Eval Notes: On site for a routine hazardous waste inspection. Rebecca Knoche, environmental site manager, was present for the inspection and provided consent to inspect. The facility's operations and the waste generated were discussed. I did not observe hazardous waste in the facility's trash or as run off on the ground in their lot. The facility did not have hazardous waste accumulating in storage. Hazardous waste is generated during periodic generator maintenance, which averages once every 3 years or so. The signed off manifests for the removal of the facility's hazardous waste were on site and available for inspection. The receipts for the removal of the facility's universal waste were on site and available for inspection. The records were reviewed. The facility had written spill response directions and emergency contact numbers provided for the employees.

Each one is connected to its own Veeder Root. The north tank is a double-walled pre-2003 tank which feeds back up generators for the phone system. The sensors (all float type) for the annular space, piping sump and fill sump were tested by immersion in water. This caused an audible/visual alarm at the Veeder Root located in the north side of the building. Eval Notes: Emailed Rebecca about updating UST DO forms. According to Susan Berg these all must be resubmitted using the new forms. I asked Rebecca what the other inspectors are doing. I received the following email: Good afternoon Ms. HensenRooks, Thank you for reaching out to us regarding our CERS information. During the webinar on November 14, 2018, Mr. Cory Hootman with State Water Board clarified that the existing Owner Statement in CERS is valid until there is 1) new installation or 2) change in owner and operator. When a change takes place, the new DO form along with the Statement of Understanding and Compliance are required to be submitted to CERS. There is no change in our system and our current DUSTO operator, Scott Larsen s license is good until July 27, 2019. We will be submitting the new DO form and the Statement of Understanding and Compliance form in July 2019. At this time, AT&T is compliance with the existing Owner Statement in CERS. Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Site History: The District at Tustin Legacy retail shopping development consists of approximately 110 acres, which were once a part of the Marine Corps Air Station (MCAS) Tustin s property. The Marines ceased operations at the MCAS Tustin in July 1999. The Navy is still conducting activities to remediate groundwater contamination in several areas of the former MCAS Tustin property. Portions of The District overlie two of the Navy s Installation Restoration Program (IRP) sites, IRP-5S(a) and IRP-6. Tarmac Area In 2005, during demolition of pavement, a hydrocarbon odor was noticed in the soil and three stained areas were observed. Soil samples were collected from the three stained areas at the surface and below the surface at each location. A total of six samples were analyzed for jet fuel, total petroleum hydrocarbons (motor oil range), and metals. Motor oil and jet fuel were detected at a maximum of 150 milligrams/kilogram (mg/kg) and 1,700 mg/kg, respectively. The following chemicals were detected in two of the surface samples: tert-butybenzene, 1,2,4-trimethylbenzene, p-isopropyltoluene, naphthalene, toluene and xylene. The soil was excavated and confirmation soil samples were collected. The analytical results of the confirmation soil samples showed only low concentrations of petroleum hydrocarbons, which did not pose a significant threat to water quality. On June 27, 2006, RWQCB-8 sent a letter stating that we would not require any further remediation at the Tarmac area. Former Vault Area Oil-stained soil was observed during removal of a vault near former MCAS Tustin Building 251. Soil samples were collected in September 2005 from three locations, between depths of 3 and 6 feet below the surface. The samples were analyzed for CAM 17 metals, polychlorinated biphenyls (PCBs), total

recoverable petroleum hydrocarbons (TRPH), and total petroleum hydrocarbons (TPH). Petroleum hydrocarbons were detected in three of the soil samples, and ranged from 38 to 1,200 mg/kg. The impacted soil was excavated, and confirmation soil samples were collected from the bottom and the sidewalls of the excavation. The samples were analyzed for TPH, volatile organic compounds (VOCs), and CAM 17 metals. A grab groundwater sample was also collected from the bottom of the excavation. The groundwater sample was analyzed for TPH and VOCs. Petroleum hydrocarbons and VOCs were not detected in the soil samples or the water sample. On October 30, 2006, RWQCB -8 sent an email to the contactor stating that we would not be requiring any further excavation and sampling at the Vault Area. Box Culvert Installation A trench was excavated and a box culvert was installed along Warner Avenue, between Park Avenue and Tustin Ranch Road. This project was constructed in the area overlying a portion of the trichloroethylene (TCE) groundwater plume, emanating from former MCAS Tustin site IRP-5S(a). The excavated soils were stockpiled, and soil samples were collected. The samples were analyzed for VOCs. There were no VOCs detected in the soil samples, and our staff gave approval (via email) for onsite reuse of the excavated soil. Construction of Park Avenue, Installation of Underground Utilities, and the Costco Gas Station within and outside of Navy property Underground utilities were installed along Park Avenue, which was built through the Navy s property known as CO-2, and across the former MCAS Tustin s IRP Site 6. The groundwater beneath IRP-6 contains 1,1-dichloroethene (1,1-DCE) and TCE. In addition, a sewer line was installed north of Park Avenue within CO-2. The Costco Gas Station construction included excavation for the installation of underground storage tanks, pipelines and other utilities. At each of these project sites, the excavated soil was stockpiled, and soil samples were collected and submitted for analysis of VOCs. There were no VOCs detected in the soil samples.

