plan. The Master Subdivision Map was approved by the City Planning Commission on May 17, 2007. The Master Subdivision Map subdivided approximately 3,585 gross acres of the Site into 44 numbered lots and 14 lettered lots, but did not authorize the construction of any trip-generating land uses or alter any land use or associated acreages to the approved Overlay Plan. As noted, the CEQA compliance was established via Addendum No. 3 approved on May 17, 2007. The City concluded that the Master Subdivision Map was consistent with the Overlay Plan land uses, as approved, and that no new areas were proposed for development. Addendum No. 3 is on file with the City Community Development Department for review.

2. Project Description

In 2007, the GPC requested approval of the Master Plan for the Great Park Development (Great Park Master Plan). The Great Park Master Plan was approved by the City Planning Commission on September 27, 2007. As noted, the CEQA compliance was established via Addendum No. 4 dated July 2007 and approved September 27, 2007. Addendum No. 4 is on file with the City Community Development Department for review.

The development analyzed in the OCGP FEIR and addenda includes both Public Park (Great Park development) and private development components (Great Park Neighborhoods development formerly known as Heritage Fields). The Great Park development, the public park component, is owned by the City and is being developed by the GPC. The Great Park Neighborhoods development, the private development component, is being developed by Heritage Fields.

During preliminary consideration of the conceptual design of Marine Way, California Department of Transportation (Caltrans) expressed concerns regarding the location of Marine Way and its relationship to the Bake Parkway freeway on-ramp. A revised alignment was first discussed in conjunction with the Master Subdivision Map for Great Park Neighborhoods and the Great Park. At that time it was recognized that the revised alignment required an amendment to the General Plan and that further study of the alignment was warranted. This Addendum is intended to provide that additional analysis and, if appropriate based on findings, allow the City to amend the City's General Plan, zoning code, and the Orange County Transportation Authority's Master Plan of Arterial Highways to effectuate that change.

On October 25, 2005, the City Council created the Orange County Great Park Development Agreement Committee, including Mayor Krom and Councilmember Agran, to review and consider proposals by Heritage Fields to amend various aspects of the existing development agreement. The committee, supported by staff, has been engaged in these discussions for the past several months. To maintain consistency with the proposed Development Agreement amendments, the City and Heritage Fields are also proposing to amend the General Plan and Zoning Code.

2.2.2 Project Components

This Addendum addresses the potential for environmental issues associated with the proposed General Plan, Zoning, and Development Agreement Amendments. The Proposed Project includes the following requested actions:

- General Plan Amendment (00468566-PGA) and Zone Change (00468567-PZC) to amend the appropriate figures in the General Plan to reflect the Bake Parkway/Marine Way intersection relocation and the Rockfield Boulevard reconfiguration in the southern portion of Planning Area 30.
- General Plan Amendment (00470036-PGA), Zone Change (00470039-PZC), and Amended Development Agreement (00470035-PDA) to provide for the following: 1) reduce the number of required golf course holes within the Orange County Great Park from 45 to 18; 2) removal of the requirement for 173 acres of Agricultural Preserve in the Lifelong Learning District; and 3) other minor changes to the General Plan and Zoning Code text, tables, and figures. The Development Agreement Amendment also addresses the following core issues: (1) vest Heritage Fields' rights to develop under the General Plan and Zoning Code, as amended in the manner described above; (2) revise the funding mechanism for the Great Park maintenance; (3) shift the CFD cost overruns from the City to Heritage Fields; (4) transfer 131 acres of land from Heritage Fields to the City of Irvine; (5) establish the location of the police facility; (6) confirm runway demolition and recycling protocols; and (7) reiterate the role of the Master Implementation Agreement in the establishment of the backbone infrastructure phasing. Please refer to Section 2.2.2, *Project Components and Appendix A*,

2. Project Description

Proposed General Plan and Zoning Code Text, Table, and Figure Changes, for a more detailed description of the proposed actions and changes.

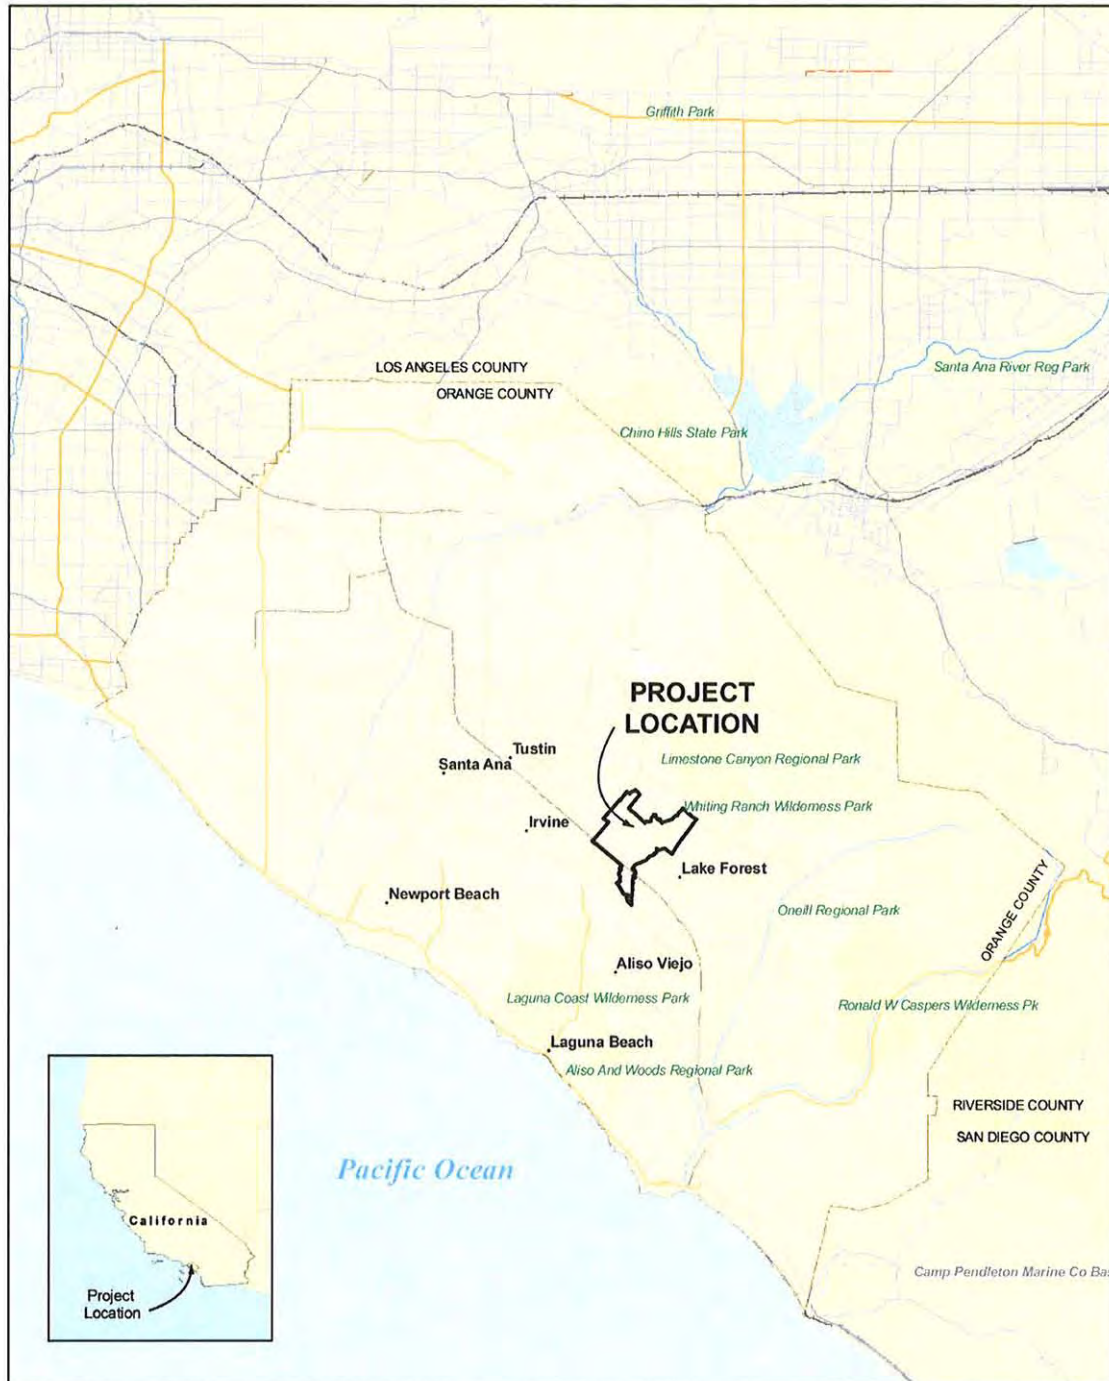

The requested actions do not permit any new residences or other changes to approved intensities. The specific components of the requested actions are discussed in more detail below.

Addendum No. 5 Update for the Orange County Great Park EIR

City of Irvine • **Figure 2-3**

2. Project Description

This page intentionally left blank.

Bake Parkway/Marine Way Relocation

General Plan Amendment (00468566-PGA) and Zone Change (00468567-PZC) would amend the appropriate figures in the General Plan to reflect the Bake Parkway/Marine Way intersection relocation and the Rockfield Boulevard reconfiguration in the southern portion of Planning Area 30. The proposed General Plan Amendment would relocate Marine Way approximately 900 feet to the east of the I-5 NB exit ramp. Due to the relocation of Marine Way, the extension of Rockfield Boulevard to Marine Way would also be modified. The currently planned alignment of both roads is reflected in Figure 2-4, with the proposed revisions shown in Figure 2-5. The associated Zone Change would reflect the modifications to the proposed street alignments and would be reflected in a revision to the Planning Area 30 zoning map.

Project design features are associated with the relocation of the Bake Parkway/Marine Way intersection. These project design features are as follows:

Bake Parkway/I-5 Northbound Ramp

The General Plan-approved Bake Parkway/Marine Way intersection provides direct access from the Bake/I-5 NB Ramp intersection onto Marine Way. Under the proposed relocation, the Bake Parkway/Marine Way intersection is relocated north (east) of General Plan approved Bake Parkway/Marine Way intersection on Bake Parkway. The relocation of the Bake Parkway/Marine Way intersection includes project design features along Bake Parkway. Specifically, Bake Parkway is proposed to be widened north (east) of the existing I-5 bridge to provide four through lanes to Rockfield Boulevard while southbound (westbound) Bake Parkway from Rockfield Boulevard will be widened to provide four through lanes which reduces to three through lanes at the I-5 NB on-ramp. In addition, the proposed Bake Parkway/Marine Way relocation is also accompanied by improvements at the I-5 Northbound off-ramp. The I-5 Northbound off-ramp would be widened to provide one left-turn lane and three right-turn lanes. The project design features tied to the construction of the Bake Parkway/Marine Way intersection would provide acceptable levels of service at this intersection.

Sand Canyon/I-5 Northbound Ramp

The proposed relocation of the Bake Parkway/Marine Way intersection resulted in the need for restriping at the eastbound approach or the southbound approach of the Sand Canyon/I-5 Northbound Ramp intersection. As part of the project design features, the southbound approach at this intersection would be restriped to provide two left-turn lanes, four through lanes, and one right-turn lane. The restriping improvement provides Intersection capacity values lower than the Without Project condition.

The certified OCGP EIR analyzed the proposed Great Park circulation system and associated amendments to the City's Circulation Element at a programmatic level and listed Caltrans as a Responsible Agency. Project specific impacts will be addressed through the normal Caltrans process including a request for an Encroachment Permit, completion of a Project Study Report, and additional CEQA/NEPA review, if required.

General Plan, Zone Change, and Development Agreement Amendment

Reduction of Golf Course Holes

General Plan Amendment (00470036-PGA) would amend the Land Use Element Table A-5 in the General Plan to reduce the number of required golf course holes from 45 to 18. The 27 holes to be removed from future plans were to have been located in the area between the Wildlife Corridor and the Aqua Chinon, in the Park District of the Great Park Neighborhoods project. The reduction in the golf course holes will not permit any new residences or other changes to approved densities.

2. Project Description

Reduction in Agricultural Acreage

General Plan Amendment (00470036-PGA), Zone Change (00470039-PZC), and Development Agreement Amendment (00470035-PDA) would reduce the required agricultural acreage within the Lifelong Learning District by 173 acres. The reduction in the agricultural acreage will not permit any new residences or other changes to approved intensities.

Development Agreement

In addition to reducing the number of golf course holes and agricultural acreage as described above, the Development Agreement Amendment also addresses the following issues: (1) vest Heritage Fields' rights to develop under the General Plan and Zoning Code, as amended in the manner described above; (2) revise the funding mechanism for the Great Park maintenance; (3) shift the CFD cost overruns from the City to Heritage Fields; (4) transfer 131 acres of land from Heritage Fields to the City of Irvine; (5) establish the location of the police facility; (6) confirm runway demolition and recycling protocols; and (7) reiterate the role of the Master Implementation Agreement in the establishment of the backbone infrastructure phasing.

Additional Text and Figure Changes

General Plan Amendment 00470036-PGA and Zone Change 00470039-PZC also include other minor changes to texts and figures to clean up other technical issues with the Planning Areas 30 and 51. The specific text and figure changes associated with the proposed General Plan Amendments and Zone Changes are included Appendix A.

2.3 DISCRETIONARY APPROVALS

Implementation of the project includes the following discretionary actions for Planning Areas 30 and 51 to be undertaken by the City:

- CEQA related actions and approvals; and
- General Plan Amendment 00468566-PGA
- Zone Change 00468567-PZC
- General Plan Amendment 00470036-PGA
- Zone Change 00470039-PZC
- Development Agreement Amendment 0040035-PDA

The OCGP FEIR lists additional discretionary actions to be taken by the City and other public agencies at or as part of the completion of the project—the adopted Overlay Plan (OCGP FEIR pages 3-29 and 3-30). The actions listed therein which have not yet been undertaken also are necessary for implementation of the project. The actions and responsible public agencies include, but are not necessarily limited to, these approvals:

- Master plans and subdivisions for development (City)
- Community facilities districts or other assessment districts (City)
- Actions to improve interim use activities (City and DON)
- Transfer of parcels within Planning Area 51 (DON)

2. Project Description

- Clean Water Act section 404 permits (US Army Corps of Engineers)
- Endangered Species Act compliance (U.S. Fish and Wildlife Service)
- Clean Water Act section 401 and National Pollutant Discharge Elimination System (NPDES) permits (Regional Water Quality Control Board)
- California Fish and Game Code 1602 permits (California Department of Fish and Game)
- Revisions to the Orange County Master Plan of Arterial Highways (Orange County Transportation Authority)

The City of Irvine Environmental Information Form and Environmental Checklist Form have been completed by the City and are included on the following pages. The Environmental Checklist Form is marked with the findings of the Community Development Department as to the environmental effects of the proposed changes to the project in comparison with the findings of the certified OCGP FEIR.

As explained above, this comparative analysis has been undertaken, pursuant to the provisions of the California Environmental Quality Act, to provide the City with the factual basis for determining whether any changes in the project, any changes in the circumstances, or any new information requires additional environmental review or preparation of a subsequent or supplemental EIR. The basis for each of the findings listed in the attached Environmental Checklist Form in Section 3 is explained in Section 4 of the Addendum.

3.1 CITY OF IRVINE INITIAL STUDY AND ENVIRONMENTAL EVALUATION

The City of Irvine Environmental Information Form and Environmental Checklist Form have been completed by the City and are included on the following pages. The Environmental Checklist Form is marked with the findings of the Community Development Department as to the environmental effects of the proposed changes to the project through the General Plan Amendments, Zone Changes, and Development Agreement Amendment in comparison with the findings of the certified OCGP FEIR and addenda.

As explained above, this comparative analysis has been undertaken, pursuant to the provisions of CEQA, to provide the City with the factual basis for determining whether any changes in the project, any changes in the circumstances under which the project is undertaken, or any new information requires additional environmental review or preparation of a subsequent or supplemental EIR. The basis for each of the findings listed in the attached Environmental Checklist Form is explained in Section 4 of the Addendum.

1. Project Title:

General Plan Amendment 00468566-PGA and Zone Change 00468567-PZC,
General Plan Amendment 00470036-PGA, Zone Change 00470039-PZC, and Development
Agreement Amendment 00470035-PDA

2. Lead Agency Name and Address:

City of Irvine Community Development Department
13825 "B" Street
Irvine, California 92618

3. Contact Person and Phone Number:

Diane Vu, Senior Planner (949) 724-7460 and Michelle Drou  , Associate Planner (949) 724-6314

4. Project Location:

The project area is north of Interstate 5 (Santa Ana Freeway), east of State Route 133 (Eastern Transportation Corridor), west of the City of Lake Forest, and south of State Route 241 (Foothill Transportation Corridor).

5. Project Sponsor's Name and Address:

City of Irvine Community Development
13825 "B" Street
Irvine, California 92618

6. General Plan Designation: Orange County Great Park (OCGP)

7. Zoning:

1.1 Exclusive Agriculture, 1.4 Preservation, 1.5 Recreation, 1.8 Golf Course Overlay, 2.2 Low Density Residential, 2.3 Medium Density Residential, 3.2 Transit Oriented Development, 4.3 Vehicle-Related Commercial, 5.4B General Industrial, 6.1 Institutional, and 8.1/8.1A Lifelong Learning District

3. Environmental Checklist

8. Description of Project

The purpose of this proposal is to initiate General Plan Amendment and Zone Change to revise appropriate General Plan Figures and Zoning Maps to reflect the relocated Bake Parkway/Marine Way intersection and the Rockfield Boulevard reconfiguration within the southern portion of Planning Area 30. This proposal also seeks to initiate a General Plan Amendment, Zone Change, and Development Agreement Amendment to reduce the number of required golf course holes within the Orange County Great Park from 45 to 18; remove the requirement for 173 acres of Agricultural Preserve in the Lifelong Learning District; and other minor changes to the General Plan and Zoning Code text, tables, and figures. The Development Agreement Amendment also proposes to vest Heritage Fields' rights to develop under General Plan and Zoning Code, as amended in the manner described above; revise the funding mechanism for the Great Park maintenance; shift the CFD cost overruns from the City to Heritage Fields; transfer 131 acres of land from Heritage Fields to the City of Irvine; establish the location of the police facility; confirm runway demolition and recycling protocols; and reiterate the role of the Master Implementation Agreement in the establishment of the backbone infrastructure phasing. Please refer to Section 2.2.2, *Project Components* and Appendix A, *Proposed General Plan and Zoning Code Text, Table, and Figure Changes*, for a more detailed description of the proposed actions and changes.

9. Surrounding Land Uses and Setting (Briefly describe the project's surroundings):

The proposed project area (which consists of City of Irvine Planning Areas 30 and 51) is in the central portion of Orange County, approximately 45 miles southeast of Los Angeles. The project area is generally bounded by the Irvine Spectrum to the south, City of Lake Forest to the east, the Woodbury residential community to the west, and the future Portola Springs residential development to the north.

The project area is north of I-5, east of SR-133, and south of SR-241. Major roadways bordering the project area include Barranca Parkway to the south, Sand Canyon Avenue to the west, Portola Parkway and Irvine Boulevard to the north, and Alton Parkway to the east.

10. Other Public Agencies Whose Approval Is Required (e.g., permits, financing approval, or participation agreement):

Orange County Transportation Authority (Master Plan of Arterial Highways)
Cal Trans

3. Environmental Checklist

3.2 ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED

The environmental factors checked below would be potentially affected by this project, involving at least one impact that is a "Potentially Significant Impact" as indicated by the checklist on the following pages.

- | | | |
|--|---|---|
| <input type="checkbox"/> Aesthetics | <input type="checkbox"/> Agricultural Resources | <input type="checkbox"/> Air Quality |
| <input type="checkbox"/> Biological Resources | <input type="checkbox"/> Cultural Resources | <input type="checkbox"/> Geology / Soils |
| <input type="checkbox"/> Hazards and Hazardous Materials | <input type="checkbox"/> Hydrology / Water Quality | <input type="checkbox"/> Land Use / Planning |
| <input type="checkbox"/> Mineral Resources | <input type="checkbox"/> Noise | <input type="checkbox"/> Population / Housing |
| <input type="checkbox"/> Public Services | <input type="checkbox"/> Recreation | <input type="checkbox"/> Transportation / Traffic |
| <input type="checkbox"/> Utilities / Service Systems | <input type="checkbox"/> Mandatory Findings of Significance | |

3.3 DETERMINATION

On the basis of this initial evaluation:

☐ I find that the proposed project COULD NOT have a significant effect on the environment, and a NEGATIVE DECLARATION will be prepared.

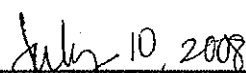

☐ I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A MITIGATED NEGATIVE DECLARATION will be prepared.

☐ I find that the proposed project MAY have a significant effect on the environment, and an ENVIRONMENTAL IMPACT REPORT is required.

☐ I find that the proposed project MAY have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An ENVIRONMENTAL IMPACT REPORT is required, but it must analyze only the effects that remain to be addressed.

☒ I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier EIR or NEGATIVE DECLARATION pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or NEGATIVE DECLARATION, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

Diane Vu, Senior Planner

Date

3. Environmental Checklist

3.4 EVALUATION OF ENVIRONMENTAL IMPACTS

- 1) A brief explanation is required for all answers except “No Impact” answers that are adequately supported by the information sources a lead agency cites in the parentheses following each question. A “No Impact” answer is adequately supported if the referenced information sources show that the impact simply does not apply to projects like the one involved (e.g., the project falls outside a fault rupture zone). A “No Impact” answer should be explained where it is based on project-specific factors as well as general standards (e.g., the project will not expose sensitive receptors to pollutants, based on a project-specific screening analysis).
- 2) All answers must take account of the whole action involved, including off-site as well as on-site, cumulative as well as project-level, indirect as well as direct, and construction as well as operational impacts.
- 3) Once the lead agency has determined that a particular physical impact may occur, the checklist answers must indicate whether the impact is potentially significant, less than significant with mitigation, or less than significant. “Potentially Significant Impact” is appropriate if there is substantial evidence that an effect may be significant. If there are one or more “Potentially Significant Impact” entries when the determination is made, an EIR is required.
- 4) “Negative Declaration: Less Than Significant With Mitigation Incorporated” applies where the incorporation of mitigation measures has reduced an effect from “Potentially Significant Impact” to a “Less Than Significant Impact.” The lead agency must describe the mitigation measures, and briefly explain how they reduce the effect to a less than significant level.
- 5) Earlier analyses may be used where, pursuant to the tiering, program EIR, or other CEQA process, an effect has been adequately analyzed in an earlier EIR or negative declaration. Section 15063(c)(3)(D). In this case, a brief discussion should identify the following:
 - a) **Earlier Analysis Used.** Identify and state where they are available for review.
 - b) **Impacts Adequately Addressed.** Identify which effects from the above checklist were within the scope of and adequately analyzed in an earlier document pursuant to applicable legal standards, and state whether such effects were addressed by mitigation measures based on the earlier analysis.
 - c) **Mitigation Measures.** For effects that are “Less Than Significant With Mitigation Incorporated,” describe the mitigation measures that were incorporated or refined from the earlier document and the extent to which they address site-specific conditions for the project.
- 6) Lead agencies are encouraged to incorporate into the checklist references to information sources for potential impacts (e.g., general plans, zoning ordinances). Reference to a previously prepared or outside document should, where appropriate, include a reference to the page or pages where the statement is substantiated.
- 7) Supporting Information Sources: A source list should be attached, and other sources used or individuals contacted should be cited in the discussion.

3. Environmental Checklist

- 8) This is only a suggested form, and lead agencies are free to use different formats; however, lead agencies should normally address the questions from this checklist that are relevant to a project's environmental effects in whatever format is selected.
- 9) The explanation of each issue should identify:
- a) the significance criteria or threshold, if any, used to evaluate each question; and
 - b) the mitigation measure identified, if any, to reduce the impact to less than significant.

