## APPENDIX G

### Irvine General Plan Update Traffic Noise Assessment

**DATE:** March 11, 2024  
**TO:** Nick Larkin, RECON Environmental, Inc.  
**FROM:** William Maddux  
**JOB NO:** Noise Assessment

## IRVINE GENERAL PLAN UPDATE TRAFFIC NOISE ASSESSMENT

Nick Larkin,

Urban Crossroads, Inc. is pleased to provide the following Traffic Noise Assessment for the Irvine General Plan Update (Project). The City of Irvine is adjacent to the County of Orange, as well as the Cities of Newport Beach, Costa Mesa, Orange, Lake Forest, Tustin, Santa Ana, Laguna Hills, Laguna Woods, and Laguna Beach. With the adoption of the certified 2021-2029 Housing Element in May 2022, the City is required to update the appropriate elements of the General Plan to accommodate the residential site inventory from the 2021-2029 Housing Element. This includes updates to the land use element and the circulation element. Additionally, the City would update the open space element, safety element, and noise element to address statutory requirements. The City would introduce an environmental protection and climate action element and would also incorporate health and wellness throughout the updated General Plan. The Draft Program EIR will address the short- and long-term effects of the project on the environment.

## PROJECT SCENARIOS

The Project Scenarios evaluated in the Noise Assessment are as follows:

- **Current General Plan/ No Project Alternative** – This scenario represents the currently approved Buildout land uses as permitted under the City's existing adopted General Plan. Future development under this Alternative includes unbuilt dwelling units and non-residential uses identified in the existing General Plan. The Great Park Framework Plan Phase 1 land uses are also included in this scenario. The Current General Plan land uses modeled for this assessment were obtained from Table 3-2 from the *Irvine General Plan Update VMT Study* prepared by Iteris, Inc.
- **Conservative Project Scenario** – This alternative evaluates the Current General Plan plus 57,656 RHNA housing units within the adopted Housing Site Inventory sites in the City's approved Housing Element. The 57,656 new residential units consist of 55,395 new dwelling units and 2,261 unbuilt units already in the General Plan. For the purpose of evaluating potential

effects, 55,395 dwelling units are analyzed under this alternative. This alternative also includes an analysis of both Phase 1 and Buildout of the Great Park Framework Plan land uses and the extension of Ada roadway from the Irvine Metrolink/Amtrak Station to Marine Way o. The Conservative Project Scenario land uses modeled for this assessment were obtained from Tables 2-1 and 2-3 from the *Irvine General Plan Update VMT Study* prepared by Iteris, Inc.

- **Cumulative Plus Conservative Project Scenario** – This scenario evaluates the Conservative Project Scenario plus additional cumulative projects that are assumed to be built in the background conditions in both the City of Irvine and in surrounding jurisdictions. Cumulative projects include known future residential development in adjacent Cities. The Cumulative Plus Conservative Project Scenario land uses modeled in this assessment were obtained from Tables 2-1, 2-3, and 2-4 from the *Irvine General Plan Update VMT Study* prepared by Iteris, Inc.

#### 4 NOISE LEVEL INCREASES

Noise level increases resulting from the Project are evaluated based on the Appendix G CEQA Guidelines. Under CEQA, consideration must be given to the magnitude of the increase, the existing baseline ambient noise levels, and the location of noise-sensitive receivers to determine if a noise increase represents a significant adverse environmental impact. This approach *recognizes that there is no single noise increase that renders the noise impact significant*. (16) This is primarily because of the wide variation in individual thresholds of annoyance and differing individual experiences with noise. Thus, an important way of determining a person's subjective reaction to a new noise is the comparison of it to the existing environment to which one has adapted—the so-called *ambient* environment.

In general, the more a new noise exceeds the previously existing ambient noise level, the less acceptable the new noise will typically be judged. The Federal Interagency Committee on Noise (FICON) (17) developed guidance to be used for the assessment of project-generated increases in noise levels that consider the ambient noise level. The FICON recommendations are based on studies that relate aircraft noise levels to the percentage of persons highly annoyed by aircraft noise. Although the FICON recommendations were specifically developed to assess aircraft noise impacts, these recommendations are often used in environmental noise impact assessments involving the use of cumulative noise exposure metrics, such as the average-daily noise level (CNEL) and equivalent continuous noise level ( $L_{eq}$ ).