Reviewed the site tank contents and quantities and reviewed the SPCC plan, there were some discrepancies between what was disclosed in the California Environmental Reporting System (CERS) and what is listed in the SPCC plan. See the comments in CERS: Under the Total Aboveground Storage Capacity of Petroleum - reference the SPCC plan for the total amount stored onsite in ASTs and bulk containers of petroleum based liquid material. This should be above 1,320 gallons. Based on the inventory currently disclosed in CERS, this should total 2009 approximately gallons not 500. Confirm that the SPCC plan includes the totals disclosed in CERS. These should match. Please revise the CERS disclosure and the SPCC plan if necessary to match quantities. Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Site History: The site is a former medical device manufacturing facility with soil and groundwater contamination with Freon-113 as the main contaminant. Soil excavation at the sump area was conducted in 1995 and an NFA for soil was granted in August of that year. Groundwater investigation was conducted in 1994. By June 1999, nine groundwater monitoring wells were installed at the Site and the downgradient area. An AS/SVE system operated at the site for 16 months. Monitoring activities came to a halt after September 2005. Groundwater investigation was resumed in fall 2009 with two quarterly monitoring events in September and December 2009 and one hydropunch investigation in November. A final report was submitted in February 2010 which indicates Freon-113 concentrations in the groundwater are at their historical high. This may be due to residual Freon concentrations in soil. A focused FS has been requested from the RP for determination of the best cleanup alternative. Bench scale testings were conducted in late 2010 and throughout 2011 to determine the best material for in-situ treatment of the groundwater. Sulfate precipitation using calcium acetate and VOCs removal using mZVI was selected as the final remedy. A work plan for pilot testing was submitted on January 31, 2012 to Regional Board.

RWQCB Region: SANTA ANA RWQCB (REGION 8)
Site History: The site is a operational medical devices manufacturing facility. They have had contamination of soil and groundwater with 1,1,1-TCA. Limited soil removal in 1992 and SVE in 1992-94 was conducted. Groundwater extraction and treatment was conducted from 1999 to 2003. Quarterly groundwater monitoring is ongoing. A request for NFA in 2008 was denied due to discovery of 1,4-Dioxane in the groundwater. Additional investigation at the Site, its downgradient area and the former Baxter Bentley facility across Armstrong Avenue has demonstrated that the source of 1,4-Dioxane is at the Site. Additional cleanup of the groundwater for 1,4-Dioxane needs to be conducted. ISCO using persulfate has been selected as the remedy for groundwater cleanup. Pilot testing at the Site is ongoing as of Febraury 2012.

Environmental Interest/Information System:

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste. California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Department of Labor, Occupational Safety and Health Administration information system consists of inspection case detail for approximately 100,000 OSHA inspections conducted annually. The FRS dataset includes facilities that had inspections within the last 7 years within the mining, oil and gas, utilities, and manufacturing sectors.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Borchard and The Irvine Company. The Naval Air Station was commissioned initially as a Lighter-Than-Air (LTA) Navy base to support observation blimps and personnel conducting antisubmarine patrols off the coast of Southern California during World War II. Presently, the site is used as a Marine Corps helicopter base that is in a transitional phase for closure under the Base Realignment and Closure (BRAC) program. Improvements consist of over 200 buildings and facilities including: family housing units, barracks, Bachelor Officer Quarters (BOQs), Naval Reserve Armory, blimp hangars, helicopter landing pads, maintenance facilities, radio transmitter facilities, water treatment plant, sewage pump plant, firehouse, public works office, chapel, pistol and skeet ranges, and storage for fuel and ammunition. The Navy disposed of 102.34 acres total, including 36.64 acres revested to Mr. Borchard on 11 September 1945, and 65.70 acres net, in four parcels (1.40 acres, 2.57 acres, 3.08 acres, and 58.65 acres), conveyed to The Irvine Company between 20 January 1981 and 5 August 1988. No facilities are known to have been constructed on the disposed properties by the Navy or the Marine Corps, and these properties are not known to have been used for training activities. The 36.64-acre area is now occupied by a business park. The 1.40-acre and 3.08-acre parcels are undeveloped. The 2.57-acre parcel is occupied by a self-service storage facility. The 58.65-acre parcel is occupied by commercial facilities in various stages of development.</p>

