

Watering Guidelines for Trees in the Landscape

Watering for Wet Seasons

- Prolonged saturated soil can lead to tree mortality.
- Turn off irrigation during rain events.
- To avoid over watering a newly planted tree, monitor soil moisture after rain events.
- If soil is saturated, stop watering. Resume watering when soil is dry.

Watering Guidelines for Hot and Dry Seasons

- Prolonged and unexpected extreme heat waves can threaten a newly planted trees survivability by depleting the available water inside the tree and in the soil.
- During these periods trees may need additional watering once or twice a week to be sustained.
- It is critical to provide additional water as soon as possible during extreme heat events to maintain tree health and vigor.

Tree Age	Frequency	Quantity
First 12 months after planting	Deep water by filling basin twice a week	20-30 gallons per watering
Year 2	Fill the water basin every other week	20-30 gallons
Year 3	Monthly	20-30 gallons
Year 4 - 7	Once a month May to October and through prolonged drought	deep watering