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
I. AESTHETICS: Would the project:						
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a State scenic highway or local scenic expressway, scenic highway, or eligible scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in the visible grading of over 5,000 cubic yards on any 20-acre portion of the project site; or visible cut and fill slope over 25 vertical feet?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in the creation of light spillover and glare effects that present a nuisance to residential land uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Result in the substantial alteration of the existing landform of the site or of a unique topographic feature on the site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
II. AGRICULTURAL RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Mode (1997) prepared by the California Department of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project:						
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
III. AIR QUALITY: Where available, the significance criteria established by the applicable air quality management district or air pollution control district may be relied upon to make the following determinations. Would the project:						
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is in non-attainment under an applicable Federal or State ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
IV. BIOLOGICAL RESOURCES: Would the project:						
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Conflict with any local policies or ordinances protecting biological resources, such as tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or State habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
V. CULTURAL RESOURCES: Would the project:						
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5 of the CEQA Guidelines?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5 of the CEQA Guidelines?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
c) Directly or indirectly destroy a unique paleontological resource or site or unique geological feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VI. GEOLOGY AND SOILS: Would the project:						
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:						
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined by Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VII. HAZARDS AND HAZARDOUS MATERIALS: Would the project:						
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter-mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project located within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Expose people or structures to a significant risk of loss, injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
VIII. HYDROLOGY AND WATER QUALITY: Would the project:						
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Substantially deplete groundwater supplies or interfere substantially with groundwater recharge such that there would be a net deficit in aquifer volume or a lowering of the local groundwater table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
support existing land uses or planned uses for which permits have been granted)?						
c) Substantially alter the existing drainage pattern of the site or area, including through alteration of the course of a stream or river, in a manner which would result in substantial erosion or siltation on-site or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner which would result in flooding on-site or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Create or contribute runoff water which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of pollutant runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a Federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Expose people or structures to a significant risk of loss, injury, or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j) Inundation by seiche or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
IX. LAND USE AND PLANNING: Would the project						
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of any agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
X. MINERAL RESOURCES: Would the project:						
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the State?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally-important mineral resource recovery site delineated on a local general plan, specific plan or other land use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XI. NOISE: Would the project result in:						
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) For a project located within an airport land use plan, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, heliport or helistop, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XII. POPULATION AND HOUSING: Would the project:						
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through the extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XIII. PUBLIC SERVICES: Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:						
a) Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XIV. RECREATION: Would the project:						
a) Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XV. TRANSPORTATION/TRAFFIC: Would the project:						
a) Cause an increase in traffic, which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
c) Result in a change in air traffic patterns, including either an increase in traffic levels or change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
f) Result in inadequate parking capacity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus stops/routes, bicycle lanes, sidewalks, etc.)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
XVI. UTILITIES AND SERVICE SYSTEMS: Would the project:						
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
d) Have sufficient water supplies available to serve the project (including large scale developments as defined by Public Resources Code Section 21151.9 and described in Question No. 20 of the Environmental Checklist) from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. Environmental Checklist

ENVIRONMENTAL ISSUES	Subsequent or Supplemental EIR				Addendum to EIR	
	Substantial Change in Project Requiring Major EIR Revisions	Substantial Change in Circumstances Requiring Major EIR Revisions	New Information Showing Greater Significant Effects than Previous EIR	New Information Showing Ability to Reduce Significant Effects in Previous EIR	Less Than Significant Impacts/No Changes or New Information Requiring Preparation of an EIR	No Impact
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
g) Comply with Federal, State, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
h) Result in a need for new systems or supplies, or substantial alterations related to electricity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
i) Result in a need for new systems or supplies, or substantial alterations related to natural gas?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
j) Result in a need for new systems or supplies, or substantial alterations related to telephone service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
k) Result in a need for new systems or supplies, or substantial alterations related to television service/reception?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
XVII. MANDATORY FINDINGS OF SIGNIFICANCE						
a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b. Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
c. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

4. Discussion of Checklist and Mitigation Measures

This section is intended to provide evidence to substantiate the conclusions set forth in the Environmental Checklist. The section will briefly summarize the OCGP FEIR conclusions and then discuss whether or not the proposed project is consistent with the findings contained in the OCGP FEIR.

4.1 AESTHETICS

4.1.1 Environmental Setting

The OCGP FEIR addressed in detail the potential visual impacts associated with the development of the former MCAS El Toro. The OCGP FEIR discussed the project's visual setting associated with its location adjacent to various arterial highways and state and federal highways. None of these roadways are designated County or State scenic highways; although Sand Canyon Avenue is designated as a highway with rural/natural character. The City's General Plan also designates I-5 as an urban character Scenic Highway.

Generally, views of the former military base are from the surrounding highways. From these highways, a variety of land uses, structures, and facilities of differing ages, sizes, and architectural styles may be viewed. Though agricultural areas are adjacent to and within the base, the predominant features are associated with the military use of the base, including runways, aprons, hangars, warehouses, barracks housing, recreational facilities, golf course, single-family housing, offices, and commercial structures.

The City of Lake Forest and the James A. Musick Branch Jail are to the southeast; Irvine Spectrum abuts the former base along the eastern and southern boundaries; and existing and developing residential developments are to the north and west. Further to the south are the residential areas of the Cities of Laguna Woods and Laguna Hills. These communities are at higher elevations and therefore have panoramic views of the project. Residences with views of the facility are not impacted by existing light sources on the site since the residences are at least two miles from the property.

4.1.2 Impacts Identified in the OCGP FEIR and Addenda

The OCGP FEIR discussed the potential aesthetic effects of the development of the site, including Planning Areas 51 and 30, under the adopted Overlay Plan and found that future development of these two planning areas would introduce new sources of light within the project area. These sources include street lighting along planned roadways and various forms of exterior lighting, including security lighting, parking lots, educational facilities, institutional and commercial developments, and lighting associated with athletic fields. The OCGP FEIR concluded that significant light impacts could have occurred if proposed light sources were directed into or located near existing or planned residential uses, which are sensitive to light intrusion during nighttime hours, but that, with the mitigation ultimately adopted by the City, these potential impacts would be less than significant. The OCGP FEIR and addenda further concluded that the proposed mitigation measures for the project would reduce potentially significant light impacts to less than significant levels.

With regard to other aesthetic-related impact significance threshold presented in the OCGP FEIR, no other significant or potentially significant aesthetic impacts were identified. These other thresholds primarily concern visual aesthetic impacts and include such evaluative factors as view-shed obstruction or impairment, landform alteration, and the degradation of valued or unique scenic resources or features.

4. Discussion of Checklist and Mitigation Measures

4.1.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Bake Parkway/Marine Way Relocation

There are no scenic routes, scenic resources, or unique geologic or topographic features within the project area. The proposed relocation of Bake Parkway/Marine Way shifts the intersection approximately 900 feet to the east of the I-5 NB exit ramp. Rockfield Boulevard is reconfigured as well. The roadways remain in the same general vicinity in Planning Area 30 as the original planned roadways as previously examined in the OCGP FEIR.

The project would not introduce new light sources or highly reflective building materials that would result in new sources of potential glare beyond those already considered by the OCGP FEIR, because it includes the same land uses and intensity, and comparable physical area for future development as the adopted Overlay Plan.

Reduction of Required Golf Course Holes

According to the OCGP FEIR, there are no scenic routes, scenic resources, or unique geologic or topographic features within the project site. Reducing the golf course requirement by 27 holes would not authorize new land uses or increase development intensities within the area. All previous land use intensities would remain the same. Therefore, the aggregate amount of residential development and developed areas remains the same. Therefore, the project would not introduce new light sources or highly reflective building materials that would result in new sources of potential glare beyond those already considered by the OCGP FEIR, because it includes the same land uses, intensity, and comparable physical area for future development as the adopted Overlay Plan.

The reduction of required golf course holes would not authorize new land uses or increase the intensity; therefore, there would be no new significant impacts degrading the visual character or quality of the site and its surroundings beyond those already considered by the OCGP FEIR.

Reduction in Agricultural Acreage

According to the OCGP FEIR, there are no scenic routes, scenic resources, or unique geologic or topographic features within the project site. Removing the requirement to include 173 acres of agricultural use within the Lifelong Learning District (LLD) would not authorize new land uses or increase development intensities. All previous land use intensities would remain the same. The project does not create a new source of substantial light or glare, or degrade the visual character of the project area and its surroundings. Therefore, there would be no new significant impacts degrading the visual character or quality of the site and its surroundings beyond those already considered by the OCGP FEIR.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major revision to the certified OCGP FEIR due to any new significant environmental impact or a substantial increase in the severity of impacts.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR.

This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance that was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project would have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR.

This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance that was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: 1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or 2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant aesthetics effects identified in and considered by the certified OCGP FEIR.

4.1.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified mitigation measures A1 and A2, which, if fulfilled, would reduce the effects of development under the adopted Overlay Plan to a less than significant level. Measures A1 and A2 are applicable to future development under the project.

- A1 Prior to issuance of building permits, lighting plans and signage plans for new development shall be reviewed by the Community Development Department to ensure that minimal light intrusion and spillover into adjacent residential areas occurs.
- A2 Prior to the issuance of building permits, and during the master plan review process for future development in the project area, the Director of Community Development shall ensure that mirrored and highly reflective surfaces are discouraged or, where proposed, shall be accompanied by a design-level glare impact analysis that demonstrates no adverse visual impairment to motorists or other visual nuisance occurs.

4. Discussion of Checklist and Mitigation Measures

4.2 AGRICULTURAL RESOURCES

4.2.1 Environmental Setting

The OCGP FEIR described the Farmland Mapping and Monitoring Program of the California Department of Conservation Division of Land Resources Protection classifications of agricultural lands present within the project area as follows:

- **Prime Farmland:** Land which has the best combination of physical and chemical features able to sustain long-term production of agricultural crops. This land has the soil quality, growing season, and moisture supply needed to produce sustained high yields. Land must have been used for production of irrigated supply needed to produce sustained high yields. Land must have been used for production of irrigated crops at some time during the previous two map updates.
- **Farmland of Statewide Importance:** Similar to Prime Farmland, except this land has minor shortcomings such as greater slopes or less ability to store soil moisture than Prime Farmland. This land has minor shortcomings, such as greater slopes or less ability to store soil moisture than Prime Farmland. Land must have been used for production of irrigated crops at some time during the previous two map updates.
- **Unique Farmland:** Lesser quality soils used for the production of the state's leading crops. This land is usually irrigated, but may include non-irrigated orchards or vineyards as found in some climate zones in California. This land is used for the production of specific high economic value crops such as oranges, olives, avocados, rice, grapes, or cut flowers. Land must have been cropped at some time during the two previous maps updates.
- **Farmland of Local Importance:** Land of importance to the local agricultural economy as determined by each county's board of supervisors and a local advisory committee.

The OCGP FEIR identified approximately 659 acres of designated Prime Farmland, 70 acres of designated Unique Farmland, and 99 acres of designated Farmland of Statewide Importance. The Orange County Board of Supervisors has not designated any farmland as being of Local Importance.

City of Irvine Policies and Programs

The City of Irvine General Plan Objective L-10, as amended in 2002 and presented in the OCGP FEIR, includes the following policies to "encourage the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development":

Policy (a): Provide for farming opportunities in the community, where feasible and appropriate, through an Agricultural Legacy Program facilitating limited-scale agricultural operations and program on public lands. The program may include components such as edible landscape, metro-farming, heritage farming, model farming, education and community service farming and other farm or farm market program. Location for implementation of the Agricultural Legacy Program to be considered should, at a minimum, include:

- Designated open space spine network,
- Designated open space areas not subject to the Natural Community Conservation Plan (NCCP), and
- Other appropriate publicly owned lands.

4. Discussion of Checklist and Mitigation Measures

Policy (b): Consider creating a “working model” farm to act as a center for education and enjoyment of all age groups pursuant to the Agricultural Legacy Program in conjunction with the City’s planning efforts concerning the reuse of MCAS El Toro, or with the South Coast Research Extension owned by UC Regents.

Policy (c): Permit agricultural use of land which is unsuitable for building because it is within flood plains, or is subject to hazards to public health, safety, and welfare or similar constraints precluding development. Conversion from agricultural use may be allowed where the identified hazard conditions have been eliminated.

Policy (d): Permit agricultural uses, on an interim bases, on land designated for development, and consider agricultural uses as part of the City’s planning efforts for the re-use of MCAS El Toro.

Policy (e): Encourage and support federal and state legislation proposed for the purpose of preservation of agricultural lands which are compatible with the City’s goals and objectives.

Policy (f): Allow for conversion of interim and permanent agricultural uses to development to provide land for the construction of housing units consistent with the Land Use and Housing Elements, and the development of commercial and industrial buildings consistent with the provision of job opportunities as described in the Land Use Element, where such conversion does not conflict with other L-10 policies.

Policy (g): Pursue the open space policies contained in the Conservation and Open Space Element and address any open space or aesthetic impacts from the conversion of interim and permanent agricultural uses to development as part of the City’s existing policies for the preservation of open space and existing policies for mitigation of views and aesthetic impacts under the policies in the Conservation and Open Space Element.

4.2.2 Impacts Identified in the OCGP FEIR and Addenda

The OCGP FEIR and addenda determined the Overlay Plan would preserve in perpetuity 303 acres¹ of land for agricultural use, of which 251 acres are classified as Prime Farmland, Unique Farmland, and Farmland of Statewide Importance. The locations of the 303 acres of permanent agricultural land are listed below, and the Farmlands Map can be found in the OCGP FEIR as Figure 5.8-1:

- **PA 30:** 13 acres within Planning Area Zone (PAZ) 26; and
- **PA 51:** 90 acres within PAZ 4; 200 acres within PAZ 1.

The Overlay Plan also resulted in the permanent loss of 802 acres of designated farmland comprised of 651 acres of Prime Farmland, 63 acres of Unique Farmland, and 88 acres of Farmland of Statewide Importance. This impact was considered significant and unavoidable.

It was determined the Overlay Plan resulted in a significant impact associated with the conversion of agricultural land to nonagricultural use. The OCGP FEIR noted the context of agricultural production in Orange County—including development pressures that have contributed to the decrease in agricultural production in the County overtime—which suggested that conversion of agricultural land to urban uses would occur with or without the development of the project.

¹ Please note that there is a typographical error within the OCGP FEIR: Table 1-2 on page 1-8 and Table 3-4 on pages 3-12 and 3-13 identify the total agricultural land as 303 acres; however on page 5.8-10 the agricultural use acreage is noted as 307.

4. Discussion of Checklist and Mitigation Measures

4.2.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Bake Parkway/Marine Way Relocation

As discussed in the OCGP FEIR, Planning Area 30 was planned for development. The roadway relocation remains in Planning Area 30; therefore, the Bake Parkway/Marine Way Relocation would not create any new impacts to agricultural resources beyond those evaluated in the OCGP FEIR.

Reduction of Required Golf Course Holes

Reduction of the required golf course holes would not increase allowable intensities or areas planned for development and would not create any new impacts to agricultural resources beyond those evaluated in the OCGP FEIR.

Reduction in Agricultural Acreage

The proposed General Plan Amendment and Zone Change (GPA/ZC) would result in the removal of the requirement to include 173 acres of agricultural use within Planning Area 51 currently designated as Prime Farmland by the state through the Farmland Mapping and Monitoring Program. The entire 173 acres is designated as Planning Area Zone 1 (PAZ 1) in the adopted Great Park Overlay Plan. It should be noted that PAZ 1 is currently occupied by a nursery, which grows the nursery stock aboveground in pots. None of the soils in PAZ 1 are currently used for growing crops. However, the loss of agricultural land in Planning Area 51 is potentially significant because the land provides: 1) open space relief and use of productive soils; 2) historical, cultural, and heritage value; and 3) the economic value of the food products grown on the land to California's economy and consumers. Existing regulatory programs, however, address each of these three values of agricultural use.

On a local level, this conversion of agricultural land within the City to development uses was previously acknowledged and mitigated through various plans, policies, and programs adopted by the City. In particular, the City of Irvine General Plan Objective L-10 specifically addresses the conversion of agricultural lands where development under the General Plan is designated to occur and establishes the Irvine Agricultural Legacy Program to mitigate the loss of existing agricultural land throughout the City.

As a result of General Plan Objective L-10, described above, and in accordance with the mitigation measures contained in the Northern Sphere EIR, and the OCGP FEIR, several areas were considered relative to being potentially viable for agricultural operations. The 173-acre Exclusive Agriculture site was identified as a potential site (Site 5). However, since certification of the OCGP FEIR an additional 508 acres within Planning Area 1 has been designated as "Exclusive Agriculture" and added to the Agricultural Legacy Program. As a result, overall acreage enrolled within the Agricultural Legacy Program is greater than that assumed in the certified OCGP FEIR. Additionally, on August 2, 2007, the Planning Commission approved the Great Park's conceptual design, which includes a 56-acre Orchard. The design also includes citrus trees, nut, and avocado trees to recognize Orange County's agricultural past and programs for "working farm models" that will serve to educate the community. In addition to the 130 acres remaining as designated for permanent agriculture within Planning Areas 30 and 51, the education programs and additional 56 acres proposed by the Great Park help support and implement General Plan Objective L-10. As a result, no new impacts to agricultural resources beyond those assumed in the OCGP FEIR are anticipated.

The City's extensive program for the preservation of open space addresses open space relief. The program includes the Open Space Memorandum of Understanding, which was based upon a 1984 agreement with The Irvine Company. This program will result in dedication of approximately 2,800 acres of land as

4. Discussion of Checklist and Mitigation Measures

permanent open space, which will be part of the City's overall program for permanent preservation of more than 10,000 acres of natural open space within the City. In addition, the City's participation in the Orange County Central-Coastal Natural Communities Conservation Plan and Habitat Conservation Plan (NCCP/HCP) has provided open space and visual relief by preserving and restoring many acres of native vegetation and ecosystems using the growing capacity of native soils.

The cultural and historical value of the 173 acres of Prime Farmland that will be affected by conversion to urban uses has been addressed by the City's existing Agricultural Legacy Program, which was adopted and is administered under the City's General Plan Policy L-10. Currently, and in the foreseeable future, the supplies of fruits and vegetables grown in California are abundant, and prices of these products have not increased at the same rate as other commodities dependent on land, such as apartments, homes, or offices. The City Council found as part of its previous approval of the Orange County Great Park project in May 2003 that "there is substantial evidence before the City that the wholesale and retail market for agricultural products is a strong and dynamic market, which functions well in delivering agricultural products to consumers without shortages and with reasonable prices."

As a result, no new significant impacts to agricultural resources are anticipated due to the proposed General Plan Amendment since loss of agricultural land has been adequately mitigated through City of Irvine General Plan Objective L-10 and establishment of the Irvine Agricultural Legacy Program.

The OCGP Overlay Plan designates PAZ 1 as Lifelong Learning District (LLD), which allows for a mix of residential, commercial, and educational uses that would promote a synergistic live/learn/work/play environment. Therefore, deletion of 173-acres of Exclusive Agriculture would not conflict with the LLD designation. Additionally, there are no Williamson Act contracts within Planning Area 51.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance that was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance that was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; 1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or 2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures

4. Discussion of Checklist and Mitigation Measures

or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant agricultural effects identified in and considered by the certified OCGP FEIR.

4.2.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Mitigation measures AG1 through AG3 would be implemented in conjunction with master plan review and subsequent development permits. The project would neither change these mitigation measures nor their application to future development projects.

- AG1 In order to encourage agriculture as an interim land use pending development on the project site by warning future residents that they are buying or renting a house adjacent to existing agricultural operators, City of Irvine Standard Discretionary Case Condition B.4 and City of Irvine Subdivision Condition 3.4 regarding disclosure statements shall be amended to include the following for subdivisions proposed adjacent to existing agricultural operations:

Prior to issuance of building permits, the applicant shall submit, and the Director of Community Development shall have approved, a completed occupancy disclosure form for the project. The approved disclosure form, along with its attachments, shall be included as part of the rental/lease agreement and as part of the sales literature for the project. The disclosure statement shall include the following information:

- Continuation of agricultural operations adjacent to the site and their potential effects (spraying of pesticides, noise, dust, odor, etc.) on future residents or tenants.

- AG2 Heritage and community service/educational farming operations shall be encouraged within utility easements and other lands. Heritage farming is defined as small-scale specialty farming operations that can be accommodated in an urban environment. An example would be the Edible Landscape project located adjacent to Harvard Avenue within the Edison right-of-way.

- AG3 Future landowners and the City shall work cooperatively with farmers to minimize conflicts between agricultural operation and adjacent urban uses.

4.3 AIR QUALITY

4.3.1 Environmental Setting

The OCGP FEIR described the existing air quality regarding the following regulated pollutants: ozone (O₃), carbon monoxide (CO), suspended particulate matter (PM₁₀), nitrogen oxides (NO_x), sulfur dioxide (SO₂), lead (Pb), volatile organic compounds (VOC), and reactive organic gases (ROG). The South Coast Air Basin (SCAB) is described as a non-attainment area for O₃, CO, and PM₁₀; annual maximum concentrations of O₃, CO, PM₁₀, and SO₂ exceeded both federal and state standards in some or all areas in the SCAB during the reporting period (2000). In contrast, standards for nitrogen dioxide (NO₂), SO₂, and Pb were not exceeded during the reporting period. The OCGP FEIR also noted the pending promulgation by the U.S. Environmental Protection Agency (EPA) and California Air Resources Board of standards for PM_{2.5} (particulate matter less than 2.5 microns in diameter). The standards are provided in Table 4-1 (Federal and State Standards for PM_{2.5}) below.

4. Discussion of Checklist and Mitigation Measures

Table 4-1
Federal and State Standards^a for PM_{2.5}

<i>Averaging Time</i>	<i>Federal Standards</i>	<i>California Standards^b</i>
Annual Arithmetic Mean	15 µg/m ³	12 µg/m ³
24-Hour	65 µg/m ³	No Separate Standard

Sources:

a www.epa.gov/pmdesignations/state/California.htm [June 5, 2006].

b 17 CFR §70200, Table of Standards.

The California Air Resources Board adopted the annual standard identified above but has postponed establishing a 24-hour standard for PM_{2.5}. EPA has identified several counties, including Orange County, as PM_{2.5} non-attainment areas. EPA is in the process of responding to comments on related regulations. At the local level, the South Coast Air Quality Management District (SCAQMD) is in the process of developing a methodology for calculating PM_{2.5} and PM_{2.5} significance thresholds for the purpose of analyzing local and regional air quality impacts in CEQA documents. A draft communication issued in May 2006 by the SCAQMD to its working group indicated that the methodology for calculating PM₁₀ could also be used to calculate PM_{2.5}.

4.3.2 Impacts Identified in the OCGP FEIR and Addenda

Operations Phase

Among the various sources of a project's operations-phase emissions, those attributable to mobile sources (i.e. vehicular traffic) comprise the largest proportion by far and is a function of both the number and trip length characteristics of vehicle trips directly and indirectly associated with the project under consideration. As discussed in preceding Section 4.3.1, OCGP FEIR estimates of the daily mobile source emission volumes attributable to OCGP project implementation, were based on traffic volumes and average trip lengths associated with build out of the overall OCGP project pursuant to adopted Overlay Plan development parameters. The development parameters for the OCGP project as a whole under the Overlay Plan were provided in OCGP FEIR Table 3-4 beginning at Page 3-12.

In the foregoing regard, Table 2-1, in Section 2.3.1 of Addendum No. 4, OCGP FEIR, identifies the General Plan land use designations, Zoning Districts, attendant Planning Area Zones and acreages, allowable land uses, and the types and quantities of development solely within the OCGP Master Plan portion of the overall OCGP project and is based exclusively on data provided in the aforementioned OCGP FEIR Table 3-4. It is noted that they have remained essentially unchanged since the OCGP Final Program EIR was certified in 2003. Furthermore, a review of the current OCGP Master Plan proposal indicates that all of the land use types and building intensities exhibited are within the scope of the development parameters identified in the subject table.

As a consequence, since future development the OCGP Master Plan portion of the overall OCGP project is consistent with the development parameters that served as the basis for determining the operations phase-related mobile source emissions provided in the OCGP FEIR, the results of the operations phase-related emissions provided in the OCGP FEIR adequately characterize the potential air quality effects of the project and further analysis is neither warranted nor required.

4. Discussion of Checklist and Mitigation Measures

Construction Phase

With regard to OCGP Master Plan construction, more precise and refined information regarding earth movement quantities, locations and anticipated demolition activities and timeframes than what was known and analyzed in the July 2003 OCGP FEIR has become available. As a consequence, PCR Services Corporation prepared a report in which they conducted an analysis to determine whether the projected emissions associated with the more recent, precise and refined information regarding OCGP Master Plan earthmoving activities would be consistent with the emissions inventory assumed in the certified OCGP FEIR and within the envelope of the original air quality impact analysis. The subject report is available for review in Appendix C of Addendum No. 4, OCGP FEIR. The following assumptions regarding OCGP Master Plan area grading (excluding the Agua Chinon and Wildlife Corridor) were provided by Duke Dunn with Gafcon Inc. and employed in the analysis:

- Earthmoving activities to total 13.23 million cubic yards
- Earthmoving activities to start in 2008
- Equipment Mix - 12 scrapers, 3 slope cats, 2 compactors, 1 motor grader, 2 rubber tire dozer, and 2 other pieces of equipment (e.g., water trucks)

The analysis was conducted using SCAQMD's recommended CEQA emissions inventory model URBEMIS. A new version of URBEMIS (URBEMIS 2007 Version 9.2) was released in June 2007 and was used in this analysis in accordance with SCAQMD's most recent recommendations for preparation of air quality analyses. The new version of URBEMIS is considered a major overhaul to URBEMIS 2002. It incorporates the current version of California Air Resources Board's OFFROAD model (OFFROAD 2007) construction equipment emission factors and reflects a better estimate of the population, activity, and emissions estimate of the varied types of off-road equipment. The emissions estimates from the proposed grading equipment mix are provided in Table 4-2 (*Comparison of Daily Construction Emissions for OCGP Construction Activities*).