Eval Notes: Met with Mr. Luis Nunez, Chief Engineer, and observed the mailing address and ownership on file was incorrect. The mailing address should be 2600 Michelson Drive, Suite 840, Irvine, Ca. 92612. The owner is now SPUS8 2600 Michelson, LP, 515 South Flower Street, 31st Floor, Los Angeles, CA 90071. Walked through the facility and observed: - 3, 50 gallon day tanks with Diesel - 2, 250 gallon generator diesel aboveground storage tanks (ASTs) This is consistent with what was submitted in CERS on 6/26/17. Discussed with the business that the CERS submittal must be completed for 2019 within 30 days. See comments in CERS. The site did commence with the 2019 CERS submittal, however, the submittal requires updates to the Business Owner/Operator page for the new contact, submittal of the hazardous materials inventory/site map, and updates to the submittal for the Emergency Response Plan. Employees are trained.

Quarterly Update:	This is a closing military base which is being redeveloped for civilian use. For corrective action status, this site was transferred to Site Mitigation (SM) group around 1998 (exact date could not be confirmed but around this time many of the military bases were transferred from Permitting program to Site Mit for Cleanup) for corrective action work. Since then, Site Mitigation has been working to cleanup areas of the site. As areas were remediated, they were transferred for civilian use thru the "Finding of Suitability to Transfer" (FOST) process. For each FOST, a number of SWMUs were cleaned up and transferred for civilian use. As of 6/06, 5 FOSTs were completed with many areas issued a No Further Action letter. A table was compiled to document the status for each SWMU found in the transferred areas. The facility requested DTSC not pursue a Class 3 permit modification equivalent process and public notice for corrective action complete determination for any past or future FOST properties. When the properties are transferred to the receiving entities, they can pursue this last step - corrective action complete determination. CA999 Corrective Action Terminated event can not be issued unless and until the receiving entities request it and pursue the associated Class 3 permit modification equivalent process. Since most of the corrective action activities have taken place by Site Mitigation. Refer to Site Mitigation EnviroStor database for details.

Site History: Irvine Towers site is located to the north of the former Sanmina facility and was suspected of having groundwater contamination as a result of migration of contaminated water from the former Sanmina and Parker Hannifin facilities. An investigation order under CWC Section 133267 was issued to both parties on May 5, 2009. The first phase of investigation was conducted in September 2009. The reported data indicates that contamination of Groundwater with TCE exists in the southern portion of the Site. Lateral and vertical delineation of the TCE plume at Irvine Towers and Marriott properties have been completed. A pilot test work plan was approved in 2016 and a report of waste discharge for the pilot test is currently under review. Pilot testing is expected to take place in Fall 2019.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAINING: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facility's name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PART 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration's document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

AQUEOUS FOAM NRC: Aqueous Foam Related Incidents Listing

The National Response Center (NRC) serves as an emergency call center that fields initial reports for pollution and railroad incidents and forwards that information to appropriate federal/state agencies for response. The spreadsheets posted to the NRC website contain initial incident data that has not been validated or investigated by a federal/state response agency. Response center calls from 1990 to the most recent complete calendar year where there was indication of Aqueous Film Forming Foam (AFFF) usage are included in this dataset. NRC calls may reference AFFF usage in the ?Material Involved? or ?Incident Description? fields.

