Whoosh into the Future of Transit

Imagine gliding effortlessly above traffic in a sleek, electric-powered pod — no waiting, no gridlock, just smooth, on-demand travel through the skies. Welcome to Whoosh, the aerial transportation system that's redefining how we move.

Developed by Swyft Cities, Whoosh features autonomous, electric vehicles that travel along a fixed cableway, reaching speeds of up to 30 mph. It's like a gondola ... but way cooler, smarter, and designed for modern urban mobility.

Why is Whoosh a game changer?

- On-demand, elevated travel — no traffic, no stress
- Eco-friendly and electric — zero emissions, zero noise
- Flexible & cost-efficient — uses existing structures to reduce disruption and lower construction costs
- Perfect for tight spaces — designed for urban parks, campuses, and districts where space is at a premium

Come see the full-scale Whoosh model up close at the Irvine Mobility Summit and explore how this innovative system could help transform transportation in Irvine and beyond.

Don't miss your chance to be inspired by the future of mobility — up in the air and on the move!