Table 4-2
Comparison of Daily Construction Emissions for OCGP Construction Activities

<i>Emissions Inventory</i>	<i>Emission Totals, lbs./day [tons per day]</i>				
	<i>CO</i>	<i>NO_x</i>	<i>PM₁₀</i>	<i>VOC</i>	<i>SO_x</i>
Certified EIR	280	840	1440	4660 ^c	40
OCGP Site Grading ^a	174	343	663	37	<1
SCAQMD Significance Threshold ^b	550	100	150	75	150
Over (Under)	(376)	243	513	(38)	(149)
Significant for Certified FEIR?	No	Yes	Yes	Yes	No
Significant for OCGP Equipment Mix?	No	Yes	Yes	No	No

Source: PCR Services Corporation 2007.

^a Compiled using the URBEMIS 2007 emissions inventory model and EPA AP-42 emission factors for PM₁₀.

^b The FEIR misstated the CEQA Significant Thresholds on Tables 5.3-12 and 5.3-13 for VOC and NO_x as 0.03 tpd, which are the correct thresholds for those pollutants during the operational phase of a project. The significance determinations in the FEIR were correctly assessed.

^c VOC emissions presented in the Certified EIR are for application of architectural coatings. VOC emissions for site grading would result in a slight decrease based on the other pollutant trends.

4. Discussion of Checklist and Mitigation Measures

As shown in Table 4-2 above, the OCGP equipment mix results in an overall decrease in daily emissions associated with equipment exhaust and fugitive dust PM₁₀, as compared to those levels estimated for the FEIR. The equipment mix identified above could complete the grading associated with the Upper Canyon, Lake, and remaining components of the OCGP Master Plan within 10 months, which is well within the assumptions contained in the OCGP FEIR. No new significant impacts and no substantial increase in the severity of previously identified impacts would occur as a result of implementation of the OCGP equipment mix. This addendum does not address other construction activities, such as painting and paving, which resulted in the VOC emissions reported previously in the OCGP FEIR.

Concurrent Grading and Demolition Activities

The site grading and demolition will most likely occur in a phased approach, over the course of numerous years. PCR also conducted an analysis to determine whether the construction emissions inventory for a maximum plausible worst case day (consisting of concurrent grading of the OCGP Master Plan along with site grading activities for Heritage Fields, the Agua Chionon, and the wildlife corridor and runway demolition activities) is consistent with the emissions inventory presented in the certified FEIR and is within the envelope of the original air quality impact assessment.

Assumptions were developed and refined consistent with the requirements for the proposed demolition and grading activities. A total of 31.2 million cubic feet of concrete and asphalt would be generated from removal of the runways with an average daily amount of 20,000 cubic feet. The equipment mix would be comprised of: (Source: Duke Dunn with Gafcon Incorporated)

- 4 off-highway trucks, 1 excavator, 1 motor grader, 1 water truck, 1 rubber tired dozer, 2 rubber tired loaders, 2 portable concrete crushing plants, and 2 other pieces of equipment.

The equipment mix and grading assumptions for Heritage Fields (including the wildlife corridor and Agua Chionon) were based on information provided in Addendum No. 3 to the OCGP FEIR (SCH #2002101020). Heritage Fields would require a total of 7.1 million cubic yard (maximum daily 47,000 cubic yards) of earth moving activities. The equipment mix would be comprised of:

- 10 scrapers, 4 compactors, 6 rubber tire dozers, 1 tractor /loader/backhoe, and 3 other pieces of equipment (e.g., water trucks).

The equipment mix and grading assumptions for the OCGP Master Plan that could occur concurrent with demolition activities and grading of Heritage Fields are provided above. The analysis was conducted using SCAQMD's recommended CEQA emissions inventory model URBEMIS 2007 Version 9.2. The emission inventory prepared for Addendum No. 3 used the previous version of URBEMIS (URBEMIS 2002) and was therefore updated using URBEMIS 2007. As discussed above, the new version of URBEMIS is considered a major overhaul to URBEMIS 2002. The details of these calculations are shown in the attachments to this technical memorandum. The emissions from the concurrent construction activities are provided in Table 4-3 (*Comparison of Daily Construction Emissions for Concurrent OCGP Construction Activities*).

As shown, concurrent grading and demolition activities results in a slight decrease in equipment exhaust emissions and fugitive dust PM₁₀ emissions, as compared to those levels estimated for the FEIR. While CO emissions show an increase, it is a function of updated emission factors in the current version of URBEMIS2007 and not a substantial change in the construction intensity. Regardless, CO emissions are less than the SCAQMD significance threshold and no new significant impacts and no substantial increase in the severity of previously identified impacts would occur as a result of concurrent construction activities. It should be noted that these emission estimates do not address other construction activities, such as painting and paving, which resulted in the VOC emissions reported previously in the FEIR.

4. Discussion of Checklist and Mitigation Measures

Table 4-3
Comparison of Daily Construction Emissions for Concurrent OCGP Construction Activities

^c VOC emissions presented in the Certified EIR are for application of architectural coatings. VOC emissions for site grading would result in a slight decrease based on the other pollutant trends.

4.3.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Regional Construction Impacts

Construction activities associated with the proposed project would have a short-term impact on air quality. While the proposed project would involve relocating the Bake Parkway/Marine Way intersection, construction emissions associated with the original roadway alignment were included in the OCGP FEIR. Other changes proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity of the Overlay Plan in a manner that would result in an increase in construction emissions. In addition, the analytical assumptions concerning construction, development phasing, and operations of the adopted Overlay Plan remain appropriate for the project (OCGP FEIR Table 5.3-14). Consequently, the project would not increase the maximum daily air pollutant emissions generated during construction and demolition activities. The OCGP FEIR concluded that air pollutant emissions associated with construction and demolition activities of the Overlay Plan were considered a Significant Unavoidable Adverse Impact. As part of the certification of the OCGP FEIR, Findings of Fact and a Statement of Overriding Considerations were adopted for unmitigatable environmental effects, including air quality. Therefore, the construction air emissions associated with this component of the project are anticipated to be less than those addressed in the OCGP FEIR and would not result in any new significant impacts that were not previously anticipated.

Regional Operational Impacts

Relocation of the Bake Parkway/Marine Way intersection would not result in land use changes that would increase project-related stationary or mobile sources of air pollution generated by the project. Other changes

4. Discussion of Checklist and Mitigation Measures

proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity of the Overlay Plan or increase project-generated trips. Consequently, the project would not increase the maximum daily air pollutant emissions generated during operational activities. The OCGP FEIR concluded that air pollutant emissions associated with operational activities of the Overlay Plan were considered a Significant Unavoidable Adverse Impact. As part of the certification of the OCGP FEIR for OCGP, Findings of Fact and a Statement of Overriding Considerations were adopted for unmitigatable environmental effects, including air quality. Therefore, the operational air emissions associated with this component of the project are anticipated to be less than those addressed in the OCGP FEIR and would not result in any new significant impacts that were not previously anticipated.

Consistency Determination with the Air Quality Management Plan

The OCGP FEIR included a consistency evaluation with the SCAQMD's Air Quality Management Plan (AQMP). The consistency evaluation concluded development of the adopted Overlay Plan would have a negligible impact on the overall air quality within the SoCAB. The project would not result in new activities or new land uses that would change the consistency evaluation in the OCGP FEIR.

Localized Construction Impacts

As stated previously, the project would not increase the maximum daily air pollutant emissions generated during construction activities. However, the OCGP FEIR identified significant localized air quality impacts associated with construction of the adopted Overlay Plan based on the extent and schedule of construction activities, primarily from particulate matter (PM_{10} and $PM_{2.5}$) emissions associated with fugitive dust. The OCGP FEIR concluded that air pollutant emissions associated with construction activities of the Overlay Plan were considered a Significant Unavoidable Adverse Impact. As part of the certification of the OCGP FEIR for OCGP, Findings of Fact and a Statement of Overriding Considerations were adopted for unmitigatable environmental effects, including air quality. Therefore, the construction air emissions associated with this component of the project are anticipated to be less than those addressed in the OCGP FEIR and would not result in any new significant impacts which were not previously anticipated.

Localized Operational Impacts

The OCGP FEIR did not identify significant localized air quality impacts associated with operation of the adopted Overlay Plan for either mobile sources or stationary sources. Because the project would not result in an increase in the number of units or permitted square footage of buildings on-site, the project would not increase the concentrations of stationary-source air pollutant emissions generated during operational activities.

However, relocation of the Bake Parkway/Marine Way intersection would redistribute traffic on the local roadway network with the Overlay Plan. Because traffic congestion is highest at intersections where vehicles queue and are subject to reduced speeds, these hot spots are typically produced at intersection locations. Typically for an intersection to exhibit a significant CO concentration, it would operate at level of service (LOS) E or worse. As discussed in section 3.15, *Transportation/Traffic*, with improvements, the proposed project would not cause any intersection to operate at a LOS E or F. Furthermore, the source receptor area for which the project is located has not had an exceedance of the ambient air quality standards for CO for at least five years and due to the very low ambient concentrations of CO, project related trips would not be able to cause an exceedance of the CO standard. As such, the project would not expose sensitive receptors to substantial pollutant concentrations.

4. Discussion of Checklist and Mitigation Measures

Odors

The OCGP FEIR identified that development of the adopted Overlay Plan would not handle large amounts of solid waste, chemicals associated with heavy industry, or other uses that would generate objectionable odor and no significant impacts would occur. The project would not result in new activities or new land uses that would change the odor evaluation in the OCGP FEIR.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, that was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project would have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, that was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; 1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or 2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant air quality effects identified in and considered by the certified OCGP FEIR.

4.3.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified mitigation measures AQ1 through AQ5, which reduce the air quality effects of construction and operations of development under the adopted Plan. However, as noted above, the OCGP FEIR found that short-term and long-term air quality impacts would remain significant and unavoidable. The measures are applicable to future development under the project.

- | | |
|-----|--|
| AQ1 | Prior to the start of demolition and construction within the project area, adjacent sensitive receptors shall be informed of the planned demolition and construction activities. Measures to avoid significantly impacting these receptors shall be developed and implemented by the project proponent in coordination with these uses. Other applicable mitigation measures such as erection of fences around construction areas; staggered use of equipment near sensitive receptors; diversion of truck trips away from receptors; etc.; shall be employed as |
|-----|--|

4. Discussion of Checklist and Mitigation Measures

necessary. Compliance with this measure shall be verified by the Director of Community Development.

AQ2 Prior to the commencement of construction activities required to demolish and/or remove existing DON structures, including runways, the Director of Community Development shall receive and approve a construction emissions mitigation plan from the chosen demolition contractor. Prior to the issuance of grading permits, the applicant of any future development project shall submit, and the Director of Community Development shall approve a construction emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.

- Evaluate the availability and use, if available, of low-emission (i.e., methanol- or natural gas-powered) construction equipment instead of diesel for each construction phase.
- Water exposed soils at least twice daily and maintain equipment and vehicle engines in good condition and in proper tune.
- Wash off trucks leaving the site.
- Replace ground cover on construction sites when it is determined that the site will be undisturbed for lengthy periods.
- Reduce speeds on unpaved roads to less than 15 miles per hour.
- Halt all grading and excavation operations when wind speeds exceed 25 miles per hour.
- Suspend all emission generating activities during smog alerts.
- Use propane- or butane-powered on-site mobile equipment instead of diesel/gasoline, whenever feasible.
- Properly maintain diesel-powered on-site mobile equipment.
- Sweep streets at the end of the day if substantial visible soil material is carried over to the adjacent streets.
- Use electricity from power poles rather than temporary on-site diesel- or gasoline-powered generators, whenever feasible.
- Use of low-VOC asphalt.
- Cover all trucks hauling dirt, sand, soil or other loose material to and from the site.
- Provide temporary traffic controls (e.g., flag persons) during all phases of construction to ensure minimum disruption of traffic.
- Schedule construction activities that affect traffic flow on adjoining streets to off-peak hours to the extent possible.
- Reroute construction trucks away from congested streets, whenever feasible.
- Provide dedicated turn lanes for movement of construction trucks and equipment on- and off-site, whenever feasible.

4. Discussion of Checklist and Mitigation Measures

- AQ3 Prior to the issuance of building permits for any future development, the applicant shall submit, and Director of Community Development shall have approved, an operation-emissions mitigation plan. The plan shall identify implementation procedures for each of the following emissions reduction measures and all feasible mitigation measures shall be implemented. If certain measures are determined infeasible, an explanation thereof shall be provided.
- Utilize built-in energy-efficient appliances to reduce energy consumption and emissions.
 - Utilize energy-efficient and automated controls for air conditioners and lighting to reduce electricity consumption and associated emissions.
 - Install special sunlight-filtering window coatings or double-paned windows to reduce thermal loss, whenever feasible.
 - Utilize light-colored roofing materials as opposed to dark roofing materials to conserve electrical energy for air-conditioning.
 - Provide shade trees in residential subdivisions as well as public areas, including parks, to reduce building heating and cooling needs, whenever feasible.
 - Ensure that whenever feasible, commercial truck traffic is diverted from local roadways to off-peak periods.
 - Centralize space heating and cooling for multiple-family dwelling units and commercial space.
 - Orient buildings north/south for reducing energy-related combustion emissions.
 - Use solar energy, when feasible.
 - Use high rating insulation in walls and ceilings.
- AQ4 At the time of residential and commercial lease and sales agreements, future sales information on available housing and employment opportunities within the project area shall be provided to employees and residents of the project area, so as to encourage employees to live within the residential developments planned on-site and future residents to find employment nearby.
- AQ5 At the time of residential and commercial lease and sales agreements, the applicant shall demonstrate to the satisfaction of the Director of Community Development that future employment generating nonresidential development shall include measures to reduce vehicle trips including: the promotion of carpool incentives and alternative work schedules, easy access to public transit systems, trail linkages between uses, low emissions vehicles fleets, and the provision of on-site facilities such as banking and food courts, and bicycle parking facilities, and other transportation demand management measures, as deemed appropriate.

4. Discussion of Checklist and Mitigation Measures

4.4 BIOLOGICAL RESOURCES

4.4.1 Environmental Setting

The OCGP FEIR described the biological resources within Planning Areas 30 and 51, including a 995-acre parcel of land in the easternmost portion of Planning Area 51 retained in federal ownership and designated as both "habitat reserve" and a part of the Orange County Central-Coastal Sub-region Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP). The areas outside the habitat reserve were described as: 1) providing minimal native or undisturbed habitat, and, 2) consisting of agricultural, ornamental, and domestic landscapes.

The OCGP FEIR identified nine vegetative communities within the project site, including Venturan-Diegan sage scrub, southern cactus scrub, chaparral, woodland, riparian scrub, grassland, open water, agriculture, and predominately disturbed or developed areas. Several sensitive plant species and a large number of mature trees also were identified as potentially occurring within the project site. The sensitive plant species potentially occurring in Planning Areas 30 and 51 include the southern tarplant, Palmer's grapplehook, many-stemmed dudleya, Coulter's Matilija poppy, Catalina mariposa lily, and intermediate mariposa lily. The OCGP FEIR also noted the Coulter's saltbush, Laguna Beach dudleya, San Fernando Valley spineflower, and the Lewis's evening-primrose as having a moderate potential for occurrence. Species with a low potential for occurrence include the Los Angeles sunflower, south coast saltscale, Santa Monica Mountains dudleya, heart-leaved pitcher sage, coast wooly-heads, slender-horned spineflower, Santa Barbara morning glory, tecate cypress, and salt spring checkerbloom.

The OCGP FEIR documented an observation made of one sensitive wildlife species, a burrowing owl. This individual, observed during the conductance of protocol focus studies for a nearby development proposal, was outside the habitat reserve at the southwest end of Planning Areas 30 and 51 along Serrano Creek. Forty other sensitive wildlife species or species of local concern were identified as having a potential to occur on the site.

The OCGP FEIR also describes the Wildlife Corridor Concept Plan that would be incorporated into the eastern portion of the project site (Refer to pp. 5.9-9 through 5.9-14 of the OCGP FEIR) and explains the guidelines pursuant to which the ultimate corridor will be designed and constructed. The subject guidelines are primarily concerned with the creation and re-vegetation of wildlife habitats that would flourish in the proposed areas and serve as protective cover for target wildlife species that will presumably utilize the proposed corridor. A preliminary design concept for the creation and/or re-vegetation of the proposed route has also been prepared which is consistent with the guidelines described below (Draft Irvine Wildlife Corridor Master Plan, November 2002). The draft recommends a series of actions to improve the environmental quality for wildlife:

- Creation (establishes historical ecosystems on lands that did not previously support that ecosystem or on severely altered sites)
- Revegetation
- Reduce the amount of noise pollution and urban influence.
- Remove and restore the unnecessary developed (paved) areas within the corridor right-of-way.
- Create a protective habitat along the entire length of the corridor.
- Apply minimum height/width requirements based on the specific wildlife species.

OCGP FEIR Mitigation Measure BIO3, which continues to apply to this addendum, ensures that the City of Irvine will continue to work with State and federal agencies to implement the revegetation/restoration plan necessary to create a viable wildlife corridor within the project area. The City has already engaged in this

4. Discussion of Checklist and Mitigation Measures

process as is demonstrated through the preparation of the Draft Irvine Wildlife Corridor Master Plan, which is independent of this project.

4.4.2 Impacts Identified in the OCGP FEIR and Addenda

The OCGP FEIR concluded that implementation of the overall project could result in the occurrence of the following potentially significant effects:

- The southern tarplant, a federal species of concern, might be adversely affected by project development.
- Although very limited in aerial extent and highly disturbed wetland, there exist isolated riparian habitat remnants that could be adversely impacted by project implementation.

The project site contains a large number of trees, many of which are mature, representing a wide range of species. Project implementation may result in damage and destruction of the trees. A significant impact related to conflicts with the City's Urban Forestry Ordinance could occur.

4.4.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Bake Parkway/Marine Way Relocation

Although Marine Way traverses the proposed Irvine Wildlife Corridor, the wildlife corridor will continue to be designed to avoid potential conflicts with the roadways (e.g., it will be below the grade of Marine Way and will incorporate conservation zones and setbacks), consistent with the alignment analyzed in the OCGP FEIR. The conclusions drawn in the OCGP FEIR adequately describe the environmental effects of the project relative to biological resources, as well as the severity of the impacts.

Reduction of Required Golf Course Holes

PAZ 18 is to the north of the proposed Irvine Wildlife Corridor. The OCGP FEIR analyzed the development of a 45-hole golf course, 250 residential units, and a 25,000 square foot club house in PAZ 18. The reduction of the golf course requirement by 27 holes would not permit any new residences or other changes to approved densities. Any development within PAZ 18 would continue to be subject special regulations designed to limit the urban influence on the proposed Irvine Wildlife Corridor, such as Encroachment Zone development regulations, 500 foot setbacks from the centerline of the core conservation zone, and sight and sound barriers along the urban edge, where applicable. Therefore, there would not be any new impacts to any biological resources beyond those evaluated in the OCGP FEIR.

Reduction in Agricultural Acreage

The agricultural fields serve as low to moderate quality raptor foraging habitat (depending of the type of crop planted). Due to the proximity of the project site to the large amount of additional raptor forging grounds, including agricultural fields, open space, and the 39,000 acre NCCP habitat reserve, impacts to raptor forging habitat are considered less than significant. No wildlife corridors currently exist within the project area. The currently proposed removal of the requirement to include 173 acres of agricultural use does not affect the development of the Irvine Wildlife Corridor. In addition, changes to the agricultural preserve do not permit any changes to the approved land use intensities; therefore, the conclusions drawn in the OCGP FEIR

4. Discussion of Checklist and Mitigation Measures

adequately describe the environmental effects of the project relative to biological resources, as well as the severity of the impacts.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance that was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project would have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance that was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that 1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or 2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant biological effects identified in and considered by the certified OCGP FEIR.

4.4.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Mitigation measures BIO1 through BIO4 would be implemented in conjunction with master plan review and subsequent development permits. The project would neither change these mitigation measures nor their application to future development projects.

- BIO1 Prior to approval of a subdivision map for each project area, a focused survey for the southern tarplant, mountain plover, and burrowing owl shall be conducted. Prior to approval of a subdivision map for development within or in proximity to Serrano Creek, a focused survey shall be conducted for the least Bell's vireo and southwestern willow flycatcher. Should the focused survey identify a significant population of southern tarplant or mountain plover, or the presence of burrowing owl, least Bell's vireo, or southwestern willow flycatcher in an area proposed for development, impacts shall be avoided through incorporation of the species into an open space easement, or if impacts cannot be avoided, then mitigation shall be negotiated through consultation with the United States Fish and Wildlife Service (USFWS) and the California Department of Fish and Game (CDFG).

4. Discussion of Checklist and Mitigation Measures

- BIO2 Prior to approval of a subdivision map for each project area, a wetland delineation shall be performed for all areas within the master plan sub-area that contain the potential for wetland habitat and/or jurisdictional waters. The loss of impacted wetlands shall be mitigated through the implementation of a wetland mitigation plan prepared and accepted by the appropriate agency (i.e., U.S. Army Corps of Engineers, U.S. Fish and Wildlife Service, California Department of Fish and Game). Wetlands impacted on-site shall be mitigated through on-site or off-site replacement, recreation (i.e., within the proposed wildlife corridor), and/or re-vegetation as deemed acceptable by the appropriate jurisdictional agencies.
- BIO3 The City shall continue to work with State and federal agencies during the implementation of the proposed project to implement the revegetation/restoration plan for the wildlife corridor. Measures such as sight and sound barriers, including artificial sound walls and natural diversions (e.g., hedges and tree lines) shall be incorporated into corridor design to ensure the viability of the corridor. The City shall implement the corridor consistent with the design criteria and viability analysis established in the OCGP FEIR.
- BIO4 Prior to issuance of a grading permit for each project area, a complete inventory of all trees of trunk diameter at breast height (DBH) greater than six inches and any significant (as determined by a certified arborist selected by the City) plants on the project site, excluding those within the habitat preserve shall be prepared. This inventory shall be prepared by an arborist certified by the International Society of Arboriculture and shall include (but not be limited to) data for each tree such as species, variety, DBH, condition (excellent, good, fair, poor, dead), and any recommendations. All trees in this inventory shall be considered "Significant Trees" under the City of Irvine's Urban Forestry Ordinance (UFO) (Sections 5-7-401 et al.) and the UFO shall apply to all trees included in this inventory.

4.5 CULTURAL RESOURCES

4.5.1 Environmental Setting

Cultural Resources

The discussion of cultural resources includes archaeological and historical resources. The OCGP FEIR presents information pertaining to the regional setting of former MCAS El Toro from both a prehistoric and historic perspective. The OCGP FEIR reported the presence of ten prehistoric archaeological sites and eight isolated prehistoric artifacts that have been recorded in the northeastern habitat preserve portions of PA 51. These sites are generally on the ridges between Borrego Canyon Wash and the Agua Chino Wash.

The former MCAS El Toro was surveyed to determine whether any of the structures would be eligible for the National Register. Generally, a structure that has achieved significance in the past 50 years is not considered eligible for the National Register unless it is of exceptional importance. The evaluation was expanded to include eligibility under the Legacy Cold War Project (Public Law No. 101-511, Section 8120). Portions of PAs 30 and 51 (the former MCAS El Toro) were established during WWII, and no structure earlier than this period is at the former MCAS El Toro. Therefore, the historical significance of any structures at the former military base would be as part of the Cold War Legacy. Surveys conducted by the US Army Corps of Engineers and the Department of the Navy in conjunction with the base's closure concluded there were no structures eligible for designation as Cold War Legacy or for inclusion in the National Register of Historic Places.

4. Discussion of Checklist and Mitigation Measures

Paleontological Resources

The OCGP FEIR reported that a majority of Planning Areas 30 and 51 is on the Tustin Plain, a coastal alluvial plain. Alluvium from the Late Pleistocene to Holocene Epochs (approximately 2 million to 11,000 years ago) immediately underlies the majority of the project area, including the part occupying the coastal plain and washes in the eastern portion of PA 51. The Pleistocene Alluvium formation is widespread and believed to extend to depths of 1,000 feet in PA 30. A significant deposit of Pleistocene terrestrial vertebrates was recovered during excavation of a flood control basin four miles from PA 30; thus, it is possible that similar beds underlie PA 30 (OCGP FEIR 5.10-2).