EDR HIGH RISK HISTORICAL RECORDS

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

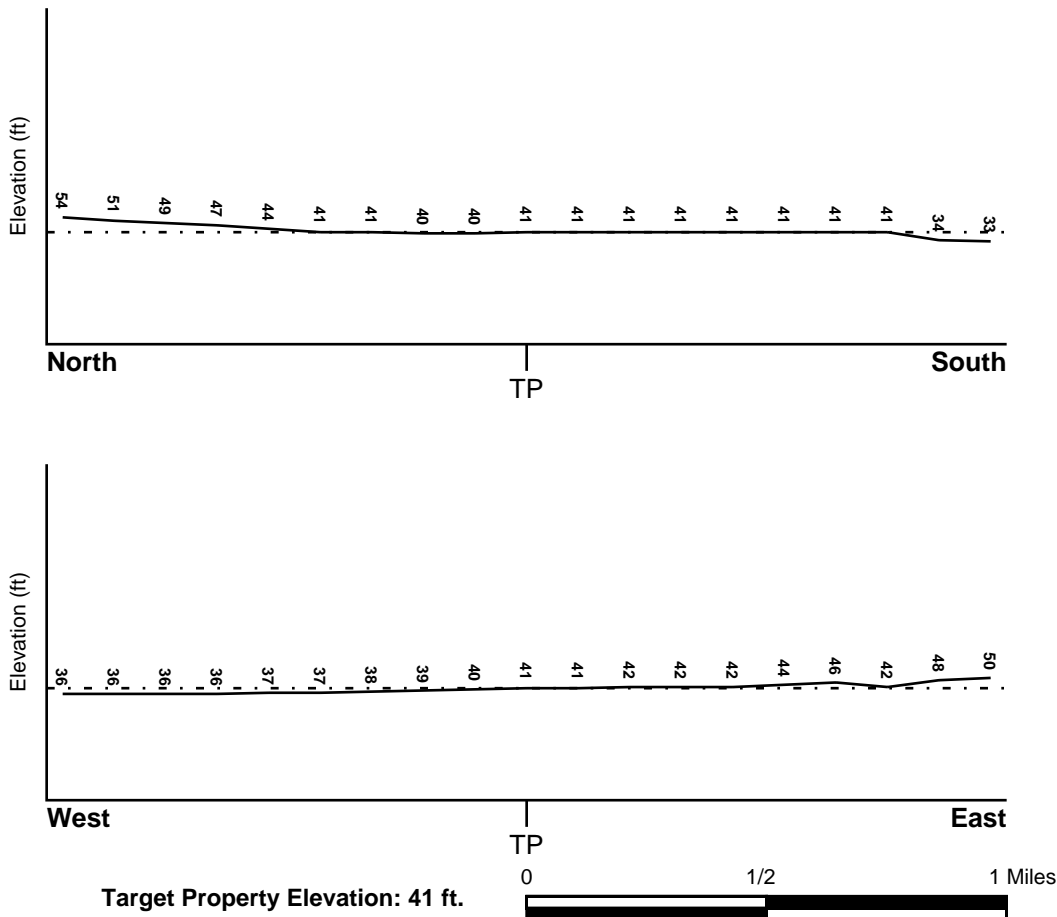

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WNW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Provide a short explanation of why you feel you are exempt in the space provided below. If the regulatory agency does not approve of the document exemption, the submittal element will be rejected. Exemption Description Per direction by Jeff Nofal on 4-10-2020, Booster Fuels filed in error and is exempt from APSA due to: Facility is a transportation related facility as defined in 40 CFR 112 App. A and does not "store" oil as all containers are DOT regulated tanker trucks used for the transport of oil in interstate or intrastate commerce and the equipment and appurtenance related thereto. Thus all tanker trucks fall outside the definition of "above ground storage tank" found in 25270.2 (a)6) of California HSC.  Site History: Essex Portfolio LP is the owner of a promissory note secured by approximately six acres of property located at 17461 Derian Avenue, Irvine, Orange County. Prior to 1973, the property was undeveloped and consisted of duck ponds with several levees crossing the property. In 1973, Great Lakes Chemical Corporation (GLCC) acquired the property. From 1973 to 1982, GLCC operated an agricultural pesticide packaging and distributing facility on the property. GLCC received chemicals in bulk form from chemical suppliers. Containers (i.e. drums and cylinders) were filled with mixed chemicals for retail sale. Containers were steam cleaned on a concrete pad sloping

