Environmental Interest/Information System:
 The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 01/20/2022. OBSERVATION: Two 55-gal drums of waste Phosphoric acid/Isopropyl alcohol mixture and one 55-gal drum of absorbent were observed with an accumulation start date of 06/10/2021. CORRECTIVE ACTION: Please have these drums hauled by a hazardous waste hauler immediately, and provide a copy of the manifest to this Agency within 45 days.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release

Eval Notes: On-site to follow-up on previous violations cited during the inspection performed on 8-9-18. Met with Ms. Dawn Harkey, Environmental Consultant, Tri-State Environmental to review the binder. The binder was missing the updated CFR and approved Monitoring Plan The UST Section in CERS was not accepted, Under "Pipe Monitoring is Performed Using the Following Method(s): "Suction Piping Meets Exemption Criteria" - check YES. Also, submit an updated the Certificate of Financial Responsibility. Once the UST Section is approved in the CERS, please update the binder. Discussed the requirements with Dawn and went to speak with the property manager about the requirements as well. Corrected two of the three violations.

Charles Cesarone, chief engineer, Jeff Tovo, engineer, and Dawn Harkley, UST DO; were present for the inspection. The UST testing technician was Antonio Rodriguez, AW Associates. His testing certifications were provided for review. He possessed current certifications for ICC UST service tech and Franklin Fueling Systems Incon level #4 testing. He possessed a certification for Universal sensors and devices testing, expiration date of 6-6-13. The facility utilizes a Leak Alert monitoring system. Leak alert model LA-04 was in operation. The one sensor in use was the tank annular sensor, model number LALS1. The direct buried fill bucket testing was in process. Two consecutive 15 minute hydrostatic tests. The buried product pipe connecting the tank to the generator room was identified as single wall suction. The UST documentation [Truncated]

Site History: From 1987 to 1993, Deft removed twenty six underground storage tanks at the subject site. Subsequent soil and groundwater investigations indicated that the soil and groundwater underlying the site were impacted primarily by releases of methyl ethyl ketone, methyl isobutyl ketone, ethyl benzene, toluene, and xylene. No remediation of the VOC-affected soil and groundwater was conducted beyond the initial tank excavation. Regional board staff concurred with closure because the detected concentrations of VOCs in the groundwater had decreased to below the maximum contaminant levels and further excavation of the affected soil was reportedly not feasible at that time. A no further action letter was issued to Deft on September 23, 1998. From 2012 to 2015, soil and groundwater investigations were conducted as part of a proposed redevelopment of the subject site. Based on the results of these investigations, Desmond Venturesn++ consultants, Tetra Tech and Clarence Johnson Environmental, recommended that a vapor intrusion survey and further assessment of the detected concentrations of 1,4-Dioxane be conducted. In a June 6,

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

RWQCB Region: SANTA ANA RWQCB (REGION 8)
Site History: Soil and groundwater assessments were conducted at the site to evaluate whether lead from munitions usage have impacted the site. The site is in the locations of a former duck pond area associated with nearby gun clubs. VOCs were detected during previous investigation at the site. Since VOCs contamination is localized and limited, Regional Board staff recommended the installation of a sub-slab depressurization system prior to redevelopment in order to protect human health of any of the occupants. The Site has been redeveloped was the responsible party was issued a no further action letter on June 25, 2019.

Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Violation Date: 06-24-2019
Citation: 40 CFR 1 265.173 - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 265.173

Violation Description: Failure to meet the following container management requirements: (a) A container holding hazardous waste must always be closed during storage, except when it is necessary to add or remove waste. (b) A container holding hazardous waste must not be opened, handled, or stored in a manner which may rupture the container or cause it to leak.

Violation Notes: Returned to compliance on 06/24/2019. The wastes were individually stored in 5-gallon buckets, some with and some without closed lids. These were stored on a pallet and shrink-wrapped in plastic. There was no label attached to the wrapped pallets. I advised the business to make sure all buckets were closed with a lid and labeled.

Eval Notes: Met with Mr. Steve Lester, Purchasing Manager and walked through the facility and checked trash receptacles at the site. Observed the following hazardous wastes stored on-site: Waste spent/expired materials, 2 pallets The wastes were individually stored in 5-gallon buckets, some with and some without closed lids. These were stored on a pallet and shrink-wrapped in plastic. There was no label attached to the wrapped pallets. I advised the business to make sure all buckets were closed with a lid and labeled. This was corrected at the site during the inspection. The business has a third party sort the wastes prior to transportation and disposal. Within 30 days provide proof that the wastes are being managed/stored on-site properly. Employees use the Business Emergency Plan as the Contingency Plan and are aware of spill control and emergency contact phone numbers.