The eastern portion of PA 51 is in the western foothills of the northern Santa Ana Mountains. The hills and ridges in the eastern part of PA 51 are composed of older, underlying marine and nonmarine rock units of early Oligocene to late Pleistocene (23 million to 2 million years ago). In order of decreasing geologic age, these latter rock units include the undifferentiated Sespe and Vaqueros Formations, Topanga and Monterey Formations, Oso Member of the Capistrano Formation, Niguel Formation, and Nonmarine Terrace Deposits. Nonmarine Terrace Deposits also underlie the terraces at the south corner of PA 51. The northwestern corner of PA 51 contains a small portion of the Santa Ana Mountains foothills, which were separated from the main formation by erosion. This small portion is composed of undifferentiated late Cretaceous (135 million years ago) Marine Williams Formation. The rock units underlying portions of PA 51 have previously yielded important fossil remains at recorded fossil sites on and near the site. There are three recorded fossil sites in PA 51. These sites occur in undifferentiated Sespe and Vaqueros Formations and in the Topanga Formation. Fossil types include marine invertebrates and vertebrates, continental vertebrates, land plants, and land mammals. The three recorded fossil sites lie within the proposed habitat preserve portion of PA 51 (OCGP FEIR p. 5.10-1 and Table 5.10-1).

4.5.2 Impacts Identified in the OCGP FEIR and Addenda

Cultural Resources

The OCGP FEIR determined that development according to the adopted Overlay Plan would not cause a substantial adverse change in the significance of any historical structure. The consequence of grading activities associated with future development, however, could potentially result in a substantial adverse change in the significance of an archaeological resource. The OCGP FEIR also stated that grading activities could uncover previously unknown human remains, including those interred outside formal cemeteries.

Although the entire project area was the subject of previous cultural resources investigations as part of the Base Realignment and Closure process, it was later determined that an updated survey and report was necessary to supplement the previous work. PCR Services performed an additional Phase I and II cultural resources investigation, the results of which can be found in the *Cultural Resources Update and Review, Heritage Fields/The Great Park, City of Irvine, Orange County, California* report² dated September 2006.

Paleontological Resources

The OCGP FEIR stated that earthmoving operations associated with grading and trenching have the greatest potential to impact buried paleontological resources in the moderately to highly sensitive areas in the coastal plain and washes, northeastern, northwestern, and southern portions of Planning Area 51. The OCGP FEIR considered the potential impact associated with earthmoving operations as a significant impact for which mitigation was necessary.

² *Cultural Resources Update and Review...* report is available for review at the City of Irvine.

4. Discussion of Checklist and Mitigation Measures

4.5.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Cultural Resources

The majority of previously documented archeological resources in the project area are in the portion of Planning Area 51 designated as Habitat Reserve. The potential to encounter unknown archeological resources and unknown human remains was considered significant in the OCGP FEIR. The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity. Therefore, impacts to cultural resources remain the same. The mitigation measures related to cultural resources developed for the OCGP FEIR remain applicable to future development under the project.

Paleontological Resources

As described in the OCGP FEIR, earthmoving operations such as grading and trenching have the potential to significantly impact buried paleontological resources. The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity. Therefore, the impacts to paleontological resources remain the same. The paleontological mitigation measure developed for the OCGP FEIR remains applicable to future development under the project.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project would have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that: 1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or 2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would

4. Discussion of Checklist and Mitigation Measures

substantially reduce one or more of the significant cultural or paleontological effects identified in and considered by the certified OCGP FEIR.

4.5.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Cultural Resources

The OCGP FEIR identified mitigation measures CULT1 through CULT4 which, if fulfilled, would reduce the effects of development under the adopted Plan to a level less than significant. Measures CULT 1 through CULT 4 are applicable to future development under the project.

- CULT1 Prior to subdivision for development, a detailed archaeological report(s) shall be prepared within PAs 51 and 30. This report(s) shall specifically address the potential for encountering archaeological resources at the time specific development is proposed. The report(s) shall provide recommendations to prevent degradation of archaeological resources such as site avoidance and data recovery. Recommendations contained in the report shall be implemented. Compliance with this measure shall be verified by the Community Development Department.
- CULT2 Monitoring of excavation and grading activities associated with future development in PAs 51 and 30 shall be conducted by a certified archaeologist in accordance with the report required in Mitigation Measure CULT1. If resources are encountered in the course of ground disturbance, the archaeological monitor shall be empowered to halt grading and to initiate an archaeological testing program. The testing shall include recordation of artifacts, controlled removal of the materials, and an assessment of their importance under CEQA and the City's local guidelines. Compliance with this measure shall be verified by the Community Development Department.
- CULT3 Prior to the issuance of grading permits and/or building permits for any future development in PAs 51 and 30, a detailed mitigation program shall be submitted by the applicant to the City of Irvine to address archaeological resources discovered during grading. Provisions of the program shall include an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be a unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation shall be available. Work may continue on other parts of the construction site while archaeological resource mitigation takes place. The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project includes potentially significant archaeological sites. These include retaining a qualified archaeologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process. Compliance with this measure shall be verified by the Community Development Department.
- CULT4 Prior to the issuance of any grading and/or building permits, a mitigation program shall be submitted by the developer to the City of Irvine to address the accidental discovery of recognition of any human remains. The program shall include the following:

There shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent human remains until:

4. Discussion of Checklist and Mitigation Measures

- The county coroner must be contacted to determine that no investigation of the cause of death is required, and

If the coroner determines the remains to be Native American:

- The coroner shall contact the Native American Heritage Commission within 24 hours.
- The Native American Heritage Commission shall identify the person or persons it believes to be the most likely descended from the deceased Native American.
- The most likely descendent may make recommendations to the landowner or the person responsible for the excavation work, for the means of treating or disposing of, with appropriated dignity, the human remains and any associated grave goods as provided in Public Resources Code Section 5097.98, or
- Where the following conditions occur, the landowner or his authorized representative shall rebury the Native American human remains and associated grave goods with appropriate dignity on the property in a location not subject to further subsurface disturbance.
 - The Native American heritage Commission is unable to identify a most likely descendent or the most likely descendent failed to make a recommendation within 24 hours after being notified by the commission.
 - The descendant identified fails to make a recommendation; or
 - The landowner or his authorized representative rejects the recommendation of the descendant, and the mediation by the Native American Heritage commission fails to provide measures acceptable to the landowner.

Compliance with this measure shall be verified by the Community Development Department.

Paleontological Resources

The OCGP FEIR identified mitigation measure P1, which, if fulfilled, would reduce the effects of development under the adopted Overlay Plan to a level less than significant. Measure P1 is applicable to future development under the project.

- P1 Prior to issuance of a grading permit for any portion of the project area, a qualified paleontologist shall be retained by the City or designee to carry out an appropriate paleontology investigation of the area proposed for grading. (A qualified paleontologist is defined as an individual with an M.S. or Ph.D. in paleontology or geology who is familiar with paleontological procedures and techniques.) The City of Irvine has standard conditions applied prior to the issuance of grading permits when a project site includes potentially significant paleontological sites, and paleontological monitoring conditions have not been attached to the previous map approval. These standard conditions include retaining a qualified paleontologist, establishing procedures for cultural and scientific resource surveillance, and protection of any resources discovered during the grading process.

When fossils are discovered, the paleontologist (or paleontological monitor) shall recover them. In most cases, this fossil salvage can be completed in a short period of time. However, some fossil specimens (such as a complete large mammal skeleton) may require an extended salvage period. In these instances the paleontologist (or paleontological

4. Discussion of Checklist and Mitigation Measures

monitor) shall be allowed to temporarily direct, divert or halt grading to allow recovery of fossil remains in a timely manner. Because of the potential for the recovery of small fossil remains, such as isolated mammal teeth, it may be necessary in certain instances to set up a screening-washing operation on-site.

Fossil remains collected during the monitoring and salvage portion of the mitigation program shall be cleaned, repaired, sorted, and cataloged. Compliance with this measure shall be verified by the Community Development Department.

4.5.5 GEOLOGY AND SOILS

4.5.6 Environmental Setting

The OCGP FEIR describes the topography of the project site as nearly flat and gently sloping down to the west to southwest with elevations ranging from 450 feet above mean sea level (msl) to 200 feet above msl. Planning Area 30 is at the southeast margin of the Tustin plain with elevations ranging from about 260 to 300 feet above msl. Planning Area 51 includes some slopes of the Santa Ana foothills which each elevations of about 750 feet above msl. Alluvial soils of six major soil associations consisting predominantly of varying sands, silts, and clayey silty sands are present within PA 51. Soils underlying PA 30 contain clayey loam alluvial material, terrace deposits, and old and unconsolidated recent alluvium of the Myford and Sorrento series.

The OCGP FEIR identified the primary potential seismic hazard in the area as ground motion. Seismic Response Areas (SRA) designations are used by the City to assess the geologic and seismic risk associated with potential development. All of PA 30 and a majority of PA 51 are within SRA-2 (denser soils/deeper groundwater) and are considered suitable for development. The planned development area of PA 51 situated north of Irvine Boulevard is designated SRA-3 (alluvium/shallow bedrock) and also susceptible to ground motion.

No known active faults crossing or projecting into the project area were identified; however, the project site is within the seismically active southern California region and there are two active faults—Whittier-Elsinore Fault and Newport-Inglewood Fault—within 14 miles of the site.

4.5.7 Impacts Identified in the OCGP FEIR and Addenda

The OCGP FEIR disclosed the potential for future development of the project area to result in the exposure of people or structures to strong ground shaking in the event of a major earthquake along any one of the active faults in the region. The OCGP FEIR noted that new construction would be required to adhere to current seismic safety building codes which address seismic concerns. Existing buildings within current Planning Area 51 do not meet current seismic codes; therefore, the temporary or permanent reuse of the existing buildings and the associated exposure of people or structures to potential substantial adverse effects due to strong seismic-related ground shaking were considered significant impacts.

Because of the documented landslides in the northeastern Santa Ana foothills area of the Site, the OCGP FEIR analysis concluded that the project would result in a significant impact associated with landslides in the affected area of Planning Area 51 east of Irvine Boulevard, where future development of habitable structures could occur under the adopted Overlay Plan. The OCGP FEIR also concluded future development has the potential to result in soil erosion or the loss of topsoils and risk to life and property with the presence of expansive soils, and that these impacts are considered significant. The project includes the same land uses and development areas as the adopted Overlay Plan; therefore the conclusions drawn in the OCGP FEIR

4. Discussion of Checklist and Mitigation Measures

adequately describe the environmental effects of the project relative to soils, geologic hazards, and seismic safety, as well as the severity of the impacts.

4.5.8 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The project occurs within the same development envelope as the OCGP FEIR and does not provide additional development intensity. Impacts related to seismic hazards, landslides, expansive soils, and loss of topsoil or soil erosion are not intensified by the proposed project. As a result, the conclusions drawn in the OCGP FEIR adequately describe the environmental effects of the project relative to soils, geologic hazards, and seismic safety, as well as the severity of the impacts.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant geological effects identified in and considered by the certified OCGP FEIR.

4.5.9 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified four mitigation measures to reduce the effects of the adopted Overlay Plan on soils, geologic hazards and seismic safety. All of the mitigation measures are applicable to implementation of the project and would be carried forward to future development of the project site. Implementation of measures GS1 through GS4 (listed below) would reduce Project impacts to a level less than significant.

4. Discussion of Checklist and Mitigation Measures

GS1 Prior to issuance of a building permit, the City of Irvine shall require that all development be designed in accordance with the seismic design provisions outlined in future proposed development geotechnical reports and specified in the latest Building Codes adopted by the City of Irvine. Compliance with this measure shall be verified by the Community Development Department.

GS2 Prior to issuance of a building permit, as per existing City policies, geotechnical studies shall be prepared at the time specific development projects are proposed to address site specific geotechnical considerations. The scope of each geotechnical study is based on the underlying geotechnical conditions of the individual site. These reports will provide measures to prevent settlement.

1. Prior to design and construction of any future developments within the project area, a comprehensive geotechnical evaluation, including development-specific subsurface exploration and laboratory testing, shall be conducted. The purpose of the subsurface evaluation is to:
 - a. Further evaluate the subsurface conditions in the area of the proposed structures.
 - b. Provide specific data on potential geologic and geotechnical hazards.
 - c. Provide information pertaining to the engineering characteristics of earth materials in the project area.

From this data, recommendations for grading/earthwork, surface, and subsurface drainage, temporary and/or subsurface drainage, temporary and/or permanent dewatering, foundations, pavement structural section, and other pertinent geotechnical design considerations may be formulated and shall be included in the grading and building plans for individual developments. General recommendations are as follows:

- Seismic Ground Shaking – Measures to prevent risk of loss, injury or death involving seismic ground shaking include constructing new development to the latest adopted building codes. In addition, new development should not be located near active earthquake faults.
- Erosion or Loss of Topsoil – Erosion and sediment control measures shall be implemented as required by the City's Grading and Water Quality ordinances.
- Where Expansive Soils Exist – Measures for the design of foundation, slabs, flatwork and other improvements subject to drainage from expansive soils.

Compliance with this measure shall be verified by the Community Development Department.

GS3 Prior to issuance of building permits for the occupancy of any existing structure at the former MCAS El Toro, or occupancy of any existing structure if a building permit is not issued, a seismic evaluation of the structure including recommendations for seismic improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required seismic improvements shall be submitted to the Chief Building Official for review and approval.

4. Discussion of Checklist and Mitigation Measures

- GS4 Prior to issuance of a grading permit, detailed geotechnical and hydrology reports shall be prepared prior to any development approval or grading activities. These reports shall specifically address erosion control and surface runoff for both construction and long-term operations on the site. Recommendations contained in these reports to prevent soil erosion, siltation, and debris influx into the drainage system shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

4.6 HAZARDS AND HAZARDOUS MATERIALS

4.6.1 Environmental Setting

Hazardous Materials and Hazardous Wastes

The OCGP FEIR discussed an environmental baseline survey (EBS) that was conducted for the project area. Information was used from the Base Realignment and Closure Business Plan for Marine Corps Air Station (MCAS) El Toro dated May 2002; the EBS dated 1995; and an update to the EBS—April 2003 Draft Final EBS. The 2003 EBS identified “76 potential release locations, all of which require further evaluation for potential releases to the environment and subsequent remediation, if required” (Refer to OCGP FEIR p. 5.5-5).

Regarding the Installation Restoration Program (IRP), the OCGP FEIR summarizes the status of each IRP site based on the information available at the time the EIR was prepared. Ten (10) IRP sites were identified as requiring “No Further Action,” including sites 4, 6, 7, 9, 10, 13, 14, 15, 19, 20, 21, 22 and 25. The IRP sites identified as “Action Required” included sites 1, 2, 3, anomaly 3, 5, 8, 11, 12, 16, 17, 18 (plume), and 24 (Refer to OCGP FEIR pp. 5.5-6 through 5.5-9).

Of the 404 underground storage tanks (USTs) identified, 357 had been remediated and received findings of “no further action” at the time the OCGP FEIR was prepared. Of the 39 aboveground storage tanks (ASTs) on the property, 36 had been remediated and received findings of “no further action” (Refer to OCGP FEIR p. 5.5-10).

Evaluation and remediation of previously identified IRP sites within the project site continues with the resulting changes in the condition of the property largely anticipated in the OCGP FEIR. Subsequent to certification of the OCGP FEIR, the DON completed environmental related findings that support the suitability to transfer (FOST) real property made available through the Base Realignment and Closure process and to support of the lease of areas not yet suitable for transfer.³ (Refer to *Installation Restoration Program (IRP) Locations*, OCGP FEIR Addendum No. 4, Figure 4-2).

The areas suitable for lease encompass locations of concern identified in the 1995 and 2003 EBS, and in the OCGP FEIR, where future evaluation and/or actions are ongoing or required. These areas were identified as “carve-outs” in the DON documentation.⁴

Progress relative to conveyance of the carve-outs includes DON transfer of approximately eight acres of the project site to Heritage Fields and the Great Park Corporation on March 22, 2006. At the time of the initial land sale, these properties (carve-outs) were retained by the DON in order to complete environmental

³ U.S. Department of the Navy, 2004. *Final Finding of Suitability to Transfer, Parcel IV and Portions of Parcels I, II, and III, Former Marine Corps Air Station, El Toro, California, July 2004*; *Final Finding of Suitability to Lease for Carve-outs Within Parcels I, II, and III, Former Marine Corps Air Station, El Toro, California, July 2004*.

⁴ U.S. Department of the Navy, 2004a. *Final Finding of Suitability to Lease for Carve-outs within Parcels I, II, and III, Former Marine Corps Air Station, El Toro, California, July 2004*.

4. Discussion of Checklist and Mitigation Measures

cleanup, and have since been approved by the regulatory agencies for transfer (FOST #2). The following sites were included in this transfer:

- Carve-out parcel II-J consists of approximately 0.2 acre in the central portion of former MCAS El Toro. It contains one building—Building No. 860—and 1 location of concern.
- Carve-out parcel II-Q (portion) consists of approximately 5 acres in the eastern portion of the former MCAS El Toro. It is an abandoned jet fuel (JP-5) pipeline.
- Carve-out parcel II-S consists of approximately 1.3 acres in the southeastern portion of former MCAS El Toro. It contains 6 buildings (347, 377, 447, 448, 566, and 726) and 13 locations of concern.
- Carve-out parcel II-T consists of approximately 0.5 acre in the southeastern portion of former MCAS El Toro. It contains 1 building—Building No. 761—and 4 locations of concern. The facility was a former aircraft wash rack.
- Carve-out parcel III-C consists of approximately 1 acre in the western portion of the former MCAS El Toro. It contains 1 building—Building No. 240—and 7 locations of concern. This site was a former ordnance storage facility.

Emergency Plans

The OCGP FEIR described the former MCAS El Toro site (Planning Areas 30 and 51) as a potential emergency response staging area because of its capacity for processing and storing large quantities of cargo. The Orange County Emergency Plan, which incorporates the statewide standardized emergency management system (SEMS), guides multijurisdictional response to emergency conditions. No substantial change to the description of the setting regarding emergency plans has occurred that would alter the analysis and conclusions of the OCGP FEIR on emergency plans and response.

Wildland Fires

The OCGP FEIR identified high fire hazard areas within open space, undeveloped land northeast of and adjacent to Planning Area 51. The City has no construction records of existing buildings and structures on the property. No substantial change to the description of the setting relative to wildland fires has occurred that would alter the analysis and conclusions of the OCGP FEIR regarding wildland fires.

4.6.2 Impacts Identified in the OCGP FEIR and Addenda

Hazardous Materials and Wastes

The OCGP FEIR identified no significant impacts associated with the No Further Action IRP sites, which are listed in Table 4-4. Table 4-5 identifies each Action Required IRP site and its location relative to the adopted Overlay Plan. The OCGP FEIR disclosed the following environmental consequences of the adopted Overlay Plan as significant impacts:

- Construction activities involving demolition and possible substantial remodeling of existing structures in the project area as the project area develops could result in the disturbance of structures and soils containing asbestos-containing building materials (ACM) and lead-based paint.
- IRP site 24 is located in the 6.1 Institutional and 1.5 Recreation zoning districts. The site may be conveyed with temporary restrictions on use that are not appropriate for transportation facility use. This is considered a significant impact.
- Future uses of IRP site 3 may be potentially constrained by the implementation of institutional controls.

4. Discussion of Checklist and Mitigation Measures

- IRP site 16 (Crash Crew Pit No. 2) is located in the 1.5 Recreation zoning district. The site may be conveyed with temporary restrictions on use that are not appropriate for recreational land uses.

Table 4-4
No Further Action IRP Sites and Zoning

IRP Site	IRP Designation	Adopted Overlay Plan Zoning District
4	Ferrocene Spill Area	8.1 Lifelong Learning District
6	Drop Tank Drainage Area No. 1	2.2 Low-Density Residential with 1.8 Golf Course Overlay

4. Discussion of Checklist and Mitigation Measures

Emergency Plans

The OCGP FEIR determined the Overlay Plan would not be expected to interfere with emergency response and evacuation plans on the basis that other sites within Orange County are already designated as emergency staging areas and portions of the OCGP would remain available to non-aviation emergency response equipment. Accordingly, the OCGP FEIR concluded that the adopted Overlay Plan would not result in a significant impact related to emergency response and evacuation plans.

Wildland Fires

The OCGP FEIR concluded that the Habitat Reserve, Wildlife Corridor, and Recreational areas in the northeastern portion of Planning Area 51 would be exposed to the highest level of fire risk from wildland fires under the adopted Overlay Plan, and that reuse of existing buildings require inspection for conformance to fire life safety code requirements. The OCGP FEIR identified the wildland fire impacts as potentially significant.

4.6.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Hazardous Materials and Wastes

The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity. As a result, the proposed modifications would not alter the findings and conclusions previously certified and adopted in the OCGP FEIR and addenda. Therefore, the OCGP FEIR adequately describes the environmental effects of the project relative to hazardous materials and wastes for the project site. No new or modified mitigation measures are required.

Emergency Plans

The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity or include new land uses and would not be expected to interfere with emergency response and evacuation plans. Other sites within Orange County are already designated emergency staging areas and portions of the OCGP would remain available to non-aviation emergency response equipment. Accordingly, the proposed modifications would not change the OCGP FEIR conclusions; the project would not result in a significant impact related to emergency response and evacuation plans.

Wildland Fires

As previously stated in the OCGP FEIR, the Habitat Reserve, Wildlife Corridor, and recreational areas in the northeastern portion of current Planning Area 51 would be exposed to the highest level of fire risk from wildland fires, and reuse of existing buildings would require inspection for conformance to fire life safety code requirements. The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity and would not alter the findings and conclusions of the OCGP FEIR and addenda regarding wildland fires.

4. Discussion of Checklist and Mitigation Measures

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant hazardous effects identified in and considered by the certified OCGP FEIR.

4.6.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified six mitigation measures to reduce the effects of the adopted Overlay Plan on public health and safety—specifically, environmental effects associated with hazardous materials and waste, emergency response, and wildland fires—to a level less than significant. All of the mitigation measures are applicable to implementation of the proposed project and would be carried forward to future development of the project site. Measures HH1 through HH6 are listed below:

- HH1 a. Prior to the conveyance of the property and issuance of subsequent grading permits, where the presence of ACMs is identified, the DON or its transferee shall ensure that all available information concerning ACMs has been provided to the City of Irvine, and the purchasers of the property, including:
- The type, location and condition of ACMs
 - The results of any asbestos testing
 - Description of asbestos control measures taken, if any
 - The costs or time necessary to remove existing ACMs
 - The results of any site-specific asbestos inventory updates

4. Discussion of Checklist and Mitigation Measures

- b. For any structures known to contain ACMs that will be renovated and/or demolished prior to transfer, the DON shall ensure that all asbestos is removed and disposed of in accordance with applicable federal, state and local regulatory requirements.
 - c. Prior to transfer of any structure constructed before October 1988, scheduled for renovation and/or demolition, and in which the presence of ACMs is unknown, an asbestos survey shall be conducted by the DON. This requirement can be waived if an architect or project engineer responsible for the construction of the structure or an accredited asbestos inspector signs a statement that no ACM was specified as a building material, and to the best of their knowledge, no ACMs were used as a building material.
 - d. Any existing structures in which ACMs have been identified and which will remain in use shall be addressed in an Operation and Maintenance Plan and must be managed in accordance with applicable laws.
 - e. Any renovation and/or LBP abatement activities on residential units at former MCAS El Toro, shall be conducted in accordance with all applicable federal, state and local regulatory requirements.
- HH2
- a. Prior to transfer, the City shall receive from the DON, with the concurrence of the appropriate regulatory agencies, a statement that the "Action Required" IRP Site 3 is to be conveyed for restricted use and that all institutional controls have been identified and implemented. The City of Irvine will adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.
 - b. Prior to transfer, if the DON chooses to impose temporary restrictions on the use of Sites 16 and 24 pending adequate remediation of groundwater, the City of Irvine shall receive from the DON a statement of temporary restrictions on the use of the sites and the release of the sites for unrestricted use following implementation of adequate remediation of groundwater. The City of Irvine shall adopt appropriate rules, policies, and regulations necessary to avoid actions that compromise the integrity of the remediated sites and that uphold the institutional controls. The actions of the City of Irvine shall be in accordance with the General Development Standards for the zone, which requires the Planning Commission to approve a master plan for the entire Planning Area indicating location, acreage, and types of land use within the Planning Area. As stated under Sec. 9-51-5 General Development Standards, boundaries and acreages are approximate and shall be established by master plan approval.
- HH3
- The Community Development Department, in coordination with the Orange County Fire Authority (OCFA), will be responsible for review of all development plans, which would include evaluation of very high fire severity zones, special fire protection plans, and any requirements for fuel modification zones. Projects potentially impacted by wildland fire hazards will be subject to OCFA Guidelines for "Development Within and Exclusion from

4. Discussion of Checklist and Mitigation Measures

Very High Fire Severity Zones” and “Fuel Modification Plans and Maintenance.” Additionally, all demolition, renovation, and construction activities in the project area will be subject to review by OCFA to ensure adequate fire protection, water flow, emergency access, design features, etc., according to the standards of the Uniform Fire Code and the California Fire Code. Due to the implementation of these standard fire protection procedures, the proposed project is not anticipated to result in significant short- or long-term adverse impacts related to fire hazards.