The FICON guidance provides an established source of criteria to assess the impacts of substantial temporary or permanent increase in baseline ambient noise levels. Based on the FICON criteria, the amount to which a given noise level increase is considered acceptable is reduced when the without Project (baseline) noise levels are already shown to exceed certain land-use specific exterior noise level criteria. The specific levels are based on typical responses to noise level increases of 5 dBA or *readily perceptible*, 3 dBA or *barely perceptible*, and 1.5 dBA depending on the underlying without Project noise levels for noise-sensitive uses. These levels

of increases and their perceived acceptance are consistent with guidance provided by both the Federal Highway Administration (18 p. 9) and Caltrans (7 p. 2\_48).

**SIGNIFICANCE CRITERIA SUMMARY**

Noise impacts shall be considered significant if any of the following occur as a direct result of the proposed development. The following significance criteria summary matrix includes the allowable criteria used to identify potentially significant incremental noise level increases.

Analysis	Receiving Land Use	Condition(s)	Significance Criteria
Off-Site	Noise-Sensitive <sup>1</sup>	if ambient is < 60 dBA CNEL	≥ 5 dBA CNEL Project increase
		if ambient is 60 - 65 dBA CNEL	≥ 3 dBA CNEL Project increase
		if ambient is > 65 dBA CNEL	≥ 1.5 dBA CNEL Project increase

<sup>1</sup> FICON, 1992.

**TRAFFIC NOISE METHODS AND PROCEDURES**

The following section outlines the methods and procedures used to estimate and analyze the future traffic noise environment. Consistent with the City of Irvine General Plan Policies, all transportation related noise levels are presented in terms of the 24-hour CNEL's.

**FHWA TRAFFIC NOISE PREDICTION MODEL**

The estimated roadway noise impacts from vehicular traffic were calculated using a computer program that replicates the Federal Highway Administration (FHWA) Traffic Noise Prediction Model- FHWA-RD-77-108. The FHWA Model arrives at a predicted noise level through a series of adjustments to the Reference Energy Mean Emission Level (REMEL). In California the national REMELs are substituted with the California Vehicle Noise (Calveno) Emission Levels. Adjustments are then made to the REMEL to account for: the roadway classification (e.g., collector, secondary, major or arterial), the roadway active width (i.e., the distance between the center of the outermost travel lanes on each side of the roadway), the total average daily traffic (ADT), the travel speed, the percentages of automobiles, medium trucks, and heavy trucks in the traffic volume, the roadway grade, the angle of view (e.g., whether the roadway view is blocked), the site conditions ("hard" or "soft" relates to the absorption of the ground, pavement, or landscaping), and the percentage of total ADT which flows each hour throughout a 24-hour period.

**OFF-SITE TRAFFIC NOISE PREDICTION MODEL INPUTS**

Table 1 (Appendix A) identifies the 540 off-site study area roadway segments, the distance from the centerline to adjacent land use based on the functional roadway classifications per the Project traffic report, and the posted vehicle speeds. Consistent with the *Traffic Analysis* prepared by Iteris, Inc. for the Project, the off-site traffic noise analysis includes the following traffic scenarios.

- Existing Conditions
- Current General Plan Buildout/No Project Alternative
- Conservative Alternative
- Cumulative Conservative Alternative
- Reduced Project Alternative

- **Cumulative Reduced Project Alternative**

The ADT volumes used for this study are presented on Table 2 (Appendix A). Table 3 and Table 4 (Appendix A) provide the time of day (daytime, evening, and nighttime) vehicle splits used for calculating CNEL values.

The traffic volumes shown on Table 2 reflect future long-range traffic conditions needed to assess the future on-site traffic noise environment and to identify potential mitigation measures (if any) that address the worst-case future conditions. For the purposes of this analysis, soft site conditions were used to analyze the on-site traffic noise impacts for the Project study area. Soft site conditions account for the sound propagation loss over natural surfaces such as normal earth and ground vegetation. Research conducted by Caltrans has shown that the use of soft site conditions is appropriate for the application of the FHWA traffic noise prediction model used in this analysis. (23) Table 3 presents the time-of-day vehicle splits by vehicle type used to develop the 24-hour CNEL, and Table 4 presents the total traffic flow distributions (vehicle mixes) used for this analysis. The information in Tables 3 and 4 provides the hourly distribution percentages of automobile, medium trucks, and heavy trucks for input into the FHWA Model based on roadway types.

## **TRANSPORTATION NOISE IMPACTS**

Noise contours were used to assess the Project's incremental traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area. Tables 5 to 10 present a summary of the exterior traffic noise levels for each traffic condition. Appendix B includes the traffic noise level contours worksheets for each traffic condition.