towards an underground clarifier (located in the southwestern portion of the site). The chemicals used by GLCC to formulate its products included: ethylene dibromide (EDB); chloropicrin; 1,2-dichloropropane (1,2-DCP); 1,3-dichloropropene (1,3-DCP); methylene chloride; methyl bromide; and Chevron 325 (a naphtha based solvent). GLCC sold the property to a real estate developer in 1982, and reacquired the property in 1995 as part of a settlement of certain litigation between GLCC and Great Western Bank. Preliminary site investigations in 1983 indicated that volatile organic compounds (VOCs), including the above listed chemicals, had been discharged to the soil at the property. Between 1983 and 1997, numerous investigations were conducted in order to more fully delineate the extent of contamination present in the soil and groundwater as a result of GLCC's activities at the site. In 1997, the Regional Board issued Cleanup and Abatement Order No. 97-38 to GLCC (Order No. 97-38), requiring full delineation and cleanup of the contamination that is present in soil and groundwater as a result of GLCC's past discharges at the site. In the mid-1990s, GLCC tested a soil vapor extraction (SVE) system at the site, and concluded that an enhanced extraction system could be more effective in removing VOCs from the soil and groundwater. A full-scale soil and groundwater remediation system was installed and started operating in 2000. It consisted of 52 SVE wells, 50 multiphase extraction (MPE) wells, and 27 off-site groundwater extraction wells. GLCC was acquired by Crompton Corporation, Inc. in 2005. Crompton became Chemtura Corporation in 2005, and GLCC remained a subsidiary of Chemtura. GLCC continued operation of the groundwater remediation system, and carried out the groundwater monitoring and reporting program. Beginning in 2006, GLCC's have periodically modified the groundwater treatment system, to effectively contain and mitigate the offsite migration of the VOCs in groundwater. The groundwater remediation system now consists of 26 groundwater extraction wells, 56 MPE wells and an air stripper. In April 2009, following a pilot test, the off-site extraction wells were turned off. In March 2009, Chemtura and GLCC filed for bankruptcy. Subsequently, the Regional Board, Essex, and GLCC executed a settlement agreement. Essex became solely responsible for remediation activities as set forth in CAO Order No. R8-2011-0013 as

of 2011. Order No. 97-38 was rescinded. The remediation system originally consisted of three major components: a SVE system that extracted vapors from 49 on-site SVE points; a MPE system that extracts groundwater and soil vapors from 49 on-site MPE points; and a well network that extracted groundwater through 26 off-site wells fitted with submersible pumps. Because of decreasing concentrations of VOCs in the SVE vapor stream, the SVE system was shut down in December 2003. Because of decreasing concentrations of groundwater contaminants in some areas, some of the MPE points and all of the extraction wells have also been turned off. Remediation is on-going at the site. As on second Q, 2015, approximately 586,000 gallons of groundwater were extracted and treated by the remediation system at the site. Some of the shallow and intermediate monitoring wells and extraction wells (except EW-26 and EW-22) were suspended from monitoring program per the Board's approval presented in the letter dated September 8th, 2014. Also, based on the Board request, Leymaster performed a sampling method comparison to determine if the sampling method (applied historical method using bailer vs low-flow sampling) may be the reason for the concentrations of contaminants in the MPE compared with the monitoring wells. Criteria for significant variance was defined as if the results of the two methods are more than 10% different. In conclusion, the Board requested for future samplings to be performed using low-flow method. Due to application of low-flow purging in MPE wells, bailer will still be used for these wells.

Quarterly Update: This facility was granted Interim Status on 3/30/81. Facility never recieved a Part B permit and went to closure. The facility closed the Interim Status units in 1983. However, the facility never went through a formal closure process. Therefore, in 2000, DTSC conducted administrative review of this site and requested facility to go through the formal closure process. The interim status units were finally clean closed on 6/26/01. For corrective action, soil and groundwater contamination from manufacturing areas has been under jurisdiction of the Waterboard since 1983. Since the WB was responsible for corrective action, little information is available regarding this.