Eval Notes: Orange County Environmental Health as the Certified Unified Program Agency (OC CUPA) is the administrating agency for the Hazardous Materials Disclosure and Business Emergency Plan programs (HMD/BEP) previously administered by the Orange County Fire Authority. During the months of August and December of 2013, the OC CUPA sent out letters to regulated businesses requesting them to electronically submit their HMD/BEP forms. Electronic submission of these forms is a legal requirement. Failure to submit HMD/BEP forms is in violation of the California Health & Safety Code Chapter 6.95. According to our records there is no electronic submission for this facility. Please go to www.esubmit.ocgov.com to request a username and password and submit your HMD/BEP forms within the next 30 days. Businesses may also submit forms via the California Environmental Reporting System. Please verify that all owner information that is prepopulated on the E-Submit Portal is still [Truncated]

IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

CEDRI is a web application used by EPA programs and various stakeholders to manage environmental data transmitted to EPA in order to meet EPA's reporting requirements.

Violation Date: 01-07-2014
Citation: 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)
Violation Description: Failure to dispose of hazardous waste within 180 days (or 270 if waste is transported over 200 miles) for the generator who generates less than 1000 kilogram per month, but more than 100 kilograms per month.
Violation Notes: Returned to compliance on 02/26/2014. An unmarked drum storing a waste was located within the main hazardous waste storage area. An unattached label "mercuric chloride", marked 3-29-13, was sitting on top of the drum. The storage drum, besides not being properly marked, has been stored on site past the approved accumulation time. The waste must be properly removed by a registered hauler immediately for recycling / disposal. Once completed, please submit a copy of the removal documentation to this Agency.

Violation Description: Failure of owner or operator of a stationary source whose employees will not respond to accidental releases of regulated substances to meet the following: 1. For stationary sources with any regulated toxic substances held in a process above the threshold quantity, the stationary source is included in the community emergency response plan developed under Section 11003 of Title 42 of the United States Code (USC), is included in the city or county Hazardous Materials Area plans, and/or is included in the business plan program, pursuant to Section 25507 of the Health & Safety Code. The owner or operator must document that response actions have been coordinated with the local fire department and hazardous materials response agencies; 2. For stationary sources with only regulated flammable substances held in a process above the threshold quantity, the owner or operator must document that response actions have been coordinated with the local fire department and hazardous materials response agencies; and, 3. Appropriate mechanisms and written procedures are in place to notify emergency responders when there is a need for a response.

Violation Notes: Returned to compliance on 06/18/2020. OBSERVATION: The owner/operator of a facility that does not respond to accidental releases of regulated substances failed to meet the following: the owner/operator failed to document that response actions have been coordinated with the local fire department and hazardous materials response agencies. CORRECTIVE ACTION: Documentation was submitted to the CUPA demonstrating the owner/operator has met the requirements noted above. Please do this on an annual basis in order to be in compliance.

Eval Date: 02-21-2001
Violations Found: No
Eval Type: Industrial Storm Water Compliance Evaluation

Eval Notes: On February 21, 2001 Regional Water Board staff, Marc Brown conducted a compliance inspection at the above referenced facility. Brown met with Vlado Senkovich, the facility contact. The facility's SWPPP (dated 1999) and training records (last conducted 9/14/00) were reviewed and found to be adequate. The facility was inspected and found to be compliant in most areas. BMPs were being implemented throughout the facility with the exception of the following issues. The hazardous waste accumulation area had two drums that were improperly secured. Although both were considered "empty", one was set atop the secondary containment wall. The second was setting outside the accumulation compound. Neither had labels. Additionally, approximately 20-30 drums, all considered empty were being stored to the west of the facility's rail trunk. Several of these drums were stacked two high and without bungs. These drums contained approximately 2-4 inches of liquid in each. The area at the north side of the facility marked "Empty Drums" had several of the 10-15 drums without bungs. The facility has implement some BMPs that included the installation of stainless steel grates within the stormwater inlets. These grates have one-inch diameter circular openings, made to trap debris, but allow storm water flow to run off site. These grates are cleaned as needed. At the time of the inspection, minimal amounts of debris was observed in the grates. The refuse compactor area located at the west side of the facility is graded to drain to the east. The eastern border of this area is equipped with a french drain, which is connected to the POTW.