### **TRAFFIC NOISE CONTOURS**

Noise contours were used to assess the Project's incremental traffic-related noise impacts at land uses adjacent to roadways conveying Project traffic. The noise contours represent the distance to noise levels of a constant value and are measured from the center of the roadway for the 70, 65, and 60 dBA noise levels. The noise contours do not consider the effect of any existing noise barriers or topography that may attenuate ambient noise levels. In addition, because the noise contours reflect modeling of vehicular noise on area roadways, they appropriately do not reflect noise contributions from the surrounding stationary noise sources within the Project study area. Tables 5 through 10 present a summary of the exterior traffic noise levels, without barrier attenuation, for the 540 study area roadway segments. Appendix B includes a summary of the traffic noise level contours for each of the traffic scenarios.

### **EXISTING GENERAL PLAN/NO PROJECT TRAFFIC NOISE LEVEL INCREASES**

An analysis of existing traffic noise levels plus traffic noise generated by the Current General Plan has been included in this report to fully analyze all the traffic scenarios identified in the *Traffic*

*Impact Analysis.* This condition is provided solely for informational purposes and will not occur, since the Project will not be fully developed and occupied under Existing conditions. Table 5 (Appendix A) shows the Existing conditions CNEL noise levels. The Existing exterior noise levels are expected to range from up to 79.0 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 6 (Appendix A) shows the General Plan Buildout conditions will range from 53.5 to 79.1 CNEL, except along Ada Street since it would not exist under the current General Plan. Table 11 (Appendix A) shows that the General Plan Buildout conditions off-site traffic noise level impacts will exceed noise level increase thresholds along 86 segments. Based on the significance criteria for off-site traffic noise, land uses adjacent to these study area roadway segments would experience a significant noise level increases due to the Project-related traffic as compared to the existing traffic noise levels.

### **EXISTING TO CONSERVATIVE PROJECT TRAFFIC NOISE LEVEL INCREASES**

An analysis of existing traffic noise levels plus traffic noise generated by the Conservative Project has been included in this report to fully analyze all the traffic scenarios identified in the *Traffic Impact Analysis*. This condition is provided solely for informational purposes and will not occur, since the Project will not be fully developed and occupied under Existing conditions. Table 5 shows the Existing conditions CNEL noise levels. The Existing exterior noise levels are expected to range from up to 79 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 7 shows the Conservative Project Buildout conditions will range from 53.2 to 79.2 dBA CNEL. Table 12 shows that the Conservative Project Buildout conditions off-site traffic noise level impacts will exceed noise level increase thresholds along 138 segments. Based on the significance criteria for off-site traffic noise, land uses adjacent to these study area roadway segments would experience a significant noise level increases due to the Project-related traffic as compared to the existing traffic noise levels.

### **EXISTING TO REDUCED PROJECT TRAFFIC NOISE LEVEL INCREASES**

An analysis of existing traffic noise levels plus traffic noise generated by the Reduced Project Alternative has been included in this report to fully analyze all the traffic scenarios identified in the *Traffic Impact Analysis*. This condition is provided solely for informational purposes and will not occur, since the Project will not be fully developed and occupied under Existing conditions. Table 5 shows the Existing conditions CNEL noise levels. The Existing exterior noise levels are expected to range from up to 79.0 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 9 shows the Reduced Project Alternative conditions will range from 53.2 to 79.1 dBA CNEL. Table 13 shows that the Reduced Project Alternative conditions off-site traffic noise level impacts will exceed noise level increase thresholds along 124 segments. Based on the significance criteria for off-site traffic noise, land uses adjacent to these study area roadway segments would experience a significant noise level increases due to the Project-related traffic as compared to the existing traffic noise levels.

### **CUMULATIVE CONSERVATIVE TRAFFIC NOISE LEVEL INCREASES**

An analysis of cumulative traffic noise levels generated by the Conservative Project has been included in this report to fully analyze all the traffic scenarios identified in the *Traffic Impact Analysis*. Table 5 shows the Existing without Project conditions CNEL noise levels. The Existing

without Project exterior noise levels are expected to range from up to 79.0 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 8 shows the Cumulative Conservative conditions will range from 53.2 to 79.2 dBA CNEL. Table 14 shows that under the Cumulative Conservative conditions off-site traffic noise level impacts will exceed noise level increase thresholds along 147 segments. Based on the significance criteria for off-site traffic noise, land uses adjacent to these study area roadway segments would experience a significant cumulative noise level increases due to the Project-related traffic as compared to the existing traffic noise levels.