- HH4 Prior to issuance of occupancy permits of any existing structure at the former MCAS El Toro, a fire life-safety evaluation of the structure including recommendations for improvements required for compliance with current Building Codes for use of existing structures adopted by the City of Irvine and plans for any required improvements shall be submitted to the Chief Building Official for review and approval.
- HH5 Prior to the issuance of a grading permit, the applicant shall prepare and the Director of Community Development shall approve a protocol plan (including but not limited to worker training, health and safety precautions, additional testing requirements, and emergency notification procedures) in the event that unknown hazardous materials are discovered during grading, construction, and/or related development activities. Additionally, said protocol plan will be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities. The applicant and/or property owner that discovers contamination due to past military operations not previously identified by the DON shall be responsible for notifying the DON, appropriate regulatory agencies, and the Director of Community Development of the City of Irvine in a timely manner. Additionally, said Protocol Plan shall be revised should the discovery of previously unknown hazardous materials be made during any of the above mentioned development activities.
- HH6 The City of Irvine shall develop and maintain the location and status, as well as other pertinent information, of all monitoring wells on the former MCAS El Toro in a geographic information systems database (GIS). The City will review all permit applications on the former air station for monitoring well locations that may be affected by a permit, and require applicants to maintain appropriate access. Access to monitoring wells will be limited to authorized personnel.

4.7 HYDROLOGY AND WATER QUALITY

4.7.1 Environmental Setting

The OCGP FEIR describes the project site as within the San Diego Creek watershed, which includes the San Diego Creek, Peters Canyon Channel, and the tributaries to these water courses. The major drainage channels that traverse the site (PA 51) are the Marshburn Channel, Bee Canyon Channel, Agua Chinon Channel, and Borrego Canyon Channel. Serrano Creek and Upper San Diego Creek Channel traverse PA 30 in the southern tip of the project site, south of the existing SCRRA Metrolink railroad tracks.

San Diego Creek and Upper Newport Bay are listed as impaired water bodies under Section 303(d) of the Clean Water Act. Accordingly, Total Maximum Daily Load (TMDL) for pollutants that have impaired these water bodies has been established and was included in the OCGP FEIR (Refer to OCGP FEIR Table 5.7-2).

4. Discussion of Checklist and Mitigation Measures

The OCGP FEIR also notes the County of Orange and the City of Irvine hold a Nationwide Pollution Discharge Elimination System (NPDES) permit for the storm drain systems, and that the State has issued a NPDES general permit relating to construction activities on sites over five acres in the area. Lastly, the flood control improvements associated with the SR-133 toll road were noted in the OCGP FEIR as having reduced the 100-year flood zone north and west of the property.

4.7.2 Impacts Identified in the OCGP FEIR and Addenda

The OCGP FEIR identified several significant impacts on hydrology and water quality associated with future development under the adopted Overlay Plan before mitigation. First, grading and excavation activities required for future development could result in the exposure of bare soils to both wind- and water-related erosion and associated significant water quality impacts (specifically, a violation of water quality standards or waste discharge requirements). Compliance with City grading and water quality regulations—including the NPDES discharge permitting requirements and preparation of a Storm Water Pollution Prevention Plan (SWPPP) and a Water Quality Management Plan (WQMP)—are the primary means of controlling the potential impacts of grading and excavation activities. These City requirements, which are described in mitigation measures H/WQ1 and H/WQ2, will reduce the impact to a less-than-significant level.

According to the OCGP FEIR, the existing drainage patterns and stream courses will not be substantially altered by future development under the adopted Overlay Plan. In addition, the potential for inundation is reduced by improvements to upstream flood-control facilities. Without project-related flood-control facilities, the rate or amount of surface runoff due to new development would result in flooding on- and off-site, depending on the nature of the specific development. Although this impact was identified as significant, the effect of increased runoff will be reduced to a less-than-significant level through preparation and implementation of hydraulic studies and recommendations for the specific development and the construction of flood-control improvements commensurate with the specific development (Mitigation Measure H/WQ3).

The impact analysis for the Overlay Plan assumed development of the land use patterns created by the zoning designations for the Overlay Plan area and a backbone storm drain system. The storm drain system took into consideration and included improvements identified in the San Diego Creek Flood Control Master Plan (Refer to OCGP FEIR p. 5.7-16 and Figure 5.7-2). The drainage plan for the Overlay Plan area included improvements to the major drainages, including Marshburn Channel, Bee Canyon Channel, Agua Chinon Channel, and the Borrego Channel, Wildlife Corridor and Serrano Creek, and San Diego Creek, as described in the OCGP FEIR and addenda.

While relatively conceptually defined in the OCGP FEIR, the foregoing area-wide drainage and flood control facility system has since been undergoing increasingly more definitive design engineering refinement. The latest formal expression of these system enhancements is memorialized in the following documents: Master Plan of Drainage, Fuscoe Engineering February 23, 2007,⁵ Orange County Great Park – Hydrology/Hydraulic Report, Fuscoe Engineering June 12, 2007 (collectively, Fuscoe Reports); Planning Area 51 and Planning Area 30 Bee Canyon, Agua Chinon, Borrego, Serrano and Upper San Diego Creek Update, RBF Consulting February 27, 2008, and Planning Area 51 Marshburn Watershed Update, RBF Consulting March 14, 2008 (collectively, RBF Reports). These reports merely refine the drainage control system components described above, and are on file with the City, and available for inspection at the Irvine Community Development Department during normal business hours. The on-site channels will continue to drain the project site as under existing conditions. Additional backbone storm drain facilities will be designed to accommodate the changes in the land use surface runoff within the Great Park Neighborhoods development. The post-development hydrology was analyzed per the Orange County Hydrology Manual for a 100-year peak storm design event.

⁵ This report was submitted to the City of Irvine as a part of the Master Subdivision Map application.

4. Discussion of Checklist and Mitigation Measures

OCGP FEIR Mitigation Measure H/WQ3 states that prior to approval of the first tentative tract or parcel map in the project area, detailed hydrologic and hydraulic analysis shall be conducted. Studies and analyses shall be prepared in accordance with Orange County Flood Control District (OCFCD) methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. In compliance with the mitigation measure, the Fuscoe Reports, and RBF Reports were prepared. The primary focus of these reports was to evaluate the proposed drainage concept for the Great Park Neighborhoods development with respect to surface water hydrology. The studies identified surface water runoff as well as drainage and flood-control improvements for the proposed project. The reports also provide a brief discussion of the local hydrologic regime; an overview which ranges from the watershed delineation of the San Diego Creek Watershed to the physical drainage characteristics of Great Park Neighborhoods in Orange County.

4.7.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Bake Parkway/Marine Way Relocation

The proposed General Plan Amendment would realign Marine Way approximately 900 feet to the east of the I-5 NB exit ramp. Due to the alignment modification of Marine Way, the extension of Rockfield Boulevard to Marine Way would also be modified. The phasing of the flood control system improvements in Planning Area 30 will not be affected by this modification and will continue to be coordinated with the street phasing schedule so that the storm drains are installed prior to or in concert with road construction. The relocation does not alter land uses or intensify development; therefore no change in the development assumptions as they pertain to hydrology and water quality would be necessary. Accordingly, the impact analysis presented in OCGP FEIR Section 5.7 adequately describes the project effects on hydrology and water quality.

Reduction of Required Golf Course Holes

The reduction of the golf course requirement by 27 holes in PAZ 18 does not increase intensity or permit additional residences. Development within PAZ 18 will not expand the development boundary and will implement all mitigation measures identified in the OCGP FEIR and addenda. The mitigation measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and development occurs in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation of the Newport Bay watershed. As a result, the reduction of the golf course requirement by 27 holes in PAZ 18 will have no additional impact to the hydrology and water quality. Accordingly, the impact analysis presented in OCGP FEIR Section 5.7 adequately describes the project effects on hydrology and water quality.

Reduction in Agricultural Acreage

The removal of the requirement to include 173 acres of agricultural use in the Lifelong Learning District does not permit any new residences or other changes to approved intensities. All mitigation measures identified in the OCGP FEIR and addenda will be implemented. Therefore, no change in the development assumptions pertaining to hydrology and water quality would be necessary and the impact analysis presented in OCGP FEIR Section 5.7 adequately describes the project effects on hydrology and water quality.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not

4. Discussion of Checklist and Mitigation Measures

result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant hydrology effects identified in and considered by the certified OCGP FEIR.

4.7.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified four mitigation measures to reduce the effects of the project on hydrology and water quality. All of the mitigation measures are applicable to implementation of the project and would be carried forward to future development of the project site. Implementation of measures H/WQ 1 through H/WQ 4 (listed below) would reduce project impacts to a less than significant level.

- H/WQ1 Prior to issuance of a grading permit, the applicant shall provide evidence that the development of the project area shall comply with City of Irvine adopted Grading and Water Quality Ordinances to ensure that the potential for soil erosion is minimized on a project-by-project basis. Specifically, the NPDES discharge permitting requirements to which the City is obligated will ensure that construction activities reduce, to the maximum extent feasible, the water quality impacts of construction activities. The NPDES permit guidance states that "industrial/commercial construction operations that result in a disturbance of one acre or more of total land area...and residential construction sites that result in the disturbance of five acres or more...shall be required to develop and implement BMPs...to control erosion and siltation and contaminated runoff from the construction sites." Note: In March 2003 this provision will apply to residential construction sites that result in the disturbance of one acre or more.

The City's standard conditions of approval indicate that a Storm Water Pollution Prevention Plan (SWPPP) shall be prepared prior to the approval of grading permits for any project site

4. Discussion of Checklist and Mitigation Measures

in order to reduce sedimentation and erosion. The SWPPP shall include the adoption of erosion and sediment control practices such as desilting basins and construction site chemical control management measures.

Additionally, prior to the issuance of a grading permit, project applicants must submit, and the Director of Community Development or designee must have approved, a Water Quality Management Plan (WQMP). The WQMP must identify the Best Management Practices (BMPs) that will be used on the site to control predictable pollutant runoff after the site is occupied. Ongoing operations after construction would be subject to the Countywide Municipal NPDES Stormwater Permit, for which the City is a Co-Permittee. This WQMP shall identify, at a minimum, the routine, structural, and non-structural measures specified in the Countywide NPDES DAMP Appendix which they are applicable to a project, the assignment of long-term maintenance responsibilities (specifying the developer, parcel owner, maintenance association, lessee, etc.), and shall reference the location(s) of structural BMPs. Completed with the WQMP (Fusco, June 28, 2006, Revised September 15, 2006).

Also in accordance with standard City project permitting and approval procedures, Notices of Intent (NOI) for coverage of projects under the General Construction Activity Storm Water Runoff Permit will be submitted to the State Water Resources Control Board prior to issuance of grading permits in the project area. This requirement will be met to the satisfaction of the Director of Community Development of any disturbance of one acre or more of soil in the project area. Also in force during the period of construction would be the General Dewatering NPDES permit of the Santa Ana RWQCB, as well as the provisions of the Countywide Permit.

The Mitigation Measures will be implemented in accordance with local and State regulatory requirements. As future projects are planned and designed in the project area, specific BMPs and other water quality control methods will be utilized to reduce water quality degradation in the Newport Bay watershed. Future projects in the proposed project area will acknowledge and implement those additional requirements that may be imposed by RWQCB in the future. Compliance with these measures shall be verified by the Community Development Department.

- H/WQ2 Prior to issuance of a grading permit, evidence (e.g., in the form of a construction management plan) shall be provided that demonstrates that all stormwater runoff and dewatering discharges from the project area shall be managed to the maximum extent practicable or treated as appropriate to comply with water quality requirements identified in the Santa Ana Regional Water quality Control Board Basin Plan, including Total Maximum Daily Load (TMDL) Implementation Plan adopted for this watershed.
- H/WQ3 Prior to approval of the first tentative tract or parcel map in the project area, detailed hydrologic and hydraulic analysis shall be conducted. Studies and analysis shall be prepared in accordance with OCFCD methodologies and standards and the Flood Control Master Plan for San Diego Creek, as well as any additional guidelines in effect at the time of project design. Recommendations contained in the hydrology studies and/or hydraulic analysis to address drainage/flooding issues related to proposed development shall be implemented. Compliance with this measure shall be verified by the Community Development Department.

4. Discussion of Checklist and Mitigation Measures

H/WQ4 Prior to issuance of a building permit, developers with property located in the newly delineated 100-year floodplain shall be required to construct such improvements as necessary to remove the property from the 100-year floodplain. Additionally, the developer shall prepare a Letter of Map Revision (LOMR) request to have the FIRMs revised to remove the development areas from the 100-year floodplain upon completion of the approved flood control facilities. The LOMR request shall be filed upon completion of design of the flood control improvements to contain or redirect the 100-year flood flows away from the property.

After the improvements are constructed, Record Drawings and a maintenance agreement with, or letter from, a public agency shall be submitted to FEMA to complete the LOMR process.

4.8 LAND USE

4.8.1 Environmental Setting

The OCGP FEIR described the existing and former land uses on Planning Areas 30 and 51, and other areas adjoining and surrounding these planning areas. Subsequent to the City's approval of the General Plan Amendment and Zone Change for the Overlay Plan, the DON initiated an auction process for the sale of the former MCAS El Toro property. To facilitate the transfer, the property was divided into and presented to prospective buyers as four distinct parcels. Interested parties were invited to bid on one or more of the parcels. In 2005, Heritage Fields successfully purchased all four parcels from the DON (3,671 acres), and entered into a Development Agreement with the City of Irvine on July 12, 2005. The Development Agreement sets forth the terms and conditions of subsequent development and implementation of the Great Park Plan, including dedication in fee of 1,096 acres of the property for development of the Great Park Plan.

The condition of Planning Area 30—generally, the cultivation of agricultural lands—is substantially the same as the OCGP FEIR baseline year. Consistent with a provision in the zoning code, there are interim uses that reuse existing buildings on-site. These uses include offices occupied by the City of Irvine Community Development Department, Great Park Corporation (GPC), and Heritage Fields. Other tenants include Second Harvest Food Bank, Families Forward, Orange County Great Park Balloon Preview Park, California State University, Fullerton. A day-care facility is immediately adjacent to these office uses. A few parcels such as Tierra Verde Industries have been leased and are operating on an interim basis.

4.8.2 Impacts Identified in the OCGP FEIR and Addenda

The OCGP FEIR identified no significant impact to established communities. There were no residents living within the Planning Areas 30 and 51 at the time the OCGP FEIR was prepared and there has been no change in this regard; there are no residents living within the project site. The OCGP FEIR analyzed certain amendments to the City's General Plan that were adopted on May 27, 2003, as part of the City's adoption of the Overlay Plan. The adopted Overlay Plan was determined to be consistent with each element of the General Plan, as summarized below.

Land Use Element: The goal of the Land Use Element is to “promote land use patterns that maintain safe residential neighborhoods, bolster economic prosperity, preserve open space, and enhance the overall quality of life in Irvine.” The “OCGP, Orange County Great Park” land use category was created to reflect the types, intensity, and density of uses and activities contemplated in the OCGP and was determined to be consistent with the goal of the Land Use Element.

4. Discussion of Checklist and Mitigation Measures

Circulation Element: The Circulation Element's goal is to "provide a balanced transportation system." Adoption of the Overlay Plan included the following modifications to the General Plan Circulation Element:

- Policy B-1(c) was changed to include the following provision:

"In conjunction with individual subdivision map level traffic studies for development proposed in the Overlay Plan area, a LOS [level of service] 'E' would be considered acceptable for application to intersections impacted in Planning Areas 13, 30, 31, 32, 34, 35, and 39."
- Figure B-1 (Master Plan of Arterial Highways) and Figure B-2 (Operational Characteristics) were amended to reflect the alignment of roadways within the OCGP, including:
 - Marine Way is aligned to join the Bake Parkway northbound exit ramp from Interstate 5 and terminate at Sand Canyon Avenue at Interstate 5.
 - Trabuco Road terminates at proposed Meadows Loop Road.
 - Rockfield Boulevard is realigned to terminate at Marine Way.
 - On-site circulation includes a new commuter highway/collector (Y Street [Ridge Valley]).
 - Research Parkway is renamed College Road and modified to extend from Irvine Boulevard to Marine Way.
- Figure B-3 (Public Transit) was amended to reflect the alignment of roadways within the OCGP.
- Figure B-4 (Trails Network) was amended to reflect the alignment of roadways within the OCGP.

Housing Element: The goal of the Housing Element is to "provide for safe and decent housing for all economic segments of the community." The adopted Overlay Plan would add up to 3,625 new dwelling units and carry forward all adopted policies and objectives of the Housing Element; specifically, the residential development component would explore opportunities for maintenance of the housing stock and help the City meet its Regional Housing Needs Assessment through year 2025.

Conservation and Open Space Element: The goal of this element is to "maintain and preserve the environmental systems as a major feature in the City." This goal would be achieved through the implementation of Objectives L-1 through L-12 and corresponding policies. Objective L-10 encourages "the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development." The adopted Overlay Plan includes 1,096 acres of Great Park recreational land, 290 acres of permanent agricultural land, and 974 acres of Habitat Preserve.

Cultural Resources: The goal of the Cultural Resources Element is to "ensure the proper disposition of historical, archaeological, and paleontological resources to minimize adverse impacts, and to develop an increased understanding and appreciation for the community's historic and prehistoric heritage, and that of the region." The OCGP FEIR identified the flatland area of the property as a low paleontological sensitivity zone and the hillside areas north of Irvine Boulevard as a high paleontological sensitivity zone. No objective of this element was amended by the adopted Overlay Plan and all of the objectives and implementing policies were to be implemented as part of the adopted Overlay Plan.

4. Discussion of Checklist and Mitigation Measures

Noise Element: The Noise Element's goal is to "contribute to a healthy and safe environment by minimizing noise impacts." The adopted Overlay Plan would not affect the mobile noise, stationary noise, and noise abatement objectives and implementing policies of the Noise Element.

Public Facilities and Services Element: The goal of this element is to "provide a full range of necessary public facilities and services that are convenient to users, economical, reinforce City and community identity, and reflect the participation of citizens." The facilities and services described in the Urban Service Plan for the adopted Overlay Plan were formulated through a public participatory process and found to implement the goal and adopted objectives and related policies of this element.

Integrated Waste Management Element: This element seeks to "encourage solid waste reduction and provide for the efficient recycling and disposal of refuse and solid waste material without deteriorating the environment." The OCGP FEIR disclosed that the Overlay Plan would not affect the adopted objectives and implementing policies regarding solid waste, waste, wastewater, and solid waste facility siting requirements; rather, it would provide the opportunity to better respond to the City's solid waste reduction requirements and other provisions of the element by broadening the range of design options.

Growth Management Element: The goal of the Growth Management Element is to "ensure that growth and development are integrally planned with, and phased concurrently with, the City of Irvine's ability to provide an adequate circulation system and public facilities." When the OCGP FEIR was certified, it was disclosed that though the project made changes to the *Master Plan of Arterial Highways*, the project would not change any of the objectives or implementing policies of the Growth Management Element.

Parks and Recreation Element: The goal of the Parks and Recreation Element is to "provide park and recreation opportunities at a level that maximizes available funds and enables residents of all ages to utilize their leisure time in a rewarding, relaxing, and creative manner." The OCGP FEIR reported that there would be no change to the objectives or implementing policies of this element.

Seismic Element: The goal of the Seismic Element is to "minimize the loss of life, disruption of goods and services, and the destruction of property associated with an earthquake." Five Seismic Response Area (SRA) designations are used to describe the magnitude and types of potential seismic hazards present within the City, and to provide policy guidance. The OCGP FEIR reported that the majority of the El Toro property was in category SRA-2 and that no objectives or implementing policies would be changed as a result of the project.

Safety Element: The goal of the Safety Element is to "minimize the danger to life and property from man-made and natural hazards, including fire hazards, flood hazards, non-seismic geologic hazards and air hazards." The OCGP FEIR disclosed the need for fuel modification to mitigate potential wildland fire hazards and drainage improvements to lessen flood hazards associated with implementation of the adopted Overlay Plan, and concluded no objectives or implementing policies would be changed as a result of the adopted Overlay Plan.

4.8.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The project is consistent with the land uses approved in the OCGP FEIR and addenda. The proposed modifications would not affect the goals, objectives, or policies, or the facilities and services described in any of the General Plan Elements. No changes or new impacts would occur. The following analysis discuss the proposed project in consideration of each General Plan element.

4. Discussion of Checklist and Mitigation Measures

Land Use Element: The Land Use Element designates Planning Areas 30 and 51 as “Orange County Great Park.” The proposed project is consistent with the General Plan designation, which allows both the City and Heritage Fields the opportunity to develop regionally significant conservation and open space, parks and recreation, educational facilities, and other public-oriented land uses, integrated with privately developed multi-use, residential, commercial, and industrial properties. The project will allow both entities to update the General Plan and Zoning Code to reflect current planning concepts for the sites. The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity and would not change the previously approved acreages for the project area. The General Plan text, tables, and figures being amended are listed below and included in Appendix A:

1. Page A-7 OCGP Definition
2. Table A-1 General Plan Footnotes
3. Table A-2 General Plan Footnotes
4. City of Irvine Boundary Map
5. Land Use Element Map
6. Figure A-1 Vicinity Map
7. Figure A-2 Planning Areas
8. Figure A-3 Land Use Map
9. Figure A-4 Scenic Highways

Circulation Element: The goal of the Circulation Element – “to provide a balanced transportation system” – could be accomplished through various circulation alignments equal to or better than the internal roadway alignments shown on referenced maps. The project would not substantially alter the planned network of arterials and connections to roadways in the surrounding area; nor would they materially change riding and hiking trails and trail linkages; pedestrian and bicycle circulation; and transit, air transportation, and telecommunication opportunities. The General Plan Amendment includes modifications to maps and figures in the General Plan’s elements to reflect the proposed relocation of the planned intersection at Bake Parkway and Marine Way and the reconfigured Rockfield Boulevard that traverse the research and development designation on the Great Park Overlay Plan. Specifically, Figure B-1 (Master Plan of Arterial Highways) and Figure B-2 (Operational Characteristics) would be amended to reflect the relocation of Bake Parkway and Marine Way within the OCGP. The project also includes an additional amendment to Figure B-1 to change the designation of Trabuco Road between Sand Canyon and “O” Street from a Major Highway to a Primary Highway. This roadway segment is a planned Primary Highway in keeping with previous traffic studies. Figures B-1, B-2, B-3, and B-4 of the General Plan are modified to reflect the Bake Parkway/Marine Way intersection relocation. The General Plan figures being amended are listed below and included in Appendix A:

1. Figure B-1 Master Plan of Arterial Highways
2. Figure B-2 Operational Characteristics
3. Figure B-3 Public Transit
4. Figure B-4 Trails Network

Housing Element: The goal of the Housing Element is to “provide for safe and decent housing for all economic segments of the community.” Project components would not permit new residential units or increase allowable development intensity. The distribution of 3,625 residential dwelling units within the Great Park would carry forward the adopted policies and objectives of the Housing Element, specifically, help the City meet its Regional Housing Needs Assessment through 2025 and implement the provisions of the Development Agreement regarding the residential component of the adopted Overlay Plan.