Eval Type: Industrial Storm Water Compliance Evaluation

Eval Notes: B. Braun Medical manufactures intravenous solutions, glass bottles, and injection moldings for hospitals and pharmaceutical purposes. The inspector arrived at B. Braun at 2:45 p.m. and completed the inspection at 3:50 p.m. A pile of soil was observed beneath a plastic tarp outside the plant building (Photos 2 and 3). Sterilized solutions were stored near the storm drain in the loading dock area (Photo 7);

the facility representative indicated that the solutions contained sterilized sugar and water. The site is graded to direct storm water from the north to the southwest onto McGaw Avenue. The facility representative indicated that storm water samples are collected at three identified points: at the facility's north section; at the facility's southwest end; and at the facility's south end. The facility SWPPP, Monitoring Plan, 2000-2001 Annual Report, and sample results were reviewed. These documents fulfilled the requirements outlined in the General Permit, with the exceptions noted below. The preliminary results of the inspection were discussed with the facility representative.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: Returned to compliance on 08/24/2020. OBSERVATION: Owner/Operator failed to meet one or more of the following spill container requirements: install or maintain spill container which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill container, and is resistant to galvanic corrosion; did not perform tightness test at installation, every 12 months thereafter, or within 30 days after a repair; did not have tested using manufacturer's guidelines, industry codes, engineering standards, or method approved by PE, or was not tested by a certified UST service technician; or failed to maintain testing records for 36 months. CORRECTIVE ACTION: The spill bucket must be repaired to meet all of the listed requirements, have tightness tested using approved method, by certified UST service technician, and you will submit documentation to verify compliance. Eval Notes: On site to witness monitoring system, spill bucket certification and to conduct routine UST inspection. Mr. Sarian, A.C.C.E.S., Inc. conducted test and has valid ICC and monitoring equipment manufacturing certifications. Mr. Andrew Sly, Building Engineer, was also present. There is one 6K gallon diesel single walled UST connected to a back-up generator adjacent to the USTs and the building located at 2525 Main Street. The piping runs across the parking lot into the front of the building where it connects to the fuel pump/day tanks in the generator room. The system uses an Veeder Root TLS-350 monitor which is located inside the building in the electrical room. Continuous automatic tank gauging is used to monitor the levels and overfill protection consists of a flapper. The site maintains an ELLD Model VR848480-001, which monitors the pipelines. There are no UDCs. The tank annular space is "dry" and the automatic tank gauging is tested monthly at 0.2 GPH, and logs were available for review.

Eval Notes: On site to conduct a routine UST inspection during the facility's annual UST Monitoring System Certification and spill bucket testing. Andre Sly, chief engineer, was present for the inspection. The UST testing technician was Farboad (John) Madad-Doust of ACCES Inc. His testing credentials were provided for review and were current. The sumps were opened for inspection. The sumps were observed dry. The veeder-root monitoring panel was in operation. I also returned to the site on 9-22-17 to witness the annual line integrity test (0.1 gph) on the pressurized piping. The UST testing technician was Rich Ruston of OC tank testing. His testing credentials were provided for review and were current. The facility operates one single wall 6,000 gallon diesel UST system. The piping is pressurized and double wall. Eval Notes: Arrived on-site to check on the overfill annual testing and inquire about the line leak detectors. I confirmed the LLDs had not yet been installed, that the business plans to install them, the business is aware this will require a plan check, and they need to do this ASAP. The tester is aware and will be taking measurements and photos today to determine what will be needed for the LLDs. The tester will remove the ball floats if this can be accomplished. Discussed the new regulations and what the procedures will be for the test and the installation of the LLDs.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Violation Description: Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

Violation Notes: Returned to compliance on 06/03/2018. A business plan has not been received as complete. The facility was previously sent a notice/request for the submittal of a business plan by 7/6/17. Based on the fact the previous Facility Manager is no longer employed and the initiative taken currently by the facility, you have an additional 30 days from the date of this inspection to complete this item. Submit the business plan electronically in the California Environmental Reporting System (CERS) and implement immediately.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Violation Description: Failure to inspect weekly, areas where hazardous waste containers are stored or transferred. The owner or operator shall look for leaking containers and for deterioration of containers and the containment system caused by corrosion or other factors.

Violation Notes: Returned to compliance on 08/15/2018. The inspection logs were not available after May 28, 2018. The owner or operator shall inspect areas used for container storage or transfer, at least weekly, looking for leaking containers and for deterioration of containers and the containment system caused by corrosion and other factors. **CORRECTIVE ACTION:** Immediately begin conducting the necessary weekly inspections for all hazardous waste containers at this facility. Provide proof (inspection logs for the next two weeks) to this agency within 30 days.