### **CUMULATIVE REDUCED PROJECT TRAFFIC NOISE LEVEL INCREASES**

An analysis of cumulative traffic noise levels generated by the Reduced Project Alternative has been included in this report to fully analyze all the traffic scenarios identified in the *Traffic Impact Analysis*. This condition is provided solely for informational purposes and will not occur, since the Project will not be fully developed and occupied under Existing conditions. Table 5 shows the Existing conditions CNEL noise levels. The Existing exterior noise levels are expected to range from up to 74.3 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Table 9 shows the Cumulative Conservative conditions will range from 53.2 to 79.1 dBA CNEL. Table 15 shows that under the Cumulative Conservative plus Reduced Project Alternative conditions off-site traffic noise level impacts will exceed noise level increase thresholds along 129 segments. Based on the significance criteria for off-site traffic noise, land uses adjacent to these study area roadway segments would experience a significant noise level increases due to the Project-related traffic as compared to the existing traffic noise levels.

### **CUMULATIVE REDUCED PROJECT TRAFFIC NOISE LEVEL INCREASES OVER CURRENT GENERAL PLAN**

An analysis of cumulative traffic noise levels generated by the Conservative Plan versus the Current General Plan has been included in this report to fully analyze all the traffic scenarios identified in the *Traffic Impact Analysis*. Table 6 shows the Current General Plan conditions CNEL noise levels. The Current General Plan exterior noise levels are expected to range from 53.5 to 79.1 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Except along Ada Street which would not exist. Table 8 shows the Cumulative Conservative conditions will range from 53.2 to 79.2 dBA CNEL. Table 16 shows that under the Cumulative Conservative conditions off-site traffic noise level impacts will exceed noise level increase thresholds along 16 segments not accounted for in the previous General Plan. Based on the significance criteria for off-site traffic noise, land uses adjacent to these study area roadway segments would experience a significant noise level increases due to the Project-related traffic as compared to the existing traffic noise levels.

### **CUMULATIVE REDUCED PROJECT TRAFFIC NOISE LEVEL INCREASES OVER CURRENT GENERAL PLAN**

An analysis of cumulative traffic noise levels generated by the Reduced Project Alternative versus the Current General Plan has been included in this report to fully analyze all the traffic scenarios identified in the *Traffic Impact Analysis*. Table 6 shows the Current General Plan conditions CNEL noise levels. The Current General Plan exterior noise levels are expected to range from 53.5 to

79.1 dBA CNEL, without accounting for any noise attenuation features such as noise barriers or topography. Except along Ada Street which would not exist. Table 10 shows the Reduced Project Alternative conditions will range from 53.2 to 79.1 dBA CNEL. Table 17 shows that under the Reduced Project Alternative conditions off-site traffic noise level impacts will exceed noise level increase thresholds along 9 segments not accounted for in the previous General Plan. Based on the significance criteria for off-site traffic noise, land uses adjacent to these study area roadway segments would experience a significant noise level increases due to the Project-related traffic as compared to the existing traffic noise levels.

Table 1: Off-Site Roadway Parameters

ID	Roadway	Segment	Classification <sup>1</sup>	Centerline Distance to Receiving Land Use (Feet) <sup>2</sup>	Vehicle Speed (mph)
1	Ada	Barranca Parway to Marine Way	Commuter	38'	40
2	Ada	Alton Parkway to Barranca Parkway	Primary	63'	40
3	Alton Parkway	Enterprise to I-5 NB Off-Ramp	Major	84'	50
4	Alton Parkway	I-5 NB Off-Ramp to Technology Drive West	Major	80'	50
5	Alton Parkway	East Yale Loop to Jeffrey Road	Primary	63'	50
6	Alton Parkway	Gateway Boulevard to Enterprise	Major	84'	50
7	Alton Parkway	Jeffrey Road to Royal Oak	Primary	63'	50
8	Alton Parkway	Daimler Street to Red Hill Avenue	Primary	63'	50
9	Alton Parkway	Culver Drive to West Yale Loop	Primary	63'	50
10	Alton Parkway	West Yale Loop to Lake Road	Primary	63'	50
11	Alton Parkway	Technology Drive West to Ada	Major	80'	50
12	Alton Parkway	Creek Road to East Yale Loop	Primary	63'	50
13	Alton Parkway	Red Hill Avenue to Von Karman Avenue	Primary	63'	50
14	Alton Parkway	Lake Road to Creek Road	Primary	63'	50
15	Alton Parkway	Telemetry to Banting	Primary	63'	50
16	Alton Parkway	Irvine Boulevard to Commercentre	Major	84'	50
17	Alton Parkway	Jenner to Telemetry	Primary	63'	50
18	Alton Parkway	Irvine Center Drive to Gateway Boulevard	Major	84'	50
19	Alton Parkway	Sand Canyon Avenue to Hospital	Primary	60'	50
20	Alton Parkway	Laguna Canyon Road to Jenner	Primary	63'	50
21	Alton Parkway	Technology Drive East to Barranca Pkwy/Muirlands Blvd	Major	84'	50
22	Alton Parkway	Royal Oak to Valley Oak Drive	Primary	63'	50
23	Alton Parkway	Banting to Pacifica	Primary	63'	50
24	Alton Parkway	Barranca Pkwy/Muirlands Blvd to Jeronimo Road	Major	84'	50
25	Alton Parkway	Ada to Technology Drive East	Major	84'	50