4. Discussion of Checklist and Mitigation Measures

Cultural Resources: The project would not affect the adopted goals, objectives, and policies of this element. Subsequent development would be required to comply with its requirements and to implement mitigation measures found in the OCGP FEIR. With implementation of OCGP FEIR measures P1 and CULT1 through CULT4, the impacts of new development on paleontological and cultural resources would be less than significant. Furthermore, the proper disposition of such resources, if any are encountered prior to or during construction would be ensured; and through the information recovered, the community's understanding and appreciation for its historic and prehistoric heritage will have been enhanced. Figures E-1 and E-2 of the General Plan are modified to reflect the Bake Parkway/Marine Way intersection relocation. The General Plan figures being amended are listed below and included in Appendix A:

1. Figure E-1 Historical/Archeological Landmarks
2. Figure E-2 Paleontological Sensitivity Zones

Noise Element: The project would not affect the goal of this element—"to contribute to a healthy and safe environment by minimizing noise impacts"—or the mobile noise, stationary noise, and noise abatement objectives and implementing policies of the element. The General Plan figure being amended is listed below and included in Appendix A:

1. Figure F-1 Aircraft Noise

Public Facilities and Services Element: The project would not affect facilities and services described in the Urban Service Plan for the adopted Overlay Plan. As no substantive change in the Urban Service Plan is necessary, and that plan was a principle means of demonstrating consistency with the Public Facilities and Services Element, the project also is consistent with this element of the General Plan. Additionally, subsequent development would be required to implement the element's objectives and policies to ensure that a full range of necessary public facilities and services that are convenient to users are provided in conjunction with new development. Figure G-1 of the General Plan is modified to reflect the Bake Parkway/Marine Way intersection relocation. The General Plan figure being amended is listed below and included in Appendix A:

1. Figure G-1 Educational Facilities

Integrated Waste Management Element: Like the adopted zoning, the project would not affect the adopted objectives and implementing policies regarding solid waste, waste, wastewater, and solid waste facility siting requirements; rather, it would provide the opportunity to better respond to the City's solid waste reduction requirements and other provisions of the element by broadening the range of design options. This element seeks to "encourage solid waste reduction and provide for the efficient recycling and disposal of refuse and solid waste material without deteriorating the environment." Figure H-1 of the General Plan is modified to reflect the Bake Parkway/Marine Way intersection relocation. The General Plan figure being amended is listed below and included in Appendix A:

1. Figure H-1 Solid Waste Facilities

Growth Management Element: The goal of the Growth Management Element is to "ensure that growth and development are integrally planned with, and phased concurrently with, the City of Irvine's ability to provide an adequate circulation system and public facilities." When the OCGP FEIR was certified it disclosed that though the project made changes to the Master Plan of Arterial Highways, the project would not change any of the objectives or implementing policies of the Growth Management Element. The project likewise would not alter any of the objectives or implementing policies because it would remain consistent with the development phasing already a part of the overall development plan.

4. Discussion of Checklist and Mitigation Measures

Parks and Recreation Element: The goal of the Parks and Recreation Element is to “provide park and recreation opportunities at a level that maximizes available funds and enables residents of all ages to utilize their leisure time in a rewarding, relaxing, and creative manner.” The OCGP FEIR reported there would be no changes to the objectives or implementing policies of the Element. Figure K-1 of the General Plan is modified to reflect the Bake Parkway/Marine Way intersection relocation.. This modification will not result in any losses of park land or increases in development intensity for the project. Furthermore, through the Great Park Development Agreement, Heritage Fields has dedicated 1,096 acres: 367 acres for the park, 165 acres for the sports park, 229 acres for the drainage corridor, 179 acres for the wildlife corridor, and 156 acres for the exposition center south. The General Plan figure being amended is listed below and included in Appendix A:

1. Figure K-1 Recreational Facilities

Conservation and Open Space Element: The goal of this element is to “maintain and preserve the environmental systems as a major feature in the City.” This goal would continue to be achieved through the implementation of objectives L-1 through L-12 and corresponding policies. Objective L-10 encourages “the maintenance of agriculture in undeveloped areas of the City until the time of development, and in areas not available for development.” The zoning stipulations within Section 9-51-3 (Statistical Analysis) include a footnote with the following text:

With implementation of the proposed project, the Overlay Plan includes approximately 1,145 acres of Great Park passive recreational land, 130 acres of permanent agricultural land, and 974 acres of Habitat Preserve. Please refer to Section 4.0 herein for a detailed discussion of how the project specifically implements Objective L-10 Permanent Agriculture. Figures L-1, L-2, L-3, and L-4 of the General Plan are modified to reflect the Bake Parkway/Marine Way intersection relocation. The General Plan figures being amended are listed below and included in Appendix A:

1. Figure L-1 Landform Zones
2. Figure L-2 Conservation and Open Space
3. Figure L-3 Implementation Districts
4. Figure L-4 Biotic Resources

Seismic Element: The goal of the Seismic Element is to “minimize the loss of life, disruption of goods and services, and the destruction of property associated with an earthquake.” Five Seismic Response Area (SRA) designations are used to describe the magnitude and types of potential seismic hazards present within the City, and provide policy guidance. The OCGP FEIR reported that the majority of the El Toro property was in category SRA-2. All of Planning Area 30 and the portions of the Lifelong Learning District (LLD) and the Park District southwest of Irvine Boulevard are identified as SRA-2. The areas of the LLD and the Park District situated northeast of Irvine Boulevard are designated SRA-3; the SRA-4 classification has been applied to small areas along the northern edge of the LLD, and the Park District’s boundary within the Habitat Preserve area. The OCGP FEIR reported that no objectives or implementing policies would be changed as a result of the project. Likewise, this current proposal would not alter that finding/conclusion because all project development remains within the previously established boundaries. Figures D-2, D-3 of the General Plan are modified to reflect the Bake Parkway/Marine Way intersection relocation. The General Plan figures being amended are listed below and included in Appendix A:

1. Figure D-2 Inactive Fault Locations
2. Figure D-3 Seismic Response Areas

Safety Element: The goal of the Safety Element is to “minimize the danger to life and property from man made and natural hazards, including fire hazards, flood hazards, non-seismic geologic hazards, and air

4. Discussion of Checklist and Mitigation Measures

hazards.” The OCGP FEIR disclosed the need for fuel modification to mitigate potential wildland fire hazards and drainage improvements to lessen flood hazards associated with implementation of the project, and concluded no objectives or implementing policies would be changed as a result of the adopted Overlay Plan. The project does not contain elements that would alter the findings, conclusions and mitigation measures because all project development remains within the previously established project boundaries. Figures J-1, J-2, J-3, and J-4 of the General Plan are modified to reflect the Bake Parkway/Marine Way intersection relocation. The General Plan figures being amended are listed below and included in Appendix A:

1. Figure J-1 Public Safety Facilities
2. Figure J-2 Fire Hazard Areas
3. Figure J-3 Flood Hazard Areas
4. Figure J-4 Clear and Accident Potential Zones

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The proposed projects would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. In that the OCGP FEIR did not identify any significant land use impacts there is no need for further alternatives to the project or the imposition of mitigation measure requirements.

4.8.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified no significant land use impact; therefore no mitigation measures were proposed.

4. Discussion of Checklist and Mitigation Measures

4.9 NOISE

4.9.1 Environmental Setting

The OCGP FEIR described mobile noise sources from nearby freeways, roadways, rail facilities, and vehicle use at adjacent commercial businesses, light industrial facilities, and agricultural lands as the dominate noise source in the project area. Stationary sources of noise included temporary and intermittent noise from construction activities and agricultural operations, noise associated with the industrial/business parks to the east and the business park and entertainment uses to the south.

The OCGP FEIR presents the results of a noise survey conducted on December 10–12, 2002, in which noise measurements were conducted at nine locations. Ambient noise levels at the four surveyed representative residential locations ranged from 58 dBA to 65 dBA CNEL (Refer to OCGP FEIR p. 5.4-18, Figure 5.4-6, and Table 5.4-7). The audible noise sources included local traffic, distant traffic, birds, aircraft, and human voices, all of which were characterized as typical of suburban areas.

4.9.2 Impacts Identified in the OCGP FEIR and Addenda

The OCGP FEIR concluded that development of the Overlay Plan would not result in any significant noise effects. The noise assessment considered a worst-case condition of simultaneous demolition and construction activities with the combined sound level of 20 pieces of large mobile equipment operating at a distance of 5,000 feet; 5 concrete breakers operating at a distance of 6,000 feet; and 2 crusher plants operating at a distance of 10,000 feet from the nearest off-project area residential location. The distances represented the closest possible location of the construction equipment to the nearest off-project area residences during a heavy construction period. The nearest off-site residential uses (sensitive noise source) were located approximately 4,000 feet from the property boundary. Under this scenario, the analysis estimated sound levels of approximately 56 dBA at the nearest off-site residential location. (Refer to OCGP FEIR, p. 5.4-24 and Table 5.4-8.)

As buildout of the project site was assumed to occur over time (years 2007–2025), construction-related noise impacts on residential areas within the project site were also estimated. Using the same construction equipment assumptions and a distance of 600 feet from the nearest residential area, the combined effect of the equipment was estimated at a sound level of 70 dBA at the nearest on-site residential locations during a heavy construction period. While the City of Irvine Noise Ordinance does not specify a limit on construction noise levels, it stipulates the days and hours during which construction activities may occur and when construction would not be allowed unless a temporary waiver is requested and granted; specifically, construction is allowed Monday through Friday between 7:00 a.m. and 7:00 p.m., and on Saturdays between 9:00 a.m. and 6:00 p.m.; no construction is allowed outside those hours, on Sundays, or on federal holidays. (Refer to OCGP FEIR, p. 5.4-31.)

4.9.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR noise assessment considered a worst-case condition of simultaneous demolition and construction activities. The worst-case assumptions described for the adopted Overlay Plan remain reasonable assumptions for the project; no new information about future demolition and construction has become available that would increase the number of pieces of equipment to be operated simultaneously.

4. Discussion of Checklist and Mitigation Measures

Construction Noise

Construction activities associated with the proposed project would have a short-term impact on ambient noise levels in the project vicinity. While the proposed project would involve relocation of the Bake Parkway/Marine Way intersection, construction noise levels associated with the original roadway alignment were based on the maximum simultaneously operating pieces of construction equipment at the nearest sensitive receptor. Changing the location of the roadway within the development area of the Overlay Plan would not place the road closer to existing off-site residences, thereby increasing noise levels. Other changes proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment do not allow any additional development intensity of the Overlay Plan in a manner that would result in an increase in construction noise levels. In addition, the analytical assumptions concerning construction, development phasing, and operations of the adopted Overlay Plan remain appropriate for the project. Consequently, the project would not increase the noise levels generated during construction activities. Therefore, the construction noise levels associated with this component of the project are anticipated to be similar to those addressed in the OCGP FEIR and would not result in any new significant impacts which were not previously anticipated.

Construction Vibration

The OCGP FEIR identified that nuisance vibration from construction activities associated with the adopted Overlay Plan would result in noticeable vibration levels. However, because vibration from construction activities would be temporary, nuisance vibration would be less than significant. While the proposed project would involve relocation of the Bake Parkway/Marine Way intersection, changing the location of the roadway would not place generate significantly higher levels of vibration. Therefore, the construction vibration levels associated with this component of the project are anticipated to be similar to those addressed in the OCGP FEIR and would not result in any new significant impacts which were not previously anticipated.

Operation

Relocation of the Bake Parkway/Marine Way intersection would not result in land use changes that would increase project-related stationary or mobile source noise generated by the project. Other changes proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment do not allow any additional development intensity of the Overlay Plan or increase project-generated trips. Therefore, the stationary-source noise levels associated with this component of the project are anticipated to be similar to those addressed in the OCGP FEIR and would not result in any new significant impacts which were not previously anticipated.

Airport Noise

The former MCAS El Toro operations have ceased and no public airport, public use airport, or airport land use plan exists in the project vicinity.

Land Use Compatibility

The project includes land use types and intensity identical to the adopted Overlay Plan. Because the OCGP FEIR did not identify any significant impacts related to land use compatibility, the proposed project is also compatible with the Irvine General Plan and zoning code for noise and vibration compatibility.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project will not result

4. Discussion of Checklist and Mitigation Measures

in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant noise effects identified in and considered by the certified OCGP FEIR.

4.9.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified no significant noise impacts; therefore no mitigation measures were proposed.

4.10 POPULATION AND HOUSING

4.10.1 Environmental Setting

The OCGP FEIR discussed the caretaker status of the base following its closure. At the time the OCGP FEIR was prepared there was a limited number of military and civilian staff working on the base. There are no residents living on the base. Consequently, there are 4,380 vacant group quarters units and 1,209 residential dwelling units. The OCGP FEIR examined demographics in the context of the existing and projected population of the Orange County region and the City of Irvine. Population and housing information was developed based on the 2000 United States Bureau of Census population, household, and employment census information. The areas surrounding the former base and the Orange County subregion are considered jobs-rich and housing-poor. The Southern California Association of Governments (SCAG) seeks to encourage housing growth over job growth in the Orange County subregion. The OCGP FEIR reported that the ratio of jobs to housing in the area has environmental implications related to transportation and air quality. Thus, a major focus of the regional planning efforts has been to improve the ratio of jobs to housing in all affected subregions in order to reduce to vehicular trips, costly infrastructure improvements, and resultant air emissions. Despite attempts, according to SCAG projections, the Orange County subregion's jobs/housing balance will worsen through the year 2025 as the number of jobs surpasses housing gains.

4. Discussion of Checklist and Mitigation Measures

4.10.2 Impacts Identified in the OCGP FEIR and Addenda

As noted above, the area surrounding the former MCAS El Toro and the Orange County subregion are considered jobs-rich and housing-poor. SCAG seeks to discourage job growth over housing growth in the Orange County subregion. The OCGP FEIR reported that regional projections are dynamic and, as a compilation of local land use projections, reflect changing community views on the location and the types of growth desired. Although implementation of the adopted Overlay Plan would not have exceeded the Orange County Preferred-2000 employment projections, its impact on employment was considered significant because the Orange County subregion is anticipated to become increasingly jobs-rich over the next 20 years and the Overlay Plan-related employment would exacerbate the subregional jobs/housing imbalance. The Overlay Plan is expected to result in the provision of 3,625 dwelling units. Based on the city's zoning categories planned for this site, the dwelling units could accommodate up to 9,000 people. This increase in population will not substantially exceed projections contained for the site in OCP-2000. No significant impacts to population and housing were identified (www.scag.ca.gov).

4.10.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The project would not substantially alter the population, housing, and employment information contained in the OCGP FEIR. The project would not introduce new levels of development that would improve the ratio of jobs to housing beyond that already considered by the OCGP FEIR. Both the proposed project and the adopted Overlay Plan would result in:

- an increase of up to 9,000 people (resident population);
- development of 3,625 residential dwelling units—1,100 low density, 860 medium density, 1,500 medium-high density, and 165 dwelling units allocated to homeless providers; and
- an approximate increase of 16,510 jobs.

The project's impacts would be the same as under the OCGP FEIR, less than significant for population and housing, and significant and unavoidable for employment.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OGCP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not

4. Discussion of Checklist and Mitigation Measures

have been known with the exercise or reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant effects identified in and considered by the certified OCGP FEIR.

4.10.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified a significant impact associated with the jobs/housing ratio. The OCGP FEIR also stated that no mitigation is available to rectify conflicts between the numerical objectives of regional planning documents including the jobs/housing ratio. This finding remains applicable to the proposed General Plan Amendments, Zone Changes, and Development Agreement Amendment.

4.11 PUBLIC SERVICES

4.11.1 Environmental Setting

Law Enforcement

At the time of the certification of the OCGP FEIR, law enforcement was provided by the Orange County Sheriff through a contract with the Department of the Navy (DON) in PA 51 and the Irvine Police Department provided law enforcement within PA 30. Subsequent to the annexation of the property, the City of Irvine Police Department has assumed law enforcement responsibility within both planning areas. The Irvine Police Department is headquartered at the Irvine Civic Center Complex and also has a satellite facility in the Irvine Spectrum Entertainment Complex. The OCGP FEIR stated that the current police facilities are adequate to handle the personnel and equipment that are employed and utilized by the department for PA 30. The OCGP FEIR also stated that the Irvine Police Department is researching the expansion of their facilities, although the specific details of constructing a substation were not known.

Fire and Emergency Medical Services

At the time of the certification of the OCGP FEIR, primary fire protection to PAs 30 and 51 was provided by Orange County Fire Authority (OCFA) under contract to the County of Orange on an interim basis. Subsequent to the annexation of the property, OCFA has continued to provide fire protection service to the project area. The OCGP FEIR stated that OCFA is planning two additional fire stations in the general vicinity. OCFA also has in place an agreement with the Irvine Company as part of the Northern Sphere Area that should provide adequate service to all areas surrounding the project.

Parks and Recreation

The site presently contains no parks, trails, bike lanes or other recreation facilities that are open to the public. However, many public facilities are located within five miles of the OCGP including neighborhood and community parks, recreational trails, and open space.

There are approximately 506 acres of neighborhood and community parks and recreational trails in the City of Irvine's public park system, including one aquatic complex containing three competition size pools. William R.

4. Discussion of Checklist and Mitigation Measures

Mason Regional Park, a County of Orange facility, and numerous private parks and recreation facilities are also available throughout Irvine that provide additional recreational opportunities for the City's residents.

The City of Irvine, through its Conservation and Open Space Element has established an open space program comprehensively aggregating open space, adjoining other regional open space, promoting conservation and passive recreational opportunities (e.g. Bommer Canyon, Shady Canyon and Limestone Canyon).

At the time of the certification of the OCGP FEIR, the DON, acting in a caretaker's role, offered public access to a variety of existing recreational facilities including the existing Marine Memorial Golf Course and equestrian stables. Currently, these facilities remain closed and are under demolition and preparation for future development.

School Services

Planning Areas 30 and 51 are within the school service boundaries of the Irvine Unified School District (IUSD) and the Saddleback Valley Unified School District (SVUSD). Prior to the closure of the base, an IUSD elementary school with a 600-student capacity was operated on the former base property.

4.11.2 Impacts Identified in the OCGP FEIR

Law Enforcement

The OCGP FEIR discussed the law enforcement needs of both Planning Areas 30 and 51, and stated that following annexation, the Irvine Police Department would provide law enforcement for the entire project area. The OCGP FEIR also analyzed the number of police officers, police supervisors and support staff, as well as the number of vehicles, equipment, and services. The OCGP FEIR stated that police protection for the park area would be funded through the use of a special park assessment. As stated in the OCGP FEIR, the general impacts associated with construction and operation of public facilities were analyzed in the OCGP FEIR as part of the planned land uses which also included the construction of a new Police substation.

Fire and Emergency Medical Services

Subsequent to annexation of the property, Planning Areas 30 and 51 continue to be served by OCFA. The OCGP FEIR stated that there was the likelihood that additional fire services infrastructure would be required to support the proposed project. OCFA had not provided the detailed calculations of the exact extent of new services. The OCGP FEIR stated that the final determination of fire station needs and locations would be made at a future date when more information is known about risk, layout, and types of occupancy. The specific environmental impact of constructing the new fire facilities to serve the project could not be determined at the General Plan level of analysis as specific site plans and locations had not been prepared. However, the general impacts associated with the construction and operation of public facilities were addressed within the OCGP FEIR.

Parks and Recreation

As discussed in detail in OCGP FEIR, the parkland acreage under the project will greatly exceed the existing City of Irvine's standards, and will provide a regional open space amenity for the benefit of Orange County. The OCGP FEIR calculated a total of 45.1 acres of parkland required for the proposed development. A portion of that acreage will be in neighborhood parks, primarily for pools and tot lots within close proximity of homes.

4. Discussion of Checklist and Mitigation Measures

The community park requirement for the future Great Park Neighborhoods development has been addressed through the Development Agreement between the City and Heritage Fields (Recorded on July 12, 2005) and reflected in the amended Development Agreement. Conveyance of the OCGP to the City satisfied any requirement imposed on the developer for the dedication or development of community parks as required by the City's General Plan and Municipal Ordinance. The neighborhood park requirements for the future Great Park Neighborhoods development will be met within the Great Park Neighborhoods development, outside the OCGP. Details of specific park locations, ownership, sizes, and improvements will be presented to the Community Services Commission as a part of the Park Plan for the new residential developments. This is consistent with the findings of the OCGP FEIR.

The OCGP FEIR also discussed the Implementation Agreement regarding the Natural Community Conservation Plan (NCCP) for the Central/Coastal Orange County Sub-region of the Coastal Sage Scrub NCCP (July 1996), and that the Habitat Reserve will be established on approximately 974 acres in the northeastern portion of current Planning Area 51. It is noted that that acreage was not sold by the Navy, but rather transferred to the Federal Aviation Administration (FAA). The FAA has an agreement with the Department of the Interior (DOI) for the maintenance of extant gnatcatcher habitat. There are two designated drainage corridors and one wildlife corridor on the Site. The wildlife corridor is located on the southern portion of the project area. The adopted Overlay Plan also includes opportunities for museums, theaters, gardens and other cultural facilities, as well as a sports park, a golf course, and network of recreational riding and hiking trails throughout the project site.

School Services

The OCGP FEIR discussed in detail the proposed project, the related student generation, and the required school facilities. Based on an initial analysis, the IUSD estimated the need for one 13-acre K-8 site as well as funding for expansion and modernization of existing middle and high school facilities by project buildout.

4.11.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Law Enforcement

The project does not change the intensity or type of land uses and therefore, the demand on law enforcement is within the envelope of analysis presented in the OCGP FEIR.

Fire and Emergency Medical Services

Since the project does not change the intensity or type of land uses, the demand on fire protection is within the envelope of analysis presented in the previously certified OCGP FEIR.

Parks and Recreation

The project does not propose changes to the land use intensities and types and maintains all of these facilities and amenities as project features. Therefore, the project remains within the envelope analyzed in the previously certified OCGP FEIR.

School Services

Since the project does not propose change to the number and type of residential units or to any of the other land uses, the proposed project remains within the envelope analyzed in the previously certified OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant effects identified in and considered by the certified OCGP FEIR.

4.11.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR determined the mitigation measures identified in other sections of the OCGP FEIR (Sections 5.1–5.13) address the impacts associated with the construction and operation of public facilities. These measures would be applicable to any new construction and operation of facilities for police, fire protection, park and recreation, and education to serve new growth expected in the northern portion of the City.

4.12 RECREATION

Issues related to Recreation are discussed above under Section 4.11, *Public Services*.

4.13 TRANSPORTATION/TRAFFIC

4.13.1 Environmental Setting

The OCGP FEIR describes the traffic and circulation conditions of a study area that encompassed 145 existing intersection analysis sites (2007) and an additional 11 future sites (Post 2025) in the City of Irvine, and portions of 7 adjacent jurisdictions including the Cities of Lake Forest, Mission Viejo, Laguna Hills, Laguna Woods, Aliso Viejo, Laguna Beach, and unincorporated areas of Orange County.

4. Discussion of Checklist and Mitigation Measures

The OCGP FEIR used the City of Irvine Traffic Performance Criteria, which establishes level of service (LOS) “A” to “D” as the peak-hour minimum acceptable service level. In its adoption of the Overlay Plan, the City General Plan Policy B-1 (C), which identified LOS E as acceptable for application to intersections in Planning Areas 13, 31, 32, 34, 35 and 39, was changed to include the effects of future development in Planning Areas 30 and 51 on the intersections in those Planning Areas. The City’s performance criteria also includes a standard of 0.02—roadway volume to capacity (V/C) ratio or the intersection capacity utilization (ICU)—to identify significant project impacts and associated need for improvements at both roadways and intersections.

At the time the OCGP FEIR was prepared the following 10 study area intersections experienced deficient peak hour traffic operations:

- Culver Drive and Walnut Avenue
- Culver Drive and University Drive
- Jeffrey Road and Alton Parkway
- Jeffrey Road and I-405 Northbound Ramps
- Bake Parkway and Irvine Boulevard
- Bake Parkway and Jeronimo Road
- El Toro Road and Aliso Creek Road
- Los Alisos Boulevard and Los Alisos Boulevard
- Muirlands Boulevard and Los Alisos Boulevard
- Trabuco Road and Alicia Parkway

4.13.2 Impacts Identified in the OCGP FEIR

The OCGP FEIR concluded that the adopted Overlay Plan would cause an increase in traffic which would be substantial in relation to the existing traffic load and capacity of the street system—that is, a substantial increase in either the number of vehicle trips, the V/C on roadways, or congestion at intersections—in the year 2007, year 2025, and post-2025 scenarios (OCGP FEIR page 5.2-66):

Year 2007

- I-5 Freeway at Alton Parkway—southbound off-ramp (A.M.)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (A.M.)

Year 2025

- University Drive from the I-405 Freeway to Michelson Drive (A.M.)
- I-5 Freeway from Sand Canyon Avenue to Jeffrey Road—northbound (P.M.)
- I-5 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-405 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-5 Freeway at Jeffrey Road—southbound on-ramp (A.M.)
- I-5 Freeway at Sand Canyon Avenue—northbound on-ramp (P.M.)
- I-5 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-5 Freeway at Alton Parkway—southbound off-ramp (A.M.)
- I-5 Freeway at Bake Parkway—southbound off-ramp (A.M.)
- I-405 Freeway at Sand Canyon Avenue—northbound direct on-ramp (P.M.)
- I-405 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)

4. Discussion of Checklist and Mitigation Measures

- I-405 Freeway at Irvine Center Drive—southbound off-ramp (A.M.)
- SR-241 Tollway at Lake Forest Drive—southbound off-ramp (A.M.)
- SR-133 Freeway at Barranca Parkway—northbound direct on-ramp (P.M.)