Environmental Interest/Information System:

All generators and treatment, storage, and disposal (TSD) facilities who handle hazardous waste are required to report to the EPA Administrator at least once every two years. The data collected is used to create the National Biennial Resource Conservation and Recovery Act (RCRA) Hazardous Waste Report. This data is processed within the RCRA Information (RCRAInfo) database

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

For your site map please include the location of the following: water, gas, and electrical shutoffs, evacuation staging locations, emergency response equipment, hazardous materials locations, adjacent streets, and storm drainers and sewers. For your chemical INK we are not so much concerned with how much you use in a day, but how much you have stored on site for an average day. For example, say you have three 55 gallon drums of ink, so your largest container size would be 55 gallons, your maximum daily amount would be 165 gallons, and let s say you keep your drums about half full on an average day, so your average daily amount would be around 80 gallons. For you days on site, that would be for the entire year, so if you always have that chemical on site the days on site is usually 365 days. We reviewed the locations of the required items to be mapped. We discussed the facility's use of CERS (California Environmental Reporting System) for their electronic HMBP submissions. Inspection found revisions to the facility's HMBEP submission necessary for accuracy. Improvements to the facility's site map were discussed. Revisions will be requested via CERS. Facility reported to conduct annual employee safety procedure training in the event of a release or a threatened release of hazardous material and will begin keeping records of topics covered and employees trained. Environmental Interest/Information System:

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The National Pollutant Discharge Elimination System (NPDES) module of the Integrated Compliance Information System (ICIS). Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

California's Hazardous Waste Tracking System Data Mart (HWTS-DATAMART) provides information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

Provide CAS# s with correct formatting (dashes in the right places) For each material, provide a value for maximum daily amount that is greater than or equal to the quantity of the largest container. Maximum daily amount refers to the maximum capacity that you have for each material. For coolant and transmission oil entries, remove the annual waste amount from the pure materials. For the waste entries, indicate that they are waste in the common name (i.e. waste coolant). Remove the annual waste amount from the motor oil entry since it is listed as a pure material. If you also generate waste motor oil that is not included in the waste transmission oil entry, create a separate entry for the waste and include both an annual waste amount and state waste code. Environmental Interest/Information System:

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

Eval Notes: Based on a review of the California Environmental Reporting System (CERS) Website, this business has failed to submit for 2018 and 2019. Annual certification of CERS information is due between January 1 and March 1 each year. Please resubmit on CERS: Every year between January 1 and March 1, AND Within 30 days of change of ownerships, changes in chemical quantities of over 100%, or any new chemicals above the reporting threshold. Hazardous materials must be reported if the business handles an amount equal to or greater than 55 gallons of liquid, 500 pounds of solid, or 200 cubic feet of compressed gas (1,000 cubic feet threshold for medical gases or gases for which the only health/physical hazards are simple asphyxiation and the release of pressure). As a result, violations have been cited against the facility. If you would like assistance, please email myself at this address and arrange an appointment.  Eval Notes: Walked through the facility and around the perimeter. Checked trash cans throughout the site. Observed the following hazardous waste: - 5-gallons expired/off-spec materials including epoxy - 5-gallon bucket used oil from machines - (1) box E-waste The site is not a yearly generator of hazardous wastes. The last manifests were dated 9/2015 and 4/2017. Very small quantities of resins and off spec materials are generated and disposed of every 2 to 3 years. Coolant from the machines is removed as waste about every 2-3 years as well. The site should be placed as Stat 03 and should be followed up with in 2020/2021 to confirm status. Reviewed manifest and observed that the Business Emergency Plan was stored at the site and available for employees.

Consent to inspect and take any necessary photos was given by Stacy Truong, Office Manager, and Brian Ruth, Coding Technician. Walked throughout the facility. Observed hazardous waste storage areas. Containers were closed and properly labeled. Manifests were available and reviewed. Employees are reported to be trained. Emergency plan is posted in the production area. No hazardous or universal wastes observed in the dumpster/enclosure area. A waste determination was not conducted for the waste machine coolant from CNC machine activities. Facility has been improperly disposing of the waste coolant into the environment. Discussed hazardous waste determination with Mr. Ruth and Ms. Truong during the inspection and with Mr. David O Connor, Facility Manager, via telephone after the inspection. Requested a hazardous waste determination be performed for this waste stream.

Environmental Interest/Information System:

The California Environmental Reporting System (CERS) is a statewide web-based user and information exchange system to support over 140,000 regulated businesses and over 130 local agencies in electronically collecting and reporting significant hazardous materials, hazardous waste and compliance and enforcement data as mandated by California law. Under oversight by Cal/EPA, certified local governing agencies (Unified Program Agencies - UPAs) consolidate, coordinate and provide consistent regulatory activities for six state and federal environmental programs.

The California Environmental Protection Agency (CalEPA) has recently implemented a new data warehouse system (nSite). This data warehouse combines and merges facility and site information from five different systems managed within CalEPA. The five systems are: California Environmental Reporting System (CERS), EnviroStor, GeoTracker, California Integrated Water Quality System (CIWQS), and Toxic Release Inventory (TRI).