Table 1

26	Alton Parkway	Von Karman Avenue to Jamboree Road	Primary	63'	50
27	Alton Parkway	Jeronimo Road to Hughes	Major	84'	50
28	Alton Parkway	Hughes to Morgan	Major	84'	50
29	Alton Parkway	Morgan to Toledo Way	Major	84'	50
30	Alton Parkway	San Marino to Culver Drive	Major	84'	50
31	Alton Parkway	Jamboree Road to Murphy Avenue	Major	84'	50
32	Alton Parkway	Hospital to Laguna Canyon Road	Primary	60'	50
33	Alton Parkway	Valley Oak Drive to Sand Canyon Avenue	Primary	60'	50
34	Alton Parkway	Murphy Avenue to Harvard Avenue	Major	84'	50
35	Alton Parkway	Foster to Irvine Boulevard	Major	84'	50
36	Alton Parkway	Fairbanks to Foster	Major	84'	50
37	Alton Parkway	Toledo Way to Berteza	Major	84'	50
38	Alton Parkway	Pacifica to Meridian	Primary	60'	50
39	Alton Parkway	Berteza to Fairbanks	Major	84'	50
40	Alton Parkway	Meridian to Irvine Center Drive	Major	84'	50
41	Alton Parkway	Paseo Westpark to San Marino	Major	84'	50
42	Alton Parkway	Harvard Avenue to Paseo Westpark	Major	84'	50
43	Astor	Lynx to Fairbanks	Commuter	38'	30
44	Astor	Cadence to Lynx	Commuter	38'	30
45	Bake Parkway	I-5 NB Off-Ramp to Rockfield Boulevard	Major	100'	50
46	Bake Parkway	Muirlands Boulevard to Jeronimo Road	Major	84'	50
47	Bake Parkway	Rockfield Boulevard to Muirlands Boulevard	Major	100'	50
48	Bake Parkway	Jeronimo Road to Toledo Way	Major	84'	50
49	Bake Parkway	Toledo Way to Cromwell	Major	84'	50
50	Bake Parkway	Cromwell to Irvine Boulevard	Major	84'	50
51	Bake Parkway	Research Drive to I-5 SB Off-Ramp	Major	84'	50
52	Bake Parkway	Irvine Center Drive to Research Drive	Major	84'	50
53	Bake Parkway	Lake Forest Drive to Irvine Center Drive	Major	84'	50
54	Banting	Alton Parkway to Barranca Parkway	Primary	63'	35
55	Barranca Parkway	Pacifica to Irvine Center Drive	Primary	63'	55
56	Barranca Parkway	Banting to Pacifica	Primary	63'	55