Post-2025

- I-5 Freeway from Sand Canyon Avenue to Jeffrey Road—northbound (P.M.)
- I-5 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-405 Freeway from Jeffrey Road to Sand Canyon Avenue—southbound (A.M.)
- I-5 Freeway at Jeffrey Road—southbound on-ramp (A.M.)
- I-5 Freeway at Jeffrey Road—northbound off-ramp (P.M.)
- I-5 Freeway at Sand Canyon Avenue—northbound on-ramp (P.M.)
- I-5 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-5 Freeway at Alton Parkway—southbound off-ramp (A.M.)
- I-5 Freeway at Bake Parkway—southbound off-ramp (A.M.)
- I-5 Freeway at El Toro Road—southbound off-ramp (P.M.)
- I-405 Freeway at Sand Canyon Avenue—northbound direct on-ramp (A.M./P.M.)
- I-405 Freeway at Sand Canyon Avenue—southbound off-ramp (A.M.)
- I-405 Freeway at Irvine Center Drive—southbound off-ramp (A.M.)

Intersections

For the list of impacted intersections by analysis year, please refer to the following OCGP FEIR tables:

- Table 5.2-12 for year 2007
- Table 5.2-13 for year 2025
- Table 5.2-15 for post 2025

4.13.3 Impacts Analyzed in the OCGP FEIR and Addenda

The OCGP FEIR established trip thresholds (also known as “trip caps”) for each of the planning areas within the Great Park area. The trip cap is based on socioeconomic data average daily trip generation for the approved Orange County Great Park plan (the Overlay Plan area), which the Great Park Neighborhoods development is a part. The traffic impacts of the 2006 GPA/ZC project were analyzed in Addendum No. 2 by distributing project-related traffic over existing and future traffic conditions. The three future conditions (year 2010, year 2025 and post-2025) are based on the existing circulation system plus fully funded intersection improvements that were planned to be in place in each future time frame and the land use and development growth that is projected in each future time frame. In each case, project impacts were identified by comparing traffic conditions with and without the 2006 GPA/ZC project.

The circulation system performance criteria applied in the analysis were the criteria approved in the 2003 North Irvine Transportation Model (NITM) Program Nexus Study. The performance criteria were also consistent with the criteria adopted by the jurisdictions that are within the project study area. The criteria include components for arterial roadways, intersections, freeway/tollway ramps, and freeway/tollway mainline segments.

The results of the year 2010, year 2025 and post-2025 analysis indicated that the proposed 2006 GPA/ZC project was not forecast to significantly impact any roadway segment based on the second level of analysis

4. Discussion of Checklist and Mitigation Measures

(the City's peak hour link capacity analysis methodology), intersection, freeway/tollway ramp, or any freeway/tollway mainline segment.

Subsequently, as addressed in Addendum No. 3, a Traffic Study (refer to Appendix C of Addendum No. 3) for the Master Subdivision Map was prepared by Austin-Foust Associates, Inc. (dated April 11, 2007) to address the transportation impacts for the "project," i.e. backbone infrastructure with no new land use development in an interim year timeframe consistent with the TTM scope of work of the North Irvine Transportation Mitigation (NITM) Program Ordinance.

The Traffic Study analyzed the impacts of the Master Subdivision Map (MSM) application based on Year 2010 traffic conditions in the traffic analysis study area.

That proposed project was presented in Figure 4-2 to Addendum No. 3, and included Marine Way from Sand Canyon Avenue to Bake Parkway, Trabuco Road from the SR-133 to "O" Street, and the extension of Rockfield Boulevard to Marine Way as four-lane primary arterials, Ridge Valley (formerly "Y" Street) from Portola Parkway to Irvine Boulevard and "O" Street (formerly College Road) as four-lane secondary arterials, Trabuco Road east of "O" Street, "A" Street, "B" Street, "C" Street and "D" Street as two-lane local road ways. The mid-block lanes were shown in Figure 4-3 to Addendum No. 3. It should be noted that the proposed project included the construction of two lanes on "O" Street between Trabuco Road and Marine Way. The remaining two lanes will be built by the owner of the adjacent property (west side of "O" Street) when that property is developed.

An Internal Circulation Analysis (refer to Appendix D to Addendum No. 3) for the Master Subdivision Map in the Overlay Plan area was prepared by Austin-Foust Associates, Inc. to analyze the access and internal circulation for the Great Park Neighborhoods project. Project access was illustrated in Figure 4-4 in Addendum No. 3, which showed the proposed access locations for the Lifelong Learning District, the Park District, and the Transit Oriented Development (TOD) District. The project traffic loaded directly onto the surrounding arterial system at several locations. These include access to Irvine Boulevard via Ridge Valley; "O" Street (formerly College Road), "A" Street and "B" Street to Sand Canyon Avenue via Trabuco Road and Marine Way (and indirectly via Irvine Boulevard); and to Alton Parkway, Barranca Parkway, and Bake Parkway via Marine Way. Project access to the SR-133 is provided directly via a planned interchange at Trabuco Road and indirectly via "O" Street to the Irvine Boulevard interchange.

The intersections shown in Figure 4-5 in Addendum No. 3 were analyzed using intersection capacity utilization (ICU) values to determine level of service (LOS). The results of this analysis showed that all intersections operate at an acceptable level of service under Post-2025 buildout conditions. The intersections were then analyzed for signalization needs. Traffic signal warrants based on peak hour volumes (as adopted by the Federal Highway Administration and Caltrans) were used to determine the need for signalization. The results of this analysis were illustrated in the Figure 4-4 in Addendum No. 3. Based on the application of the warrants, it was determined that traffic signals should be installed at all of the analyzed intersections except for the intersections of "C" Street and "D" Street at Marine Way.

Recommended on-site traffic-control measures included one-way stop signs, signals, and roundabouts. Left-turn pocket lengths for project access intersections with exclusive left-turn lanes were estimated using the County of Orange Environmental Management Agency (EMA) Highway Design Manual. The estimated left-turn storage length requirements for the analyzed intersections were based on peak hour volumes.

Right-turn lanes will be provided for select project access locations on site where additional intersection capacity is needed. The length of the right-turn lane is a function of the adjacent through-traffic queue and LOS at the intersection. A minimum length of 250 feet plus a 120-foot transition will be provided at these

4. Discussion of Checklist and Mitigation Measures

locations. Right-turn deceleration lanes are provided along the periphery of the project site and along major roadways within the project site where higher speeds prevail (i.e., Irvine Boulevard, Trabuco Road, and on Marine Way with the exception of locations within the TOD District). The right-turn deceleration lane will be a minimum of 150 feet with a 120-foot transition, in order to provide a safe transition from the through lane to the right-turn lane.

4.13.4 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Bake Parkway/Marine Way Relocation

A traffic study analyzing the potential impacts of the Bake Parkway/Marine Way relocation was prepared by the City of Irvine and Parsons Brinkerhoff in June 2008 and is included in its entirety as Appendix B. The following summarizes the analysis and conclusions contained in the traffic study.

Roadway Segment Improvements

Individual arterial segments that operate at a deficient level of service are candidates for a special analysis to determine whether additional improvements are required. Peak-hour segment analysis was conducted for segments that were forecasted to operate at a deficient level of service in Year 2012, Year 2030, and Post-2030. The results of the analyses revealed that additional lanes are needed on Bake Parkway between I-5 NB Ramps and Rockfield Boulevard in Year 2012. The need for the additional lanes in Year 2012 was due to the completion of the Marine Way segment between Sand Canyon Avenue and Bake Parkway and also due to the relocation of the Bake Parkway/Marine Way intersection in Year 2012. Since the completion of Marine Way was not anticipated in the Without Project scenario until year 2030, the determination of the impacts for Year 2012 was deferred to Year 2030. In Year 2030, analysis showed that the segment of Bake Parkway between I-5 NB Ramps and Rockfield Boulevard did not result in deficient level of service. Therefore, there are no project related impacts in Year 2030. No arterial improvements are needed Post 2030. In conclusion, there are no project-related roadway segment improvements.

Intersection Improvements

Intersection analysis was conducted for all intersections in the NITM study area for Year 2012, Year 2030 and Post 2030. For intersections that are forecasted to operate at a deficient level of service, NITM fully funded improvements were applied where applicable. In Year 2012, three intersections (Sand Canyon Avenue at I-5 northbound ramps; Marine Way/Bake Parkway at Rockfield Boulevard and Bake Parkway at the I-5 northbound ramps) were found to be in need of additional improvements. The need for additional improvements at these three intersections is due to the completion of Marine Way (Sand Canyon Avenue to Bake Parkway) and the relocation of the Bake Parkway at Marine Way intersection in Year 2012. The No Project scenario in Year 2012 does not assume the completion of the entire Marine Way segment. Since the assumptions between the No Project and With Project are different in Year 2012, the additional improvements associated with these three intersections are deferred until Year 2030 to determine if improvements are needed. In Year 2030, when both Without and With Project assume the completion of the entire Marine Way from Sand Canyon Avenue to Bake Parkway, the intersections of Sand Canyon Avenue at the I-5 northbound ramps and Marine Way/Bake Parkway at Rockfield Boulevard did not have project related impacts. However, the intersection of Bake Parkway at the I-5 northbound ramps was found to be in need of additional improvements. In Post 2030, the intersections of Sand Canyon Avenue at the I-5 northbound ramps and Marine Way/Bake Parkway at the I-5 northbound ramps were found to be in need of additional improvements. The relocation of the Bake Parkway at Marine Way intersection includes the following project design features that will provide improvements at the intersections identified above.

4. Discussion of Checklist and Mitigation Measures

Project Design Features

Bake Parkway/I-5 Northbound Ramp

The General Plan approved Bake Parkway at Marine Way intersection provides direct access from the Bake Parkway at the I-5 northbound ramps intersection onto Marine Way. The proposed Bake Parkway at Marine Way intersection is relocated north (east) of the General Plan approved Bake Parkway at Marine Way intersection on Bake Parkway. The relocation of the Bake Parkway at Marine Way intersection includes project design features along Bake Parkway. Specifically, Bake Parkway is proposed to be widened north (east) of the existing I-5 bridge to provide four through lanes to Rockfield Boulevard while southbound (westbound) Bake Parkway from Rockfield Boulevard will be widened to provide four through lanes which reduces to three through lanes at the I-5 NB on-ramp. In addition, the proposed Bake Parkway at Marine Way relocation is also accompanied by improvements at the I-5 northbound off-ramp. The I-5 northbound off-ramp at Bake Parkway will be widened to provide one left-turn lane and three right-turn lanes. The project design features at this location needed for Year 2030 and Post-2030 operations, tied to the construction of the Bake Parkway and Marine Way intersection will provide acceptable levels of service at this intersection.

Sand Canyon/I-5 Northbound Ramp

The proposed relocation of the Bake Parkway/Marine Way intersection resulted in the need for restriping at the eastbound approach or the southbound approach of the Sand Canyon/I-5 Northbound Ramp intersection. As part of the project design features, the southbound approach at this intersection will be restriped to provide two left-turn lanes, four through lanes, and one right-turn lane. The restriping improvement provides ICU values lower than the Without Project condition.

The certified OCGP EIR analyzed the proposed Great Park circulation system and associated amendments to the City's Circulation Element at a programmatic level and listed Caltrans as a Responsible Agency. Project specific impacts will be addressed through the normal Caltrans process including a request for an Encroachment Permit, completion of a Project Study Report, and additional CEQA/NEPA review, if required.

Conclusion

The project would not produce or substantially worsen significant impacts identified in the OCGP FEIR. Consistent with the conclusions in the OCGP FEIR, traffic and circulation impacts associated with the project would be less than significant, as the future development would implement all applicable laws and regulations to reduce impacts on traffic and circulation.

The OCGP FEIR also disclosed the traffic analysis assumption that the cumulative impact of the adopted Overlay Plan traffic along with other regional growth at the identified ramp and freeway locations would be mitigated through a combination of regional programs that are the responsibility of other agencies, and if said programs are not implemented, the cumulative freeway/toll way ramp impacts would remain significant and unavoidable (OCGP FEIR page 7-19). The project would not alter this conclusion.

Removal of Golf Course Holes

Removal of the Golf Course Holes does not increase allowable intensities or uses within the Orange County Great Park and would not create any new traffic impacts beyond those evaluated in the OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

Reduction in Agricultural Acreage

Removal of the requirement to include 173 acres of agricultural use within the Lifelong Learning District will not generate any additional traffic since the proposed Amendments do not increase allowable intensities beyond that analyzed in the certified OCGP FEIR. Therefore, no new traffic impacts beyond those analyzed in the certified OCGP FEIR are anticipated.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project will not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP OCGP FEIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR. This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures that would substantially reduce one or more of the significant effects identified in and considered by the certified OCGP FEIR.

4.13.5 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR identified mitigation measures TRAN1 through TRAN8 which, if fulfilled prior to specified development approvals, would eliminate or substantially reduce the traffic and circulation effects of development under the adopted Plan. The measures are applicable to future development under the project.

- TRAN1 Prior to the approval of any final map (other than a financing and conveyance map) within the Great Park project, and prior to issuances of any building permits for permanent improvements within the Great Park property, the landowner or subsequent project applicant shall apply for annexation of any areas within the final map to the Irvine Spectrum Transportation Management Association (TMA) ("Spectrumotion") in accordance with Article X of the recorded Declaration of Covenants, Conditions, and Restrictions (CC&Rs) for the Irvine Spectrum TMA, including any supplementary or amended CC&Rs. The primary

4. Discussion of Checklist and Mitigation Measures

purpose of this mitigation measure is to reduce traffic, air quality and noise impacts. Should annexation into Spectrumotion not be approved, the landowner or subsequent project applicant shall develop and implement a similar transportation management plan containing the elements and meeting the criteria described below:

Transportation Management Plan (TMP)

The development and implementation of a Transportation Management Plan is an identified mitigation measure to manage transportation access for the Great Park Project. This document summarizes the key elements of the TMP.

1.0 Introduction

The purpose of this document is to provide an outline for a comprehensive TMP for the Great Park. This report is not intended to provide the specific details of the plan, but rather to highlight the key components and provide direction for subsequent detailed planning and implementation activities. When preparation of the TMP is undertaken, all of the agency and stakeholders will be invited to provide input.

It is the intent to annex Planning Area 51 and a portion of Planning 35 into the Irvine Spectrum Transportation Management Association (Spectrumotion). Spectrumotion is a private, non-profit Transportation Management Association (TMA) formed to reduce traffic congestion in Irvine Spectrum. Spectrumotion promotes, markets, and subsidizes alternatives to solo commuting and assists the business community in complying with trip reduction related requirements. Membership is mandatory to property owners with deed restrictions requiring participation in TMA. Membership dues provide the funding for the Association and its program, which offer a variety of employer and commuter services focused on reducing vehicular trip generation.

In the event that annexation of PAs 51 and 35 into Spectrumotion is not approved, a TMP similar to that provided by Spectrumotion will be implemented. This document sets forth the components of the TMP should it be necessary.

2.0 Transportation Management Plan Framework

The key elements of the Great Park TMP are set forth below:

New Hire Orientation: Inform newly hired employees of commuting services available to them.

Public Transportation Pass Sales: Provide a central location for purchase of passes to available transit services (i.e., OCTA buses, Metrolink, Amtrak, etc.).

Vanpool and Carpool Formation Assistance: Perform all of the administrative work necessary to establish van pools and car pools.

On-site Promotions: Hold rideshare promotions at work sites and assist in employer assistance promotions.

4. Discussion of Checklist and Mitigation Measures

Telecommuting/Alternative Work Schedule Consulting: Assist employers in developing and implementing a telecommuting or alternative work schedule program.

Personalized Commute Consulting: Provide a personalized commute profile to any commuter, which includes carpool match list containing the names of other commuters in the North Irvine Sphere that live and work near each other.

Website: Maintain a website with all of their program information available.

Rideshare Promotions: Conduct high visibility rideshare promotions as a means to advertise its services.

Subsidies: To the extent financially feasible, offer subsidies to assist in the formation of vanpools, the formation of carpools, and to encourage the trying of transit services.

Public Agency Coordination: Work closely with various public and quasi-public agencies to improve bus and commuter rail service to the Spectrum and North Irvine Sphere areas.

3.0 Transportation Management Plan Implementation

As part of the TMP, a process will be established to monitor its effectiveness in reducing peak hour trip generation in the Great Park. Provision shall be made for the Plan to be modified as appropriate to enhance its effectiveness.

- TRAN2 Prior to the issuance of the first building permit, City shall establish, and the landowner or subsequent project applicant shall commit to participate in, a transportation system/infrastructure fee program to fund improvements identified as mitigation measures listed in Tables 5.2-16 and 5.2-17 of the OCGP FEIR.
- TRAN3 Prior to issuance of any building permits for permanent improvements within Planning Areas 30 and 51, the landowner or subsequent project applicant shall implement or contribute its percentage funding responsibility for traffic improvements as identified in the NITM Ordinance.
- TRAN4 Prior to approval of each Master Tentative Map or equivalent, the landowner or subsequent project applicant shall prepare, subject to City review and approval, an updated traffic study consistent with the City of Irvine Traffic Study Guidelines inclusive of a phasing plan for traffic improvements associated with the subject Master Tentative Map. The phasing plan will specify the timing, funding, construction, and responsibilities for all traffic improvements identified in the updated traffic study. The updated traffic study will determine whether any additional or alternative traffic improvements are necessary based on updated traffic forecasts. The updated traffic study will evaluate the cumulative impact of the subject map and all previously approved or concurrently submitted maps. The methodology for the study area, applicable land use and circulation modifications, and standards for assessing and mitigating impacts employed in the updated traffic study shall be consistent with a City approved traffic study scope of work. The landowner or subsequent project applicant shall construct, bond for, or enter into a funding agreement for necessary improvements identified in the updated traffic study and/or participate in the City fee program (Tran 2 above) to the extent that the improvements identified in the updated traffic study are listed in Tables 5.2-16 and 5.2-17 of the OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

Traffic signals that are on-site or directly related to the Great Park development will be installed as warranted through the mitigation implementation plan process.

- TRAN5 In conjunction with the preparation of any updated traffic study as required in Mitigation Measure Tran 4 for each master tentative map or equivalent, and assuming that a regional transportation agency has not already programmed and funded the warranted improvements to the impacted freeway mainline or freeway/toll way ramp locations in conjunctions with fulfilling its regional role, that landowner or subsequent project applicant and the City will take the following actions:
1. The City shall ensure that the updated traffic study identifies the project's proportionate impact on the specific freeway mainline and/or freeway-toll way ramp locations and its percentage responsibility for mitigating these impacts (assuming tolled conditions on the Transportation Corridors) based on thresholds of significance, performance standards and methodologies used in the OCGP FEIR and established in the Orange County Congestion Management Program and City of Irvine Traffic Study Guidelines.
 2. The City shall estimate the cost of the project's percentage responsibility in cooperation with Caltrans and the Transportation Corridor Agency.
 3. The landowner or subsequent project applicant shall enter into an agreement with the City prior to recordation of the first final map for each Master Tentative map or equivalent to establish the method and timing of payment of the identified percentage responsibility.
 4. The City shall allocate landowner or subsequent project applicant's percentage contribution to traffic improvements that result in improved traffic flow on the impacted mainline and ramp locations, including but not limited to construction of physical or operational improvements, contributions to mandated trip reduction or transit programs, or funding participation in a regional transportation improvement fee program, if adopted.
- TRAN6 The project shall mitigate to insignificant levels all project impacts at significantly impacted study area intersections. Tables 5.2-16 and 5.2-17 in the OCGP FEIR show the mitigation program for each phase. With regard to impacts that require improvements in other jurisdictions, the City of Irvine shall cooperate with the affected jurisdiction to ensure that the improvements are constructed in a timely manner.
- TRAN7 Assuming that a regional transportation agency has not already programmed and funded the improvements, the City of Irvine shall coordinate with Caltrans and the Transportation Corridor Agencies, and submit for their approval proposed plans for modifications to the state highway system and the transportation corridors, as required to provide ramp connections to Trabuco Road. If needed, the City shall prepare a Project Study Report, a new Connection Request, and a Detailed Traffic Revenue Study for review by Caltrans and the Transportation Corridor Agency for the proposed connection of Trabuco Road to the Eastern Transportation Corridor. The City shall perform toll and revenue impact studies for any mitigation measure (improvement) that may be impacted by the non-complete clause or any similar agreement restricting a public agency's authority to construct improvement.

4. Discussion of Checklist and Mitigation Measures

- TRAN8 Following adoption of a land use plan and circulation plan for the Great Park property and before the issuance of any building permits within the base property, the City of Irvine shall enter into a cooperative study with OCTA and other affected jurisdictions to amend the Orange County Master Plan of Arterial Highways (MPAH). Marine Way, Trabuco Road from the SR-133 toll way to College Road, and Y Street should be included on the MPAH.

4.14 UTILITIES AND SERVICE SYSTEMS

4.14.1 Environmental Setting

Potable Water

The OCGP FEIR described the potable water system for the project. The IRWD is the jurisdictional agency responsible for plan approval and water service to the project area. Planning Areas 30 and 51 are within Zone 3 North and Zone 4 of the IRWD water system. The existing on-site distribution system includes a network of distribution system pipelines, six reservoirs, and two pump stations.

Recycled Water

As stated in the OCGP FEIR, IRWD is the jurisdictional agency responsible for plan approval and water service for the project area. Recycled water is currently supplied to Planning Areas 30 and 51 via a 12-inch IRWD Zone B pipeline and connecting to an 8-inch former military base pipeline in the southwest corner of the property.

Sewer

As stated in the OCGP FEIR, IRWD is the jurisdictional agency responsible for plan approval and sewer service for the project area. Planning Areas 30 and 51 are served by a two-branched system with flow, mainly by gravity, from the northeast to the southwest. The system includes a series of pipes ranging from 6 to 15 inches in diameter.

Solid Waste

The OCGP FEIR discussed in detail the environmental setting for solid waste for the project. Solid waste at the project site is collected by Waste Management, Inc., and is disposed of at the Frank R. Bowerman Landfill owned by the County of Orange Integrated Waste Management Department (IWMD).

The IWMD's Countywide Integrated Waste Management Plan (CIWMP) was approved in 1996 pursuant to California Integrated Waste Management Board requirement. The CIWMP shows that there is sufficient solid waste disposal capacity in the County for the next 30 years.

Energy and Communications

Southern California Edison (SCE) serves the project via two primary substations. The Southern California Gas Company serves Planning Areas 30 and 51. AT&T is the communications provider for these Planning Areas. Detailed information regarding the environmental setting of dry utilities was included in the OCGP FEIR.

4. Discussion of Checklist and Mitigation Measures

4.14.2 Impacts Identified in the OCGP FEIR and Addenda

Potable Water

The OCGP FEIR projected the potable water demand to be less than 1.75 million gallons per day (MGD) calculated for the land uses proposed within the project. Since the Proposed Entitlements do not include any additional intensity or change in the mix of land uses, the demand projection is consistent with the OCGP FEIR and addenda. As stated in the OCGP FEIR, selected portions of the existing potable water facilities are assumed to remain in place and operational through project buildout. The OCGP FEIR stated that the existing system will be expanded and integrated into the IRWD system and thus provide a backbone service to all users on the project site. The OCGP FEIR assumed a potable water system that would follow the routing of existing and proposed roadways. The approved Master Subdivision Map includes the alignment for water lines throughout Great Park Neighborhoods, which was an additional project design detail and not a change in the project.

Recycled Water

The OCGP FEIR stated that on January 27, 2003, the IRWD Board of Directors approved the assessment of water supply for the project. According to the findings of the assessment, the IRWD has determined that a sufficient non-potable water supply is available to serve the project. Since the proposed entitlements do not increase the intensity or change the mix of land uses, the total non-potable water supplies will meet the project demand.

The OCGP FEIR stated that the implementation of the project would require the expansion of the recycled water transmission lines to serve the project. It was assumed that selected on-site facilities would remain in place and operational through buildout. The OCGP FEIR stated that the existing system will be expanded and integrated into the IRWD system and provide a backbone service to all users in the project site. The OCGP FEIR assumed a non-potable system that would follow the routing of existing and proposed roadways within the project. The approved Master Subdivision Map included the alignment for the recycled water lines throughout Great Park Neighborhoods, which was an additional project design detail and is not a change in the project.

Sewer

The OCGP FEIR stated that the IRWD will continue to provide sewer service to the project. The IRWD has indicated that it would have sufficient capacity to meet the future demand; however, additional wastewater treatment capacity may need to be purchased by project proponents as specific development projects come forward. The OCGP FEIR stated that projected buildout demand for sewer services based on the land uses in the project were 0.89 MGD and that the project would require an increase of sewer transmission capacity to serve the project. The proposed sewer system would preserve selected, existing on-site facilities in place and operational through buildout and would expand the system through extension of existing sewer lines. The OCGP FEIR stated that additional IRWD maintenance and equipment could be required to operate and maintain the proposed system.

The adopted Master Subdivision Map ensured that any projected use of the existing sewer system would be in conformance with all applicable regional and state requirements and the mitigation requirements of the OCGP FEIR and addenda. It included the alignment for the sewer lines throughout the project, which was an additional project design detail and did not change the project description.