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Toxic Release Inventory System (TRIS) is a publicly available EPA database reported annually by certain covered industry groups, as well as federal facilities. It contains information about more than 650 toxic chemicals that are being used, manufactured, treated, transported, or released into the environment, and includes information about waste management and pollution prevention activities.

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.

The Site has been redeveloped was the responsible party was issued a no further action letter on June 25, 2019.

The facility maintains (1) process that has a maximum quantity of 18,580 pounds ammonia. The ammonia is stored in (2) 1,500 gallon tanks filled to a max 80%. Ammonia is used to reduce NOx emissions created by burning natural gas. The facility plans to decommission the Ammonia process by 1/2024 and replace the natural gas generators with fuel cells to eliminate the production of NOx emissions. Please notify this agency of the progress as this will potentially remove the facility from regulation under CalARP. The following were reviewed/observed: -- RMP Certification: The RMP certification was dated 6/2020 and prepared by a consultant. The certification was signed by Camille

Eval Notes: On February 21, 2001 Regional Water Board staff, Marc Brown conducted a compliance inspection at the above referenced facility. Brown met with Vlado Senkovich, the facility contact. The facility's SWPPP (dated 1999) and training records (last conducted 9/14/00) were reviewed and found to be adequate. The facility was inspected and found to be compliant in most areas. BMPs were being implemented throughout the facility with the exception of the following issues. The hazardous waste accumulation area had two drums that were improperly secured. Although both were considered "empty", one was set atop the secondary containment wall. The second was setting outside the accumulation compound. Neither had labels. Additionally, approximately 20-30 drums, all considered empty were being stored to the west of the facility's rail trunk. Several of these drums were stacked two high and without bungs. These drums contained approximately 2-4 inches of liquid in each. The area at the north side of the facility marked "Empty Drums" had several of the 10-15 drums without bungs. The facility has implement some BMPs that included the installation of stainless steel grates within the stormwater inlets. These grates have one-inch diameter circular openings, made to trap debris, but allow storm water flow to run off site. These grates are cleaned as needed. At the time of the inspection, minimal amounts of debris was observed in the grates. The refuse compactor area located at the west side of the facility is graded to drain to the east. The eastern border of this area is equipped with a french drain, which is connected to the POTW.

Eval Notes: B. Braun Medical manufactures intravenous solutions, glass bottles, and injection moldings for hospitals and pharmaceutical purposes. The inspector arrived at B. Braun at 2:45 p.m. and completed the inspection at 3:50 p.m. A pile of soil was observed beneath a plastic tarp outside the plant building (Photos 2 and 3). Sterilized solutions were stored near the storm drain in the loading dock area (Photo 7); the facility representative indicated that the solutions contained sterilized sugar and water. The site is graded to direct storm water from the north to the southwest onto McGaw Avenue. The facility representative indicated that storm water samples are collected at three identified points: at the facility's north section; at the facility's southwest end; and at the facility's south end. The facility SWPPP, Monitoring Plan, 2000-2001 Annual Report, and sample results were reviewed. These documents fulfilled the requirements outlined in the General Permit, with the exceptions noted below. The preliminary results of the inspection were discussed with the facility representative.

Environmental Interest/Information System:

THE EMISSION INVENTORY SYSTEM (EIS) MAINTAINS AN INVENTORY OF LARGE STATIONARY SOURCES AND VOLUNTARILY-REPORTED SMALLER SOURCES OF AIR POINT POLLUTANT EMITTERS. IT CONTAINS INFORMATION ABOUT FACILITY SITES AND THEIR PHYSICAL LOCATION, EMISSIONS UNITS, EMISSIONS PROCESSES, RELEASE POINTS, CONTROL APPROACHES, AND REGULATIONS. FACILITY INVENTORY DATA ARE KEPT SEPARATE FROM THE EMISSIONS DATA AND HAVE STABLE IDENTIFIERS TO IMPROVE CONTINUITY FROM YEAR TO YEAR AND TO HELP IDENTIFY DUPLICATE OR MISSING FACILITIES

The Resource Conservation and Recovery Act Information System (RCRAInfo) is EPA's comprehensive information system in support of the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. It tracks many types of information about generators, transporters, treaters, storers, and disposers of hazardous waste.