Table 1

57	Barranca Parkway	I-5 HOV Ramp to Technology Drive West	Primary	63'	55
58	Barranca Parkway	Technology Drive West to Ada	Primary	63'	55
59	Barranca Parkway	Irvine Center Drive to I-5 HOV Ramp	Primary	63'	55
60	Barranca Parkway	Culver Drive to West Yale Loop	Primary	63'	55
61	Barranca Parkway	East Yale Loop to Jeffrey Road	Primary	63'	55
62	Barranca Parkway	West Yale Loop to Lake Road	Primary	63'	55
63	Barranca Parkway	Ada to Alton Parkway	Primary	63'	55
64	Barranca Parkway	Lake Road to Creek Road	Primary	63'	55
65	Barranca Parkway	Red Hill Avenue to Armstrong Avenue	Major	100'	55
66	Barranca Parkway	Discovery/Herchel to Banting	Primary	63'	55
67	Barranca Parkway	Lyon to East Yale Loop	Primary	63'	55
68	Barranca Parkway	Creek Road to Lyon	Primary	63'	55
69	Barranca Parkway	Von Karman Avenue to Jamboree Road	Major	80'	55
70	Barranca Parkway	Sand Canyon Avenue to Laguna Canyon Road	Primary	63'	55
71	Barranca Parkway	Armstrong Avenue to Von Karman Avenue	Major	80'	55
72	Barranca Parkway	Valley Oak Drive to Sand Canyon Avenue	Primary	63'	55
73	Barranca Parkway	Jamboree Road to Construction Circle	Major	84'	55
74	Barranca Parkway	Santa Rosa to Culver Drive	Major	84'	55
75	Barranca Parkway	FedEx to Discovery/Herchel	Primary	63'	55
76	Barranca Parkway	Jeffrey Road to Valley Oak Drive	Primary	63'	55
77	Barranca Parkway	Laguna Canyon Road to FedEx	Primary	63'	55
78	Barranca Parkway	Pullman Street to Red Hill Avenue	Major	100'	55
79	Barranca Parkway	Construction Circle to Fire Station	Major	84'	55
80	Barranca Parkway	Fire Station to Harvard Avenue	Major	84'	55
81	Barranca Parkway	Paseo Westpark to Santa Rosa	Major	84'	55
82	Barranca Parkway	Harvard Avenue to Paseo Westpark	Major	84'	55
83	Bay Tree	Trabuco Road to Roosevelt	Primary	63'	35
84	Beacon	Ridge Valley to Benchmark	Commuter	38'	30
85	Benchmark (LN Street)	Ridge Valley (O Street) to Bosque	Commuter	38'	30
86	Bison Avenue	SR-73 NB Off-Ramp to California Avenue	Primary	63'	45
87	Bonita Canyon Drive	MacArthur Boulevard to SR-73	Primary	75'	50

<sup>1</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest receiving land use.  
 "RW" = Location of the respective noise contour falls within the right-of-way of the road.

Table 6

<sup>1</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest receiving land use.  
 "RW" = Location of the respective noise contour falls within the right-of-way of the road.

Table 7

Table 7: Conservative Plan Conditions Noise Contours

ID	Road	Segment	CNEL at Nearest Receiving Land Use (dBA) <sup>1</sup>	Distance to Contour from Centerline (Feet)

<sup>1</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest receiving land use.

"RW" = Location of the respective noise contour falls within the right-of-way of the road.

Table 8

Table 8: Conservative Cumulative Plan Conditions Noise Contours

ID	Road	Segment	CNEL at Nearest Receiving Land Use (dBA) <sup>1</sup>	Distance to Contour from Centerline (Feet)

<sup>1</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest receiving land use.  
 "RW" = Location of the respective noise contour falls within the right-of-way of the road.

Table 9

Table 9: Preferred Plan Conditions Noise Contours

<sup>1</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest receiving land use.  
 "RW" = Location of the respective noise contour falls within the right-of-way of the road.

Table 10

<sup>1</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the nearest receiving land use.  
 "RW" = Location of the respective noise contour falls within the right-of-way of the road.

Table 11

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.

<sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.

<sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria?

Table 12

Table 12: Existing and Conservative Plan Traffic Noise Level Increases

ID	Road	Segment	CNEL at Receiving Land Use (dBA) <sup>2</sup>			Incremental Noise Level Increase Threshold <sup>3</sup>

540	Yale Court	Arborwood to Portola Parkway	60.0	60.4	0.4	1.5	No

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.

<sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.

<sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria?

Table 13

Table 13: Existing and Preferred Plan Traffic Noise Level Increases

ID	Road	Segment	CNEL at Receiving Land Use (dBA) <sup>2</sup>			Incremental Noise Level Increase Threshold <sup>3</sup>	
			Existing	Preferred	Project Addition	Limit	Exceeded?

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses.

<sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use.

<sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria?

Table 14

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses. <sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use. <sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria?								

Table 15

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses. <sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use. <sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria?								

Table 16

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses. <sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use. <sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria?								

Table 17

<sup>1</sup> Based on a review of existing aerial imagery. Noise sensitive uses limited to existing residential land uses. <sup>2</sup> The CNEL is calculated at the boundary of the right-of-way of each roadway and the property line of the receiving land use. <sup>3</sup> Does the Project create an incremental noise level increase exceeding the significance criteria?