4. Discussion of Checklist and Mitigation Measures

Solid Waste

As stated in OCGP FEIR, demolition of existing runways, buildings, and structures within PA 51 will generate debris materials that will have to be disposed of at local landfills. Green waste will be also generated as a result of ongoing park and landscaping maintenance. In addition to the City requirement for recycling of construction and demolition material to reduce waste, solid waste reduction will also be achieved through compliance with AB 939, which requires that a minimum of 50 percent of the solid waste generated in cities in California be diverted from landfills. Further, SB 1374 requires that all cities implement measures that require diversion of 75 percent of all construction and demolition waste from landfills. While the OCGP FEIR identified a potential impact related to solid waste, it concluded that, with the recommended, City-adopted mitigation measures, the impact would be less than significant.

Energy and Communications

The Overlay Plan has proposed to install the new systems generally along a routing that coincides with the existing and proposed roadway within the project. A portion of the routing, (specifically the portion along the "loop road") is not included in the project and will require an adjustment to the routing system for the expansion of the dry utilities system. However, the expansion of the system will generally coincide with the existing and proposed roadways consistent with the OCGP FEIR. The OCGP FEIR further stated that the specific impacts of constructing new energy and communication transmission facilities could not be determined at the program level analysis, as site-specific plans for the installation of the energy and communication transmission backbone system have not been prepared. The general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the transmission system, were addressed in the OCGP FEIR.

4.14.3 Impacts Associated with the General Plan Amendments, Zone Changes, and Development Agreement Amendment

Potable Water

The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity. Therefore, the demand projection for potable water is consistent with the OCGP FEIR and addenda. No additional mitigation measures or change in any mitigation measure is required.

Recycled Water

The OCGP FEIR stated that on January 27, 2003, the IRWD Board of Directors approved the assessment of water supply for the project. The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity, and the total nonpotable water supplies would meet the project demand, as analyzed in the OCGP FEIR.

Sewer

The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity. Therefore, demand projections and proposed system expansion would remain the same. The OCGP FEIR

4. Discussion of Checklist and Mitigation Measures

further stated that the specific environmental impact of constructing new sewer facilities to serve the project cannot be determined at the program level analysis, as site-specific plans for the installation of the sewer backbone system had not been prepared. However, the general significant impacts associated with the construction and operation of public facilities, including the project's construction and operation of the sewer system, has been addressed in the OCGP FEIR.

Solid Waste

As stated in OCGP FEIR, demolition of existing runways, buildings, and structures within Planning Area 51 would generate debris materials that would have to be disposed of at local landfills. Green waste would also be generated as a result of ongoing park and landscaping maintenance. The project would not change the land uses or intensity; therefore, no change in impact to solid waste is anticipated. No additional mitigation measures or changes in any mitigation measure are required.

Energy and Communications

The changes proposed in the General Plan Amendment for the Bake Parkway/Marine Way intersection relocation, and those proposed in the General Plan Amendment, Zone Change, and Development Agreement Amendment relating to the Heritage Fields property do not allow any additional development intensity and would have no impact on the fuel and energy consumption projected for the project, which the OCGP FEIR previously analyzed in detail. The analysis and conclusions in the OCGP FEIR do not change since the intensity and types of land uses in the revised plan have not changed from those previously analyzed in the OCGP FEIR.

Major EIR Revisions Not Required. Based on the foregoing analysis and information, there is no evidence that the changes to the project require a major change to the certified OCGP FEIR. The project would not result in any new significant environmental impact nor is there a substantial increase in the severity of impacts from that described in the certified OCGP FEIR.

No Substantial Change in Circumstances Requiring Major EIR Revisions. There is no information in the record or otherwise available indicating substantial changes in circumstances that would require major changes to certified OCGP FEIR.

No New Information of Substantial Importance Showing Greater Significant Effects Than Previous EIR.

This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP EIR was certified, indicating that the project will have one or more significant effects not discussed in the previous EIR or result in a substantial increase in the severity of previously identified effects.

No New Information of Substantial Importance Showing Ability to Reduce Significant Effects in Previous EIR.

This Initial Study/Addendum has analyzed all available relevant information and has determined that there is no new information of substantial importance, which was unknown and could not have been known with the exercise of reasonable diligence at the time the OCGP FEIR was certified, indicating that; (1) mitigation measures or alternatives previously found not to be feasible would in fact be feasible, and would substantially reduce one or more significant effects of the project, but the project proponent declines to adopt the mitigation measures or alternatives; or (2) mitigation measures or alternatives that are considerably different from those analyzed in the previous EIR would substantially reduce one or more significant effects on the environment, but the project proponent declines to adopt the mitigation measures or alternatives. There are no alternatives to the project or additional mitigation measures

4. Discussion of Checklist and Mitigation Measures

that would substantially reduce one or more of the significant effects identified in and considered by the certified OCGP FEIR.

4.14.4 Mitigation from the OCGP FEIR and Applicability to the General Plan Amendments, Zone Changes, and Development Agreement Amendment

The OCGP FEIR determined the mitigation measures identified in other sections of the OCGP FEIR (5.1-5.13) address the impacts associated with the construction and operation of public facilities. These measures would be applicable to any new construction and operation of facilities for the following types of utilities to serve new growth expected in the project area:

- potable water
- recycled water
- wastewater
- energy and communication transmission facilities

Mitigation Measures SW1 through SW5 apply to future demolition and new construction, and would be carried forward through permit approvals for subsequent development projects. The proposed project would neither change these mitigation measures nor their application to future development projects.

SW1 It is anticipated that much of the solid waste resulting from the demolition, dismantling, or other deconstruction of the aged structures and property, including but not limited to buildings and runways, at MCAS El Toro is contaminated with lead-based paints, asbestos, or other materials that may render it unsuitable for recycling or reuse. At the sole cost and expense of the project applicant, in order to evaluate this condition and determine the feasibility of recycling of solid waste material from the MCAS El Toro site by ordinary means, a technical evaluation by a qualified environmental consultant must be conducted. The technical evaluation shall include sufficient sample testing of all types of solid waste materials to be generated by the project to analyze its composition. A copy of the full technical evaluation and its findings must be submitted to the City of Irvine Community Development Department. The City of Irvine must confirm the adequacy of the technical evaluation prior to authorizing the demolition, dismantling, or deconstruction project to proceed.

If it is determined by the technical evaluation that material is contaminated and prohibited from being recycled by ordinary means, a further evaluation must be conducted to identify and evaluate other feasible methods approved by state law to divert the material from landfills. This may include the delivery of the waste material to other appropriate non-disposal or transformation facilities, such as “waste-to-energy” (WTE) plants.

SW2 For that solid waste which is determined to be inappropriate for recycling (as that term is defined by California Public Resources Code Section 40180), the project applicant must submit a written plan to the City and implement such plan to ensure that 75% of the material, or the maximum amount feasible as determined by the technical evaluation, is diverted from the landfill through other methods that comply with state statutes and regulations.

SW3 For that solid waste which the technical study deems to be suitable for recycling, the project applicant must submit a written plan to the City and implement such plan to ensure that solid waste material generated by the demolition, dismantling, or deconstruction project,

4. Discussion of Checklist and Mitigation Measures

land use operations and maintenance is collected by a City authorized solid waste hauler or recycling agent, and that a minimum of 75% of the solid waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180 ("Recycling" does not include transformation, as defined in Public Resources Code Section 40201).

- SW4 To ensure ongoing compliance with these mitigation measures, the project applicant will be required to submit solid waste tonnage reports to the City of Irvine on City approved forms, accompanied by "weight ticket" receipts from state-certified disposal, nondisposal, or transformation facilities, on a quarterly basis to demonstrate that solid waste diversion has occurred in accordance with these required mitigation measures and in a manner that is consistent with, and not detrimental to, the efforts of the City of Irvine to comply with AB939.

To assure compliance with applicable statutes related to the disposal of solid waste, it is necessary for the City to require appropriate and effective mitigation measures to limit the disposal and ensure significant recycling of solid waste on-site.

- SW 5 For green waste, the project applicant must submit a written plan to the City and implement such plan to ensure that the green waste material generated by landscape maintenance operations is collected by a City authorized waste hauler or recycling agent, that the maximum feasible amount of that collected green waste is recycled, and that a minimum of 50% of the green waste from the project is diverted from landfills by recycling, as that term is defined by California Public Resources Code Section 40180.

4.15 DETERMINATION

Based on the information and analysis in this Initial Study/Addendum, and pursuant to Section 15162 of the State CEQA Guidelines, the City has determined that:

1. There are no substantial changes to the project that will require major revisions to the OCGP FEIR due to new, significant environmental effects or a substantial increase in the severity of impacts identified in the OCGP FEIR;
2. Substantial changes have not occurred in the circumstances under which the project is being undertaken that will require major revisions of the OCGP FEIR to disclose new, significant environmental effects or a substantial increase in the severity of the impacts identified in the OCGP FEIR; and
3. There is no new information of substantial importance not known at the time the OCGP FEIR was certified that shows any of the following:
 - a) The project will have any new significant effects not discussed in the OCGP FEIR;
 - b) There are impacts that were determined to be significant in the OCGP FEIR that will be substantially increased;
 - c) There are additional mitigation measures or alternatives to the project that would substantially reduce one or more of the significant effects identified in the OCGP FEIR; or
 - d) There are additional mitigation measures or alternatives that were rejected by the project proponent that are considerably different from those analyzed in the OCGP FEIR that would substantially reduce any significant impact identified in that EIR.

GENERAL PLAN AMENDMENTS

provides for offices, industry, and support commercial, mixed with high-density housing, and a variety of activities. Typical uses are professional/medical offices, industrial manufacturing, research and development, support service retail, restaurants, multifamily housing and hotel/motels.

Multi-use

Definition: The integration of a variety of land uses and intensities.

Multi-use. This land use category includes uses which are high intensity and urban in character. Typical uses include medium to high density residential, commercial, institutional, and offices.

Orange County Great Park

Definition: The development of regionally significant conservation and open space, parks and recreation, educational facilities, and other public-oriented land uses, integrated with privately developed multi-use, residential, commercial, and industrial properties, at the former MCAS El Toro site.

The Orange County Great Park land use category ensures the development of a Great Park and other cultural and institutional uses at the former MCAS El Toro site. The site will serve as a countywide asset consistent with the intent of the citizens of Orange County, who adopted Measure W, the “Orange County Central Park and Nature Preserve Initiative,” in March 2002. This land use category includes habitat preservation, conservation and open space, parks and recreation, education, institutional, and other public-oriented land uses as well as opportunities for the private development of agriculture, research and development, commercial, transit-oriented, and residential development. The property owners

entered into a development agreement with the City on July 12, 2005; therefore allowing development to occur at maximum intensities referred to as the “Overlay Plan”. These intensities are identified in Table A-1.

Military

Definition: Land under the jurisdiction of the United States.

The Military land use category currently shown on the Land Use Element map shall be retained within the General Plan until such time as the City’s planning efforts establish new and compatible land uses for MCAS Tustin.

Conservation and Open Space

Definition: Land or water that is essentially unimproved for the purposes of management and natural resources, production of preservation or enhancement of resources, outdoor recreation, or public health and safety.

TABLE A-1
MAXIMUM INTENSITY STANDARDS BY PLANNING AREA
GENERAL PLAN FOOTNOTES

1. For planning areas not yet annexed, the County of Orange maintains land use authority and controls related regulatory activities. Dwelling units and square footage totals may not reflect the Orange County General Plan.
2. This designation allows a variety of land uses, including the high-density residential category.
3. Refer to Objective A-4, Policy (a) for additional institutional category requirements. Within each planning area, actual intensity is regulated by the appropriate agencies involved. The development intensity for institutional uses is in addition to the development intensity allowed in the adopted land use category.
4. This designation provides for a variety of land uses and is based upon 63,476 AM (peak hour), 76,173 PM (peak hour) and 812,673 ADT as the maximum intensity regulating factor (refer to the IBC database), with the exception of Planning Area 4.
5. This designation provides for a variety of land uses, which are regulated by the Irvine Center Development Agreement for PA 33. The development intensity is derived from the Irvine Center Development Agreement adopted August, 1993. The development intensity for PA 33 was determined by converting the allowable points (6,300) to gross leaseable square feet and then multiplying by 1.15 to achieve a gross floor area. As such, the Irvine Center Development Agreement is estimated to allow approximately 8,388,980 square feet of gross floor area. An additional 1,514,000 square feet of gross floor area is permitted subject to the Zoning Ordinance. The actual development intensity within PA 33 may exceed these estimates subject to the traffic provisions contained in the Development Agreement. Within Planning Area 4, this designation provides for a variety of land uses as provided by the Lower Peters Canyon Development Agreement.
6. The permitted range of dwelling units (low-high) may be less than that allowed by the available acreage. The residential intensity ranges are based on estimated gross figures and may be adjusted through technical refinements to reflect more accurate information at subsequent planning levels.
7. Within Planning Area 12, the multi-use designation allows medium high or high density residential use.
8. On September 26, 1988, the "Memorandum of Understanding Implementing Initiative Resolution 88-1" was approved, establishing a 10,600 dwelling unit cap for Planning Areas 17, 18, 22, 26 and 27. In addition, the Memorandum permits up to 800 dwelling units in lieu of commercial in Planning Area 26, for an overall cap of up to 11,400 dwelling units.
9. Reserved.

10. The University of California controls land use authority and related regulatory activities. Dwelling unit totals are based on the University's Long-Range Development Plan.
11. Total residential Dwelling Units within Planning Area 4 shall not exceed 8,000.
12. Residential uses within Sector 11 of Planning Area 4 shall not exceed 2,830 ADT unless additional environmental documentation ensures traffic mitigation.
13. Natural Communities Conservation Program [NCCP] Facilitation Agreement [Approved 7-24-96]. These units can be located anywhere in the City upon mutual agreement of The Irvine Company and the City.
14. Derived from Planning Area 22 Zone Change [16868-ZC].
15. In Planning Area 15, a total of 50,526 square feet of Institutional Uses are located on a site designated as High Density Residential. This square footage is not included in the Planning Area 15 total intensity caps.
16. The Multi-Use category intensity will be used for Transit Oriented Development in Planning Areas 30 and 51 and Lifelong Learning District in Planning Area 51. The units and square footage will be divided between Planning Areas 30 and 51 through the implementation of a Master Plan for Transit Oriented Development.
17. The 1,254,5000 square feet in Institutional/Public Facilities in Planning Area 51 includes 122,500 square feet for Orange County Transit Authority facilities; 300,000 square feet for County of Orange facilities; 263,000 square feet for warehousing for homeless providers (Buildings 319, 322, and 360); 25,000 square feet for a golf course clubhouse (including a golf course with at least 18 holes); 468,000 square feet of institutional uses; 26,000 square feet of sports park; and 50,000 square feet for a mausoleum and mortuary.
18. In order to develop at the maximum intensities as established under the Overlay Plan for Planning Areas 30 and 51, the property owner has entered into a development agreement, (recorded on July 12, 2005), which will require the dedication of land and the development or funding of infrastructure improvements in excess of the City's standard requirements, and the commitment to long-term maintenance of public facilities.
19. To the extent that residential units are built in PA 33, within the 4.7C Urban Commercial District, a corresponding reduction in the allowable non-residential intensity shall occur in terms of equivalent traffic generated. The actual amount of reduction in non-residential intensity will be based upon a conversion rate of 648 square feet of non-residential intensity per dwelling unit (as established in the traffic analysis "City of Irvine Spectrum 1 Traffic Analysis" July 2003). Revisions to the non-residential and residential intensity figures for

PA 33 (consistent with this note) are authorized without the need for a subsequent general plan amendment.

20. The total residential dwelling units within Planning Areas 10, 11, 12, 14, 15, 19, 20, 21, 24, and 38 shall not exceed the figures reflected in the Maximum Dwelling Units column for each planning area.
21. The maximum residential density in the 5.0 IBC Mixed Use district in Planning Area 36 is 0-52 dwelling units per gross acre except that the maximum allowable density may be increased to 0-56 dwelling units per gross acre if the development provides 20 percent of the units in the development as on-site affordable housing in accordance with the following criteria:
 - ◆ Five percent of the units for Income II (30-50 percent of median area income); and
 - ◆ Five percent of the units for Income III (50-80 percent of median area income); and
 - ◆ Ten percent of the units for Income IV (80-120) percent of median area income).
22. The maximum Dwelling Units in Planning Area 36, the Irvine Business Complex, are specifically assigned to the following projects/properties:

Project / Address	Approved Intensity
<i>Existing</i>	
Charter Apartments	403 units
The Metropolitan	261 units
Villa Sienna	1,442 units
Toscana	563 units
Irvine Inn	192 units
<i>Approved</i>	
Central Park	1,380 units
Park Place (potential remaining approval)	1,416 units
Marquee at Park Place	232 units
MetLife Apartments	481 units
Essex Apartments	132 units
R. D. Olson/Legacy Partners	290 units
The Lofts @ Von Karman	115 units
Campus Center Apartments	341 units
The Plaza - Irvine (Phases I & II)	202 units
Watermarke Apartments	535 units

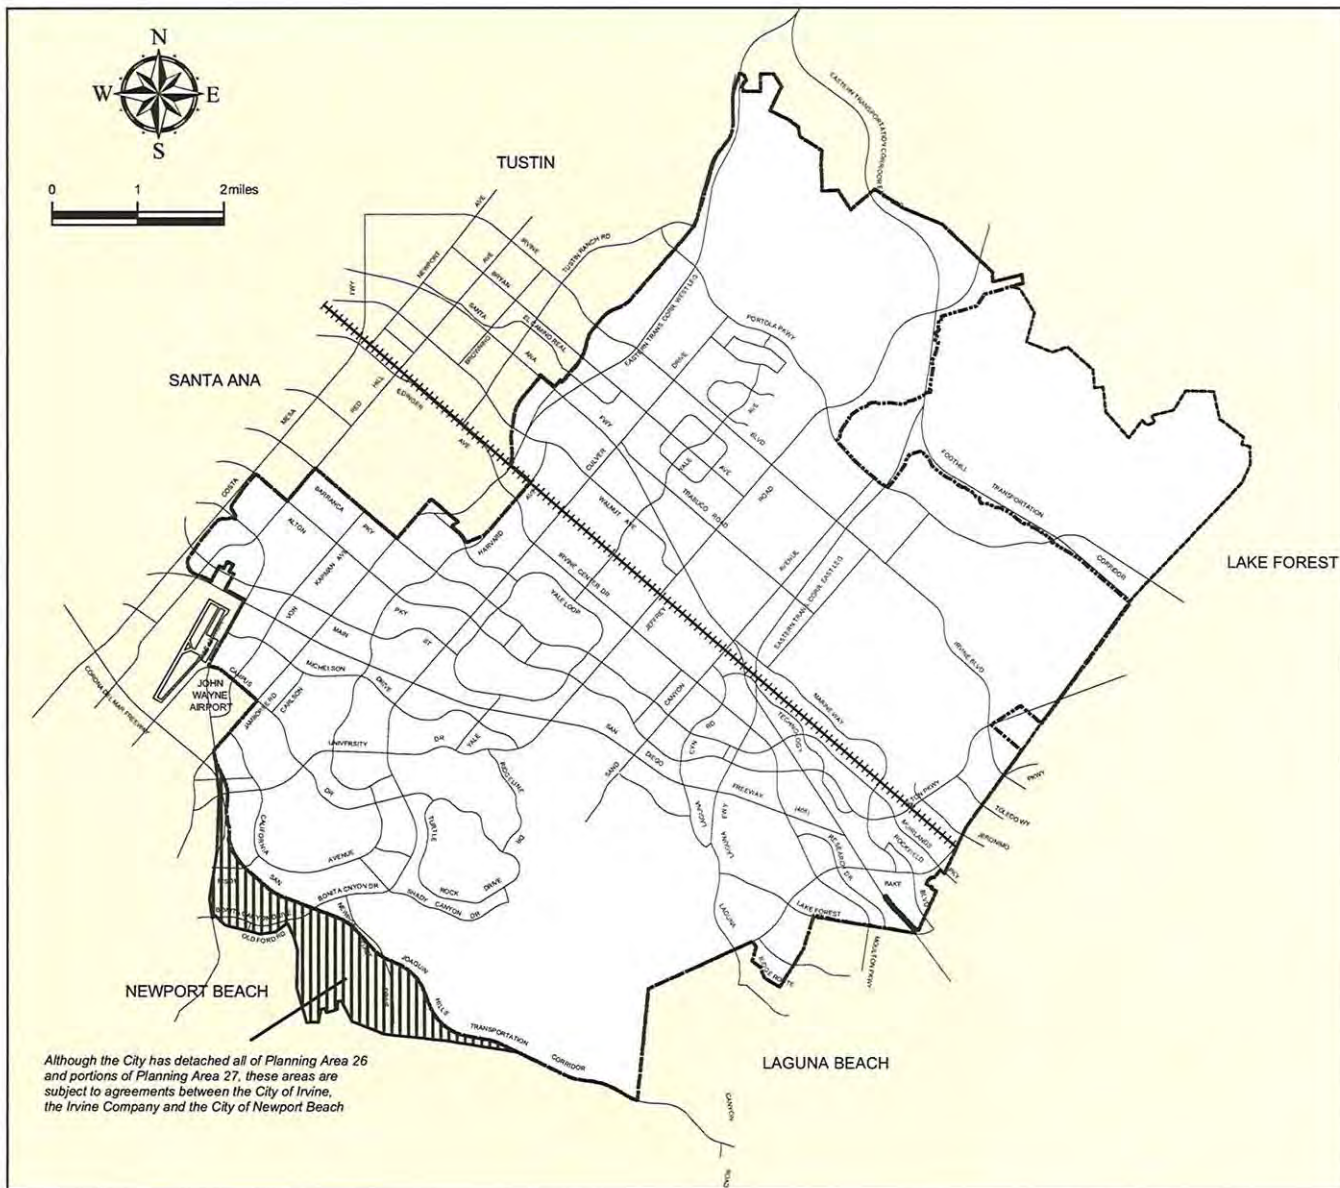

23. Development Agreement 00310468-PDA vested certain entitlements for the Park Place development (collectively, the "Vested Park Place Entitlements"). The Vested Park Place Entitlements include the right to allocate the maximum permitted intensity of development within Park Place among the various permitted and conditionally permitted uses utilizing the development points system set forth in Section V.E.-736.5 of the 1989 Zoning Code (the "1989 Point System"). The maximum intensity limits for Planning Area 36 allow for up to 3,090 dwelling units within Park Place subject to an overall intensity limit 8,567,880 total

points under the 1989 Point System which have been allocated to Park Place under the Vested Park Place Entitlements. To the extent that the 3,090 maximum unit entitlement is not developed at Park Place, non-residential uses may be developed at Park Place by utilizing unused points under the 1989 Point System. Total construction within Park Place shall not exceed any of the following intensity limits: 3,090 residential dwelling units and 8,567,880 points under the 1989 Point System.

24. To the extent residential units are built in PA 33 within the 4.7C Urban Commercial District, a corresponding reduction in the allowable non-residential intensity shall occur in terms of equivalent traffic generated. The actual amount of reduction in non-residential intensity will be based on a conversion rate of 648 square feet

TABLE A-2
MAXIMUM INTENSITY STANDARDS:
LAND USE ACREAGE BY PLANNING AREA
GENERAL PLAN FOOTNOTES

1. Community Parks and some open space spines located within Recreation land use category in Planning Areas 4,5,10, and 38 are conceptual. Unless specified in the Conservation and Open Space Element or the park code, the size of the open space spines or Community Parks will be determined concurrent with subsequent development applications.
2. Planning Area 3 includes a 730 acre Landfill overlay on the Recreational land use designation.
3. Planning Area 22 includes a 620 acre Golf Course overlay on the Residential land use designation.
4. Planning Area 27 includes a 58 acre Landfill overlay on the Recreational land use designation.
5. Planning Area 29 includes a 33 acre Landfill overlay on the Recreational land use designation.
6. Institutional acreage within Planning Area 4 represents a goal, not a requirement. Per the Lower Peters Canyon Development Agreement, institutional uses for Planning Area 4 include: public & private schools; churches; libraries; post offices; police stations; fire facilities; day care centers; utilities; public facilities; hospitals; government offices; educational facilities; non-profit housing, and institutional residential.
7. The Planning Area 30 and 51 total acreage figures include all General Plan Land Use categories as well as railroad and roadway rights-of-way. The railroad and roadway rights-of-way acreage has not been divided into individual General Plan Land Use categories. Therefore, the total acreage in Planning Areas 30 and 51, although correct, is greater than the sum of the individual General Plan Land Use categories in each planning area.
8. In order to develop at the maximum intensities under the Overlay Plan for Planning Areas 30 and 51, the property owner has entered into a development agreement (recorded on July 12, 2005), which requires the dedication of land and the development or funding of infrastructure improvements in excess of the City's standard requirements, and the long-term maintenance of public facilities.
9. A maximum of 7,800 students will be allowed for the institutional/educational use within the Lifelong Learning District.