Violation Notes: Returned to compliance on 01/21/2022. Several of the hazardous and universal waste containers were either not labeled, had missing information on the labels (accumulation dates), or did not have the appropriate labels for the wastes contained inside. Please ensure all waste containers are properly labeled with all the required information. For the SWARF waste bins used to temporarily store the waste, an excluded recyclable materials label was being used - this is not correct. The proper label should be for Non-RCRA Hazardous Waste and labeled as such. All hazardous waste containers shall be marked with the following information: 1) the words Hazardous Waste ; 2) name and address of generator; 3) hazardous properties; 4) physical state; 5) composition (contents); 6) accumulation start date. Eval Notes: Met with Cesar Aquirre, Engineering Associate, at the facility and walked through the facility and around the perimeter. The facility had emailed to request assistance with the California Environmental Reporting System (CERS) database annual submittal. Observed the following hazardous materials stored at the site, above the reportable thresholds, that are not included in the CERS submittal dated 10/2/20:
- Propane, 6-7 gallon cylinders - Hocut cutting oil/coolant, 2- 55 gallon drums (and amount stored inside machines if applicable) - Hydraulic oil (if the amount stored inside machines is at or above 55 gallons total) - Buffing compound/MPC 7 Liquabrade each 7, 55-gallon drums, check SDS to see if these are solely irritants or sensitizers (if these are then there is a higher reporting threshold of 500 gallons versus 55 gallons) and if chemically similar (if these are, then combine these two quantities 14x55). - Waste aerosol cans pending onsite recycling (report [Truncated])

The hazardous component of the waste was identified as 0.9%. Only need to disclose when hazardous component in the mixture is >1% by weight if non-carcinogenic, or 0.1% by weight if carcinogenic. Eval Notes: Numerous email failures due to presentation size. Solutions to send were pursued. Assistance pursued. Hello Erin, Thank you for your questions. I m sending you over a presentation on HW recycling for you. It should answer most of your questions. To answer your question below no. Non RCRA hazardous metal dust waste may have a legitimate value in recycling and as such, may be handled as ERM. ERM must be stored and handled as required. Thus, when I inspect the HW generator, I check on how the ERM is being handled. I inspect for proper storage, storage times, the required identifying information on the container, and PROOF of recycling. For scrap metal, whether some gets spilled or thrown away that not a hazardous waste issue. But for ERM, if ERM ends up being thrown away it s an illegal disposal of hazardous waste. Eval Notes: On site for a routine hazardous waste inspection. Ken Trevino, director of technical services, was present for the inspection and provided consent to inspect. The facility's operations and the waste generated were discussed. The facility's outside lot and dumpster area were viewed. I did not observe hazardous waste in the facility's trash or as run off on the ground. Due to event that the facility had scheduled, I agreed to return the following week to complete the inspection's document review with the director. The signed off manifests for the removal of the facility's hazardous waste were provided for review. The records for the last year were reviewed. A non RCRA (CA regulated) hazardous waste large quantity generator (LQG) is a generator of equal to or greater than 1000 kg (roughly 2200 pounds) of non RCRA hazardous waste during a single month during a one year period. Eval Notes: The laboratory analysis report of a metal swarf sample provided by MPC and dated 10-16-15 was reviewed by this Agency. The laboratory analysis for heavy metal content (CAM metals) of the solid sample was conducted. The laboratory analysis for STLC was then conducted for the chromium and nickel detected. With the provision that this sample is representative of the facility's products and procedures; the facility's metal swarf represented by this sample does not appear to be hazardous for regulated heavy metals and may be handled as non-hazardous. No further testing is required by this Agency at this time. Please note that any changes in product use and procedures will necessitate the re-evaluation of the metal swarf s hazardous waste properties. If determined to be hazardous waste, then the metal swarf must be handled, stored, transported, and disposed properly. A copy of the laboratory reports and Chain of Custody are to be maintained in your on site records. [Truncated]

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Eval Notes: Inspectors Jonathan Alaniz and Terry Carrier were on site for a routine hazardous waste inspection. Peter Panenka gave consent to perform the inspection and take any necessary photos. Mr. Panenka asked Julie Johnson to escort us through the facility. Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed. The used oil container was missing the hazardous waste label. The spent machine coolant and parts washer containers had labels that did not indicate the hazardous property of the waste. A violation was issued for the labels. The accumulation start date for the waste drum was 6/2015. Manifests were available and reviewed. Ms. Johnson verified that employees were trained and that the hazardous containers are inspected on a weekly basis. The trash enclosure was inspected and no hazardous waste was found in the dumpsters. A copy of the inspection report was emailed to Julie Johnson. Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).
